Mr. Frederick Steel was born in 1868, his father being Mr. Robert Steel, J.P., of Cheltenham. After a private education he served his apprenticeship to the printing craft with the Cheltenham firm of Norman, Sawyer and Co., afterwards working as an improver with the firm of John Bellows, Gloucester, before embarking upon business on his own account at Stroud.

To his other activities on behalf of the trade Mr. Steel adds persistent propaganda work in support of the Federation Costing System, of which he is a staunch advocate.

MESSRS. SHELDON LEICESTER AND Co., 12 and 13, Upper Thames-street, London, E.C.4, have been appointed sole agents for the United Kingdom and export for the Printing Paper Mills Association of Austria, which comprises all the news paper mills. Austria has only recently been in the position to export news, as the mills suffered severely from low water through the abnormally dry summer last year and an early winter. This interfered with the output of mechanical pulp, making even the home demand extremely difficult to fill, and exports impossible. The conditions have now become more normal, and we understand that Messrs. Sheldon Leicester and Co. have had a definite monthly tonnage allotted to them.

linotype operators, and machine printers. The colour work was particularly good, while the designs for magazine covers, the display printing, and the specimens of binding attracted favourable attention.

Mr. Robert Wilson, president of the Scottish Alliance of Employers in the Printing Trade, who presided at the opening ceremony, mentioned that for the first time in the history of the classes an external examiner had been appointed—Dr. James Macle hose, Glasgow, president of the Federation of Master Printers.

Dr. Macle hose wrote that he was very much impressed by the value to the printing trade and to the community of the classes, and by the excellence of the work done by many of the students. He was very pleased to see that training was given which would enable a man to have a general idea of the relation of his own section of work to other departments of the trade.

Lord Provost Hutchison observed that printing was the principal industry of the city of Edinburgh, and it was right that the rudiments of the trade should be taught in a thoroughly effective manner. The Edinburgh Day Printing School was the first and the only one of its kind in Scotland.

Mrs. Hutchison presented certificates to those who had completed the course of training, and medals and prizes to the following students:—Caxton competition—Gold medal—J. S. Stephenson (1st place); bronze medals—W. D. Ingle (3rd place), John Caution, Fred Loumgair, and James M'Diarmid; bronze medals for linotype—Thomas Christie and A. Kenyon. Sir Walter Scott Club prizes for an essay on "The Fair Maid of Perth"—1, George Richardson; 2, John E. Reith.

ACCORDING to a press statement stationery is to be sold in L.C.C. elementary schools at a profit of three halfpence in the shilling.

A HARRIS
ENVELOPE AND CARD PRESS
 WOULD
SAVE YOU MANY POUNDS!

The Harris Blanker is a high-speed Rotary Press with a simple and positive suction feeder for printing envelope blanks in the flat after being die-cut and before being folded. It will handle the complete range of standard envelope blanks; has an automatic suction feeder, packer delivery, and attains a speed of 12,000 per hour.

Miller Craftsman Unit.

Demonstration for Members of the Printers' Managers and Overseers Association.

An interesting demonstration of the Miller Craftsman Unit and of other machinery, including the Miller Universal Saw Trimmer, was given at the premises of the Lanston Monotype Corporation, Ltd., in Fetter-lane, London, on Tuesday of last week, before a large assembly of members of the Printers' Managers and Overseers Association (Parent Body). The demonstration naturally appealed to the expert instincts of the visitors, who were not slow to examine every detail, putting the various machines to all possible tests.

The Miller Craftsman Unit is the latest printing machine on the market, and after three years' experience with the ordinary commercial machines in this country, this style has been especially designed to meet the most exacting requirements of the English printer. The fact that the Craftsman Unit occupies a floor space over all of 55½ in. by 60 in. and that a speed of 2,200 per hour to accurate register is guaranteed will indicate the value of the machine. It will handle the highest class of work, not excepting heavy half-tone and three or four-colour work, at a high speed. It possesses, in addition to perfect register, unique rolling powers, automatic feeding of all classes of stock, from a light bank to an eight-sheet board, whilst the low labour cost which it involves must be a great attraction to every printer. The whole of the mechanism is remarkably simple, and once it is set in motion there is little for the operator to do, whilst his attention is drawn to any cessation of printing by a bell which is automatically sounded. The Miller Craftsman Feeder has been specially designed to meet the increased speed requirements and the enlarged scope of operations. With regard to the ink distribution, the Miller Craftsman Unit is equipped with four forme rollers, all of which clear the forme on the downward stroke, while the vibrator Brayer fountain is declared to be the equal of the latest approved cylinder press fountain. Indeed it is rightly claimed for the machine that it is a model of compactness, the press, the feeder, and the electrical equipment being self-contained.

The printers' managers and overseers were no less interested in the continuous demonstrations being made on the Miller Universal Saw Trimmer, with its innumerable tools and its wonderful capabilities in trimming blocks and cutting through plates with remarkable precision and ease. There were many other things to occupy the attention of the visitors, including various specimens of printing performed on the Craftsman Unit.

Among the 60 odd visitors were Mr. S. M. Bateman (president), Mr. R. H. Berry (vice-president), Mr. A. E. Jarvis and Mr. E. H. Berryman (past presidents), also Mr. C. Durston (treasurer), whilst Mr. J. H. Burton discharged the duties of Mr. E. W. Whittle (general secretary) in that gentleman's unavoidable absence.

The officials of the Lanston Monotype Corporation, with Mr. W. J. Beck (sales manager) at their head, were unremitting in their demonstration of the various machines. The assistance of the managers was sought, in fact, so that if any further improvements can be adopted the experience of the expert printer might be brought to bear upon the machine.

Tea and Discussion.

Following the proceedings in Fetter-lane, tea was served at the "Old Bell," under the presidency of Mr. Beck, and an interesting discussion followed, interspersed with a few songs.

Mr. Beck read a letter from Mr. W. I. Burch, expressing his regret at being unable to be present, and then went on to say that the object of the Lanston Monotype Corporation was not only to sell machinery, but to sell good and up-to-date machinery that would bring a return to the purchaser and that would enable the user to keep in the front rank of the craft. With the increased costs with which the printing trade was faced in all directions in these days, there was a great need for labour-saving machinery. That was one way, he thought, in which the increased cost could be met. In the Craftsman Unit and the Miller Saw Trimmer they claimed to have supplied such labour-saving machinery. The speaker mentioned the valuable suggestions which had been made at a Leeds meeting of the Printers' Managers and Overseers Associa-

tion when a Miller machine was demonstrated in that city. Those suggestions had led to the development of the Craftsman Unit, which they claimed and believed was as good an automatic platen as could be found in Great Britain to-day. For that reason the company would be glad of any criticism that might be offered that night.

Mr. Bateman, on behalf of the members, expressed appreciation of the trouble which had been taken to give them such an interesting demonstration. He thought the Miller Craftsman Unit and the other machines represented an extremely clever series of inventions.

Mr. Northam remarked that the feeder was good so far as it went, but he thought the taking off apparatus was even better. The speaker also had something to say with regard to the vibration.

Mr. Dawson was sorry that the demonstration did not include printing on news stock or something of that sort, instead of being confined to M.G. or art paper.

Replying to Mr. Paul, who asked what would happen if the automatic feeder got out of action, Mr. Beck observed that this could be turned right away from the machine. It was automatically locked and could not be put in the wrong place. If they took the feeder away, they could use the machine as an ordinary platen.

Another member of the Association spoke appreciatively of the Saw Trimmer and mentioned that one of the great needs of the day was for a dead flat level mount for half-tone work. He was confident a machine such as they had seen would save many hours in the machine-room and would give better results than were obtained by the present make shift methods.

Answering other questions, Mr. Beck observed that they had no difficulty in rolling any forme they had been able to get on to the machine. When they said that the size of the work that could be done was limited to a sheet 12 in. by 18 in., that was the size of the sheet that the feeder would handle. Actually, if they cast the feeder on one side, the machine would deal with a larger size. Referring to the inking mechanism, Mr. Beck observed that the machine had been designed with the intention of coping with the largest amount of work that was done by platen machine users.

Mr. Dawson described the Chandler and Price machine as very good for light work. When he first had dealings with the Lanston Monotype Corporation 25 years ago, he never dreamed they were going to develop in the way they had done. After putting the saw trimmer to a pretty severe test, he had nothing but praise for it.

Mr. Beck remarked that they had many batteries of Miller machines running both in provincial towns and in London, including the Stationery Office Works at Harrow, where there were three units and a saw trimmer in use. Altogether there were over 16,000 of the Miller Units operating throughout the world.

Mr. Jarvis said he had seen several Miller machines in America as well as in Germany and France, and they appealed to him as a very useful article to have in their works. He thought it was a machine of which the Corporation had every reason to be proud. As to the feeder, that seemed to him perfection.

Irish Papermaker's Troubles.

Sir John Irwin's Motor Car "In Action."

During the recent hostilities in Dublin, and on the opening day of the "battle," a five-seater private touring car, the property of Sir John Irwin, J.P., paper manufacturer, was seized by the "Irregulars," and used by them for raiding the Rathfarnham district of South County Dublin. During the time these "Irregulars" had possession of this car, they had the audacity to use it in an abortive attempt to raid Sir John's mills, thus adding insult to injury. The car was subsequently captured by the Provisional Government's troops, with whom it has been ever since on "active service" in the rounding up of the "Irregulars" in the mountainous district of Blessington, co. Wicklow.

The Dublin papermakers have been passing through an anxious and trying time.

THE secret of the maintenance of wages and reduction of costs is in the production of more with the same wage and other charges, says Sir Charles W. Macara.

Printers' Sports at Leeds.

Spotted by Heavy Rain.

In aid of various charities connected with the printing trade the Leeds and District Printing and Allied Trades held their second sports gala on the Headingley Football Ground on Saturday, July 8th. Unfortunately the gala was spoiled by wretched weather, heavy rain falling the whole time the various events were contested. The objects for which the sports were promoted will not suffer in a financial sense, as the proceeds are derived from the sale of tickets beforehand. During the afternoon, despite heavy rain, the St. Aidan's Gymnastic Club (ladies) and Salem Gymnastic Club (men) gave a very fine combined display. The prizes were presented by Mr. Frank Petty (president of the executive) and Mrs. Petty. The following are the results of the principal events:—

50 Yards Handicap, boys under 13.—1, R. Ainley (4 yards); 2, H. Parker (3); 3, A. Shanks (4).

40 Yards Handicap, girls under 13.—1, D. Clement (14); 2, E. Asquith (5); 3, C. M. Kilner (7).

100 Yards Handicap, boys under 16.—1, L. Ward (5); 2, F. Goldthorpe (4); 3, C. H. Parker (7).

60 Yards Handicap, girls under 16.—1, L. Moore (6); 2, L. Burton (4); 3, E. M. Briggs (6).

440 Yards Handicap (Chorley Trophy).—1, G. W. Bickers (17); 2, W. E. Howland (10); 3, A. Braithwaite (32).

75 Yards Handicap for women (Peebles Trophy).—1, M. E. Cain (4); 2, E. Escreet (5).

100 Yards Handicap for men (Dickinson Trophy).—1, E. C. Sewell (7); 2, W. Bondman (3); 3, W. E. Howland (scr.).

Tug-of-War, Works teams, men (Jubb Shield).—Geo. Mann and Co., Ltd., beat Leeds Technical School.

Tug-of-War, Works teams, women (Richardson Shield).—Alf. Cooke, Ltd., B Team beat Alf. Cooke, Ltd., A Team.

One Mile Flat Race (Gilby Trophy).—1, F. Ledger (20); 2, J. F. Bland (25); 3, E. Wellborn (20).

400 Yards Women's Relay Race for Works Teams (Linotype Cup).—1, Electric Printing Works, Ltd., A. Team; 2, Electric Printing Works B Team.

60 Yards Veterans' Handicap, age over 50.—1, S. Wortley (2); 2, J. H. B. Pearson (3); 3, S. Craven (scr.).

One Mile Relay Race for Works Teams.—1, Beck and Inchbold; 2, Petty and Sons (Leeds), Ltd.

220 Yards Hurdle Handicap.—1, J. Marshall (13); 2, H. Wilkinson (3); 3, L. Pyrah (10).

440 Yards Obstacle Handicap.—1, J. V. Sorton (12); 2, A. Senior (16); 3, J. F. Robertson (21).

Three-quarter Mile Ladies' Walk.—1, E. Asquith; 2, L. Demaine; 3, B. Blackburn.

American News-Print Production.

Giving May statistics, the News-Print Service Bureau (N.Y.) states: All the companies reporting produced 207,324 tons and shipped 208,510 tons during May. Shipments exceeded production by 1,186 tons. Production figures include 842 tons of hanging, of which 403 tons were made in Canada. The average daily production of news-print paper by the mills reporting for May amounted to 92.0 per cent. of the average daily output during the three months of greatest production in 1920 or 1921, with allowances for new machines.

Comparing the production during the first five months of 1922 with that of the same period for 1921, the United States companies reporting show an increase of 42,701 tons, or 9 per cent.; the Canadian companies an increase of 104,645 tons, or 33 per cent., and the total of all the companies reporting shows an increase of 147,346 tons, or 19 per cent. Strikes at the mills in 1921 largely account for the big difference in production during these periods.

Stocks during May decreased 418 tons at United States mill points and decreased 351 tons at Canadian points. Total stocks at all reporting mills amounted to 28,343 tons, or 769 tons less on May 31st than on April 30th, and were equivalent to 3.4 days' maximum production.

AN Advertisement is always working.

Printers and Benevolence.

Another Great Effort by the Printing and Allied Trades Charity Sports Association.

Printing and benevolence are almost synonymous terms. Few industries can boast of so many and such successful efforts for the benefit of those engaged in their operations as our own particular craft. The Pensions Corporation, perhaps, stands preeminent among the efforts; but there are other splendid movements, represented by such glorious institutions as the Lloyd Memorial Seaside Home, the Caxton Convalescent Home at Limsfield, the Alf Evans Convalescent Home and the Natsopa Sanatorium. All of them have been singularly successful, and the reason is the remarkable readiness with which men have come forward to labour on their behalf. That response to these activities has been generous is a fortunate circumstance; but the opportunity for such response would not have been presented without the hard and unremitting work of the organisers. How much time and energy are devoted to the cause it is impossible to calculate or to indicate. The results only are apparent.

Stamford Bridge Meeting.

One of the many movements set on foot to help these worthy objects is the Printing and Allied Trades Charity Sports Association, which held its annual event with such pronounced success on Saturday at Stamford Bridge. One marvels at the enthusiasm with which the officials promote and carry out so ambitious a programme. This sports gala is not only a great benevolent effort; it is also an athletic fixture of note. The work of preparation is now really colossal. It began, of course, many years ago as quite a modest proposition; but it has since grown until the resources at Fulham are required to accommodate it. During the 26 years of its existence, it is calculated that something like £20,000 has been raised by the Association for printing charities, and last year a record number of pensions were created.

Those who have been at the back of the Association must be proud men, and the tenacity with which they have stuck to their task is responsible for the success achieved. Credit for the inception of the Association, which was founded in 1896, is due to such gentlemen as Mr. H. F. Parker, who is still the general hon. secretary, Mr. W. A. Fricker, the assistant hon. secretary at the beginning, Mr. W. Hicks, who has occupied the office of chairman all along, and Mr. C. H. Pushee, the hon. assistant secretary. Others, also, have helped on the work enormously, and not least the various presidents. In office last year, Mr. Chas. H. Roud gave the Association a splendid backing; and now Mr. W. R. Masters, of the Fleetway Press, is no less enthusiastic in the cause. Mr. Masters is described in the annual report of the Association as "one of the most up-to-date and enterprising master printers in the Metropolis," and his interest in the object of the Association is exemplified by the fact that he undertook to pay the total expenses of Saturday's gathering, including the handsome prizes.

From the outset it has been the object of the promoters to bring employers and employed in the printing trade together, and in this way smooth over some of the workshop difficulties. Much good has resulted from the fraternisation that has taken place, and still more may be achieved with a development of the social and printing element.

A Successful Day.

The 27th sports meeting at Stamford Bridge on Saturday was a great athletic success. This function, which ranks as one of the most important social events in the printers' year, was well supported by a large "gate," which easily exceeded that of former years. A well-arranged programme was presented, which comprised over one thousand entries, in which there were some very big fields and many exciting finishes. A shower of rain that came on three-quarters of the way through the proceedings seemed likely seriously to interfere with the smooth running of the afternoon's programme, but the enthusiasm of Mr. W. C. Jewell, the energetic hon. secretary of the athletic section, and the officials was not to be damped, and they carried on to a happy

conclusion. During the proceedings the L.S.C. military band, under the conductorship of Mr. Wm. Avery, rendered a well-appreciated selection of music. A detachment of No. 68 (City of London) Division (Printers' Own), St. John's Ambulance Brigade, was in attendance.

Amongst those present besides Mr. W. R. Masters (the president) and Mrs. Masters, were Major J. Arnold Wilson, Mr. Parham (*Daily Chronicle*), Mr. B. Bennison (*Daily Telegraph*),

ship for the shield presented by Mr. E. A. Braddick, was secured by the National Union of Printers, Bookbinders, etc.; and the tug-of-war competition for the Walker-Usher Challenge Cup (presented by Messrs. Walker Bros.) was secured by the Vauxhall Printing Works.

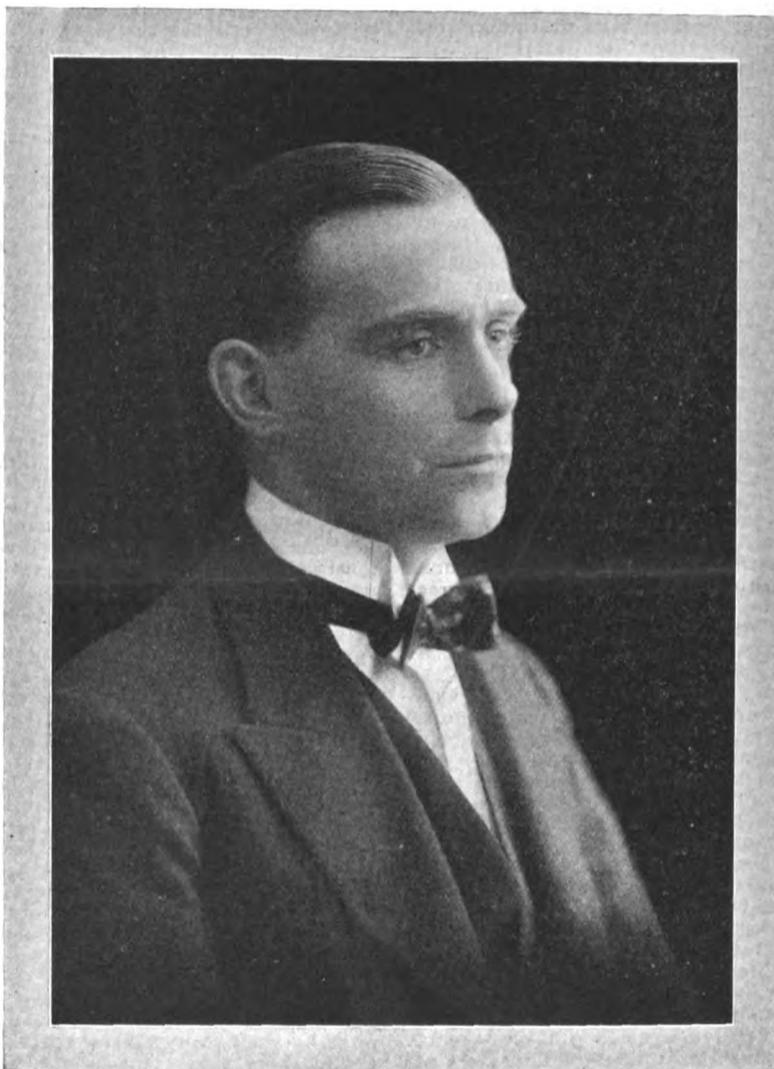

The following is a detailed account of the principal trade events:—

Half-mile Open Cycle Handicap (prizes by Messrs. Usher-Walker, Ltd.).—Heat winners: E. Girotti, F. W. Hand, D. H. Genner, J. T. Scott, J. J. Lee. Final: Scott, 1; Lee, 2; West, 3; Girotti, 4. Won by half a wheel. Time, 1min. 8 4/5sec.

Tug-of-War.—Final: Vauxhall Printing Works beat Britannia House team by two pulls to nil.

"Fryotype" Team Championships.—100 Yards.—Final: R. Young, Wyman's, 1; C. Wilkinson, Waterlow's, 2; C. Montgomery, *Daily Mail*, 3. Won by half a yard; a foot between second and third. Time, 11sec.

880 Yards.—A. J. Smith, Wyman's 1; J. H.

Mr. W. R. Masters.

and Messrs. A. Chadwell, E. A. Lowe, A. H. Munday, P. M. Parish, H. F. Parker (general secretary of the Association), F. C. Peacock and A. Oddy (treasurer).

Mr. and Mrs. Masters were greeted with a hearty reception on their arrival, and Mrs. Masters, who presented the prizes, was handed a handsome bouquet by little Miss Irene Jewell.

Wyman's Win the Fryotype Championship.

Great interest was shown in both the open and trade events. One of the principal of the latter was the competition for the Fryotype Shield, presented by Mr. John Fry, which embraces a series of events, comprising 100 yards, 880 yards, one mile running and one mile walking. This trophy was easily gained by Messrs. Wyman and Sons (Printing Department), who secured the first place in the 100 yards, first in the 880 yards, and second in the mile flat, the aggregate score being 8. Other trade attractions included the two mile Linotype Team Scratch Race (presented by Linotype and Machinery Limited), which was won by Messrs. Waterlow and Sons, Ltd.; the Trade Societies' one mile Relay Champion-

Fletcher, Truscott's, 2; A. H. Shute, *Daily Mail*, 3. Won by five yards. Time, 2min. 7 1/5sec.

One Mile.—P. F. Goodyer, Cassell's, 1; A. J. Smith, Wyman's, 2; J. H. Fletcher, Truscott's, 3. Won by ten yards. Time, 4min. 50 1/5sec.

One Mile Walk.—F. G. Easto, *The Times*, 1; H. V. L. Ross, *Daily Mail*, 2; F. Creasey, Mansell's, 3. Won by five yards. Time, 7min. 5 2/5sec.

Trade Societies' Mile Relay Championship.—London Shop Associations and Chapels Council, etc. (A) (G. F. Goodyer, T. Milton, W. Commons and T. W. Woodman), 1; London Shop Associations and Chapels Council, etc. (B) (J. H. Fletcher, G. Gatehouse, A. E. Findall and T. W. Baugh), 2. Won by fifty yards. Time, 4min. 1sec.

Linotype Team Race.—Two Miles.—A. J. Smith, Wyman's, 1; W. W. Philp, Waterlow's, 2; A. W. Hubbard, Dane and Co., 3; G. Dodkins, Carmelite A.C., 4; P. F. Goodyer, Cassell's, 5; R. W. Chisholm, Waterlow's, 6. Won easily by forty yards, five separating second and third. Time, 10min. 30 4/5sec. Team placings: Waterlow and Sons, 2 6 13—21 points; Carmelite A.C., 4 8 12—24; Wyman and Sons, 1 7 17—25.

One Lap Obstacle Race.—S. Nicol, 1; J. W. Smith, 2; W. Burge, 3. Won by fifteen yards. The chief open event was a fourteen miles' road race, which resulted in P. A. Selman being first home, V. S. Callard second and R. Norton third.

Mr. W. C. Jewell merits congratulation upon the capable way on which he managed the whole of the proceedings, for in his ability as an organiser the success achieved in no small degree depended.

Mr. W. R. Masters.

President of the Printing and Allied Trades Sports Association.

Mr. W. R. Masters, who was this year elected president of the Printing and Allied Trades Sports Association, not only takes a keen interest in athletics, but is a master printer of great enterprise. He is managing director of the Fleetway Press, Ltd., a very vigorous unit in the printing industry. As a matter of fact, the Fleetway Press, Ltd., is a combination of units, since it incorporates the "Electrician" Printing and Publishing Co., Ltd., the London business of Love and Malcomson, Ltd., and Bonnett and Shum. They cover every branch of the industry, and in addition to publishing 19 weekly periodicals, they are contractors to H.M. Stationery Office, the Physical Society of London, and other institutions.

Mr. Masters holds his large organisation together by infusing into it a spirit of comradeship allied with responsibility. The spirit of good fellowship and *esprit de corps* which exists in the Fleetway Press is something to be proud of. It is encouraged by the development of social amenities and the publication of a very lively house organ. The Fleetway Press has its own sports ground at Osterley Park, where every form of pastime is provided for throughout the year, while there are also fortnightly social gatherings throughout the winter. All these activities bring the members of the staff together in the most friendly spirit possible, and make life a great deal more pleasant than it often is where the head of the establishment, unlike Mr. Masters, neglects the human element in business.

Besides being a thoroughly capable master printer, Mr. Masters, as already stated, is also a keen sportsman. He is a close acquaintance of Georges Carpentier, who has visited the Fleetway Press on several occasions, and on one recent afternoon spent the whole time manipulating the machinery in the various departments.

Mr. Masters, therefore, was the right person to have at the head of affairs for the annual printing sports gala which was held at Stamford Bridge on Saturday. Of the work of the Association Mr. Masters speaks in the highest praise.

"I think it is perfectly wonderful," he remarked to a representative of the *British and Colonial Printer and Stationer*, "the way the various organisers and secretaries of the different sections perform their work. They are imbued with the real enthusiasm of the amateur. Take Saturday, for example. Mr. Jewell, who was responsible for the arrangements, is a member of the printing craft, and I think he ran the meeting to perfection. Every event took place exactly to time, and the whole thing went like clock work. Mr. Bennison, the sporting editor of the *Daily Telegraph*, who attends an enormous number of these gatherings, remarked that he had never been to a meeting where there had been such perfect organisation.

"Throughout the whole Association, in fact," added Mr. Masters, "there is a fine note of *esprit de corps* and good fellowship, and one of the outstanding features is the fact that so many employers attend the ordinary committee meetings, and give the Association the benefit of their advice.

"The printing industry has every reason to be proud of its chain of charities. Each union has its convalescent home or its hostels for poor people, and every one of the institutions can stand the minutest examination. With very few exceptions, the charities are carried on by voluntary effort, and very largely by those who are actively engaged in printing operations.

"The future of the industry depends upon developing the spirit of social intercourse between employer and employed, and I am glad to think so much has been done already in this direction in our own particular craft."

recently on the Report stage. Actually there is not a strong opposition; and although the Bill has been before the House at intervals covering a period of over twenty years, it has never been rejected on account of votes. The real trouble is that it is a private member's bill and as such is always open to be washed out by any one or other of the artifices to which opposing interests may resort. There is a real need for the measure, and no logical argument can be brought against its provisions. The only claim that can be put forward by opponents is that there may be in some districts a diminution of revenue from machinery users who are at present unfairly assessed as compared with other districts. As the law now stands, any local surveyor or assessment committee may take for assessment the whole or any part of the machinery and plant in any factory or workshop. It is said that in Leeds there are four different bases of assessment. Clearly there is an imperative need for a new law on the subject of rating of machinery, but the only prospect of carrying a bill through the Commons successfully will be when the Government adopt it as a measure of their own.

Price of Paper.

IN announcing their decision on the printers' wages question, the Industrial Board recognised the fact that paper prices had fallen very materially. Tacitly it seemed to be implied that at least the papermakers had done all that could be expected from them toward bringing down the price of printing. It is doubtful if all printers fully appreciate the extent to which prices, particularly of the lower grades of paper, have fallen compared with their war figures. Even against pre-war prices the ratio of difference rarely exceeds two to one, and in a very large number of cases to-day's quotations for printings and E.S. papers are much less than twice the pre-war price. In fact, there are many M.F. and S.C. printings and esparto writings that can be secured to-day at figures ranging between 50 per cent. and 75 per cent. over those of pre-war. It is difficult to conceive how further falls can occur for a long time to come. Railway and coal concessions of any importance are out of the question this year, and materials for papermaking are very likely to take on an upward tendency as winter approaches. Taking the two things together, i.e., a definite zero point for printing papers and a stable phase of production costs in the printing trade, we have two very important elements for the creation of buying confidence, both as regards printers and users of printing. It is for just such a period as that we are now entering upon that paper users have marked time. Will they now begin to march on?

The Paper Market.

PAPERMAKERS and those who deal in paper are not too cheerful at the moment. Although it is generally admitted that there is no set back, the improvement is not anything like so extensive as it ought to be. Both at home and abroad there are too many disturbing elements to allow of the industry making any decided progress. In this country we have the printing trade in a state of considerable uncertainty, in spite of the recent award, with the result that orders for paper are withheld, at all events, for the time being. In some directions export is said to be looking up, but here again markets abroad are too unsettled to permit of big business. At the same time a certain amount of improvement is taking place at the mills. News plants continue busy, and elsewhere rather more orders are being received. But even at the best, the position leaves ample room for improvement, and this apparently is only coming very slowly. There are some people who give up hope of seeing much improvement before the autumn.

 Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, JULY 20, 1922.

The Wages Position.

THE latest developments in the wages negotiations, as reported on another page, indicate that although peace throughout the industry is not yet assured, there are grounds for hope that the difficult and disturbing subject of wages adjustment may ere long have been settled in some way or other in respect of all the unions concerned. Although the Industrial Court's decision has been followed by the taking of a ballot of the Typographical Association members, it is a very important fact that the Executive of the T.A. definitely recommends the acceptance of the decision of the Court. Such recommendation must carry great weight, and presumably the members of this important trade union will recognise the wisdom of this advice in the prevailing conditions. To accept the decision will not only be to take the more honourable course, but will tend to shorten the dispute in respect of other unions, and thus hasten the establishment of the very necessary state of peace in the printing trade.

Halfpenny Post Restrictions.

IT is gratifying to note that the subject of the restrictions upon the use of the halfpenny post is receiving energetic attention by Chambers of Commerce throughout the country. The regulation that matter for transmission at the halfpenny rate must be posted before 3.30 p.m., and earlier in some cases, means that many firms must have their postings ready for dispatch from their offices soon after 2 p.m. Much evidence is available of the trouble caused generally to traders by the consequent holding up of orders, invoices, and other matter, and the Post Office by removing or modifying this regulation would be benefiting the whole of the country's commerce as well as making a concession specially welcome to the printing industry.

Rating of Machinery.

THE Machinery Rating Bill has a considerably lessened prospect of getting through the Commons since its opponents talked it out

Printing Trade Wages.

Settlement Not Yet General.

Whilst large sections of the printing industry have, as we have previously announced, agreed to wage-reduction, and reduced wages are accordingly operating in these quarters, there remain, nevertheless, a number of unions in regard to which a final settlement has not yet been established.

The Typographical Association.

The position with regard to the Typographical Association is a curious one. It was generally assumed that as the T.A. had agreed to submit the wages dispute to the Industrial Court, they were prepared to accept the Court's decision as final. A ballot paper was, however, issued to T.A. members during last week-end asking for their approval or otherwise of the award of the Industrial Court. A circular letter, which accompanied the paper, reported upon the decision of the Industrial Court, and added: "It may be well to point out that while decisions arrived at by the Industrial Court have in the past been accepted by both sides, such decisions are not legally binding. The Industrial Court was informed that no matter what the decision of the Court might be, a ballot of our members would be necessary to either accept or reject the findings of such Court." The letter continues: "It is generally admitted in all quarters that the present industrial and economic conditions tend to strengthen the position of the employers rather than that of the workers. Taking into consideration the whole of the present factors and future possibilities, the Executive Council are not satisfied that this is the time to enter upon a fight. The Council believes that the better course is to preserve and even strengthen the fighting power of the Association for a time and an occasion that will ensure more favourable prospects. The Executive Council, therefore, conceive it to be their duty to recommend the members to accept the decision of the Industrial Court."

The ballot papers were to be returned to the branch secretaries by the morning of Tuesday last, July 18th, and the result of the ballot should be known before the end of this week.

A circular letter to branch secretaries has been issued by the Executive Council of the Typographical Association, dated July 13th, containing the following passage: "It is possible that some employers will attempt to reduce wages before the result of the ballot is known, and in some cases employers may attempt to do so irrespective of the vote. Members are therefore instructed that any attempt to reduce wages before such reduction has been agreed to by a majority vote of the members of the Association must be resisted, and in cases where a reduction is insisted upon such insistence must be regarded as a termination of engagement."

The Employers' Attitude.

We understand that at Tuesday's meeting of the Council of the Federation of Master Printers the Council endorsed the action taken by their National Wage Basis Committee in instructing their members to make this week from members of the T.A. the reduction awarded by the Industrial Court. A statement was presented showing that at the Industrial Court the representatives of the T.A. for the first time raised the question of submitting the award to a ballot of their members, and it was pointed out that the responsible officials of the T.A. with the full approval of their executive had signed an agreement that the whole question should be referred to the Industrial Court for settlement, and it was on this understanding that the notices were withdrawn.

Position of Other Unions.

There is little change, we understand, in the position as it affects the various London unions which we mentioned last week as continuing negotiations with the employers. A conference between the employers and the London Society of Compositors has been arranged for to-day (Thursday), and one with the Printing Machine Managers on Monday, to be followed by conferences with other unions later.

AN antiquarian section devoted to book-binding has been added to the Book Fair now being held in Florence.

Federation of Master Printers.

New Officers Elected.

At a meeting of the Council of the Federation of Master Printers held at Stationers' Hall on Tuesday Mr. James MacLehose, M.A., L.L.D., retired from the presidency of the Federation and Mr. R. A. Austen-Leigh was unanimously elected president. Mr. J. C. Coppock, was made senior vice-president, and Lieut.-Col. H. Rivers Fletcher junior vice-president. Expressions of appreciation of the valuable services rendered to the Federation by Dr. MacLehose were made by representatives from every quarter of the United Kingdom.

Personal.

SIR PHILIP H. WATERLOW, who is 74 years of age, in descending the stairs at his London residence last week slipped and hurt his back. Although the injury is not serious, the doctor ordered several days' complete rest, which have brought much improvement.

SIR PHILIP is the eldest surviving son of Sir Sydney H. Waterlow, to whom he was apprenticed at Stationers' Hall in 1861. He is chairman of Waterlow and Sons, Ltd.

VISCOUNT NORTHCLIFFE's condition is reported to be less satisfactory. His lordship was fifty-seven on Saturday.

THE Council of the Federation of Master Printers on Tuesday expressed its thanks to Mr. George W. Jones for his work as representative of the Federation on the special committee on type faces and modes of display for Government printing, whose report is dealt with elsewhere in this issue.

MESSRS. HARRISON AND SONS, LTD., of St. Martin's-lane, W.C., have honoured their Hayes manager, Mr. Charles Warne, by electing him on the board of directors. Mr. Warne is responsible for the organisation and development of the Hayes branch of the business, where the British postage stamps and other specialised classes of work are produced.

TO CELEBRATE the occasion Mr. and Mrs. Warne were entertained by the Hayes staff on July 1st, when a very enjoyable day was spent in a roam through Bucks. Lunch was provided at Amersham, when Mr. Warne was presented with a very handsome hall clock from the staff as a mark of their esteem and appreciation.

MR. A. BRODIE FRASER, for eleven years on the editorial staff of the *Daily News*, was recently presented by his colleagues with a gold watch on leaving to take up the post of news editor of the *Sunday Times*.

MR. WILLIAM WASHBURN NUTTING, editor of the *Marine Journal*, of New York, announces that he has forwarded a reply to the Duke of Leinster accepting his challenge for a race across the Atlantic single-handed in a ketch. Mr. Nutting offers to build a suitable boat in 1923.

IN the June examinations for Technical Science Degrees at Manchester University, Mr. Thos. Hodgkinson was placed in the Second Class of the Pass Lists. He has been studying in Manchester for three years and has specialised in paper manufacture. He is a member of the Technical Section of the Papermakers' Association.

MR. H. MURRAY MERK, a gentleman well known in the news-print and wrappings market, having been London representative of an important Manchester house, and more recently of a London firm, has now joined the travelling staff of Messrs. Spalding and Hodge, Ltd., Drury House, London, W.C.

MR. T. H. INGLEBY, paper agent, Palatine-buildings, Manchester, has appointed Mr. H. F. Beard as his representative in Manchester and district. Before joining the army, where he held a commission, Mr. Beard had some years' papermaking experience at the mills of Messrs. Olive and Partington, Ltd., Glossop.

Printers' Pension Corporation

Duke of York's Good Wishes.

The Duke of York will preside at the 95th annual festival of the Printers' Pension Corporation, which will be held in London on 15th November.

To promote interest in the function a luncheon was given at the Savoy Hotel July 12th by Sir William E. Berry, Bart., to representatives of printing and newspaper interests.

Among those present were Lord Riddell, Lord Waring, Sir Charles Wakefield, Sir Arthur Spurgeon, Sir Herbert Morgan, Sir William Waterlow, Sir Ernest Benn, Sir Alfred Butt, and Lieut.-Colonel Lawson.

The following message was received from the Duke of York:—"The Duke of York desires to say with what pleasure he is looking forward to presiding at the Printers' Pension Corporation Festival on 15th November. He is extremely gratified to know that so many friends of the institution are meeting to-day to promote the success of the festival. His Royal Highness looks upon this luncheon, which Sir William Berry has so kindly given, as a very happy thought, and most helpful to the object we all have in view."

The "Anomalous" Overseer.

SIR,—I have to thank your correspondent "H. M." for his courteous reply to my letter, and to assure him that I had no desire to seem unduly critical of the terms used, being more deeply concerned with the intention of the writer and the views of those whose interests he represented.

His reply, therefore, is in the nature of an explanation, and a challenge to deal with a difficult question which is largely of a personal character. While I certainly did not think your correspondent had an axe to grind, it was but reasonable to infer that he had in mind the outline of a scheme to formulate as a basis for consideration and discussion.

The absence of this being frankly admitted, it would serve no useful purpose to deal further with the subject at the present stage. But upon one point your correspondent may rest assured. There is little immediate prospect of overseers being "automatically transferred" to a section of another association. Principle will ever remain a stronger force than mere expediency. The P.M. and O.A. has a membership approaching fifteen hundred in Great Britain and overseas. The views among these will surely vary upon the question of principle involved. All the same, we should welcome the consideration of a concrete proposal from "H. M." or the interests he represents.

Yours, etc.

E. H. BERRYMAN,

Editor the *Managing Printer*.

Malden, Surrey.

July 17th, 1922.

JUDGMENT was given in the Divisional Court on Monday in the case, the King v. the Publishers of the *Patriot* Newspaper and Another. This matter arose out of comments made in the *Patriot* by Brigadier-General Prescott-Decie concerning the death of Field Marshal Sir Henry Wilson. On the ground that this comment was calculated to prejudice the fair trial of two men who stand charged with the murder of Sir Henry Wilson, a rule had been obtained calling upon Brigadier-General Decie and the publishers of the newspaper to show cause why a writ of attachment should not issue against them for contempt of Court. After hearing counsel the Judges came to the conclusion that this application was not made *bona fide* in the interests of the accused, because there was no real probability of the jury being influenced by what was published. The rule was accordingly discharged, without costs.

THE "North China Commerce," a monthly publication reviewing finance, commerce and industry in North China, is an attractive and enterprising periodical printed by the *North China Star*, Tientsin.

(printers, stationers, etc., London).—Satisfaction in full (a) as to £500 on July 1st, £500 on November 23rd, 1915, and £500 on July 1st, 1917, of debentures dated September 22nd and November 6th, 1902, and April 25th, 1903, securing £1,500; (b) on July 1st, 1918, of agreements dated May 21st, 1906, May 30th, 1907, May 7th, 1908, May 30th, 1910 and May 20th, 1912, relating to debenture for £2,000; and (c) on July 1st, 1908, of a collateral security dated July 22nd, 1914.

JOHN S. DOWNING AND SONS, LTD. (manufacturers of stationers' sundries, etc., London).—Debenture charged on company's undertaking and property, present and future, including uncalled capital, dated June 29th, 1922, to secure all moneys due or to become due from company to Barclay's Bank.

BANKRUPTCIES, etc.

THE PERFECT MANUFACTURING Co. (Robert Leslie Wise and James Geo. Marsden, trading as), wholesale manufacturing stationers and pattern card makers, late of 10, Union-street, E.C.—The debtors attended at the London Bankruptcy Court last week for public examination upon accounts showing liabilities £951 against assets valued at £10. Marsden was present, but a solicitor who appeared on behalf of the debtors said that Wise was at present on a ship which went backwards and forwards to the West Indies, and he was only home for one week in every five. The debtor sailed only on the previous day, and would be away for five weeks. The Registrar said the debtor Marsden had attended time after time, and it was not fair to him to hold over the examination, but Marsden said he would rather wait until his partner returned. Eventually the registrar adjourned the examination until November 8th in order to give Wise a further opportunity to attend.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

F. W. Cooke and F. O. Toll, advertising agents, at 4, Duke-street, Villiers-street, Charing Cross, W.C.2, under the style of Cooke's Publicity Agency.

A. Sheppy and W. E. Perrett, publishers, 44, Spencer-road, Bedford, or 43, Bromham-road, Bedford, under the style of Allyn Sheppy.

Paper Bag Wages.

The Paper Bag Trade Board (Great Britain) have sent notification to the Minister of Labour that they have varied minimum rates of wages for male and female workers in accordance with the provisions of their notice of proposal, dated April 21st, 1922. The Board have asked the Minister of Labour to confirm the minimum rates as varied, and to bring them into operation as from August 1st, 1922.

The minimum rates, as varied by the Trade Board, are based on a sliding scale dependent upon the cost of living index figure, as published in the *Labour Gazette*.

Notice will be sent to all employers in the trade who are known to the Trade Board should the minimum rates, as varied, be confirmed by the Minister of Labour, and of the date from which they become effective. Copies of the notice, if and when issued, and further particulars with regard to the minimum rates may be obtained on application to the Secretary of the Trade Board at the Office of Trade Boards 7-11, Old Bailey, London, E.C.4.

UNDER the failure of Mr. John Bradley, papermakers' agent and merchant, of 37, Queen Victoria-street, E.C., and 15, Bankside, Southwark, S.E., an application has been made by the bankrupt for his discharge, and a hearing has been fixed for the 26th inst.

"INEXPERIENCE of the paper trade; heavy trade expenses; and inability to obtain adequate orders." These are the causes of failure as alleged by Ernest Hopewell of 14, St. Saviour's hill, Leicester, and carrying on business at Leicester as Hopewell and Co., printers and paper merchants, in respect of whose affairs a statement has been issued.

MESSRS. PERCY WESTBROOK AND Co., paper agents, 28, Corn Exchange buildings, Manchester, have been appointed by Messrs. Wm. Nash, Ltd., St. Paul's Cray, Kent, manufacturers of high grade tub-sized papers, to act as their agents in the Midlands and North of England.

*The LUDLOW is a better system for
display composition—you want to know
the real facts.*

IF you knew that the LUDLOW would give you faster and better display composition—would eliminate costly distribution—do away with all sort hunting—make you ready for any job that might come in—you, too, would be using the LUDLOW System for display composition.

The “Daily Express” which recently equipped its composing room with the LUDLOW System says:—

“that if Caxton and Gutenberg could see the LUDLOW
“spitting out lines of great display type as regular as
“clock-work, beautifully clean and firm, and then see
“these same lines thrown back into the melting pot after
“ten minutes’ use they would die again, of apoplexy.”

Invitation is extended to all users of display types to call and have a practical demonstration of the modern LUDLOW method

LUDLOW-ELROD

Trade Notes.

L.M.P.A. DIRECTORY.—A new "List of Council, Committees, and Members of the London Master Printers' Association" has just been issued from the offices of the Association at 24, Holborn, London, E.C.1.

TRADE LECTURES.—The Worshipful Company of Stationers has prepared a syllabus of craft lectures to be held at Stationers' Hall, Ludgate-hill, E.C.4, at 6.30 p.m. on Fridays, on dates ranging from October, 1922, to March, 1923. The following are the dates, speakers and subjects:—October 13th, 1922, by Lord Riddell, "The Printing Business as a Career"; November 10th, 1922, by R. W. Sindall, F.C.S., "Paper for Books"; December 15th, 1922, by J. R. Riddell, "Training of the Craftsman"; January 12th 1923, by Harold Curwen, "The Printing Art"; February 9th, 1923, by E. J. W. Zaehnsdorf, "Bookbinding"; March 9th, 1923, by Sidney Hodgson, "Bibliography."

A Jewish art publishing company is reported to be in process of formation in Jerusalem, the capital to be invested being estimated at £20,000.

A MEZZOTINT by J. R. Smith, after Reynolds's "Lady Catherine Pelham Clinton Feeding Chickens," fetched £2,000 at Sotheby's. It was published in 1782 at 15s.

THE annual exhibition of the Northumberland Handicrafts Guild, opened last week in the Armstrong College Art Department, Newcastle, includes a loan book collection illustrating the history and development of book production.

A FIRST instalment of the modern prints collected by aid of the Print Fund of the Contemporary Art Society, which was inaugurated in 1919, has just been presented to the British Museum.

THE *Tatler*, founded in 1901 by Mr. Hugh Spottiswoode, Mr. Clement K. Shorter, and Mr. George King as a companion paper to the *Sphere*, has just completed twenty-one years of its existence.

THE Recorder of Dublin on Tuesday awarded £45,150 to the *Freeman's Journal* against the Dublin Corporation as compensation for malicious damage and destruction of its premises on March 29th–30th last, when they were raided by members of the Republican Army.

MR. H. N. BRAILSFORD has accepted the offer of the editorship of the *Labour Leader*, which journal is to be entirely reconstructed and published in London after the first week in October.

THE Printing and Allied Trades' Chess League competition has been won by Messrs. S. H. Benson Chess Club. The trophy, in the form of a solid silver chess queen, Staunton pattern has been presented to the winners.

THE *Strand Magazine* (Sir Frank Newnes and E. Hudson) has won the London Press Golfing Society's Foursomes Tournament for the Sir George Sutton Challenge Trophy for the second year in succession.

STATIONERY OFFICE.—In the House of Commons last week on a vote of £1,779,957 for the Stationery Office, Sir D. Maclean said the expenditure on this department was two and a half times what it was before the war. He moved the reduction of the vote by £100. Sir J. Baird (Under Secretary, Home Office) said that when the experiment of Government printing had been three years in operation a full inquiry into the results would be held. The amendment was rejected by 143 votes to 59, and the vote was agreed to.

MR. CHARLES R. MILLER, editor of the *New York Times*, died on Tuesday.

THE death has occurred of Mr. Robert Atkinson, journalist, Spennymoor, after a long illness.

MR. WILLIAM EDWARD POLLARD, the oldest journalist in Hertfordshire, has died at the age of 79. He was known as the "walking journalist," as he covered his engagements on foot.

WILLS.—Mr. Albert Frederick Bailey, of Dursley, Gloucester, printer, editor of the *Dursley, Berkeley and Shires Gazette*, Glos. (died suddenly, April 13th, £8,018; Mr. Lionel Edward Davis, formerly of the literary staff of the *Chester Courant and Cheshire Observer* and latterly editor of the *Western Weekly News*, Plymouth, £2,219.

THE late Mr. James Peter Ford, Glasgow, paper merchant, Edinburgh, who died on June 6th, 1922, left £14,029.

MR. WILLIAM S. CASE, M.A., of Oxford, at one time on the staff of *Literature* and later editor of a musical journal, who died on March 18th, left estate valued at £779, with net personalty £645.

PAPER umbrellas are to be manufactured by a new company formed in Bethel, Maine, U.S.A.

Printers' Managers and Overseers ASSOCIATION.

Annual Bowling Cup Competition.

THE Yorkshire Centre having challenged the Manchester Centre, who have been the cup holders for the past two years, the two contesting teams travelled to the Belle Vue Hotel, Sheepridge, Huddersfield, on Saturday last, and played for the championship. It had been stated that London, North Midlands, Birmingham and Liverpool would probably send teams, but none of these Centres was able to muster the necessary party. Yorkshire had selected a much stronger team than their opponents; therefore it was seen early on in the competition that the Red Rose would have to pass on the cup to the White Rose. The following is the result:—

YORKSHIRE.		MANCHESTER.	
J. King	15	F. Scouler	21
J. Thackrah	21	F. E. Robinson	9
A. Cawthra	21	E. Garrett	11
H. O. Pattinson	21	E. C. Balls	14
J. D. Wheelhouse	21	Ed. McVay	10
L. C. Mennell	8	Jos. Orrell	21
— Atki son	21	Young, A.	17
T. Booth	21	A. Hellowell	2
A. L. Hamer	21	Thos. Rignall	13
E. W. Rawstron	21	Chas. N. Knowles	13

Four Manchester members (Messrs. Jas. E. Mayo, A. Piggott, C. Goat and F. J. Hughes) were unable to play owing to Yorkshire not being able to muster more than ten.

An excellent tea was afterwards served at the hotel, when ten ladies (Mesdames Scouler, Robinson, Balls, McVay, Young, Hughes, Mayo, Taylor, Booth, Miss Edith Hughes) and the donor of the cup (Mr. Fred Seeley) along with several others sat around the festive board.

Everyone being satisfied, Mr. Thos. Rignall (president, Manchester Centre) said it was a pleasure to meet the Yorkshire friends, as his supporters had been looking anxiously forward to the day when they would have to fight to retain the cup so kindly presented by Mr. Seeley some years ago. Yorkshire was well known as a county of cricketers, but that day had shown Manchester that they were also keen players of the game that Drake so well loved. The meeting of old friends, the making of new ones, and the real Yorkshire welcome, all added to the social side of the Association's membership. Although the cup was not going back to Manchester, yet its members could look back upon happy occasions when contestants had met on various greens to wrest the cup from Manchester. No Centre was more worthy than Yorkshire to become the holders, and although he regretted passing it back to the donor, yet he and his colleagues would look forward to a future date when probably other contestants would enter the green.

Mr. Fred W. Seeley said the best team had won on a green that was fast and tricky. He wondered what had become of the various challengers who early in the year declared they would compete and carry away the trophy. Liverpool had failed to appear since the first occasion, and he wondered whether they were shy of Manchester or smarting under the defeat they had received. He was sure it was not a question of expense as they were probably one of the foremost Centres for dipping deeply into their pockets to help forward social events. There had been some comments as to what were the rules and conditions governing the cup. There were only two conditions: (1) any Centre desiring to compete must place not less than eight of their bonafide members on the green; (2) the competing Centres to automatically have the right to choose the green and make arrangements whether or not they are holders of the cup. He admired Yorkshire for being so considerate as to journey half-way to Manchester, as it showed true sportsmanship. He felt great pleasure in handing the cup to Mr. Mennell, as now it had been proved that Man-

chester was not invulnerable other Centres would next year take heart and join in the social event. (Applause.)

Mr. L. C. Mennell (president, Yorkshire Centre) said they owed Manchester an apology for not bringing a greater number of competitors. Holidays and business claims had robbed them of several good players who had hoped to be present. To Mr. Seeley he remarked that it was one of the finest outings they could have, as they met one another when business cares and worries were almost forgotten. Yorkshire never wanted better competitors than the Manchester members, and when they spoke of that Centre's secretary it was always as Wee Mac, because he was a Yorkshireman who had been adopted by the fraternity in the great City of Cotton. Probably he had done more than any other member to bring closer together the friendship of the two Centres, and whenever his name was mentioned in the Yorkshire Centre it was received as that of a true, staunch friend. In accepting the cup on behalf of his Centre, he thanked the donor and also the Manchester friends for the kind way they had met with, and accepted, defeat from Yorkshire. (Applause.)

WEE MAC.

Trade Union Matters.

A SPECIAL general meeting of the members of the Leeds branch of the Typographical Association was held on Saturday evening for the purpose of discussing the award of the Industrial Court on the proposals for reduction of wages. The negotiations leading up to the award were explained by Mr. W. Bottomley, the Leeds representative on the Executive Council, and Mr. Owen Cornellan, an ex member of the Council, also addressed the meeting. At the close of the meeting a resolution disapproving of the Industrial Court award was adopted.

THE Typographical Association has removed from Caxton Hall, Chapel-street, Salford, Manchester, to "Beechwood," Oak Drive, Fallowfield, Manchester, to which latter address all communications should be directed.

COVENTRY Typographical Association have elected Mr. A. E. Feltham as president and chairman, it having been decided to combine the two offices. Mr. W. Holmes has been elected vice-chairman; Mr. Walton, hon. sec.; Mr. J. E. Parbury, treasurer; Messrs. H. E. Caldicott, C. Hill, C. A. Gray, Cecil Gray, J. R. Austin, F. Parbury and E. Sage, committee. The meeting expressed great appreciation of the services rendered by Mr. J. Griffiths, who has removed from Coventry to London, and thanks were recorded to Messrs. Iliffe and Sons, Ltd., for their many kindnesses. A letter was read from Sir Edward Iliffe in reply to the congratulations of the association upon the honour conferred upon him.

NATSOPA MEMORIAL HOME.—Several acceptable gifts have been received by the National Society Operative Printers' and Assistants' Memorial Home. They include four handsome armchairs given by the Manchester Natsopa Women, a large brass telescope on tripod stand from the Newcastle Women Section, and a set of outdoor skittles from an Ashton-under-Lyne member.

EIGHTY-THREE branches of printing trade unions in the provinces have officially declared themselves in support of the principles and methods of the National Alliance of Employers and Employed.

MR. THOS. SPROAT, general secretary of the Amalgamated Society of Lithographic Printers, in his quarterly report to the members, urges them to keep alert to the developments ever taking place in connection with photo-litho and offset work.

GIDNEY ROURKE AND CO., LTD., offer a wide range of papers and boards, representing arts, covers, blottings and writings. Their quarterly price list gives the latest quotations.

Treasury Note Paper.

The care required in the manufacture of the paper on which treasury notes are printed is well described in an article which appeared recently in the *Daily Chronicle*.

Within twenty miles of London, says the writer, is a village which, not itself particularly prosperous, yet produces the raw material of boundless wealth. Day after day there flows from it, in a never-ending stream, the paper on which are printed the millions of 10s. Treasury notes constantly put into circulation.

The mill is a small one, employing about 300 people, of whom nearly half are women. It has long had a reputation for the excellence of its hand-made paper; nothing else is produced, and when the Government decided to issue paper money the contract for notes of the smaller denomination was placed here, and has remained ever since.

Nothing but the finest rags is used in the production of the paper, which must be light yet tough; every sheet is subjected to a breaking strain of 60lb. before it is passed.

Each process of manufacture is guarded with meticulous care, and there is an almost tiresome counting and recounting of the sheets before they emerge as the finished article and are handed over to the representatives of the Treasury.

It says much for the system that only one sheet, sufficient to print twenty notes, has gone astray. Hope has not yet died that some day this derelict may be found to round off a record which is well-nigh perfect.

To imitate a Treasury note, so far as the printing goes is not a very difficult matter. There are thousands of bogus "Bradburys" and "Fishers" in circulation abroad, though they very seldom find their way to this country. It is the peculiar quality of the paper, and especially the watermark, that make successful forgery well-nigh impossible.

If a ten shilling note is examined it will be found that the watermark is complete in itself, and exactly fits the paper. On the round note the watermark is of wallpaper design and is not identical in every case. Why this should be so only the Treasury, and perhaps not even that august department, could explain.

The result is that extreme care has to be

taken in making the paper, for if the watermark is a fraction of an inch out of line the sheet must be scrapped. Only when it has passed the severe tests imposed is the sheet admitted to the closely-guarded store, to be taken away in due course to the Treasury printing works.

French Bank-Note Printing.

To a recent issue of the *Daily Telegraph*, Mr. J. D'Arcy Morell contributed a description of French bank-note printing and the method of distillation and incineration adopted for the destruction of old and imperfect notes.

Describing the printing of new notes, he says: Behind two doors of plate-glass, each protected by massive iron bars like those of a prison, expert printers are at work turning out bank-notes, sheet after sheet, on a revolving roller, something like the earlier method of printing a newspaper. They printed before me sheets of several 1,000 franc notes, six to a sheet, which look clean and attractive in their fresh blue tint when, with a swift movement, the grey-haired printer in mechanic's dress received each sheet from the roller. In the meantime his younger assistant worked the printing press and watched intently the rollers and checked their rotations. He deftly pulled the sheets off as each in succession received the imprint. The older man then examined each note carefully, and if he dis-

covered any imperfection, however slight, he placed the faulty note in a basket beside him. Smoking is strictly forbidden in the workshop, and, indeed, I never saw more careful supervision over every act and movement of the workmen; yet it is done with so much discretion that it is hardly perceptible by these carefully caged and reliable workmen. Here they print millions of francs in paper money, as severely enclosed beneath their glass roof as the noble lions at the Zoo. Great precautions are no doubt necessary.

Canadian Tariff Change.

Supplement A (No. 22), issued on June 13th, 1922, by the Canadian Department of Customs and Excise, contains resolutions introduced into the Canadian Parliament on June 12th, proposing to amend the original Budget resolutions introduced on May 24th, 1922.

It is proposed to substitute or to add, as the case may be, certain Customs Tariff items for those contained in the original resolutions, with effect from May 24th, 1922. Included in these is the following item: Coated papers, when used exclusively in the production of magazines, newspapers and periodicals printed, published and issued regularly under regulations prescribed by the Minister of Customs and Excise. The respective tariffs indicated are: British preferential, 17½ p.c.; intermediate, 32½ p.c.; general, 25 p.c.

BELGIUM.

An agent in Antwerp is desirous of obtaining an agency for the sale of fine chemicals, etc., and also paper for bookbinding purposes. The agent in question previously worked for German and French firms, on a commission basis. He desires now to be placed in touch with United Kingdom firms. (Reference No. 701.)

CZECHO-SLOVAKIA.

A British resident in Bohemia wishes to obtain an agency, on a commission basis, for the whole of Czecho-Slovakia of manufacturers or export merchants of chemicals for the paper, etc., industries. Correspondence in English, French and German. (Reference No. 721.)

FRANCE.

A French agent, established at Paris, desires to undertake the exclusive representation of United Kingdom manufacturers of good class writing paper and envelopes (boxed). (Reference No. 723.)

New Motives in the Book Arts.

A circular announcing the issue of a volume entitled "New Motives in the Book Arts; Original Designs for the Use of Printers," by Mr. James Guthrie, of the Pear Tree Press, Flansham, Bognor, came to hand with a refreshing note.

Mr. Guthrie writes: "My idea is to explore definitely in the direction of fresh settings and decorations, and to give, if possible, a new impetus to the practical artistic aspect of printing. In England it is commonly thought that 'art' can be regarded as 'freakish' and expensive, or it is charged on the bill without being obvious in the job! Abroad, they seem to take the art seriously as an element of business, and probably make more use of English ideas than we do. Some of my work is frankly experimental, because I believe that is the only way in which new departures can be made. The co-operation of makers of all sorts of material is essential."

Mr. G. R. HALL CAINE has been appointed deputy chairman of Charles Marsden and Co., Ltd.

New Paper for Old.

Work at the London Paper Reelers and Cutters, Limited.

A little known industry which is of great value to all paper users is the salvaging of injured reels and the re-conditioning of flat paper. In this direction an important enterprise is being carried forward by the London Paper Reelers and Cutters, Ltd., who, after starting operations at Wapping in 1911, moved to larger premises at 2-4, Bermondsey-street, Tooley-street, London, where they are now established and where they have ample accommodation for their interesting and extensive operations. The company first took over No. 2, Bermondsey-street, in 1914, and at a later date secured the adjoining premises, and as these run to four storeys the amount of floor space is considerable.

The London Paper Reelers and Cutters can handle almost any problem in the way of turning paper to account, whether it be a 14 cwt. "news" reel or "tissue" for wrapping purposes. The difficulties which they solve are numerous and varied. Reels with crushed centres are turned out like new; large sized reels are cut to sheets, slit to smaller widths, reduced in diameter, or re-wound on different sized cores to meet the particular purpose for which they are required.

In addition to a mill reeler by Messrs. Milne of Edinburgh, which deals with reels on a large scale, the factory contains rotary machines for cutting several reels at one time which can handle anything from light board downwards. On one of these cutters a special device is provided for rapid handling of a large number of reel ends which are cut to offcuts for wrapping purposes. An ingenious little paper machine can turn out rolls of almost any width from 20 in. down to $\frac{1}{2}$ in. The ever-growing use of rolls of varying width is developing into a big business.

There are guillotines of different sizes which are devoted to the cutting of flat paper into different sizes.

A striking feature of the operations at Bermondsey-street is the recovery of any scrap of paper which is in good condition. Particular care is taken in the sorting of flat sheets. These are turned over by skilled hand labour and any that are imperfect are put aside for further treatment. The torn sheets and narrow trimmings, and, indeed, all the waste that is too small or too damaged to be cut or re-reeled is pressed by means of an electric baler and returned to the mill for re-pulping. Some 12 tons are handled every week, and this waste being entirely composed of white shavings is always in good demand on account of its remarkable cleanliness and regularity.

In addition to the sorting of printing paper, very particular attention is given to the packing of the reams. Skilled packers under the supervision of an experienced "finisher" ensure that all parcels are turned out abso-

lutely "mill packed," ready for despatch to any part of the British Isles, and owing to the excellence of their product the London Paper Reelers and Cutters have steadily built up a large connection among provincial newspapers using special sizes of paper on flat bed printing machines.

The operations of this company serve a very useful purpose, not only in the recovery of what used to be regarded as waste paper, but in rendering it serviceable in new sizes or for other purposes than those originally intended. There is, no doubt, even wider scope for such undertakings as the London Paper Reelers and Cutters as the services available become known to the vast circle of makers and consumers of paper.

The secretary and manager is Mr. H. C. Bailey, who is always ready to consider any new problem of re-reeling, slitting, etc., and the company claim to have machines to meet the most varied demands of the printing and paper trade.

Russian Printing Exhibition.

The trade unions in Moscow, in conjunction with various scientific and educational organisations, are arranging an exhibition of printed matter to take place in Moscow in July. The object of the exhibition is to institute a campaign for the improvement of the quality of printing and book production, which have deteriorated during the years of revolution. The falling-off has been mainly due to the absence of good paper and the difficulty of renewing machinery and type.

The exhibition will be a lesson in contrasts. Side by side with publications of the last few years illustrating the decline in technique and quality will be the high grade products of pre-revolutionary days. The history of Russian printing during the revolutionary years has not been entirely one of deterioration, says the *Russian Information and Review*, since a considerable amount of highly artistic printing has been done. Against examples of this will be set examples of technical improvement achieved in Western Europe during the same period.

The exhibits will include book covers, bookplates, colour printing, newspapers, periodicals, children's books, books and periodicals in foreign languages, war and propagandist literature, posters and placards, etc.

The aim of the organisers is not to present a comprehensive picture of the state of Russian printing during the revolution, but to show some of its best and worst features in order to arouse general interest in the attempt to secure the maximum improvement that the present difficult state of affairs will permit.

New Inventions.

Cylinder Printing Machines.

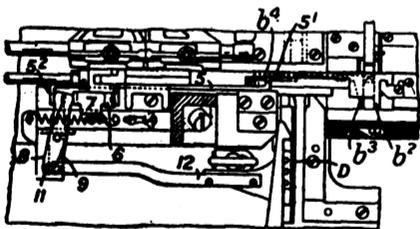

An invention by Mr. H. Bonham relates to cylinder machines of the travelling cylinder type fitted with a pivotally mounted bed which is tripped automatically or by hand on the return of the impression cylinder or when the machine is inking-up. The tripping of the bed may automatically effect the tripping of the inking apparatus. As applied to a machine with a continuously driven cylinder as described in Specification 160,685, a bed 3 is

pivoted at 12 to the frame and may be counterweighted to facilitate its being raised to printing position by a cam 13 on a shaft 14 geared to a shaft 17 which is connected by a lever and link to a hand-operated lever 20. In a modification, as applied to a machine for printing by the photogravure process, the shaft 17 is operated by a cam on the return of the bed so that the bed is out of the way of the scraper. The ink transfer roller 21 is normally operated by a pivoted cam 27 which is kept in its operative position by a roller 28 connected by a link to the bed trip mechanism, the actuation of which as described above moves the cam 27 out of its operative position.

Type Casting Machines.

An invention patented by the Lanston Monotype Corporation, Ltd., refers to machines of the kind described in Specification 8633/99, in which the type-grasping jaws of the carrier that conveys the type from the

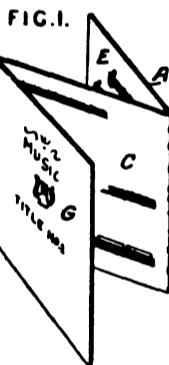

mould to the type channel are adjustably opened to correspond with the body size of the type, the jaw adjustment being connected with that of the type channel, and means is

provided for maintaining a definite opening of the jaws in proximity to the mould. The movable jaw b^3 which is spring-pressed towards the fixed jaw b^2 and is operated by a lever b^4 , as heretofore, is retracted by an adjustable Z-shaped stop 5, the bent end 5¹ of which rests in the path of the lever b^4 . The stop 5 is adjusted simultaneously with the movable type channel block D by means of a bar 12 attached to the block D and bearing against a pin 11 on a lever 8 which is pivoted at its centre to a second lever 9. The inner end of the lever 8 bears against the end of a spring-pressed slide 7. The lever 9 is pivoted at its outer end in the machine frame, and its inner end bears against the bent end 5¹ of the stop 5, which is thereby moved to the same extent as the block D. When the jaws are in the neighbourhood of the mould cavity, the slide 7 is engaged by an abutment 6 on the type-carrier so as to move therewith. The stop 5 is thereby caused to move at the same speed as the type carrier, so that a uniform opening of the jaws is maintained. Specification 6287/15 also is referred to.

Printing Sheet Music.

In this invention, which is patented by the Niantic Sheet Music Co., two pieces of music are printed on opposite sides of a sheet of paper which is also printed on each side with a title page corresponding to the piece of music on the other side. The sheet is folded in zigzag form, and the finished product has the two titles on the outside. On opening out the title page, the pages of the music appear

in correct order until the page with the title of the second piece occurs, and on further turning over, the pages of this piece are exposed to view. As shown in Fig. 1, applied to a sheet which is folded twice to form six pages, the title of piece No. 1 is printed on page G, and the piece of music corresponding thereto on the back of page G and on page C.

The second title is printed on page A, and the corresponding piece on the inside E of this page and on the back of page C.

Stationers' Hall Examinations.

Adjudicators' Awards in Spring Examinations,
Conducted by the Technical Examining Board.

It was early in 1921 that the important step was taken of constituting a body representative of the printing and allied trades to set and adjudicate upon tests of technical knowledge for those engaged in the industry. The Worshipful Company of Stationers—one of whose earliest functions was to test the technical efficiency of printers—was fittingly in the van of the movement, and a technical board was established which included not only members of the Stationers' Company but also representatives of various sections of the printing industry, employers and employed. Growing interest has been aroused by the examinations already held, and it was gratifying to note the large numbers of entries for the examinations which took place in the spring of this year.

Close on 500 students sat for the Stationers' Company and Printing Industry examinations at Stationers' Hall in May, and the awards have now been issued.

The following are the results of the various examinations:—

Blinding.

SENIOR.—J. C. M. Burke, A. Cottenden, E. Elliott, F. C. Gould (second place and £1 1s.), W. V. Pearce, S. H. Pilgrim, A. T. Quelch (first place and £2 2s.), H. H. Taylor, W. T. Warden, H. White, H. J. Wingham. A. H. Baggett, G. L. Duckett, S. H. Evans, F. C. Hand, R. B. Regent, C. D. Sherriff, D. S. Wood.

JUNIOR.—G. S. W. Brand, H. Deacon, H. W. Holliday (first place, £2 2s. and Stationers' Company's silver medal), G. T. Smith (second place and £1 1s.), A. W. Twitchings. F. Cumberland.

Costing, December, 1921.

FIRST CLASS.—R. Berrey, A. Bradford, E. Brett, W. C. Bunn, E. Cleverley (Miss), A. H. Cook, E. T. Denton, A. R. Emerson, E. Gray, J. H. Gray, R. C. Humm (second place and £1 1s.), B. J. Jones, A. H. Kendall, W. H. Kingston, E. W. Kirby, C. F. Medcalf, J. R. Mills, F. A. E. Moore, E. B. Morgan, S. E. Osborn, A. Payne (Miss), H. A. Pearson (first place and £2 2s.), F. W. Pullinger, G. Sheppard (Miss), W. H. Slark, W. A. Spiller, J. S. Toscenie, F. W. Turner, E. A. Weeks (third place and 10s. 6d.), R. F. C. Wilkins, F. Wilkinson, V. G. Willard, C. Willis, F. H. Wisdom, E. Wiseman (Miss), W. D. Young.

SECOND CLASS.—H. A. Allen, L. H. Almond, F. G. Bryant, A. Clarke (Miss), G. E. Dollery, G. E. Fish, E. A. Flindall, F. E. Godfrey, R. G. Gough, C. R. Hodgson, H. E. Hodgson, J. W. King, J. Lucas, R. Lucas, T. Nixon, W. Nixon, G. H. Poupard, R. Powell, I. Rindovitz, R. D. S. Rogers, S. F. Russell, E. G. Shrimpton, H.

Simon, M. Taylor (Miss), M. Williams (Miss), G. V. Willis.

THIS THREE-MAGAZINE LINOTYPE

(Model 4) can be equipped with three different body founts of Old Style or Modern Roman and three different founts of De Vinne, Clarendon, Doric or other display faces. Italic founts can be substituted for the display faces if desired.

Model 4
Linotype
with
Latest
Improvements

If all three magazines are not required for body founts, one of the magazines can be equipped with three, four, five, or six founts of display capitals, for the setting of headlines, etc., according to the display equipment required.

If additional type faces are required, extra magazines equipped with the necessary faces can quickly be substituted for those on the machine.

Tabular matter is set on this machine as well as ordinary run-on matter and headlines. It produces leaded matter as readily as solid matter, and also casts borders, clumps, and other decorative and make-up material.

A change from one magazine to another is simple and rapid; the operator makes the change in a few seconds without moving from his seat.

Immediate delivery of these machines can be given at a definite fixed price.

Printers contemplating installing a Linotype are invited to write us for a copy of a booklet entitled "Suggestions for the Installing of Linotypes." Amongst other useful information, it contains notes on Position of Machine, Space Required, Source of Power, Heat, Light, etc.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CANADA.

A firm of wholesale stationers and bookbinders in Toronto, who are also manufacturers of account books, loose-leaf system, etc., are prepared to undertake the representation, on a commission basis, for the whole of Canada of United Kingdom manufacturers of stationery lines used in commercial work, such as paper (bond, writing, ledger, book and cover), millboards, etc., and stationers' sundries which are not competitive with goods already handled. One of the principals of the firm is at present in this country, and his name, together with an address to which communications can be sent, will be given to United Kingdom firms on application to the Department of Overseas Trade. (Reference No. 20.)

EGYPT.

The Government Press, Cairo, is inviting tenders for one paper slitting and cutting machine to cut transversely from reels 86

centimetres to 126 centimetres wide, in sheets of any required length from 34 centimetres to 90 centimetres. The machine must be provided with an automatic sheet counter and automatic jogger and the necessary motor and starter for a continuous current of 110 volts must be provided. Sealed tenders will be received until noon on August 1st, 1922, in Cairo. Tenders should be placed in double sealed envelopes addressed to the Superintendent, Government Press, Bulaq, Cairo. (Reference Department of Overseas Trade, 35, Old Queen-street, London, S.W.1, Room 50.)

NEW ZEALAND.

A New Zealand firm of agents having branches with a selling staff in Wellington, Auckland, Dunedin and in Christchurch, is desirous of obtaining the representation of United Kingdom firms manufacturing newsprint, bank, and wax papers, unbleached, cap double crown 10 lb., wrapping paper, toilet papers, boards for the manufacture of caps for milk bottles, envelopes, printing machinery, as follows:—Newspaper printing, letterpress, platinum and flat bed, lithographic, and printers' accessories, such as type, ink, etc. A director of the New Zealand firm is now in this country, and will be pleased to interview manufacturers interested. (Reference No. 25.)

Stationery Tariff in South Africa.

Interpretations of the classification of various articles under the Customs Tariff of the Union of South Africa on importation into South Africa give the following particulars:—

Floral Stationery.—Tariff item, 53b; general tariff, 25 per cent. *ad valorem*; rebate upon goods the produce or manufacture of the United Kingdom or reciprocating British Colonies, 3 per cent. *ad valorem*.

Fibre board stiffenings for boots and shoes: Tariff item, 193; general tariff, 20 per cent. *ad valorem*; rebate United Kingdom and reciprocating British Colonies, 3 per cent. *ad valorem*.

Employment in Printing Trade.

An official report on employment in the printing and allied trades reveals a condition of affairs which is little better than a month ago.

In the printing and bookbinding trades employment continued bad on the whole, and much short time was still reported with lithographic printers and bookbinders; some improvement on the previous month, however, was reported with letterpress printers at several provincial centres, with lithographic artists in London and at Manchester and in the bookbinding trade in London and at Birmingham.

In the paper trade employment on the whole showed a slight improvement, but short time was still prevalent in some districts.

Statistics show that unemployment is on the decrease but the movement is measured by small degrees, especially on the printing side of the allied industries.

In papermaking and staining, out of a total of 59,380 insured workpeople, 5,086 were totally unemployed at June 28th—3,873 males and 1,213 females. The percentage is 8.6, a decline of 0.7 as compared with May 22nd.

Manufactured stationery revealed a rather more decided improvement. The estimated number of insured workpeople is 68,810, and of these 4,383 were totally unemployed and 813 on short time. Females (2,606) represented the majority in the total figure, and the percentage of 6.4 was lower by 1.1 than at the end of May. Males (435) comprised the larger section of short time workers, while the percentage of 1.2 revealed a decrease of 2.2 in the month.

With a larger number of estimated workpeople in the printing, publishing and bookbinding trades, there are naturally more people totally unemployed and on short time; but the percentages are not out of proportion. Of the total of 213,620 workpeople, 14,103 were wholly unemployed at June 28th, 10,255 being males. This represented a percentage of 6.6, a decline of 0.6. Short time workers numbered 1,693 (925 males and 768 females), the percentage of 0.8 being lower by 0.1 than at May 22nd.

BINDERS TO THE PRINTING TRADE.

PRINTERS who have the facilities for folding, sewing and casing up, can be supplied with cases made in Leather, Rexine, Pluvisin, Imitation Leather, Cloth, or any other material, blocked or embossed in Gold, Imitation Gold, White or Coloured Foil Leaf, ink in any colours.

Our staff consists of more than 300 capable workers, provided with the most up-to-date machinery.

We shall be pleased to submit samples for Trade Catalogues, etc.

Sales Dept.,

3, Cloak Lane,

London, E.C.4.

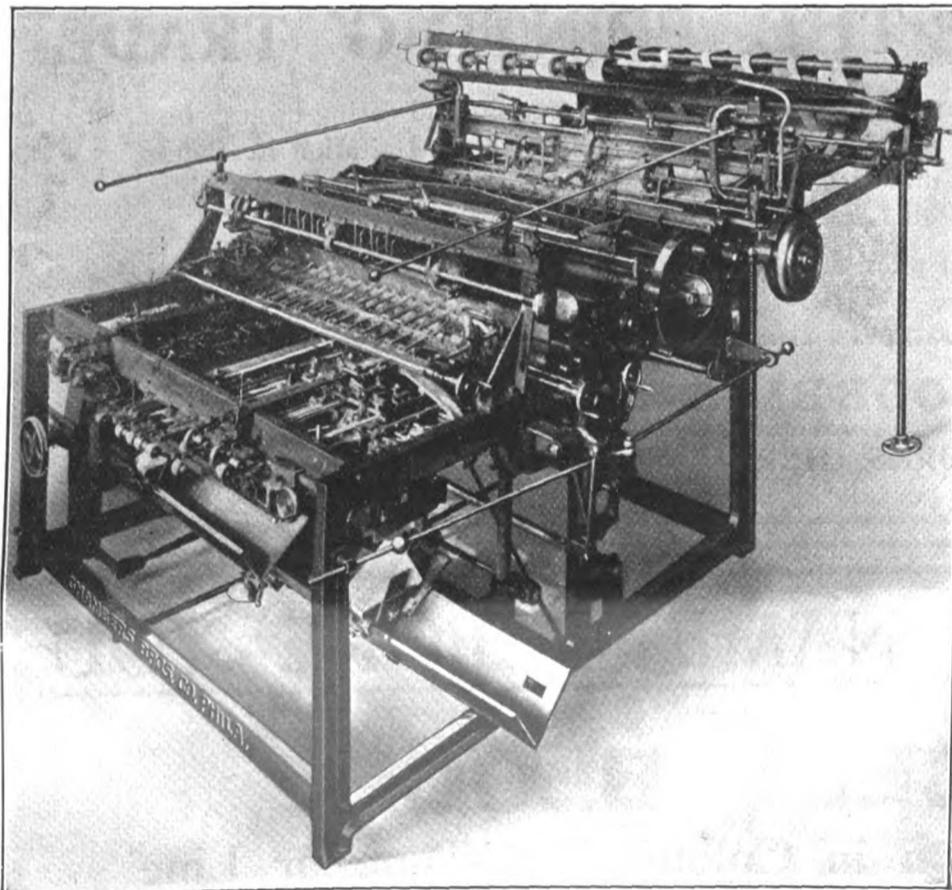

□

Telephone: City 7495.

1. "We have now had reports from the various departments about the CHANNON GLUE. It is undoubtedly the greatest thing to stick we have come across. It is suitable for paper work, cloth, leather, rexine, and other waterproof cloths, and in fact for every purpose in connection with bookbinding. Please send us a ton as soon as possible."
2. "With regard to the sample lot of Glue which you sent for the casemaking machine, this appears to be all right. My operator informs me that the Glue is giving no trouble, and is setting quickly, which is a very great advantage. I have no hesitation in saying that it is perfectly suitable for use on SMYTH CASEMAKING Machines."

The price is 80/- per cwt. carriage paid in United Kingdom.

Trade Notes.

A WARM welcome was accorded to Colonel and Alderman Sir Charles Wakefield, on Friday, by the members of the London Press Club, on the occasion of the opening of the library which he has generously given to the club. The ceremony was performed by Mr. Augustine Birrell, who delivered a delightful address on journalism and literature. The library consists of a large set of oak bookshelves laden with hundreds of books in daily use amongst Pressmen.

STONE V. WYMAN AND SONS, LTD.—A statement in the *London Gazette* that the plaintiff had been made bankrupt formed the basis of this action for damages for libel in the King's Bench Division. After the jury had returned a verdict in favour of plaintiff, with £10 damages, judgment was given for defendants. Mr. Justice Darling explained to the jury that defendants had paid into court £50, which plaintiff could have taken in settlement. But he was not satisfied, and had thus received £40 less than was offered him.

AT Swansea Assizes, last Thursday, Mr. T. Lewis, shipowner and coal exporter, Cardiff, failed in his action against the proprietors of the *South Wales News* and *South Wales Echo*, Cardiff, for alleged libel, arising out of the Hooley bankruptcy proceedings. The defence was that the newspapers did not publish the statements alleged, with any of the meanings alleged, and that they were not defamatory. They further said it was a fair and accurate account of the proceedings and published *bona fide* and without malice. After a short retirement the jury found for the newspapers, and judgment was entered accordingly.

THE East and North-East London Master Printers' Association recently made an interesting innovation by arranging a very enjoyable motor charabanc outing to Epping Forest.

THE Record Composition Co., Ltd., held their annual outing on Saturday last, when sixty employees and their wives journeyed by train to Windsor, thence by special launch to

Marlow, where luncheon was partaken of. A concert was held in the afternoon, and a most enjoyable day was spent.

GEORGE NEWNES, LTD., issued on Tuesday the first number of the *Humorist*, a sixpenny weekly.

COMMONS LIBRARY.—The Speaker is appointing a committee, of which Sir H. J. Mackinder is to be chairman, to revise the House of Commons library. Old and useless books are to be weeded out and removed to some other place, and new books are to be added to the library.

THE difficulties under which the Cork newspapers have lately been produced were described at a recent meeting of the Cork Trade and Labour Council, reported in the *Irish Independent*. A deputation appeared from the Typographical Society, and explained the extraordinary censorship exercised by the Republican party. It was stated that the Cork press had been turned into propaganda sheets for the purpose of serving the interests of one political party.

WE regret to learn that Mr. Herbert Leigh, who for over twelve years occupied the position of chief engineer for the Cross Paper Feeder Co., Ltd., of 92, Fleet-street, E.C., died suddenly on the 12th inst.

THE death occurred on Thursday at Worplesdon, near Guildford, of Mr. John Richard Kelly, aged 78, who had been associated with Kelly's Directories for 30 years.

MR. ALF. MARTIN, president of the National Union of Journalists, and a well-known sports journalist, who had been ill for some months, died at his residence at Grantham on Saturday.

THE death has occurred at Cambridge of Mr. Arthur Rayney Waller, M.A., of Peterhouse, secretary to the Syndics of the Cambridge University Press. Mr. Waller, who was 55 years of age, had been ill for some weeks, and death was not unexpected. A native of York, he, after doing literary and journalistic work in London for fourteen years, joined the University Press twenty years ago, and succeeded the late Mr. R. T. Wright as secretary to the Syndics in 1911.

Trade Union Matters.

WAGES CRISIS.—The subject of supreme interest in printing trade union circles is, of course, the strike of the Typographical Association against the Industrial Court award, and the effect of their stoppage upon other unions. The Printing and Kindred Trades Federation have called, for Friday, a conference of all the affiliated unions affected by the present dispute, at the Memorial Hall, Farringdon-street.

"NATSOPA" ATTITUDE.—The situation created in the provincial printing industry by the action of the Typographical Association has been considered at considerable length by the Executive Council of the National Society of Operative Printers and Assistants. A statement has been issued instructing members to remain at work and accept the change in wages "as an act in conformity with the agreement now in existence."

MR. A. E. HOLMES, the secretary of the Printing and Kindred Trades Federation, has notified the Typographical Association that he had brought to the notice of the Hours and Holidays Committee the case of men employed on Christmas card work by the Christmas Card Association, Preston. The committee had decided that the manager of that firm was in error in claiming that the men had to be engaged in the works for six months before being entitled to *pro rata* payment for holidays, and that unless special conditions were made at the time of engagement the men were entitled to *pro rata* payment of one day for each two months worked

Mr. Jacobi's Retirement.

Mr. Charles T. Jacobi, so well known to all our readers through his long and honourable association with the Chiswick Press and through his many writings of trade interest, has resigned his position of director and consultant of the Chiswick Press. His retirement, after more than 50 years' connection with this famous printery, is a source of regret to his colleagues, whose respect he has earned both by his own character and by his able maintenance of the high quality which has distinguished the productions of this Press for more than a century.

In our issue of July 7th of last year will be found a biographical article dealing at some length with Mr. Jacobi's multifarious and distinguished association with the printing craft, including mention of some of his books and other writings, which have received very high praise from the Press and have been of wide educational value to printers everywhere.

We are glad to learn that Mr. Jacobi's services in advisory or consultative capacity will probably still be available to printers, publishers and others who may wish to take advantage of his exceptional knowledge and experience in book-production and printing generally. We hope he may yet enjoy many years of useful and happy activity.

Ad. Club Visits Linotype.

On Thursday last, at the invitation of the Linotype and Machinery Company, through their publicity manager, Mr. Wm. M. Bower, the London Ad. Club paid a visit to their School and Demonstration Rooms in Norwich-street.

A most enjoyable evening was spent, commencing with a lantern lecture by Mr. Bower, who traced a brief history of this wonderful machine and then gave a good description in non-technical terms of the principal idea. This was followed by practical demonstration on linotype machines, where the whole process was clearly shown. The demonstrators were plied with many questions, to which they invariably gave full and painstaking answers. The well-known printing machines, the "Miehle" and "Centurette," were also fully explained, and this most instructive and interesting evening was concluded by Mr. Cyril King thanking Mr. Bower and his associates on behalf of the club.

Foreman Wins Court Case.

At Mountain Ash County Court on Tuesday of last week Gwilym Thomas, foreman printer, Aberdare, brought an action against his former employer, Cyril George Chapman, printer and stationer, Mountain Ash, to recover ten guineas in lieu of two weeks' notice and a week's wages in lieu of holidays. Plaintiff's case was that defendant told him that owing to slackness of trade he would have to stay away from the works until things improved. After he had been away for six weeks he wrote to defendant saying that he could not wait further on his convenience and that he must seek other employment. Giving evidence Mr. Chapman said he did not dispute the claim in regard to holidays. He offered Thomas the option of "laying off" or working his notice, and he chose the former. He contended that Thomas dismissed himself by the letter which he sent. Evidence was given by the secretary of the local branch of the Typographical Association and Joseph Knowles, printer, the latter being called for the defence. Judge Rowland Rowlands said he must come to the conclusion that six weeks was long enough to "lay off," and he therefore gave judgment for plaintiff for the amount claimed.

MR F. G. WILLMOTT, managing director of Messrs. Willmott and Sons, Ltd., printers and stationers, 5, Bartholomew-close, City, who has died in his 59th year, was a well-known figure in the printing and bookbinding trade, with which he had been connected all his life. Mr. Willmott underwent an operation in a London nursing home last week.

Coventry Master Printers' ASSOCIATION.

The annual meeting of the Coventry Master Printers' Federation, preceded by a luncheon, was held at the "Craven Arms" Hotel, on Friday, the 7th inst. Mr. A. E. Feltham presided, supported by Mr. W. Coker Iliffe, president of the Association.

The secretary presented the annual report and statement of accounts for the past year, which were of a satisfactory nature.

It is with regret we have to announce the resignation of Mr. J. Griffiths, the energetic secretary of the local Association, he having left the district for purely business reasons. The chairman, in his remarks at this meeting, referred to the strenuous work Mr. Griffiths had rendered during his term of office. His kind, genial and straightforward disposition had won for him the esteem and confidence of every member of the Association.

The election of officers for the ensuing year resulted in the following gentlemen being elected:—President, Mr. A. E. Feltham; vice-president, Mr. W. Holmes; treasurer, Mr. J. E. Parbury; secretary, Mr. S. H. Walton. Though the attendance was not so large as could be desired, there was no lack of interest in the welfare of the Association.

We regret that in our last issue a paragraph, from one of our provincial correspondents, erroneously attributed the above-reported meeting to the Coventry Typographical Association.

Curtailement of Assistants' Hours.

Mr. Macquiston, M.P., Mr. Charles White, M.P., and Rear-Admiral Sueter, M.P., have brought in a Bill, entitled "Shop Assistants and Small Shopkeepers (Facilities)," the memorandum of which reads as follows:—"The object of this Bill is to enable shop assistants to obtain more leisure either for the purpose of recreation or to become small shopkeepers to provide for the wants of the public in the hours after the large shops are closed. At present small shopkeepers, who could earn a livelihood by the sale of goods in the evening, are compelled to close at the same hour as the large shops in which business is done in the day time. Under the provisions of the Bill shop assistants desirous of becoming their own masters would have a chance of bettering their lot." The Bill seeks to amend the Shops Act, so as to enact that: 1) no shop assistant in receipt of wages shall be employed in or about the business of a shop between the hours of five in the afternoon and nine in the morning, and (2) nothing in a closing order or in any enactment relating to the closing of shops shall apply to any shop in which paid shop assistants are not employed at the time said shop is open before 9 a.m. and after 5 p.m.

The Federation of Master Printers, in drawing the attention of employing printers and stationers to this Bill, point out that if the Bill becomes law (a) it will be impossible to keep open, or employ any assistants, in a large number of stationers' shops excepting between 9 a.m. and 5 p.m., and (b) it will be impossible, excepting between 9 a.m. and 5 p.m., to execute orders from, or employ any assistants, in stock departments from which (say) inks, gums, pens, envelopes, blotting paper, etc., etc., are supplied, such departments being in the warehouse and not being retail shops at all, but coming under the Act as "shops."

We understand that the Federation of Master Printers and other influential trade bodies have already protested against the unreasonable character of this Bill, which is now not likely to be allowed to become law.

THOMAS PROSSER (31), described as a journalist, was indicted at the Glamorgan Assises, held at Swansea on Friday, on three charges of obtaining money by false pretences at Aberdare between September 30th and October 16th, 1921. Prosser solicited orders for advertisements in a church almanac or calendar which he was going to produce, and received money, but the almanac had not appeared. For the defence, it was submitted that at the time Prosser gave the undertaking to produce the calendar he honestly believed that he could do so but as the revenue did not meet the estimated cost of the production he decided to defer its appearance until the cost of printing had decreased somewhat. The jury found Prosser not guilty, and he was discharged.

Bankruptcies.

Re D. SMITH AND SONS (Colman Smith-Gabriel Smith and Mrs. Jennie Littman-trading as), Cardboard Box Manufacturers, etc., 19 and 20, Rupert-street, Leman-street, E.—These debtors attended before Mr. Registrar Mellor, at the London Bankruptcy Court on July 18th and 19th, for public examination upon accounts showing total liabilities £45,397 (unsecured £33,788), and net assets valued at £12,681, after deducting £219 for payment of the preferential claims. Among the transactions entered into was an order they took for 1,250,000 cigarette boxes in weekly deliveries. The purchaser did not take full delivery. Judgment was obtained for £2,000, which was paid, and a claim for breach of contract was subject to arbitration. The defendant appealed, and an issue as to the registration and constitution of their firm resulted in favour of the purchaser for the return of part of the £2,000 and his costs. They tried to execute a deed of assignment, but it was not proceeded with, as the petition had been filed. The debtors attributed their insolvency to heavy costs of litigation, losses on various transactions, to the depreciation in the value of their stock and plant, and to having paid in premiums on life policies £2,000 in excess of their surrender values.

Re EDWARD DE MARNEY, Publisher, 12a and 13, Cliffords-inn, E.C.—The creditors under this failure met at the London Bankruptcy Court last week before Mr. E. Parke, official receiver. The debtor, who roughly owes £2,000 against assets "bad book debts £100," states that in 1913 he started *Sporting Gossip*, which he sold six months later for a nominal sum in consideration for the retaining of the whole of the advertising rights. In June, 1915, he started a paper entitled *Russia*, and ran it for the Russian Chamber of Commerce for a year, when it was abandoned owing to the Russian revolution. Late in 1921 he re-started *Sporting Illustrated*, but owing to want of capital, the idea had to be dropped. He attributed his failure to loss in connection with the publication *Sporting Illustrated* and to the precarious state of the advertising business. The case was left in the hands of the official receiver.

Re FRANCIS M. W. MEYNELL.—A sitting was appointed to be held in the Bankruptcy Court last Friday for the public examination of Mr. F. M. W. Meynell, formerly assistant editor of the *Daily Herald* and afterwards editor of the *Communist*. A statement of his affairs showed gross liabilities of £4,455, of which £3,715 was expected to rank for dividend, against net assets valued at £50. Mr. Frampton appeared for Mr. J. H. Thomas, M.P., the petitioning creditor. The official receiver said that the bankruptcy was a sequel to the libel action brought against the debtor by Mr. Thomas, who was awarded £2,000 damages and costs. Nearly the whole of the debtor's liabilities arose out of the action, but as there was a prospect that they might all be paid in full it would be convenient if the Court would allow the examination to stand over. The Registrar granted an adjournment till October 13th.

From the London Gazette.

Uni ed States—LOCKWOOD TRADE JOURNAL Co., 10, East 89th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, JULY 27, 1922.

A Deplorable Strike.

It has come as a shock, we believe, to trade unionists and employers alike, to find that the "settlement," of which the terms were left to the Industrial Court to decide, is being treated by the Typographical Association as no settlement at all—their members being called out against a wages decision to which the T.A. representatives appended their signatures. The T.A. officials now find themselves in a false position, due, we believe, simply to a misunderstanding of the functions of the Industrial Court. It seems to us there is no answer to the employers' contention that the T.A. representatives, having once signed an agreement to submit the dispute to the Industrial Court "for settlement"—the employers having on the strength of this withdrawn their notices—the Association cannot, rule or no rule, honourably go back upon the Court's decision.

Heads We Win: Tails You Lose.

THAT the stoppage is in fact a strike is clear. Had it occurred in response to the enforcement by the employers of a wage reduction to which the union officials had not signed agreement, the stoppage might be represented as a lock-out; but in the present circumstances it is obviously an appeal to force to prevent the coming into effect of a settlement which was agreed beforehand by the union's leaders. For unless the union leaders did indeed mean to do what they actually did, namely, to refer the matter to the Court "for settlement"—not for advice or recommendation—the use of the Industrial Court becomes a farce. In that case, as has been remarked, it must be taken that the T.A. have said in effect: "If the decision pleases us we will accept it; if it does not we will reject it. It's heads we win and tails you lose."

An Unfortunate Mistake.

WE do not believe, however, that there was anything in the nature of trickery in the conduct of the T.A. We believe the Association's representatives, pressed by critical cir-

cumstances, agreed to accept, without a ballot, the reference of the dispute to the Industrial Court, under the impression that there would be found an honourable way of putting the matter to the vote of their members. This was a mistake. In signing the agreement to go to the Industrial Court, the T.A. agreed beforehand to the decision of that Court. No statement as to the need of a ballot was made until the Court was actually sitting. Employers, the public, trade unionists generally, and even, we think, an important section of the T.A. membership, feel that to reject now the Court's award is not "playing the game."

What Can Be Done?

THE position, however, having developed as it has, the question of prime importance now is how it can be remedied. Stoppage of the printing industry means irreparable injury—customers do without certain forms of printing or make use of substitutes for print, and newspapers and general printing businesses are receiving severe set-backs. The strike must be stopped. The responsibility for remedying the mistake made by the Typographical Association rests primarily with those who made the mistake. The Typographical Association ought now, and before more harm is done, and before more members of other unions are brought out on the streets, to instruct their members to return to work. Application could then be made to the employers' federation for a conference so that the circumstances could be discussed afresh; then, in the light of the new situation, the fact that the terms awarded are somewhat less favourable than those agreed by other unions could receive due consideration.

False Description of Hand-Made Paper.

ONCE more the Papermakers' Association has had occasion to draw attention to a misleading description by which machine-made paper has been put forward as hand-made. For the ordinary person, of course, it is extremely difficult to discriminate between the two, since the imitation article so closely resembles in appearance the hand-made product. Specimens of the particular paper referred to, however, were examined by experts, and were proved to be machine-made. In calling attention to the fact, Mr. Foster, on behalf of the Association, pointed out that the hand-made industry takes a great pride in its historic antiquity, and it is, of course, very desirable that a distinction between hand-made and machine-made paper should be preserved. The firm in question readily admitted that a mistake had been made and it has now been corrected. This is the second occasion within the last few months that the watchfulness of the Association has been exercised to good purpose.

Paper Exchanges.

A CURIOUS feature of the paper trade is the way in which the material is exchanged between countries. It is a sort of "robbing Peter to pay Paul" arrangement, as, indeed, is most business. Reference to the matter as affecting Canadian and European supplies of paper is made by the *Pulp and Paper Magazine*, which states: "The position is a curious one, in that European countries are sending news-print to the North American continent, and that we are also shipping news print to the other side of the ocean. Thus we find ocean consignments coming from east to west, and per contra, consignments going from west to east. This securing of business in far-off fields is no doubt of benefit to the shipping companies in the way of freight; but it is questionable whether the paper companies would not find it more profitable if the production could be sold in what may be termed their own immediate spheres. Despite the efforts of European mills to secure trade in the United States, Canada is holding her own in that market."

Wage Crisis in the Trade.

Critical Position follows the Rejection by the Typographical Assn. of the Industrial Court's Award.

When we went to press last week interest centred on the ballot being taken by the Typographical Association on the award of the Industrial Court and there were hopes that the membership of the Association would accept the award and thus ease the very threatening situation created by the taking of that ill advised ballot. It became known soon afterwards, however, that the ballot resulted in the rejection of the Industrial Court's award, and the figures, which were announced on Friday showed a majority of 5,833—8,199 T.A. members voting in favour of the acceptance of the award and 14,032 voting against acceptance.

The Newspaper Society promptly issued a statement indicating the seriousness of the position thus created. The statement included the following passage: "At a meeting of the Joint Industrial Council of the industry (on the 19th inst.) it was announced that the ballot was for the rejection of the award. This was reported to Sir David Shackleton, who at once came to the meeting from his room, and expressed amazement at the action of the T.A. and its executive. He declared that never before had an award of the Industrial Court been referred to ballot. He swept aside the plea of the T.A. that their executive thought they were merely referring the dispute to the Court for advice and recommendation. Everybody knew beyond possibility of misapprehension or doubt that the dispute was definitely and finally referred to the Court for settlement. The notices of reductions were formally withdrawn because reference to the Court ended the wages dispute and there was no longer any reason for notices, and both sides were honourably bound to accept the Court's award. Sir David Shackleton said quite plainly that the action of the T.A. in repudiating the award struck at the very root of wage negotiations and settlements, and he declared that the Ministry of Labour could take no further part in the matter."

The T.A.'s Explanation.

The T.A. replied in a long statement in which it was stated that "Reference has been made to the fact that the two chief officials of the T.A. signed a document agreeing to the dispute being referred to the Court for settlement. The rules of the T.A. lay it down that no agreement can be valid unless it is approved by the members of the Association by ballot, and the two officials referred to had this in mind when the document was signed, and were of opinion that the rules covered the question at issue." A further statement on behalf of the T.A. says: "Although it was distinctly declared that no undertaking could be given that the decision of the Industrial Court would be accepted as 'final,' the case was proceeded with. The executive council of the T.A. have been blamed for not placing before the members the proposal to submit the matter to the Industrial Court. In regard to this it must be pointed out that when this proposal was considered many members had left their situations, and many more would have ceased work the two following days. The executive council, therefore, accepted the responsibility of remitting the dispute to the Court in order to secure a resumption and continuance of work. Having taken that responsibility, they could not go farther than recommend the members to accept the decision of the Court."

The Employers' Attitude.

The Federation of Master Printers and the Newspaper Society issued on Monday a statement in which were quoted words used by Dr. MacLehose during the proceedings of the Industrial Court. Dr. MacLehose said: "May I point out with reference to that rule (the rule which says the T.A. Executive 'shall not sign any agreement without first submitting the proposed agreement to a vote of the members') that that is precisely what Mr. French has done. After consultation with his Executive he has taken the responsibility of signing the statement that they will submit this matter to this Court for settlement. If this is a rule which binds him, he broke it in our presence, and without making the slightest objection to doing so." The statement pro-

ceeds: "The President of the Court, after consulting with his colleagues, said: 'These are matters with which we cannot interfere as an Industrial Court; we can only express the hope that any decision we come to will be loyally accepted by both parties.' It was on that understanding that the parties proceeded, and it is essential to a correct public appreciation of the point at issue that the attitude both of the employers and the Court should be understood. It will be best understood in the light shed upon the position in the final paragraph of the Typographical Association's statement. It is there stated that 'the Executive Council of the T.A. have been blamed for not placing before the members the proposal to submit the matter to the Industrial Court.' Evidently this can only mean that the blame comes from their own members. Herein lies the essence of the trouble. The result of their action is now seen. Clearly it might lead to the complete discounting of any value which the Industrial Court can have in future. If the decision of a Court is to be submitted to subsequent ballot by either side, there will never be any decisions; for what Court will be prepared to sit and decide under such conditions?"

In effect the T.A. have said, "If the decision pleases us we will accept it; if it does not we will reject it. It's head we win and tails you lose." In the long statement of the Typographical Association there is little else that matters, except their reasons for the course pursued. Their signature having once been put to the reference to the Court "for settlement," it is the contention of the employers that, rule or no rule, the T.A. cannot honourably go back upon the Court's decision.

Men on Strike.

The Typographical Association, states Mr A. E. Goodwin, have, it is reported, instructed their members to cease work, contending that the employers have not given formal notice to reduce wages. When the award was made, he points out, the union was informed that it would be given effect to. That was on July 8th. If the union did not intend to comply with the award, they should have given the employers a fortnight's notice.

From all parts of the country messages have reached the offices of the Federation of Master Printers and the Newspaper Society that the reduction in wages in accordance with the award of the Industrial Court was made last week-end, and in a number of centres as wide apart as Hastings and Hull, members of the T.A. are remaining at work and accepting the reduced wages. Large numbers of T.A. members, however, have ceased work. In many centres the printing offices are closed. Some provincial papers temporarily suspended publication, others have combined to produce a joint issue, and a number are appearing in truncated form, some even resorting to photo-zincographed typewritten matter to take the place of type. Scotland and London are not affected by the dispute, but in some parts of Ireland, chiefly Belfast, no newspapers appeared on Saturday morning.

The National Executive Council of the Typographical Association sat in Manchester all day on Tuesday and resumed their sitting on Wednesday. The Association's officials are reported as stating that the reports received from the branches and groups showed that the employers covering nearly half the membership of the Association had refused to reduce wages. The Association is about to take a ballot of the members on the question of levying 2s. on every 10s. earned, so as to finance the dispute with as little call as possible on the general funds.

The position in regard to unemployment and the cessation of important work is already very serious. Members of unions other than the Typographical Association are being involved, and there is need of prompt action if a disastrous state of affairs is to be averted.

The London Position.

It will be remembered that over a fortnight ago the following unions, with which London is concerned, had accepted by ballot a wage reduction of 12s. 6d. in instalments:—The

Amalgamated Society of Lithographic Printers, the Amalgamated Society of Lithographic Artists, the Music Printers' Society, the London Society of Machine Rulers, the Bookbinding and Ruling Section (males) and all female members of the National Union of Bookbinders, Paper Workers, etc., as well as by the Female Section of the N. S. O. P. and A. and the first reduction, namely, 5s. per week from men and 2s. 6d. per week from women was made on the pay day in the week ending July 15th, the reduction for learners being 1s. 3d. per week.

With regard to the N. S. O. P. and A. (London male section), Printing and Paper Workers Union (London male section), London Society of Compositors, Printing Machine Managers, Electrotypers and Stereotypers, Pressmen, Typefounders and Platen Machine Minders arrangements have been made that notices will remain suspended until negotiations have either reached a settlement or have been broken off. The action of the Typographical Association in refusing to honour the decision of the Industrial Court awarding a reduction of 12s. 6d. in instalments has reacted to some extent on those London unions which are still outside a settlement, but further meetings are being arranged in the hope of an amicable agreement being reached.

Personal.

LORD ASKWITH, K.C.B., K.C., K.C.L. (chairman of the Lanston Monotype Corporation, Ltd.), has been elected chairman of the council of the Royal Society of Arts.

LORD NORTHCLIFFE's condition continues to give rise to anxiety. The fever due to the infection does not abate, and the heart is in consequence considerably embarrassed. Owing to the serious illness of Lord Northcliffe the libel actions brought by Sir Andrew Caird and Mr. Walter G. Fish have been withdrawn.

THE printer Lord Mayor of London and the Lady Mayoress gave last Thursday the customary banquet to meet the Chancellor of the Exchequer, the Governor and Directors of the Bank, and bankers and merchants of the City of London "at the Mansion House.

THE large and representative company included several who are well known in the printing world, among them being Sir George Truscott, Alderman Sir William and Lady Waterlow, Mr. J. W. Baddeley and Mr. B. B. Baddeley.

THE wedding took place at St. Peter's, Eaton-square, of Mr. H. Vernon-Hunt and Miss Estelle Blumenfeld, elder daughter of Mr. R. D. Blumenfeld (editor of the *Daily Express*) and Mrs. Blumenfeld, and later a reception was held at 11, Buckingham Palace gardens, S.W.

WE regret to learn that Mr. A. D. Phelps, the energetic hon. treasurer of the East and North-East Master Printers' Association, is incapacitated through illness and has had to enter the London Hospital.

THE many friends of Mr. Samuel Sidders, principal of the firm of Sidders and Son, of Salisbury-road, N.W., will be glad to hear that Mrs. Sidders is on the way to recovery from her long and severe illness.

MR. JOHN A. KIDD is sojourning in Norfolk.

A GATHERING of Hull and district journalists assembled at Powolny's Restaurant, Hull, on Saturday night, when Mr. Arthur Tidman was entertained at dinner in celebration of thirty-three years' active journalism in the city, and was presented with a Sheraton writing bureau, subscribed for by newspaper men of Hull.

THE Hackney Constitutional Labour Movement has invited Mr. George K. Naylor (brother of Mr. T. E. Naylor, M.P.), to contest the expected Parliamentary vacancy in South Hackney.

MR. ALLEN E. WHITING, president of the Whiting-Patterson Co., a large paper concern of Philadelphia, is making a tour of Europe to study the paper industry.

The Bookbinder.

Notes and News.

The State of Trade.

It cannot be claimed that trade has improved very much as far as bookbinding is concerned. There are orders about, and more of them than hitherto, but there is not the bulk behind them that keeps staffs busy for a long period. Government and municipal requirements are low, and the banks and large public companies are still working off their old stocks of stationery bought when the boom was on. Still, unemployment is not so bad as it has been, and there is a steady, though slight, progress in the right direction.

The Printers' Stoppage.

Just as we write the printers have ceased work on account of the wage reduction. In a large measure the bookbinding industry is dependent on, or at least combined with, the printing side of the trade, and any prolonged stoppage will react disastrously upon it. It is doubly unfortunate that the printers should decide to make trouble just at the time when railway rates are lowered and other industries have settled their differences. Conditions were apparently favourable to a move forward in trade and it is in keeping with the modern tendency in industry that just such a moment should be chosen for checkmate.

Trade Unions and the T.A.

The printers cannot claim to have the sympathy of their colleagues in trade union-

ism in their present attitude. It is characteristic of the T.A. to desire something different from the treatment which suits the binders. Failing to secure any advantage in the wage basis by open negotiation, they elected to accept settlement by arbitration as a last resort. That was evidence of weakness and forlorn hope, if we are to judge from the previous attitude toward neutral judgment. The result of the Industrial Court's investigation was an award which conceded no remarkable advantage over the confreres of the T.A., hence resentment and dissatisfaction in the rank and file. But it was never thought that they would go back on their word to accept settlement by arbitration. Whatever the ultimate result may be, the facts of the present case will be brought to light on many a future occasion.

New Book Cloths.

Conditions in the bookbinding materials market remain fairly stable. There has been no development of note in any direction. A new series of bookcloths is on the market, made by A. T. Eccles and Sons, of Darwen, and handled by G. Baker, Ltd., of Manchester. This product shows an advantage of a penny per yard to the consumer as compared against the accepted standards. From what we have seen of the cloth, it is good in quality and finish. Binders are justified in looking for something which will save money, and a penny per yard on cloth is a consideration.

The Leather Market.

Leathers are very firm with makers but there are occasional cheap lots on offer. Among others we have before us red glazed basils of large size and good substance quoted at 8½d. per square foot, rough sheep (pure bark tanned) at 9d., glazed skivers at 4½d. and pigskins at 1s. 3d. The standard prices of leathers run about 9d. per foot for first selection glazed basils, 6½d. and 7d. for seconds, 7d. per foot for roller basils, 9d. per foot rough basils. For rough calf firsts are quoted 1s. 3d. and seconds 1s., while fair calf firsts are 1s. 9d. and seconds 1s. 6d. Anglo hides are in fairly good demand and remain stable at 1s. 9d. and 1s. 6d. for first and second grades respectively. Rough moroccos are listed at 1s. 1d. and 9d., pigskins at 1s. 6d., 1s. 3d. and 1s., H.G. goats at 2s. and 1s. 9d., moroccos at 1s. 3d. and glazed skivers at 5d. and 6d.

Other Binding Materials.

Threads, tapes and fabrics have not undergone any reduction for several months, excepting American leathers, baizes and oil-cloths, which fell a little in May. Buckrams are losing caste in favour of canvas and union buckram, either of which means a saving to the bookbinder. It is questionable whether binders should not pay more attention to canvas and corduroy as a set-off against the old-time methods and materials. They are certainly deserving of close consideration.

A Fine Piece of Binding.

Another excellent specimen of bookbinding has been performed by Messrs. Sangorski and Sutcliffe, who were entrusted with the task of binding the Roll of Honour for the Royal Engineers. The record contains over 18,000 names of the fallen, including that of Lord Kitchener, and is to be placed in the Memorial Chapel to Lord Kitchener in St. Paul's Cathedral. On the occasion of the unveiling at Chatham recently by the Duke of Connaught of the War Memorial of the Royal Engineers, the volume was on view, and attracted favourable attention.

On the advice of Mr. Maurice Webb, of the firm of Sir Aston Webb, P.R.A., and Son, the War Memorial Committee of the Royal Engineers invited Mr. Sydney H. Meteyard to prepare a scheme for their Volume of Honour. This volume, which has been bound by Messrs. Sangorski and Sutcliffe for Messrs. H. H. Martyn and Co., of Cheltenham, of which firm Mr. Meteyard is one of the art directors and advisers, is 19 by 14½ inches in size, and contains 150 leaves of the finest vellum. The opening page contains a symbolic sword and wreath in plain burnished gold, with inscription "Justicia Libertas."

The double page, with enriched borders, contains on the one side a dedicatory quotation from the "Pilgrim's Progress," and on the other a decorative miniature depicting the figure of Armed Science holding in the one hand a globe, to represent the wide field of the activities of the Royal Engineers, and in the other hand a theodolite. At her feet lies a lion couched, and in the background in a mist is a column of Engineers on the march, while beyond them again a ruined town to show the desolation of war.

The borders, the colours of which are based on those of the Royal Engineers' ribbon, crimson and blue, are headed with the Royal Arms and the Royal Engineers' cypher and the composed chiefly of palms, wreaths, and the national flowers, rose, thistle, leek and sham-

rock, and upon labels are the various theatres of war, while in panels at the base are representations of the bridge over the Canal du Nord and a pontoon bridge. Shields containing the arms of the Dominions occupy the corners of the borders.

Mr. Solomon J. Solomon, R.A., a Royal Engineer himself, has kindly painted a picture representing Lord Kitchener taking the salute as companies of troops go to embarkation, and has beautifully represented the turmoil and yet the order of such a scene, with, in the background a troopship and the heavy lowering sky so suitable to the occasion, and at the head of the decorative border he has finely placed and treated the coat of arms of Lord Kitchener. To face this comes a page of plain lettering, showing Lord Kitchener's full titles and decorations. The actual roll is commenced with a decorative heading containing the Royal Engineers' cypher and ribbon.

Bookbindings Exhibited.

It is interesting news that the Book Fair of Florence, which opened in May, and is to continue until the end of the present month, has been enriched by the addition of an antiquarian section devoted to book-binding, this section containing examples ranging from the eleventh to the nineteenth century, lent by great libraries and by private collectors.

From fine examples of Byzantine Gospels, gorgeously bound in silver-gilt plates, enriched with precious stones and enamelled plaques—says a Florence correspondent of the *Observer*—we pass to the heavy monastic bindings of the next period, their wooden boards covered with leather and protected with metallic bosses, corner-plates, and clasps. A third type of heavy bindings is the painted wooden cover for the registration of taxes, like those first made in 1224 by the Repub-

lic of Siena. Often decorated with contemporary historical scenes, these bindings form an entertaining picture chronicle of mediæval life.

A Comprehensive Collection.

With the invention of printing, books became portable, and a lighter style of binding came into vogue. Rich and delicate arabesques in gold, with sometimes a centre mosaic design of foliage tooled in colour show the influence of the East which reached Italy mainly through Venice. A case of Arab and Persian bindings are exhibited at the Pitti which serve as an excellent link in the history of book-binding. There are also rare examples from the Aldine Press, and other unique Italian bindings made for the famous bibliophiles, Tommaso Maioli, of Venice, and Jean Grolier, of Lyons.

The art of French binding culminated with the work of Le Gascon, in the XVIIth Century, of which there are splendid specimens. The royal arms and lilies of Valois, together with the crescent moon of Diane de Poitiers, mark certain books as gifts of Henri II.; the royal arms of Hungary are upon the bindings of rare editions of the classics once belonging to Matthias Corvinus, and there are other fine copies with the symbols and mottoes of Catherine of Medici and Marie Antoinette.

Some Remarkable Toolings.

Besides books with interesting pedigrees, there are many with suggestive mottoes tooled upon the smooth, fine leather. An Aldine edition, bound in 1544 for the Emperor Charles V., has a bust of the Emperor embossed in gold, and beneath his symbol of the two columns joined by a ribbon are the words, "Plus ultra." On a splendid Venetian binding made for the Duke of Ferrara, the Este eagle is embossed in gold, poised upon a world of stars, with the words beneath, "In Motu immotum." Perhaps the richest specimen is a copy of the "Hours" presented to Mme. la Dauphine by Theodor de Hauzy in a Padeloup binding of white morocco (1770) tooled in gold

and colour. On one side, amid intricate arabesques, is the small figure of a pilgrim in colour with the words beneath: "Je voyage pour arriver a l'eternite," on the opposite cover is a cupid, blindfolded, led by a dog on a leash with the words, "L'on ne doit rien craindre quand l'on a la fidelite pour guide."

Mounting Dies for Hot Stamping.

In practically every bindery, where a hot-stamping, or embossing machine is installed, the finisher is often required to gold stamp some job where the die to be used is considerably less than type high. If the die is brass, likely it will be not more than a quarter of an inch high. Of course, it must, or should be, mounted on a solid base, making the whole thing type high to permit its being locked in the chase. Sometimes these thin dies are taken to some engraving house and there mounted in the usual way. This however, requires time and expense. Furthermore, it is unnecessary, unless the job to be stamped should be a long one. For short runs, up to three or four thousand, or even more, the die will hold up by simply glueing it to the smooth back of some old solid metal cut, which may often be found in profusion in the storage cabinet of the composing-room. To glue them, however, requires a special preparation. But this should not deter the workman, as this preparation can be made right in the bindery, and upon short notice.

Where a good grade of flexible glue is obtainable—preferably after it has been melted for use in the bindery—equal quantities of this melted glue and strong acetic acid are mixed together. After stirring thoroughly, it may be diluted with the acid—if too thick—to the consistency of rich cream. It is then ready for use.

The next step is to remove all dirt and grease from the backs of both die and old cut selected for the purpose. The most effective method for doing this—and perhaps the quickest—is to scrub both surfaces with a

strong solution of oxalic acid—about one tablespoonful oxalic crystals to one pint of warm water. Cold water will do, but warm water is better, as the acid crystals will dissolve much quicker. After wiping the surfaces perfectly dry, a thin coat of the glue and acid solution is applied with a small paint brush, care being taken to get it on evenly. In a warm room it will dry in a few minutes.

Next, the old cut is locked in the chase—back side up, of course—and a piece of ordinary red flexible binders' board glued thereon, using either flexible or ground glue. If the machine is hot, and the red board glued under pressure, this operation is quickly over with, as the heat will dry the glue in two or three minutes. It would be well to have the red board a trifle larger both ways than the old cut; then, when dry, overlapping edges may be trimmed off.

Now comes the mounting of the die. The hot chase is slipped out of the machine, a coat of glue applied over the prepared surface of the die, which is then laid in position on the red board previously glued to cut, held there an instant until glue begins to set, then chase and all slipped back into the machine and pressure quickly applied. In a minute or two the chase may be removed.

Narrow strips of canvas, or duck, are now glued to the red board, letting it lap about the edges of the die on all sides. When this is dry, the die is ready.

Now it may happen that an old cut cannot be found which is large enough to accommodate the die. In such a case, the flat plates which fit into the head of the stamping press—usually two or three of these flat plates come with every stamping press, one small one, and one of the same dimensions as the head—either of these plates may be utilised, if desired, in place of old solid cuts, giving them the same treatment.—EDWIN R. MASON, in *American Printer*.

MR. HENRY LING, papermakers' agent, has removed from 19, Ludgate-hill, to larger premises at 30-32, Ludgate-hill, London, E.C.4, thus increasing his business facilities. Mr. Ling's specialities are news, printings and wrappings.

Paper Covers Again?

Mr. B. Blackwood, the Oxford publisher, is said to be going to try an experiment which, though it has been tried before, may this time succeed—that is, to dispense with a cloth binding and substitute for it the familiar French type of paper cover. "Some twenty or thirty years ago," says a writer in *The Times*, "Mr. Heinemann started a series of novels so bound, or unbound, but owing, I believe, to the opposition of the circulating libraries, he found it impossible to go on. It would, in my opinion, be a good thing if those books which are usually bought and not borrowed—that is, almost all poetry and certain volumes of *belles-lettres*—were always issued in paper cover, so that the purchasers might have them bound to please themselves."

Northampton Printers' Celebration.

A trio of interesting anniversaries in connection with the business of Messrs. Archer and Goodman, printers of the *Northampton Independent*, Wellington-street, Northampton, have just been commemorated. The present year marks the 25th anniversary of the founding of the business (under the management of the present proprietors), the "coming-of-age" of the firm of Archer and Goodman, and the completion of 21 years in their service of Mr. H. Abraham (overseer).

In celebration of the triple event the employees and their friends were entertained by the firm to a day's outing at Stratford-on-Avon. In the course of the day's festivities Mr. John Archer (one of the principals, and a director of the *Independent*) on behalf of the firm congratulated Mr. Abraham, thanking him for his long period of service, and presented him with a cheque. Mr. W. J. Beeby (hon. secretary of the Northampton Master Printers' Association) also offered his congratulations in a happily worded speech.

PAPER

Standardisation in the Netherlands.

Imported and Exported Goods Affected.

In our issue of June 22nd we dealt with the regulations for the standardisation of paper set forth in a Royal Decree of the Government of the Netherlands. It was not clear to what extent the Decree operated. The governing factor was Article 14 of the Merchandise Act (Warenwet), 1919, and the question arose whether this applied only to paper produced in the Netherlands or whether it also embraced imported paper.

We have now received a letter from the Acting Consul-General of the Netherlands in London, which states:—

"I beg to inform you that, according to information received from my Government, the Merchandise Act ('Warenwet'), 1919, applies also to paper imported into and exported from the Netherlands.

"Regarding imported paper the 'Warenwet' does not allow any contravention to the general regulations. As to paper intended for export, no exceptions have been made up till now under Section 14 (under 5) and 15 (under 2) of the Merchandise Act."

Papermakers' Directory of all Nations

With the 1922 edition, which is just to hand, "The Papermakers' Directory of All Nations" (950 pp., demy 8vo., price 21s. net.) reaches its 31st annual issue. Published by Messrs. Dean and Son, Ltd., 29, King-street, Covent-garden, London, W.C.2, the work is of undoubted value to all engaged in the paper and allied trades throughout the world. It is a comprehensive volume, but arranged so that reference is made easy. The alterations which have recently taken place by reason of amalgamations and changes of ownership render a book of this description very necessary wherever paper, board and pulp are handled. The three main sections of the Directory are

all arranged alphabetically and record full details regarding the paper, pulp and board mills of the world, with particulars of their products. The first deals with the mills in the United Kingdom and incorporates many lists of allied trades; the second comprises mills abroad and in the Colonies; and the third is a comprehensive register of mill productions arranged under 400 headings, according to class of goods manufactured, country of origin and name of firm. A further valuable feature is the classified index to commercial prospectuses, which forms a useful buyers' guide.

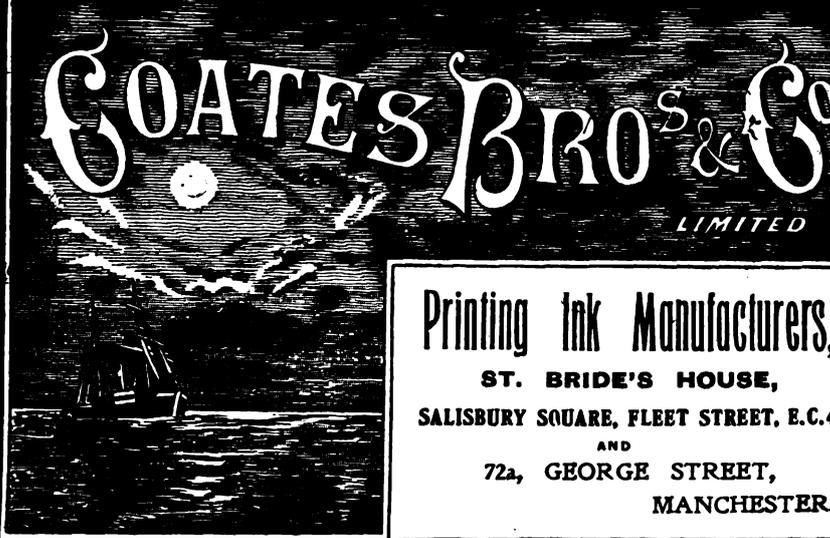

Limehouse Container Boards.

The Limehouse Paperboard Mills, Ltd., have developed new container boards which are meeting with favour and which supply a ready market. These boards can be made in any substance up to 0'100 in., and they fully comply with the railway companies' requirements both as regards waterproof qualities and tensile strength.

Samples of the boards have been forwarded to us and they represent all that is claimed for them by the makers. The nice bright colour of the boards will take printing very well, a necessary feature in fibre board containers. For large orders many varieties of colours can be given.

With the new pasting machine which has been installed, the Limehouse mills can turn out 100 tons of container board per week, the capacity of their board machine being 150 to 160 tons. Orders for the new product have been coming in well, we understand. The fact that trial orders for some of the leading firms have been followed by repeat orders for much larger quantities is a tribute to their quality.

MESSRS. SAMUEL JONES AND CO., LTD., are issuing a comprehensive range of papers, including printings, azure laid, cream woves, tinted enamels, flint papers, marble papers, steel blue boards, non-curling gummed papers, book cloths, etc. The new price lists, and the variety of goods on offer, are alike attractive.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!*
 The following is one of many
 unsolicited testimonials we have
 recently received.

Under date of May 10th Mr. E. P. Woodman,
 Managing Director of the Fisher Bookbinding
 Co. (1912), Ltd., writes:—

"We are sure you will be pleased to
 hear that through the advertisement that
 we have in your old-established paper—
 the *British and Colonial Printer and Sta-
 tioner*—we have received numerous en-
 quiries from all parts, and have been suc-
 cessful in securing some very good orders,
 which proves conclusively that your
 Journal circulates amongst those who are
 in search of manufacturers who can carry
 out their orders to their satisfaction, and,
 of course, give their customers faith in
 the work they undertake to bind.

"It may also interest you to know that
 we are very busy, and, from what we can
 see of it, the whole of the Printing and
 Bookbinding Trades will soon be in a
 flourishing condition, which is much to
 be desired after the slack period we have
 all gone through for the past two years.

"We wish you continued success with
 your Journal."

New Inventions.

Bookbinding.

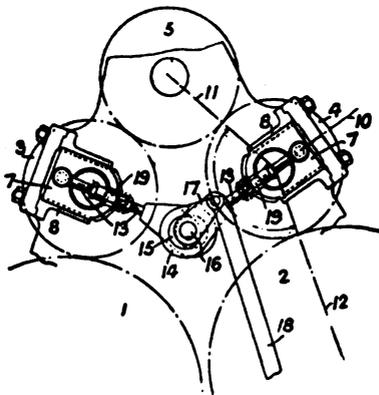

In a bookbinding invention, patented by Mr. H. A. M. van Hoffen, the folded sheets are bound together by separate threads in the manner known as Dutch stitching, glue is applied to the back of the assembled sheets so that the projecting ends *c* of the stitching

threads are glued to the back, and then gauze, strong paper, or the like *e* is glued or sewn on the back to provide a strengthening backing and also a means for suspension in stiff covers. The projecting ends *c* of the stitching threads are laid either transversely across or at an angle to the longitudinal direction of the back. The back may be rounded after applying the backing.

Offset Printing Presses.

An invention patented by Messrs. Linotype and Machinery Limited, and T. R. G. Parker, relates to an offset printing press in which the transfer cylinder is of the same diameter as the impression cylinder and a sub-multiple

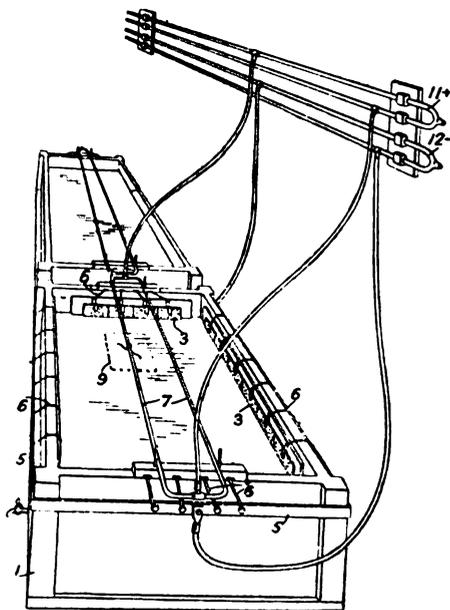

of the forme cylinder; the transfer cylinder is tripped relatively to the other two in a direction bisecting the angle formed by lines joining the centres of the three cylinders. As

shown applied to the known type of machine comprising forme cylinders 1, 2, transfer cylinders 3, 4 and a single impression cylinder 5, the bearings 7 of the cylinders 3, 4 are slidable in straight guides 8 in the direction 10 bisecting the angle formed by the lines 11, 12, and are simultaneously operable by connecting rods 13 provided with eccentric straps 14 encircling sheaves 15 on a rock shaft 16 operated by hand-controlled tripping mechanism through rods 17, 18. Turn buckles 19 on the rods 13 allow for independent adjustment of the cylinders 3, 4.

Etching Printing Plates.

In an invention by the Weeks Photo-Engraving Co. a method is given of producing an etched printing plate by sensitising the plate, forming an image thereon photographically, heating the plate to bake or

enamel the image, and etching by electrolysis, the electrolyte consists of a solution of sodium chloride to which a chloride of iron is added. The preferred electrolyte is sodium chloride in water testing from 5 degs. Bé to saturation, 5 to 10 per cent. of its volume of perchloride of iron of about 40 degs. Bé. or of chloride of iron of the same strength, or the equivalent

in dry chloride of iron with the addition of nitric, hydrochloric, chromic, citric, or acetic acid. The plate may be immersed in a hardening solution after the usual developing. If some parts are to be etched more than others the etching may be interrupted and the latter stopped with a solution of shellac in alcohol. In etching deeply, undercutting may be prevented in known manner by protecting the edges of the lines with waxy or resinous powders. The plate 9, insulated on the back, is suspended face down by means of conductors 7 in a tank 1 carrying carbon cathodes 3 connected by conductors 6 to an encircling bus-bar 5. The plate forms the anode the conductors 7 being connected to a looped positive bus-bar 11 and the bar 5 to the negative 12, the arrangement being adapted for supplying a series of tanks.

The Federation's New President.

Mr. R. A. Austen-Leigh Succeeds to the Highest Office in the Federation of Master Printers.

The wisdom, energy and business ability which Mr. R. A. Austen-Leigh has displayed during his long terms of office as President of the London Master Printers' Association and Vice-President of the Federation of Master Printers have made him a marked man in the printing industry of this country, and we think the announcement we recently made of his election as President of the Federation will have been received by the whole trade with a feeling of complete approval and of gratification that on the retirement of his distinguished predecessor, Dr. MacLehose, the great responsibilities of the captaincy of the employers' organisation have been entrusted to one so eminently well qualified to uphold the high traditions of the office.

When Mr. R. A. Austen-Leigh was, early in 1920, made President of the London Master Printers' Association, we took advantage of the occasion to publish in our pages a biographical article in which we gave some particulars of his family, his education, and his association with the famous old firm of Spottiswoode, Ballantyne & Co., Ltd., of 1, New Street Square, E.C.4. Without covering too much old ground we may recall that, at the time of his election to the L.M.P.A. presidency, Mr. Austen-Leigh had already been for nine years a member of the Council of the L.M.P.A. and a member of the Costing Committee of the Federation, whilst having also, since 1915, presided over the very useful labours of the Book-Printers' Committee, and having moreover rendered distinguished service in connection with several other of the many activities of the employers' organisation. The industry's indebtedness to his efforts has been still further increased during the last two years, when, through a very trying period of printing trade history, he has given of his best in the interests both of London and the country as President of the L.M.P.A., and at the same time as junior Vice-President (later, senior Vice-President) of the Federation. Notable features of his period as L.M.P.A. President are his success in getting the London District Committee of the Joint Industrial Council set up (of which he was the first chairman), and the large sum (over £2,600) which he was instrumental in raising for the Printers' Pension Corporation on the occasion of the Prince of Wales taking the chair at the dinner. Mr. R. A. Austen-Leigh is, we suppose, second to none in the valuable work he has accomplished, not only for the improvement of the organisation of employing printers in this country, but also for advancing the general interests of the craft.

This wide range of activity has, of course,

meant travelling all over the country and spending a great deal of time in attending meetings of various kinds. Sittings have often been prolonged until far into the night, and Mr. Austen-Leigh can claim to be one of those holding the longest-meeting record, for he was present at Manchester in September, 1920, when a conference sat till 4 a.m. On that occasion, by the way, he had an experience which illustrates the inconvenience which committee and conference work sometimes entail. He had left London in the morning fully intending to get back the same night. But, as time

Mr. R. A. Austen-Leigh.

gradually wore on, he saw that this was impossible, and eventually tried to engage a bedroom at the Midland Hotel. He was told this could not be done unless it should be found after midnight that someone who had booked a room had failed to arrive. The meeting having at last come to an end, he accordingly inquired at the booking office and was told there was one vacant room, with two beds in it. When, however, after a short delay, he was conducted to this apartment, he discovered to his surprise that two other master printers who had been to the conference were already in possession of the room and were now preparing to retire. A couch in the Turkish bath proved to be the only accommodation available!

Recently, also, Mr. Austen-Leigh has added to his overseas travels, having in the last two years attended, as representative of

the Federation, several meetings of master printers in France and Belgium. It will be remembered that in acting thus as ambassador to our French-speaking colleagues he has proved himself the possessor of the uncommon and very useful accomplishment of being able to make speeches in the French language. His gifts of speech are, indeed, an invaluable asset. The many after-dinner and other speeches demanded of him have shown him an ever-ready speaker whose utterances have a very welcome endowment of humour—which led to his once being dubbed by Mr. E. G. Arnold "the chartered wit of the printing trade."

Mr. Austen-Leigh has found time recently to contribute articles to various periodicals, including the BRITISH AND COLONIAL PRINTER. He is editor of *The Falcon*, the sprightly house organ of Messrs. Spottiswoode, Ballantyne & Co., which we think can truly claim to be the best printing house journal printed in this country. *The Master Printers' Annual and Typographical Year Book*, which he edits in collaboration with Mr. Gerald T. Meynell, is now in the third year of its existence, and is sometimes familiarly referred to as the "Red Bible," so indispensable an adjunct is it to the printing office bookshelves. It will be remembered also that Mr. Austen-Leigh is the author of "The Story of a Printing House," in which is ably set forth the history of the famous house of Spottiswoode. It is, however, in connection with the history of his old college, Eton, that he has chiefly specialised. His books on Eton include "An Illustrated Guide to the Buildings of Eton College," now in its third edition, "Eton College Lists, 1678-1790," and "The Eton Register, 1753-1790." The last of these is a monumental work of over 600 pages, which can fairly claim to be the best school register in existence.

The various official positions he has held and the visits which he has paid abroad have brought Mr. Austen-Leigh a host of acquaintances and friends in the printing world, and few master printers of note come to England without paying a visit to New Street Square. The wide extent of his circle of well-wishers is indicated by the numerous messages of congratulation which, we hear, his recently-bestowed presidency has brought him from all quarters of this country and from overseas.

We print herewith the best portrait of Mr. Austen-Leigh at present available. Though he has unflinchingly faced many terrors (at wage conferences, master printers' meetings and elsewhere) there seems to be something in the photographic camera which in his case strikes fear through some sub-conscious "buried complex" and makes him pass the

• TRADE **LINOTYPE** MARK •

HARD FACTS

¶ The Linotype composing machine has thirty-six years of proved service behind it and guaranteed service ahead.

¶ It was the first composing machine to do all that printers required of it. It has continued to be "first," with the result that there are now over 43,000 Linotypes in use.

¶ Every marked improvement in the "All-Slug-Way" has been originated and developed by the makers of the Linotype.

¶ Although other machines are now on the market, Linotype sales are to-day larger than ever.

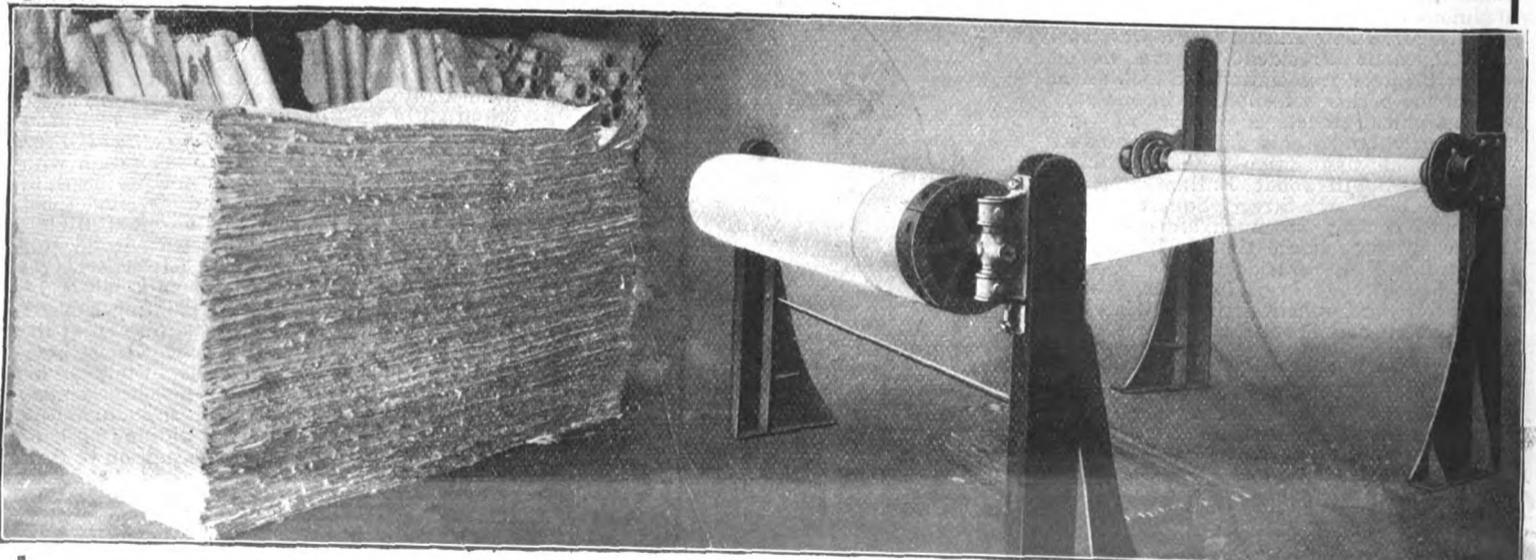

¶ You cannot ignore the significance of these facts.

MATRIX SERVICE. We have in stock over 100,000,000 matrices, made by experts on machines developed and perfected by ourselves, and of a quality far superior to those produced by mere imitators.

Linotype & Machinery Ltd., 9 Kingsway, London

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

- | | |
|---|--|
| <p>1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.</p> <p>2.—It occupies a space of only six feet on the run, and is quite noiseless.</p> <p>3.—The power required is such a small amount that it can be driven from any existing shafting.</p> | <p>4.—Centres of any kind or width can be worked on the machine.</p> <p>5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.</p> <p>6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.</p> |

photographer's door. We trust, however, that in the interests of posterity as well as of this generation someone will contrive to produce an authentic photograph of the present Federation President taken during his period of office.

A Link with the Past.

The craftsmen of to-day examine with curiosity and interest old engravings of the antiquated plant used by their forefathers. It should interest many readers to study the picture we give on this page of an old paper-maker.

Marchant Warrell, the subject of our sketch, served his apprenticeship to the "hand-made" art at Frammoorend Mill (No. 401). He later settled down at Two Waters Mill (No. 400), and brought up his family in an old-world timbered brick house on Boxmoor. Family tradition affirms that he became the first machineman in this country. He certainly ran the first machine laid down in Two Waters Mill from its start. This machine was erected at Little Gain on Boxmoor before it was installed at Two Waters, and appears to have been the same machine which was started up in the presence of Donkin on January 13th, 1812 (vide *World's Paper Trade Review*, December 3rd, 1897, page 3).

Judging from his portrait, Marchant Warrell appears to have been a man of some character and determination, and indeed it required a man of this type for the job. The great majority of paper mill workers looked on the advent of the paper machine as a calamity. There were riots, and the windows of Two Waters Mill had to be protected with shutters, and carboys of vitriol were placed on the roof to threaten the besiegers. Rioters from Wickham, Chess Streams and neighbouring mills attempted to destroy Two Waters. But the machine went on under Warrell's guidance, and it is to such men as he was that the workmen of the present day should look with respect. He foresaw that greater production was going to help the working man. This is a lesson that applies quite as strongly to-day with the shadow of foreign competition threatening industry.

Marchant Warrell's sons were also paper-makers. His son Charles started when he was about eight years of age in Two Waters and worked subsequently in mills at Cheddar, Stock Cross, Maidstone (Medway Mill) and Thorney. At one of the county shows (Bucks) he was awarded a certificate of merit for long

MARCHANT WARRELL.

service. Another son, Reuben Warrell, was the father of a family that branched out into the printing trade, in which industry his descendants are still represented.

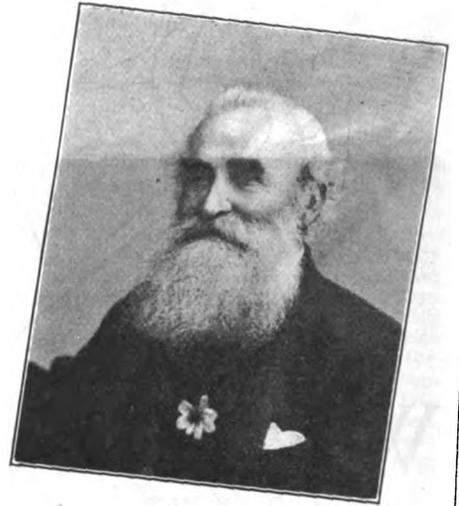

The third generation of the Warrell family were also papermakers. Charles (son of Charles) commenced papermaking at Apsley Mill on his ninth birthday. He appears to have been a type of the old wandering school of papermakers who went from one place to another in search of experience, for we learn that after working under his father at Cheddar he tramped through Devon, thence

WALTER C. WARRELL (bottom left).

CHARLES WARRELL, the Younger (top right).
FREDERICK C. WARRELL (bottom right).

up to the Lake district and back again to Soho Mill before he settled down to bring up another family of papermakers.

The fourth generation is represented to-day by Mr. Walter C. Warrell, who proceeded recently from the Donside Paper Mills (Aberdeen) to assist the management at the *Daily Telegraph Mills*, Dartford.

There are probably other descendants of the same family in the paper trade, as a brother of old Marchant, viz., Job Warrell, settled down in the Midlands. It would be interesting to learn how many members of this old papermaking family are still in the industry.

We are indebted to Mr. W. C. Warrell for a loan of the painting from which our sketch is engraved, and to his uncle, Mr. F. Warrell (another veteran papermaker) for much of the information contained in this note.

On this page we give photographs of four succeeding generations of papermakers, thus completing with old Marchant, five generations of papermaking Warrells

JOHN DICKINSON AND Co. continue to issue artistic folders containing paper samples of a very attractive order. Paper bargains in printings and writings are offered at wonderful prices. Another folder contains standard stock lines of papers from the Dickinson mills suitable for every purpose, the range for printing being particularly extensive. The folders are of Cordelia maize, flaxen finish, and Caldecott maize.

German Paper News.

The German trade papers reflect the consequences of the recent sharp fall in the value of the mark. In all directions prices are being put up. Wood pulp is increased 20 per cent. to 1,750 M. per 100 kg. for unbleached, printing paper from 1,638½ M. to 1,937½ M. per 100 kg., the average delivered price now being 1,951¼ M. as compared with 21 M. before the war. Coal has been advanced 30 per cent. Railway rates also participate in the upward move, and indeed the German industries have protested to the Ministry of Transport that the increase of 25 per cent. this month is in advance of the depreciation of the currency, and is an important factor in the increasing dearness of things generally.

German exports of paper and pulp mill machinery amounted to 101,746 million marks in April and of wire cloth and dandy rolls to 107,770 million marks.

The Papyrus A.G. in Mannheim-Waldhof is paying a dividend of 30 per cent.

MR. GEO. H. WILKINSON has transferred a part of his interests in Messrs. James Wrigley and Son, Ltd., Bridge Hall Mills, Bury, to a syndicate, of which he is chairman. The control of the Bury firm in local hands will give Mr. Wilkinson greater freedom to devote personal supervision to his extensive London businesses.

AMONG the week's partnerships dissolved are those between H. Whitehead, A. V. Whitehead A. S. Johnson, printers, 44, Brunswick-road, Liverpool, under the style of Whitehead, Son and Johnson; W. H. Kelsey and W. E. Lambert, printers, 21, Godwin-street, Bradford, under the style of W. H. Kelsey and Co.; J. Wiseman and G. W. Thompson, manufacturing stationers, Fennell's-yard, Westgate, Wakefield, under the style of Wiseman and Thompson.

L.M.P.A. PENSION.—Mr. A. Langley, vice-president of the London Master Printers' Association is organising a campaign by which the district associations in London are hoping to establish a London Master Printers' Pension in connection with the Printers' Pension Corporation. The first step in this connection has been taken by the East and North-East Association which is holding a grand dance in the Stratford Town Hall early in October.

CITY AND GUILDS PRIZEWINNERS.—Amongst the prizewinners in the City and Guilds of London Institute Technological Examinations, 1922, were the following:—Typography (compositors' work), 1st prize, final, S.M., Bernard Rogers (Manchester College of Technology); typography (press and machine work), 1st prize, final, S.M., John Owen Wilding (St. Bride Foundation Printing School, London)—1st prize, Grade II., B.M., Andrew Harrow Watson (Heriot Watt College, Edinburgh); lithography, 1st prize, final, S.M., George Gibbons Weston (Municipal Technical and Art Schools, Leicester); bookbinding (forwarding), 1st prize, final, £2 (Skinners) and S.M., William Wright (Central Technical School and City School of Art, Liverpool); bookbinding (finishing), 1st prize, final, £2 (Skinners) and S.M., Edgar Owen Jennings, (Technical Institute, Leeds).

DAMAGE estimated at £7,000 to £10,000 was done early on Saturday morning at the works of the Keighley Printers, Ltd., situated at High-street, Keighley. The premises were closed down at 4.30 on Friday afternoon for the local holiday, and the outbreak was discovered at 1.45 a.m. on Saturday, several rooms being then well alight.

THE large modern factory of the Conqueror Typewriter Manufacturing Co. in Wakefield-road, Stourton, near Leeds, has been bought by Messrs. John Waddington, Ltd., theatrical and general printers, of Great Wilson-street, Leeds, who intend to convert the place into a printing works.

MESSRS. GOOSE AND SONS, printers, of Norwich, were last week, at the police court, fined £20 and costs for omitting the imprint from 3,000 copies of a book entitled "The Trail of the Serpent." The case was brought by the Director of Public Prosecutions, and counsel remarked that the defendants were liable to a fine of £5 for each copy. It was said in defence that the imprint had been omitted by inadvertence.

PHILIP HENRY REEVES, Racquet-court, Fleet-street, E.C., was fined £10 and £10 10s. costs at Bow-street last week for sending a copy of the *Sporting Times* containing an indecent article through the post.

PAUL TRENCH (42), a Manchester journalist, was last week sentenced to a month's imprisonment with hard labour by the City Stipendiary Magistrate for assaulting another Manchester journalist named Joseph Henry Makin, who reported a case at the City Police Court in which Trench had been acquitted on a charge of impersonating a police officer. Trench went to a Manchester club, and struck Makin on the head and face with a dog whip.

NEARLY three hundred employees of the *Western Mail*, Ltd., took part in the annual waygoose on Saturday, the total being considerably swelled by the participation for the first time of those engaged at the Tudor-road Printing Works. Crossing by steamboat to Weston-super-Mare the party, which included Lady Davies (wife of the editor-in-chief), Mr. Robert J. Webber (general manager) and Mrs. Webber and Mr. T. Armstead, J.P., of the Ely Paper Mills, found a fleet of motor cars awaiting to convey them to Burnham. On arriving at the latter place dinner was served in the Lifeboat Pavilion. Mr. Robert J. Webber presided, and Mr. Robert Smith, one of the oldest employees, in proposing the toast of the *Western Mail*, Ltd., described the outing as the most successful held during the last forty years.

TENDERS are to be invited for advertisements in Post Office telephone cabinets in public telephone call offices.

THE *Express and Echo*, Exeter, came out on Friday with a six-page paper, seven columns wide, all set by Lino operators who had been trained within a few days.

THE London Higher Education Sub-Committee recommend the establishment of ten voluntary day continuation schools, accommodating 3,600 students. The cost, on a voluntary basis, would be £80,000 a year. The Board of Education will contribute 50 per cent.

NEW BLOCK MAKING PROCESS.—An interesting announcement in the German *Buchdrucker-Woche* is to the effect that the firm of Brend'ampur, Simhart and Co., Nachf. (Düsseldorf-Oberkassel), has brought out a new patented half-tone process, whereby the printing surface is etched not in metal, but in zellon, apparently a celluloid-like material. Important advantages are claimed for the new process, cheapness being among them.

WELSH UNIVERSITY PRINTING.—When the theological section of the Welsh University Guild of Graduates met recently at Aberystwyth, Professor Gwynne Jones raised the question of the printing of the University publications, and said a good deal of feeling had been created because these works were being printed outside Wales; he regarded the complaints made on this ground as perfectly legitimate. Mr. E. T. D. Jenkins said he understood that all the printing for the Welsh University Press Board would be done through the Oxford Press, and he suggested that they should fall in with that arrangement. Professor Jones did not carry his protest further, and Mr. Jenkins' proposal was agreed to.

MR. GEORGE COOPER, bookbinder, of Seven Kings, was amongst those who had to receive hospital treatment for shock after the train accident at Liverpool-street, G.E.R., Station, last Thursday.

WE regret to announce the death which occurred at his home in Birmingham, on July 24th, of Mr. John Graves, in his 83rd year. Mr. Graves entered the service of B. Winstone and Sons, Ltd., 100-1, Shoe-lane, London, E.C.4, in 1862, and it was only a few weeks ago that we announced his retirement after sixty years in their employ. Mr. Eric W. Muirsmith represented the company at the funeral.

THE death has occurred, in London, of Mr. William Reid, bookbinder, late of Edinburgh, aged 63 years.

THE death is announced of Mr. Frank Dean, proprietor of the music publishing house of Nightingale and Co.

THE death has occurred, after a brief illness, of Mr. Fred E. Morris, of Holywell, of the *Flintshire Observer*. He had been connected with that newspaper for upwards of forty years.

SHORTLY before 9 a.m. on Monday Miss Winnie Squires (18), a clerk, fell from a third storey window at Messrs. Odham's Ltd., Long Acre, where she was employed in the costing department. She struck the pavement, some 50 ft. below, and died almost instantly.

AT Norwood Cemetery the funeral took place on the 18th ult. of Mr. William Edward Abrahams, for nearly forty years printer of the *Morning Advertiser*. Among the many floral tributes was a wreath from the *Morning Advertiser* staff. It is understood that by his will Mr. Abrahams has bequeathed £250, free of duty, to the Lloyd Memorial Home for Printers, Deal, for two beds to be named "The William and Mary Anne Abrahams Beds," together with two pictures, attributed to Rubens, which, with portraits of the testator and his late wife, are to be hung over the beds.

AT Lincoln County Hospital there has been unveiled a memorial tablet to Dr. Edward Mansel Sympton, thirty years surgeon there, and later editor of *Notes and Queries*.

WILLS.—Mr. Joseph Nash, for 30 years one of the principal artists on the staff of the *Graphic*, £6,863; Mr. C. A. Maggs, a member of the well known bookselling firm, of Conduit-street, W., £32,216; Mr. Edward Vaughan Morgan, last survivor of the original firm of Messrs. Morgan Bros. founders and proprietors of the *Ironmonger* and the *Chemist and Druggist*, net personalty, £315,831; Mr. William Harris (64), of Carnoustie, N.B., partner in the firm of Burns and Harris, Ltd., manufacturing stationers, Dundee (personal), £4,039.

THE late Mr. William Cawthorne, of Nun-eaton, printer and stationer, died April 20th, aged 82, left £6,900.

THE Society for Promoting Christian Knowledge has made arrangements whereby its general secular publications shall in future be published with the imprint "The Sheldon Press."

THE united board of Spicers, Limited, is now constituted as follows:—Right Hon. Sir Albert Spicer, M.P. (Chairman), Mr. H. G. Spicer (Deputy-Chairman) and Sir Howard Spicer, K.B.E. (Vice-Chairman), Managing Directors, Mr. J. Leonard Spicer, Mr. A. Dykes Spicer, Mr. Douglas Spicer, Mr. H. N. Brady, Mr. A. E. Brown, Mr. F. L. Cayzer, Mr. C. E. Higgins, Mr. H. F. Higgins, Mr. P. W. Kennett, Mr. W. Oliver and Mr. J. T. Steele.

AMONG securities which have been ordered to be quoted in the official list are £746,000 Seven-and-a-Half per Cent. Debenture stock of the Imperial Paper Mills, Limited.

BRITISH TRADE SHIP.—Sailing of the ss. "British Trade," which should have already left London on a world voyage to advertise British goods, has been postponed until September 29th. The engineering lock-out greatly interfered with the plans of many of the exhibiting firms, and the reconstruction of the ship has been delayed by the Thames ship-repairing dispute. She is at present at Tilbury, and the arrangement of the various decks for exhibition purposes is now proceeding. It has been decided to extend the tour to the Solomon Islands.

THE Federation of British Industries are representatives in the United Kingdom for the seventh Holland's Industries Fair at Utrecht, September 4th to 9th. Group 6 comprises printing, paper office requisites and appliances.

THE new commercial convention between France and Spain provides lower duties for cigarette paper in packets, postcards and photographs, pictures and prints, and French-Spanish dictionaries.

OWING to the economic depression, the well-known daily commercial newspaper, *Svensk Handelstidningen* has ceased to appear.

SWEDISH Government's proposal for a trade agreement with Russia has been rejected by the Second Chamber.

PAPER manufacturers in the United States demand a 10 per cent. reduction in the wages of skilled workmen, no wage scale agreement for unskilled workmen and elimination of the time and a half clause for overtime.

THE Information Service of the American Paper and Pulp Association has been co-operating with the United States Department of Commerce in a campaign to increase American exports, particularly to South America, through the use of motion pictures.

TROUBLES OF GERMAN NEWSPAPERS.—The Hamburg *Tageblatt*, a German National newspaper, ceased publication on June 30th. The publisher declared that he was forced to this step by the exceptional ordinances for the defence of the Republic, since he could not risk being condemned to pay fines of half a million marks, with the alternative of imprisonment. The Altona *Tageblatt*, which has been established for 72 years, has suspended publication for the same reason. It is also announced that for financial reasons the *Neue Hambueger Zeitung* will cease publication on September 30th. Many small anti-Semitic newspapers are expected to close down.

THE *Reichsanzeiger* publishes the text of a law for the purpose of aiding the German Press to obtain paper more cheaply and for the levying of a special duty of one-and-a-half per mille on exports in this connection, says a Reuter Berlin message.

THE German Imperial Minister for the Interior has forbidden the publication of the *Berliner Lokalanzeiger* for three weeks, on the ground of violation of the Defence of the Republic Act.

THE Egyptian Ministry has ordered the suspension of *La Liberté* (Cairo), a French-written Nationalist paper.

Belgian Master Printers' Congress.

Mr. R. A. Austen-Leigh's Visit.

This year again Mr. R. A. Austen-Leigh acted as representative of the employers of this country in attending the Congress of Belgian Master Printers held at Namur, July 21st-23rd. This was the second to be held, the first congress having taken place at Antwerp last year. The master printers of Namur and Luxembourg were the hosts, and their president, M. Auguste Godenne, acted as president of the Congress, his nephew, M. Paul Godenne, officiating as secretary - general. The conferences were held in the foyer of the theatre.

Unfortunately Mr. R. A. Austen-Leigh was unable to get away in time for the first day, but came in for interesting papers on July 22nd, some of the subjects being: Payment to workmen according to the size of their families; how to render agreements between employers and employees legally binding; and a price list for lithography. In each case the papers had already been put into print, and were in the hands of the members attending the Congress. Nevertheless they were read through by their authors, and the time for discussion was as a result somewhat curtailed.

The paper on a price list for lithography was read by M. Immig, a Dutch master printer from Rotterdam, and its delivery in French was somewhat of a linguistic triumph for the author. Unfortunately the attendance at the Congress was not quite as large as had been hoped. Probably the fact that it was held at the time of the National Fête made the numbers less than they might have been—members having made other arrangements for the holiday.

A very pleasant break in the work of the Congress was provided by a trip up the Meuse as far as Profondeville, arranged for the evening of July 22nd. The trip commenced at 5 p.m., and the return was made in the dark, with flash lights, which were turned on banks and passers by, an orchestra playing aboard, and dancing being indulged in, home being reached again at 10.30.

Sunday, July 23rd brought the formal closing of Congress in the morning. Then the banquet at 11.30, when the toast of the visitors included the President of the Dutch Master Printers, M. Korhuis; M. Deligne, Vice-President of the French Master Printers, as well as Mr. R. A. Austen-Leigh. A reply was expected from each in turn, the British representative leading off. M. Stiels interpreted for M. Korhuis, who spoke in Dutch. M. de Grève, the popular President of the Belgian Master Printers, now in his third year of office, announced that news had just been received that King Albert had been graciously pleased to confer a decoration on M. Paul Godenne, the Secretary-General of Master Printers in Namur, an example that might well be followed in other countries. The banquet ended in singing and dancing about 4 p.m., when members adjourned to the theatre, where seats had been kindly provided to witness two plays by Molière, most admirably given by members of the Odéon Theatre in Paris.

With this a delightful Congress came to an end. Nothing could have exceeded the hospitality shown to the foreign visitors, who all left for their respective homes fully determined to accept the invitation which had already been conveyed to them to attend next year's meeting at Ostend.

Printing in Belgium seemed to be prospering, there being plenty of work available. A three years' collective agreement between employers and employees, just expiring, has been renewed with an increase of wages. The minimum wage in big towns is now about 135 francs—or about £2 10s. at present rate of exchange.

Dutch master printers gave a much less favourable report of work in their country, where there appears to be a great shortage of work, much of the usual work having gone to Germany.

LARGEST LOOSE-LEAF BINDER.—The largest loose-leaf binder ever built is reported to have been finished by the Kalamazoo Loose-Leaf Binder Co. and shipped to the Dallas (Texas) office of the John Hancock Insurance Co. The size is 41½ by 54 in., giving it a stretch of nine feet when wide open. It weighs 100lbs. empty, with sheets 500lbs. The binder holds eleven inches in thickness of sheets. One ton of ledger paper will fill the book just five times.

The House of Truscott.

Unveiling of War Memorial by Lord Marshall of Chipstead at the Famous Printery.

Lord Marshall of Chipstead, P.C., K.C.V.O., LL.D., paid an eloquent tribute on Monday afternoon to the memory of the men connected with Messrs. J. Truscott and Son, Ltd., who lost their lives in the great war. The occasion was the unveiling of a war memorial, which was performed by his Lordship in one of the warehouses at the works in Suffolk-lane, the ceremony being witnessed by a large gathering of the office and works staff. Besides many relatives of the fallen men there were also present Sir Geo. Wyatt Truscott, Bart., Mrs. Waller, Mrs. Gabb, Mr. Henry Truscott and Miss Truscott, Col. and Mrs. J. R. Truscott, Col. and Mrs. R. F. Truscott, Mr. E. H. S. Truscott, Mrs. Greenall and Mr. W. S. Tredgold.

The Rev. Canon Bullock-Webster, M.A., who officiated at the dedication service, was accompanied by the choir from St. Michael Paternoster Royal.

The service, which was simple but inspiring, consisted of the singing of familiar hymns and readings of well known passages of Scripture, the Lesson from Wisdom iii., 1-9, being read by Sir George Wyatt Truscott, Bart. The assembly was then led in prayer by Canon Bullock-Webster, who after an impressive pause, read out with much feeling the names of the men engraved upon the scroll.

Sir George Wyatt Truscott then said in the name of the Board and the members of the House of Truscott and in the name of those associated with their House that he desired to offer to Lord Marshall their grateful thanks for the readiness with which his Lordship had accepted the invitation to unveil the Memorial. He (Sir George) was very proud of the brilliant part played by their firm in the war, and it was to perpetuate the names of those who had made the supreme sacrifice that they were placing that tablet in their factory that day. When it became a question as to whom they should ask to perform the unveiling they remembered the civic traditions of their House and thought it very appropriate if London's peace Lord Mayor would undertake the task. He then, in the name of the House of Truscott, asked Lord Marshall to unveil the memorial.

The Unveiling.

Lord Marshall of Chipstead, after drawing aside the national flags that bedecked the beautifully executed oak panel, solemnly dedicated the tablet to the "Glory of God and to the memory of those members of the House of Truscott who made the supreme sacrifice."

His Lordship went on to say that he esteemed it a great honour and a great privilege to be allowed to take part in that service. He accepted the invitation not only because of the personal friendship which had existed for so many years between his own and Sir George's firm, but also because he regarded himself in some senses as a neighbour of the adjoining Ward of Vintry, and also because it fell to his lot to be Lord Mayor of the City of London in the Armistice and peace year. Apart from all these considerations, he had accepted the invitation because it would give him an opportunity again of paying a tribute to the brave men who laid down their lives for their friends. He understood that 35 members of the board and staff had made the supreme sacrifice, and many of those present that day were their comrades in arms; they too, would have laid down their lives had they been called upon to do so. Everyone of them there that day would learn again the lesson that it is a duty to yield admiration to brave men. The thousands of these memorials, continued Lord Marshall, being set up by communities, large and small, throughout the country, should serve as rallying points for our best and highest efforts, and they should inspire us to a comradeship towards that mutual recognition of the bond which unites those who love their country, and that with one common purpose, namely brotherhood, and their country's highest good. Lord Marshall, in concluding, quoted Longfellow's lines:

"Let us then be up and doing,
 With a heart for any fate,
 Still achieving, still pursuing,
 Learn to labour and to wait."

The proceedings were brought to a close by the singing of the National Anthem.

Several handsome wreaths were placed at the foot of the shrine by relatives and others.

War Memorial of United Newspapers

The staffs of the *Daily Chronicle* and *Lloyd's Sunday News* assembled on Sunday afternoon in Salisbury-square, in connection with the unveiling of a memorial to those comrades of theirs who laid down their lives in the war; and 200 ex-Service men, fellow-workers on United Newspapers, paraded in tribute to those gallant and remembered men.

The dedication service in St. Bride's Church, Fleet-street, was conducted by the vicar of St. Bride's, the Rev. A. Taylor, M.A., after which a return was made to Salisbury-square, where the men again fell into rank, and Brigadier-General E. B. Cuthbertson, C.M.G., M.V.O. (one of the directors of United Newspapers) made an address after unveiling the memorial in the office.

The memorial, which takes the form of a panel in oak and bronze, set in a specially constructed recess, bears the names of 43 officers and men who lost their lives in the war.

AN INTERNATIONAL Congress of Master Printers.

In 1923, Gothenburg (Sweden) will commemorate the tercentenary of its foundation by opening an historical and export exhibition arranged on quite modern lines, the exhibition to include a number of objects of unique interest. Taking advantage of the occasion, the Swedish master printers, represented by their chief organisation, the Swedish Master Printers' Association (Svenska Boktryckareföreningen) invite organised master printers everywhere to take part in an International Congress of Master Printers to be held at Gothenburg, June 4th to 6th, 1923. The Federation of Master Printers and Allied Trades of Great Britain and Ireland has been invited to elect four official members at the Congress. Besides these official representatives, who will have the right of voting at the Congress, all master printers, who in their own countries belong to the chief organisation in the trade, will be welcome. Inquiries can be addressed to Den Internationella Boktryckare-Kongressen, Gothenburg, Sweden.

Our own Federation of Master Printers has, we understand, expressed its cordial approval of the proposed International Congress, and will be officially participating. Never before have questions of international relationships been of such great importance as to-day, and there are numerous matters of common interest which could profitably be discussed by master printers from all the principal countries of the world.

The subjects to be dealt with at the Congress are stated as follows: (1) Various cost systems; (2) standardisation of sizes and qualities of paper (for printing paper certain sizes, thicknesses and qualities should be fixed upon, say three or four of each. Likewise with writing and letter paper, and paper for artistic printing, etc.); (3) standard sizes for power presses, platen printing presses and rotary machines of all kinds (these sizes could certainly be reduced to a small number, e.g. 3, and the size of the printing presses should correspond to the sizes of paper decided upon. By this means the prices of both paper and machines could no doubt be considerably reduced); (4) new inventions in the graphic arts; (5) the importance of the offset press in printing offices; (6) how to secure healthy premises; (7) principles of sale for printed matter; (8) how to standardise wages so as to make them uniform everywhere; (9) the conditions and system of work in different countries; (10) the apprentice system in different countries; (11) the regulation of prices for typefoundry productions; (12) the importance to printers of rotary photogravure; (13) estimating in different countries; (14) printing conducted on scientific principles; (15) an industrial democracy for printing offices; (16) premium systems in printing offices.

Mr. J. B. Jones, proprietor of the *Dover Express*, has died at the age of eighty-two. He was the oldest journalist in Kent.

Personal.

In celebration of his fifty years' association with the *Liverpool Daily Post and Echo*, Sir Alexander Jeans has been presented by his fellow directors with a handsome silver replica of the famous Warwick vase, suitably inscribed.

MR. WICKHAM STEED, editor of *The Times*, was the guest at luncheon last Thursday, at the Café Royal, Regent-street, of the Foreign Press Association in London. The chair was taken by M. J. de Marsillac, London editor of *Le Journal*.

MR. GEORGE LANSBURY has resigned his position as editor of the *Daily Herald*, and will hand duties over to a successor as soon as he is appointed and able to take up his duties.

WRITING in the *Herald* on Saturday, Mr. Lansbury stated he had resigned because he desired the new owners to be perfectly free to appoint whom they pleased to take editorial charge of the paper. He had found the burden of his duties as both manager and editor too great, but would still retain his connection, first as a director of the unified company, and also as general manager.

MR. G. H. PEACOCK, who has resigned his position as editor of the *Liverpool Courier*, to take up an important journalistic appointment at Hereford, after two decades of service with the *Liverpool* journal, was presented by his colleagues with a handsome cabinet of cutlery and a silver cigarette case. Mr. Peacock was also the recipient of a handsome rose bowl from the composing staff.

MR. PEACOCK had been previously entertained by a group of fellow members of the Press Club, who presented him with a silver cigarette box.

MR. EDWIN BRIGDEN, managing director of the *East Kent Gazette*, Sittingbourne, has just completed 50 years at the office of that paper. He joined the staff in July, 1872, as junior clerk. At the annual staff outing at Eastbourne Mr. Brigden was presented with a solid silver salver, suitably inscribed, and candelabra by the directors and shareholders of the firm, and a pair of solid silver candlesticks by the members of the staff.

WITH reference to Mr. C. T. Jacobi's retirement, announced in our columns last week, we are requested to say that any communication for the present should be sent to 83, Stradella-road, Herne-hill, S.E.24.

MR. W. R. CUMMINS, the hon. treasurer of the North London Master Printers' Association, has, in connection with his hobby of gardening, secured 14 prizes this year—6 firsts, 4 seconds, 4 thirds.

MR. CHRISTOPHER COLEBROOK is among the graduates of London University who have this month attained the degree of B.Sc., Engineering. He studied at the Imperial College of Science and Technology, South Kensington, where he also, by a separate examination this summer, attained the distinction known as the A.C.G.I. (Associate of the City and Guilds Institute).

MR. CHRISTOPHER COLEBROOK is the youngest son of Mr. Frank Colebrook, the well known printers' auctioneer and valuer. He is the second of Mr. Frank Colebrook's sons to become Bachelor of Science.

MR. GEO. A. EDEN, late general secretary of the Printing, Bookbinding and Kindred Trades Overseers' Association, and now technical adviser to that body, opened an interesting discussion at the monthly meeting of the Association at St. Bride Institute, on Tuesday evening.

MR. F. L. CAYZER, a director of the newly-constituted Spicers, Ltd., last week concluded 45 years' service in the house of James Spicer and Sons.

In connection with the amalgamated firm of Spicers, Ltd., Mr. T. P. O'Connor, M.P., has

LONDON COUNTY COUNCIL.

REQUIRED, in September next, a FULL-TIME LETTERPRESS MACHINE INSTRUCTOR at the LONDON SCHOOL OF PRINTING AND KINDRED TRADES, Stamford-street. Salary scale £300 a year by £15 annually to £425. Commencing salary according to experience. Candidates must be able to teach the Theory and Practice of a Letterpress Pressman and Machine Minder's work, elementary and advanced, up to higher branches of Half-Tone and Colour Printing, including Proving. Thorough knowledge of Letterpress Printing Machines and Automatic Feeders and of Mechanics and Mechanical Drawing necessary, and candidates should be capable of estimating time and quantities and of dealing with all matters arising out of the direction of a Letterpress Machine Department. Preference given to candidates who have served or attempted to serve with H.M. Forces. Apply to the Education Officer (T.I.A.), The County Hall, Westminster Bridge, S.E.1. (Stamped addressed foolscap envelope necessary) for form of particulars to be returned by 11th August, 1922. Canvassing disqualifies.—JAMES BIRD, Clerk of the London County Council. 13978

COMPOSITOR wanted; also LINOTYPE OPERATOR wanted. Best location in United States America; business owned and managed by Englishman; give qualifications and references, also wages asked.—Box 13965.

COSTING and ESTIMATING CLERK wanted in Lithographic Transfer Works in the Midlands.—State qualifications, references and wages, to Box 13980.

TRAVELLER wanted, with good connections in the Printing Trade for Manchester, Liverpool and Midlands, with old-established house; state age and experience; all applications treated confidentially.—Box 13976.

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

written a brochure giving a historical account of the businesses of Spicer Bros. and James Spicer and Sons.

MR. GEORGE H. HEDLEY, of G. H. Hedley, Ltd., and managing director of St. Anne's Board Mill Co., Ltd., Bristol, has been appointed chairman of directors of the latter concern.

MR. GEO. RUSSELL is resigning his position as manager of the Broughton Bridge Paper Mills of Messrs. Olive and Partington, Ltd., and is joining the Boothwood Paper Mills Co., Ltd., Rishworth, near Halifax, as a director and manager. Mr. Russell went to Broughton Bridge 32 years ago, and has held his present position for the past 14 years.

Situations Wanted.

ENGINEER'S DRAUGHTSMAN, internal combustion, etc., car experience, desires Position where artistic talent would be of service; ability for advert. lay-out and commercial art.—Address Box 13952.

MINDER (Two revolution) seeks permanency; experienced in Commercial, Book and Three-Colour Work; disengaged.—Box 13973.

MACHINE MINDER.—Centurettes, Wharves, etc.—E. C., 32, Hargrave Park, Highgate, N.19. 13974

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Machinery for Sale.

COTTERILL, 60 by 40, Two-revolution machine, for sale; room wanted; best offer accepted; can be seen running by appointment.—Apply, Box 13970.

"PALATIA" ROTARY GRAVURE MACHINE for sale, cheap, little used; complete with two copper cylinders 42-in. long, 10-in. diameter and all accessories.—Box 13968.

Patents, etc.

INDEXES OR FILES.—The Proprietors of Patent No. 9,629, 1915, for "IMPROVEMENTS IN INDEXES OR FILES," are desirous of entering into arrangements with manufacturers or other interested parties for manufacture and exploitation of the invention in United Kingdom on reasonable terms. For particulars, apply, Fell and James, 11, Queen Victoria-street, E. C. 4. 13975

Miscellaneous.

AN opportunity occurs to ACQUIRE a SMALL PRINTING PLANT, in running order, within a short distance of Liverpool-street; lease of basement premises, about 2,000 sq. ft., at a low rent, may also be had if desired.—Full particulars from D.E., c/o Dixon and Roe, 17, Walbrook, E. C. 4. 13981

CITY OF LONDON.—City-road, few doors from, Splendid WAREHOUSE or FACTORY; newly erected, exceptionally strong, about 10,000 ft.; would be divided; plenty of light; to be LET or SOLD (Freehold or Leasehold); possession may be had; alterations effected if decided as one, so as to be ready before September 29th.—Ring up Holborn 1326, between 10 and 12. 13979

COLONIAL NEWSPAPER CUTTINGS, dealing with the Paper, Printing, Stationery and Allied Trades, are wanted by Advertiser.—Communicate, stating terms, to Box 13882.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

PHOTO PRINTS.—Object Photography, etc.; Practical and Skilled Operators at your service; Modern Studies specially planned for all Object Work.—For efficient service send your work to The Nickeloid Electrotype Co., Ltd., Photo Engravers and Electrotypers, 10, New-street-hill, London, E. C. 4. 13963

TYPE METAL RULE BORDERS, LEADS AND CLUMPS.—Send for samples and prices. Best Alloy used for all these materials.—The Nickeloid Electrotype Co., Ltd., 10, New-street-hill, London, E. C. 4. 13964

The Strike Continues.

It is very clear that much serious damage has been done to the printing industry through the strike of the Typographical Association, but the position in the country as a whole is still very confused. There has been defection on both sides, some few employers having allowed their men to continue working at the same wages as before the Industrial Court's award, whilst on the other hand an increasing number of T.A. members are returning to work at the reduced wages awarded. Master printers are maintaining—and, we think, rightly—that the award of the Industrial Court cannot be trampled upon in the way attempted by the T.A. Statements issued by the employers make clear their insistence that the award must be accepted by the T.A. as a preliminary to any agreed settlement. The T.A., in proposing a resumption of the *status quo*, with a ballot on a suggested reduction of 7s. 6d., seems to forget that the referring of the dispute to the Industrial Court came at the end of innumerable conferences, and even if the employers could ignore the Court's decision and were prepared to modify the reduction of 12s. 6d. awarded, what guarantee is there that a new ballot would do anything more than start the whole process of procrastination and disturbance afresh?

Newspapers' Strong Stand.

THE week's news shows that the stand taken by the newspaper and periodical proprietors has been much stronger than many people anticipated, and its strength shows remarkable development. The posting of notices by the *Yorkshire Post* is a striking indication of the trend of events, as is also the decision of the Liverpool newspapers to enforce the award. It is estimated that if settlement is not reached this week, 46 weekly newspapers in the Lancashire area alone will suspend publication. The T.A. has doubtless built upon the belief that the newspapers would not be prepared to make the very heavy sacrifices which a stoppage entails, but the newspapers are showing that they are pre-

pared to go to even these lengths rather than allow the T.A. to juggle with agreements and dictate their own terms.

The End at Hand?

THIS new self-assertion on the part of the newspaper employers foreshadows, we fancy, the collapse of this most regrettable strike. Such an outcome would probably be but little less a relief to the printing trade unions as a whole than it would to the employers. Many members of the Typographical Association recognise the falsity of the position into which they have been led, and other unions, whose members have been thrown on to the streets by the T.A.'s action, have a right to complain that the T.A. has shown astonishingly little regard for the unity and strength of the general trade union movement in the industry. The strike is on a false basis, as even trade unionists have admitted. To continue fighting to the bitter end would be a policy of madness both in respect of the interests of the T.A. and the interests of all others concerned.

Costly State Printing.

SOME interesting correspondence has been going on in *The Times* on the subject of Government publications and the high figure at which some of these are priced. It was explained in Parliament on July 20th that generally Government publications are issued at cost price—that is, if every copy printed were sold, the cost of paper, printing, binding and so forth would just be recovered. With prices worked out on this basis customers find that some of the more desirable publications are entirely beyond their means. Mr. A. E. Goodwin, secretary of the Federation of Master Printers, discussing the matter with a representative of *The Times*, pointed out that the larger the circulation of any publication, the lower would be the cost, and in place of the present policy adopted by the Stationery Office he suggested that they should sell at a price which would stimulate a ready sale. With regard to the cost of printing, Mr. Goodwin said that the question was discussed at some length on the Stationery Office Vote in Parliament, when Sir Rowland Blades drew attention to the fact that many of these official publications were now being printed at the State Printing Works at Harrow. These works, it was pointed out, were only being conducted for an experimental period, which will expire in June next year. Sir Rowland Blades suggested that the experiment had gone on long enough for an inquiry to be started. "It is difficult," Mr. Goodwin added, "to give any comparative figures as to the cost of the Parliamentary Debates when produced by a firm of contractors and the cost now when produced in the State Printing Office, but there is good ground for saying that if this work was put out to contract it would be done at a considerably lower figure than the present cost. Contracts for Government printing amounting to approximately £70,000 have been put out to open competition within the past nine months, and of this the State Printing Works was able to secure only about £400."

News-Print Prices Higher.

INDICATIONS are that prices of paper, especially news-print, are on the rise. The International Co. of America have advanced the price from \$70 to \$75 per short ton at the mill. This is taken as a proof that the bottom of the market has been reached and that the tendency now will be for quotations to go to higher levels. For some time the news-print side of the paper business has exhibited considerable strength and mills everywhere have been working well. Operations in the newspaper publishing business have been increasing, making larger demands on supplies of paper. The result is to give a firmer tone to the market all round.

Second Week of the Strike.

Employers Hope for Early Settlement on the Basis of the Industrial Court's Award.

With the second week of the strike of the Typographical Association against the award of the Industrial Court the industry is, of course, suffering still further loss and damage on the side both of the employers and of the strikers—and not only of the strikers but also of many members of other unions which, having themselves agreed to wage reduction, are turned out of employment by the action of the T.A.

The Principle at Stake.

In the House of Commons, on Wednesday of last week, Dr. Macnamara, Minister of Labour, in answer to a question by Major Kelley, described the negotiations, the acceptance by a number of unions of the reduction of wages, and the reference of the case of the Typographical Association to the Industrial Court, and stated further: "Reference to the Industrial Court or the alternative forms of arbitration provided under the Industrial Courts Act, 1919, can only be made by the joint consent of the parties, but if the purpose of the Act is not to be stultified, the decision of the Court must be final. I do not think it necessary to arrange that in future proceedings by an Industrial Court both parties to the dispute should be asked to declare their willingness to accept the findings of the Court. Unless willingness to abide by the decision of an Arbitration Court is a prior assumption in all cases arbitration is useless as a method of settling industrial disputes."

Conference of Trade Unions.

A conference of societies belonging to the Printing and Kindred Trades Federation was held in London on Friday afternoon to discuss the policy in connection with the dispute. The Typographical Association declined to be represented. The conference was attended by representatives from: The London Society of Compositors, Printing Machine Managers' Trade Society, the National Union of Printing, Bookbinding, and Paper Workers, the National Society of Printers' Assistants, the Electrotypers and Stereotypers, Platen Machine Minders, Correctors of the Press, Lithographic Artists, Designers, the Amalgamated Association of Pressmen, Litho Music Printers, London Machine Rulers, the Society of Typefounders, the National Union of Journalists, and the Society for Women employed in the printing and allied trades. The meeting passed the following resolution without dissent: "That this meeting of the printing trades unions regrets the refusal of the Typographical Association to attend this conference called to consider questions of policy in which the Typographical Association was chiefly involved, and in view of this refusal to discuss generally the serious position created by the dispute, the unions here represented are recommended to carry on their own work in their own departments." It was also agreed to leave to the officials of the Printing and Kindred Trades Federation and to the joint secretaries of the Joint Industrial Council the responsibility of taking what steps they are able to take with a view to bringing about a settlement at the earliest opportunity.

An important development in the North on Friday was that the members of the Typographical Association employed in the Leeds newspaper offices received fourteen days' notice terminating their engagements in view of their refusal to accept the award of the Industrial Court. The award will be enforced in the district of which Leeds is the centre, including Bradford, Halifax and Huddersfield. The papers published in Leeds include the *Yorkshire Post*, *Leeds Mercury*, and *Yorkshire Evening News*.

Notable Development at Newcastle.

The proprietors of the *Newcastle Daily Chronicle* and the *North Mail* announced at the week end that the two papers have been amalgamated permanently as a direct result of the strike. The *Newcastle Chronicle* has been in existence since 1764, and the *North Mail* since 1901. Both are Liberal papers. The proprietors stated: "We have been compelled, against our desires, to build up a new

fabric of non-union labour in our composing room in place of the trade unionism hitherto established there. We are charged in some quarters with an effort to defeat the trade union principle, and we readily agree that this is the superficial interpretation that might be placed upon our conduct. But it is monstrously unjust and incorrect. As the amalgamation to which we have referred conclusively proves, newspapers are not like shipyards or coal mines, which can close down for a period and resume business, when disputes are settled, at the point at which they suspended it. Daily production is the prime essential of their existence. They must come out or go under. We have no quarrel with trade union principles. . . . This struggle is not of our seeking. We strove to avert it. The right of the Typographical Association to be represented without question in our establishments would never have been contested had we not been placed in the position where total paralysis confronted us. The Industrial Court was the judge and jury. The verdict is on record, for trade unionism to study. . . . Nothing that has happened affects our belief in the benefits of collective bargaining, or will weaken our support, now or in the future, of the reputable methods whereby the workers in our great national industries have established themselves on that plane of security which is needed to make their existence tolerable and to ensure their social and communal progress."

The T.A.'s Blunder.

Opinion is growing strongly that the T.A. have made a bad mistake. "Directly the T.A. membership repudiated the Industrial Court award," says the *Express and Echo*, Exeter, "the employers were concerned not with wage but with a basic principle. The operative document (the only declaration that matters) is the agreement which all parties signed at the Ministry of Labour agreeing to submit the dispute to an Industrial Court for settlement. . . . Mr. French and Mr. Skinner stated without qualification that the agreement they were signing was for settlement, and they made a strong point that the notices then maturing must be withdrawn, not suspended, because the dispute was definitely at an end."

The *Scotsman* points out that "if the attitude of the T.A. were to become common in trade unionism it would lose every atom of respect and recognition. . . . What, it may be asked, would be said in trade union lodges if employers were to gamble in this way with their word. . . . The success of the T.A. is alike impossible and undesirable. It would be fraught with evil consequences to all branches of labour."

T.A. Men Returning.

Mr. R. A. Austen-Leigh, president of the Federation of Master Printers, stated on Monday that whereas the general result of the rejection by the members of the Typographical Association of the Industrial Court wages award had been that the members of the association had left their employment, a certain number had accepted the deduction straight away, whilst a trickle of men had been returning all the week, convinced of the mistake made by their executive in taking a ballot on the award. That trickle was getting more and more pronounced, and it was expected that before the end of the week it would have broadened into a very considerable stream. Naturally, the newspaper section had been more obviously and immediately hit than the general printing section, but the proprietors were overcoming the difficulties of the situation in a wonderful way, and every day saw a marked improvement in the emergency editions which they are producing. Altogether the employers felt themselves in a very strong position, and believed that the Typographical Association, sooner or later, would have to recede from the attitude they had taken up.

Mr. F. L. Armstrong, the Newspaper Society secretary, announced that in over forty towns members of the Typographical Association had accepted the employers' terms to abide by the Industrial Court award. The Midland

proprietors were hopeful of a settlement and had arranged to produce improved sheets this week.

A meeting of the Lancashire, Cheshire and Derbyshire Federation of Weekly Newspaper Proprietors, held in Manchester on Monday unanimously decided that there was no other course open to the proprietors than to confirm their decision to stand by the award of the Industrial Court, to which the question of wages had been referred for a settlement. In nearly every office in the area the men had ceased work, and with the exception of a few isolated cases all the weekly newspapers throughout Lancashire and Cheshire did not publish last week. There will again be a general suspension of weekly newspapers throughout the area this week. In four important towns no evening paper has been issued for over a week. The Lancashire and Cheshire Alliance of Master Printers also met in Manchester. It was reported that of 28 centres in this area there was a complete stoppage in 25, and in the other three a few men had returned at the reduced rates. The employers, however, were resolutely firm that the award must be complied with.

The managements of the *Liverpool Courier* and *Liverpool Daily Post* on Monday proposed to the men in their employment that they should follow the example of other centres and work on the basis of the Industrial Court's award on condition that any different settlement ultimately arrived at should apply to them. They further intimated that failing the acceptance of the offer a fortnight's notice to conform with the terms of the award would be issued on the next pay-day. The *Liverpool Journal of Commerce* has already given a fortnight's notice of its intention to enforce the award.

A T.A. Proposal.

The Typographical Association on Monday issued the following:—"It is important that employers in the printing industry and the public should know that as far as the T.A. is concerned the position is the same as on July 22nd last, when the Executive Council of the T.A. offered to recommend to its members a reduction of 7s. 6d. per week in two instalments and requested the Master Printers' Federation to place the offer before their alliances. This the employers refused to do. That offer has not been withdrawn. The Executive Council of the T.A. are prepared to meet the other side at any time to examine any proposal likely to lead to a settlement."

The Council of the T.A. has decided to ballot the members of the Association on the question of taking a levy of 2s. from each 10s. earned in wages.

"No request has yet reached the employers' organisations at headquarters for a conference," stated Mr. Goodwin on Wednesday, "but in many areas the local employers have been approached. In a widespread dispute of this character, and in view of the national wage agreement, this matter can only be dealt with nationally. The National Wage Basis Committee of the Federation of Master Printers and the Newspaper Society is to meet in London this (Wednesday) afternoon to review the position."

A six-a-side conference of Bristol master printers and operatives was held at Bristol on Tuesday under the chairmanship of the Lord Mayor. It was agreed that both sides should write to their national executives urging them to get into conference at the earliest possible moment.

"Owing to the reduction in the price of paper, printing, and wages," Messrs. Dent reduce the price of *Everyman's Library* to 2s. per volume, excepting the reference section, which volumes will remain 2s. 6d.

NEW FIELD FOR PRINT.—A firm of wrapping paper dealers in New York have struck upon an interesting plan which tends to popularise their wrapping paper and at the same time provide more work for the printer. The firm has arranged for a series of specially written illustrated stories, which it entitles "Uncle Wiggily Stories" and which it prints on wrapping paper and paper bags, these to be sold to stores for the purpose of attracting the child trade of the country. Each story refers to another sheet that can be had of a different story, so that children will bring their mothers back to make further purchases.

MILLINGTON AND SONS, LTD., make a great point of the cheaper postage in sending out a complete sample set of envelopes, together with printing, writing and other classes of papers.

DIVIDENDS AND REPORTS.

LAMSON PARAGON SUPPLY Co.—Half-year's dividend on 10 per cent. preference shares, payable August 1st.

BURY PAPERMAKING Co., LTD.—Report for half-year ended May 27th states that there is loss on trading account of £10,967. After charging interest, depreciation, etc., amounting to £5,435, there is a debit balance of £16,401, to which must be added debit balance from last account, plus dividend, amounting to £6,332, making total debit £22,734.

"LIVERPOOL DAILY POST" AND "ECHO."—The directors have declared an interim dividend for the half-year ending June 30th at the rate of 15 per cent. per annum, subject to tax.

NEW COMPANIES.

STACY AND SON, LTD.—Capital £4,000; to acquire the business of printers, stationers and account book makers, carried on by H. S. Stacy as "Stacy and Son, of Winchester-place, Kingsland, London. Private company. First directors: H. S. Stacy and N. W. Stacy. Registered office: Winchester-place, Kingsland, E.8.

GEORGE HARRISON (AGENCIES), LTD.—Capital £4,000; paper merchants, manufacturers and agents, printers, stationers, lithographers, publishers, advertising agents, ink manufacturers, etc. Private company. The Articles of Association appoint Godfrey Isaacs, Michael Levy and Jonah Isaacs as directors for life, but the separate "copy of register of directors" filed therewith, gives only the names of Godfrey Isaacs and Michael Levy, both of Villa Rosa, Cornwall-gardens, Margate, paper merchants. Registered office: 32, Queen Victoria-street, E.C.

MAYFAIR PRESS, LTD.—Capital £100; paper manufacturers, dealers in and manufacturers of materials used in the manufacture of paper, wholesale and retail and export stationers, printers, lithographers, booksellers, publishers, advertisement contractors, etc. Private company. Subscribers: G. H. Bettinson, E. L. Brynildsen, and D. Davies.

MARSHALL ADVERTISING SERVICE, LTD.—Capital £2,000; to carry on the business indicated by the title and that of printers, lithographers, stationers, bookbinders, publishers, etc. Private company. First directors: R. Cunningham, G. F. Cunningham, J. P. Cunningham and H. S. Marshall. Registered office: Longbank Works, Alva, Scotland.

CAMPBELL AND PRICE, LTD.—Capital £10,000, in £1 shares; paper agents, manufacturers, importers, exporters and shippers of and dealers in papers of all kinds, and articles made from paper or pulp, including cardboard, millboard and wall and ceiling papers, etc. Private company. Subscribers: J. Price and T. E. Godbold. Registered office: 25, Garlick-hill, E.C.4.

PENRICE CHINA CLAY Co., LTD.—Capital £5,000; to carry on the business of china clay producers and merchants, to adopt an agreement with A. Daniels, etc. Private company. First directors: A. Daniels and T. Pool. Registered office: Copperhouse, Hayle, Cornwall.

VI-BOARD (SALES), LTD.—Capital £5,000; to adopt an agreement with A. B. G. Colpoys and F. M. Russell, trading as "Russells," and to carry on the business of manufacturers of and dealers in building materials, paper, pulp, cardboard, millboard, compo board, glue and other plastic substances, etc. Private company. First directors: A. T. Masterman, A. B. G. Colpoys and F. M. Russell. Registered office: 58, Pall-mall, S.W.

N. V. PAPIERGROOTHANDEL AND FABRIKEN V/H GEBR. CATS.—Particulars of the N. V. Papiergroothandel and Fabriken v/h Gebrs Cats (Wholesale Paper Trading and Manufacturing Co., Ltd., formerly Cats Bros.) have been filed at Somerset House pursuant to Section 274 of the Companies (Consolidation) Act. The company was incorporated in Holland in 1918, with a capital of 1,500,000 guildens in 1,500 shares of 1,000 guildens each. L. E. Cats, Scheveningen is director. The London address is 31, Walbrook, E.C., where Jacob Smid (manager) is authorised to accept service of process and notices on behalf of the company.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

STANLEY CLARKE AND Co., LTD. (paper bag manufacturers, etc., London).—Particulars of £3,000 debentures authorised July 10th, 1921; whole amount now issued; charged on the company's undertaking and property, present and future, including uncalled capital.

FRENCH PAPER STOCK Co., LTD.—Debenture dated July 19th, 1922, to secure advances up to £15,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Becker and Co., Ltd., 34-40, Ludgate-hill, E.C.

CRISP AND Co., LTD. (fancy box manufacturers, etc., London).—Mortgage debenture dated July 4th, 1922, to secure £200; charged on the company's undertaking and property, present and future. Holder: Miss Kate R. Abel, "Dunolly," Shortlands, Kent.

E. N. MASON AND SONS, LTD. (engineers and general stationers, etc., Colchester).—Deposit on July 15th, 1922, of deeds of land and buildings known as part of Castle Brewery premises, Ryegate road and Maidenburgh-street, Colchester, to secure all moneys due or to become due from the company to Barclay's Bank, Ltd.

FLEETWAY PRESS, LTD.—Satisfaction to the extent of £2,500 on June 30th, 1922, of B debentures dated July 28th, 1920, securing £58,200.

NORFOLK PRESS SYNDICATE, LTD.—First mortgage dated July 15th, 1922, to secure £1,000, charged on the company's undertaking and property, present and future. Holder: H. D. King, 1, Stanhope-terrace, Hyde Park, W.

BIOSCOPE PUBLISHING Co., LTD.—(a) Satisfaction in full on July 3rd, 1922, of debentures dated October 22nd, 1919, securing £1,000; (b) particulars of £1,000 debentures authorised July 20th, whole amount now issued; charged on the company's undertaking and property, present and future, including uncalled capital.

HUDSON AND KEARNS, LTD. (printers, publishers, etc., London).—(a) Particulars of £105,000 first debentures authorised by resolutions dated June 7th and July 11th, 1922; the whole amount being issued; charged on the company's undertaking and property, present and future, including uncalled capital; (b) particulars of £110,000 second debentures authorised by resolutions of same dates;

charged on the same property; the whole amount being now issued; (c) satisfaction in full of charge dated November 26th, 1915, securing all moneys becoming due to the London County and Westminster Bank.

STANDARD CATALOGUE Co., LTD.—(a) Issue on May 10th, 1922, of £4,000 B.S.E. debentures, part of a series already registered; (b) satisfaction to the extent of £39,500 on or before June 18th, 1922, of B.S.E. debentures of various dates from January 5th, 1921, to May 10th, 1922, securing in all £47,000.

C. J. CULLIFORD AND SONS (LITHO), LTD.—Debenture dated July 18th, 1922, to secure £4,000, charged on the company's undertaking and property, present and future, including uncalled capital, but excluding freehold property at Norwood. Holder: H. J. Brodie, 50, Cannon-street, E.C.

BASIL BLACKWELL AND MOTT, LTD. (newspaper proprietors, etc., Oxford).—Deposit on July 1st, 1922, of deeds of 5, Alfred-street, High-street, Oxford, to secure all moneys due or to become due from company to L.C.W. and Parr's Bank, Ltd.

STRINGERTYPE MANUFACTURING Co., LTD.—Issue on July 6th, 1922, of £3,000 debentures, part of a series already registered.

C. G. KEMP, LTD. (manufacturing stationers, etc., London).—Particulars of £300 debentures, authorised July 12th, 1922, present issue £230, charged on the company's property, present and future, including uncalled capital.

BANKRUPTCIES, etc.

Re "LONDON MAIL" (1918), LTD.—Under a compulsory winding-up order made against the London Mail (1918), Ltd., 39, King-street, Covent Garden, W.C., accounts have been lodged showing liabilities £4,776, against assets valued at £4,763, and a deficiency of £6,013 as regards contributories. The company was promoted by Arthur Savile and Wm. J. B. Odhams. The company's trading resulted in profits of £5,925 in 1918; £7,202 in 1919; and £548 in 1920; but a loss of £403 in 1921. The failure is attributed by Mr. J. S. Elias, the managing director, to the general depression in the publishing world during 1920 and 1921. Messrs. A. H. Partridge and Fredk. Wilcock have been appointed joint liquidators by the Court.

Re THE METROPOLITAN REVIEW, LTD., 14, Bloomsbury-street, W.C.—Under the compulsory liquidation of this company, accounts have been lodged showing liabilities £36,387 against assets valued at £5,202 and a deficiency of £31,385 with regard to contributories. Mr. E. T. A. Phillips, official receiver, reports that the company which was promoted by B. J. Redman, J. E. Pickles and T. S. Knowlson, as directors of the Pelman Institute, Ltd., was incorporated as a private company on May 28th, 1921. Its immediate object was to act as the proprietor and publisher of a weekly illustrated magazine. The nominal capital is £11,000, divided into 10,000 ordinary shares of £1 each and 20,000 deferred shares of 1s. each, but the issued capital only amounts to 200 ordinary shares, which were subscribed for by Knowlson and Pickles, but not paid for. The first number of the new magazine, the Metropolitan Review, appeared in June, 1921, but only 13 numbers were issued. None of the directors were acquainted with the business of newspaper publishing, and, whilst it was found impossible to secure advertisements, the arrangements for distribution were quite inadequate. Arrangements were also made to publish a set of books of an educational character, to be called the "Metropolitan Library." The writing and editing of this series were practically finished, arrangements for printing and binding made, and the manuscript set up in type, but these steps resulted in a large indebtedness to printers, papermakers and bookbinders, which there was no means of satisfying. Some of the debts were guaranteed by the Institute, and creditors' claims, included in the accounts of

both the Institute and the company in respect of the library, amount to about £14,750. After the winding-up order was made the official receiver obtained the appointment of Mr. Harry Wingfield, a partner in the firm of Fairbairn, Wingfield and Wykes, of 67, Watling-street, E.C.4, chartered accountants, as special manager, with a view to selling the company's interest in the Metropolitan Library. This gentleman's efforts were not, at the time, successful, but as a result of the usual meetings of creditors and contributors, held at 33, Carey-street, on June 27th, 1922, he has been appointed liquidator and will doubtless renew the attempt to dispose of this asset.

RE ACTE AND CO., LTD., 70, Newman-street, E.C.—Under a compulsory winding up order made against the company recently, the statutory first meetings of the creditors and shareholders were held on August 1st at the Carey-street offices of the Board of Trade, Lincoln's-inn, W.C. Mr. J. Barwick Thompson, official receiver, reported that the company was formed in August, 1910, with a nominal capital of £4,000, to purchase the stock-in-trade and carry on the business of Acte and Co., dealers in pictorial post cards and fancy goods. The issued capital at the date of the winding up order was £2,861. The company carried on the above business until the end of 1916, when they had a credit balance of about £450, but then directed their activities into other channels. Considerable losses and liabilities were incurred in respect of advertising, the amount outstanding for the same at the date of the winding up order being returned at £7,153. Debentures for £5,000 were issued in April, 1921, and in January last a receiver was appointed, who had realised the company's assets for £5,207, and had distributed the proceeds in nearly full payment of the debenture bonds and attendant expenses. The accounts filed under the liquidation showed unsecured liabilities £21,647, and as the whole of the assets had been realised and distributed there could be no prospect of any return to either those creditors or the shareholders. The liquidation was left in the hands of the official receiver.

Re PERCY PAYTON TAYLOR (trading as Taylor and Co.), canned goods and paper importer and merchant, late of 64, Wright-street, Hull. The debtor attended before Mr. Registrar Mellor last week, at the London Bankruptcy Court, for public examination upon accounts showing total liabilities £4,828 (unsecured, £4,112), and net assets valued at £776. In reply to Mr. Walter Boyle, official receiver, he stated that in 1917, with a borrowed capital of £200, he commenced business as a dealer in canned goods and paper at Hull. In January, 1919, he was joined by a partner, who put in a capital of £250, and traded then under the style of Taylor and Thomas. The partnership was dissolved in October, 1920, witness taking over the liabilities and assets and continuing the business alone in the name of "Taylor and Co.," until Nov. 1921, when owing to financial worries he had a nervous breakdown, left the business, and sailed for Australia. His wife made him acquainted with the fact that these bankruptcy proceedings had been taken, and sent him the money for his passage home. Witness attributed his failure to lack of capital, forced sale of stock owing to the calling in of the overdrafts, to depreciation, to claims in respect of loss of profits, and to loss in trading. The examination was concluded.

Re ROBERT CAMMELL, Cardboard Box Manufacturer, 53, New North-road, N.—The first meeting of creditors was held on July 25th, at the London Bankruptcy Court, when the official receiver reported that the liabilities were returned at £920 against assets valued at £215s. The debtor started business in May, 1918, under the style of "Cammell" with a borrowed capital of £400, since repaid. The trading was successful during the first year, but was subsequently carried on at a loss owing to the slump. In March, 1922, by an order of the High Court, the business was transferred to the debtor's wife, and he had since acted as manager. The case was left with the official receiver to be wound up in the usual manner.

UNDER the deed of arrangement entered into by James Samuel Roy and Hugh Alexander Davids, trading as Forward, Davids and Co., paper agents and merchants, 145, Cannon-street, E.C., a statement has been issued by the trustee (Mr. A. Granville White), and a first and final dividend of 2s. 2d. in the £1 distributed to the creditors.

Don't talk about opportunities—make them.

"PRINTERS' PIE," 1922.—Published last week was another fine issue, of *Printers' Pie*, the well-known annual of the Pie Publications, Ltd., whose £10,000 5 per cent. preference shares are held for the benefit of printing and allied trades' charities. Owing to the lamented death of its former editor, Mrs. Hugh Spottiswoode, her son, Mr. R. Andrew Spottiswoode, now succeeds her in the editorial chair. This year's issue is good value for its price of 1s. 6d. net, including as it does, stories by W. Pett Ridge, George R. Sims, William Le Queux and other well-known writers, and pictures in colour by such artists as Lawson Wood, Will Owen and H. M. Bateman.

FRENCH REVIEW OF PRINTING.—A copy of a very handsome special number of the French trade journal *Papyrus* is sent us by the publishers, at 30, Rue Jacob, Paris (VIe). This number bears the sub-title "Typographie" and is wholly devoted to a review of the printing craft which readers of French will find of much interest. Included are a score or so of articles by well-known French technical writers on such subjects as Wood Engraving in Modern Books, the Typographic Setting of Advertisements, the Origin of Several Typographic Correction Marks, the Evolution of the Linotype, Latest Improvements of the Intertype and Linograph, New Printing Presses, etc. In format of about demy 4to, beautifully printed on superior paper, about 100pp., the attraction of this fine issue is enhanced by the addition of a supplement of illustrations produced by a variety of processes. The price of this edition de luxe is Francs 27.50 post free, whilst a cheaper edition is available at F.9.50. In preparation also is a special number of *Papyrus* to be devoted to the subject of Paper.

POSTAL RATES DATA.—From Mr. W. H. Burchell (of the Caxton Press, Ltd., 13-15, Leather-lane, Holborn, E.C1.) we have received a copy of a hanging card, about 10 ins. by 15 ins., giving at a glance the revised rates for all classes of postal matter, together with other useful Post Office information. The card, which is published at one shilling, should be found a real time and money saver in the office, as it will save much calculation and searching for postal information, and will facilitate taking full advantage of Post Office services.

We have received a copy of the first number of "The Thistle," which says of itself that it is "Published between-whiles by the Caledonian Press, Ltd., the only printing establishment in Great Britain owned and controlled by a trade union." This number, which is well designed and excellently printed in two colours, contains an illustrated article descriptive of the Caledonian Press, and among other items is a wise little article "On Labour and Publicity" by Herbert Morrison, in which some good advice is given on the subjects of advertising and printing. "Rather dangerous, perhaps, is the suggestion that 'The ideal thing is to be acquainted with type faces and the little tricks of lay-out . . . etc., and to control your printer from beginning to end,'" but Mr. Morrison is on sound ground when he writes "The printer who is merely concerned with spelling correctly and filling up the area with metal, throwing in a few 'ornaments' to fill up blank spaces—it is extraordinary how some printers abhor a vacuum!—that printer should be put on the barred list."

"THE HUMAN FACTOR IN INDUSTRY," by Mr. Robert R. Hyde (director of the Industrial Welfare Society), is a reprint in handy form of a series of articles which appeared in the *Daily Telegraph*. Sir Wm. Mackenzie, K.C. (president of the Industrial Court) contributes a foreword.

MR. W. C. POWERS, who is in charge of the new London office of Messrs. Peter Dixon and Son, Ltd., has a very extensive knowledge of the "news" trade not only of the United Kingdom but in the United States and Canada. He has earned a high reputation as both seller and buyer, his activities covering Scandinavia and other countries. In the trade Mr. Powers is deservedly popular. He possesses unbounded energy, backed up with enthusiasm and optimism.

A Telephone Complaint.

SIR.—We think the matter of the telephone should be taken up strongly by our profession. The treatment accorded generally to subscribers by telephone operators at the exchanges is, we find in Salisbury, practically disgusting. The snappy way in which one is answered and the speaking in during conversations and general treatment leaves much to be desired.

It may hardly be believed that during a conversation between ourselves and Bristol, at about 6.15 p.m. on Tuesday, July 25th, one of the girl operators between the two towns called the other a "maniac." This really should cease, and we think that all those who have anything to complain of at all should take the matter up with the Postmaster-General, as it is a public service, and operators are the servants of the subscribers. If anything of this description happened in a commercial house we, personally, should discharge the person who acted in such a manner.

Yours, etc.,

p.p. THE SALISBURY PRESS.

HORACE F. G. ALLAWAY.

5, Wilton-road, Salisbury.

Paper Industry J.I.C.

New Scope of Work Indicated at the Annual Meeting.

The annual meeting of the Joint Industrial Council of the Papermaking Industry was held on the 20th ult. at 26, Farrindon-street. Mr. James Pearson (East Lancashire Paper Mill) was elected chairman, and Mr. C. R. Seddon vice-chairman.

On the employers' side Captain Nash was appointed to take the place of Mr. H. A. D. Wathen (resigned) as a representative of the Papermakers' Association. On the workers' panel, Mr. J. Mathewson was appointed in the place of Mr. Reed as a representative of the Amalgamated Society of Papermakers. In the representation of the National Union of Printing and Paper, etc., Workers, Mr. J. Douglas and Mr. W. H. Brudekin take the place of Messrs. Bishop and Dowd.

The Council received a report from the Technical Section of the Papermakers' Association as to the proposals of the sub-committee on workers' education, and after a general discussion, in which the need for combined action was fully recognised, it was decided that the workers' panel on the Council should nominate three representatives to co-operate with the Technical Section in this matter.

The Council then proceeded to consider the position arising from the operation of the Night Work of Young Persons Act, 1920.

The Council decided to continue its membership of the Association of Joint Industrial Councils, on which it is represented by Mr. A. W. Foster (Papermakers' Association) and Mr. W. Ross (National Union of Printing and Paper Workers).

Discussion ensued on the question of preventable accidents in paper mills, and it was agreed that steps should be taken in the direction of a Safety First campaign for the special benefit of the industry.

MESSRS. JOHN DICKINSON AND CO., LTD., forward striking samples of coated papers and boards. Their "non-such" surface boards in 14 colours and their "new-fine" chromo boards indicate improvements even upon their previous productions. An example of the fine printing qualities is given on a "new-fine" chromo board in the form of a mailing card, 6½ by 9½ ins., which can go through the post for a halfpenny. An attractive new colour, silver grey, has been introduced into the Dickinson "velvet finish" art. Samples of paper and boards also come from Gidney, Rourke and Co., Ltd., and a series of printing and cover papers from Grosvenor, Chater and Co., Ltd.

MR. EDWARD H. MAYO, general manager of the Southern Paper Co., Moss Point, Miss., is making an eight or ten weeks tour through England, France, Scotland, Sweden, Norway and Finland.

British Paper Industry.

Important Movements Under Weigh.

Upholding British Goods Abroad.

Although actual business in the paper trade appears to be small and moving slowly, there are potent forces at work in various directions fashioning the industry into its more or less permanent shape. Paper continues to be one of the greatest necessities of civilised mankind, and its uses are bound to extend with the advance of education and the progress of international relations. The part which paper already plays in the affairs of men and women is colossal, yet few outside those who manufacture or handle it realise the fact. Perhaps even those in the industry do not altogether appreciate the importance of the variety of the service which paper performs. Their great concern is to make and market the product, and its ultimate purpose interests them little as a general rule. The ultimate destiny of paper is more the concern of the agent and merchant than of the papermaker, who in the main manufactures to requirements. Probably it is inevitable from the nature of things that this should be so. Papermakers have their own problems to deal with, and it is left to others to find new uses for paper. If these prove of sufficient value, of course the mills readily respond. The magnitude of papermaking machines necessitates substantial runs. Experiments are matters which are not easily or lightly undertaken—on the commercial machines. Hence it is only upon established requirements and large orders that the mills can enter with security.

Both inside and outside the paper industry, however, minds are being centred upon questions of new uses, and in the matter of boards particularly, outstanding developments have taken place, as, for instance, the now familiar cartons. In regard to paper, progress is rather in the direction of modifications and improvements. As with the Fourdrinier machine, the basis is unaltered.

Something of a new departure is promised by the suggested employment of rubber latex as an ingredient. Considerable interest is being manifested in this idea of Professor Kaye, and if it is practicable we should soon know.

Competition in Skill.

An outstanding feature of recent date in paper manufacture is the progress being made with the education of those practically engaged in the mills. The movement is but in its infancy. Specialisation is one of the prominent features of modern industry, and it is necessary that papermaking should keep itself abreast of the times. Up to the present our workpeople have been as efficient as in any other country in which paper is made. But competition in skill is growing steadily, and, as has often been pointed out, British mills are under the handicap of having to seek their principal raw material from overseas. Therefore, it is the more necessary that our manipulation of that material should be as near perfection as possible. By care and study the superiority which British papermakers have hitherto enjoyed can be maintained, and with the directing hand which the Technical Section is exercising, there need be no fear in this regard, provided the rank and file respond to the appeal that is being made to them.

The Selling Side.

On the selling side of the paper trade, also, important changes are taking place. We have seen large amalgamations aiming at efficiency and economy as to the disposal of paper and paper goods, and the footing which the firms concerned had already obtained in foreign markets will doubtless lead to an extension of overseas business.

This tendency is also seen in a modified form on the machinery manufacturing side. It is a sign of the times and should help to consolidate the position which the industry holds in this country.

Export Trade.

So far as the export of British paper and stationery is concerned, this for the moment is the most promising side of the business. Curiously enough export trade has always been the mainstay of our manufacturers in spite of the vast consumption of paper at home. While it is true that our foreign trade is not all that could be desired, it has increased steadily of late in face of the uncer-

Exports of British Paper, etc.

tainty that has existed. At the moment our exporters are not grumbling, which is a good sign.

For the improvement we have mainly our colonies to thank. Blood is thicker than water, after all, and British goods are well received in the "community of nations." But the proportions which our foreign trade in paper has been able to maintain are due to the old spirit of enterprise and adventure which is still an abiding characteristic of our race. Men have gone out to the far corners of the world as vendors of British paper, and in spite of special difficulties they have succeeded well in their mission. It is for the papermakers—mill owners and workers alike—to support these adventurers with their best work and service. They have not failed in the past, and they are not likely to do so in the future. The welfare of the industry in this country depends upon the ample fulfilment of such a compact.

So in every department of the British paper industry we see splendid efforts being made to meet the changing circumstances of the times. With a solid backing of those who are at the helm, all will be well.

Paper Tariff in Jamaica.

The Jamaica Tariff Law, 1922, provides for a preferential tariff of 4½d. on playing cards per pack (not exceeding 54 cards per pack) and a general tariff of 6d. The preferential tariff applies to U.K. or Canadian goods only.

Schedule II, which sets forth the table of exemptions from duty, includes the following:—Books, printed, bound or unbound, manuscripts, music, newspapers, pamphlets, periodicals, unframed photographs, almanacs, school globes, atlases, charts, maps, plans, trade catalogues, bank notes, used and unused postage stamps, and used postcards; but

not account books, printed labels, printed forms or Christmas cards. Orange wrapping paper stamped as such; printing paper, as known to the papermaking and printing trades as "printing" or "newsprint," and not to include any sized, water-marked or writing papers of any kind.

Tearing Strength of Paper.

Investigation into methods of determining the strength of paper has been continued by the Paper Laboratory of the Bureau of Standards, U.S.A. Another type of instrument has been examined apart from the mechanical features of the machines themselves. It has been found that this test is affected by the rubbing of the sample during the tear when more than one ply is used, and also that the width of the sample affects the test. This latter is probably due to the assistance given by the fibres adjoining those being torn and seems to extend out from the place of the tear. Although most of the instruments sold for this purpose are satisfactory for certain work, it is thought that the two factors mentioned above must be considered before a really accurate machine will be available.

A SERIOUS FIRE.—Fire was discovered last week at the factory of Messrs. Brown, Stewart and Co., Limited, paper-makers, Springfield-road, Glasgow. The outbreak occurred in a two-storey part of the premises which is used in connection with the preparation of esparto grass. In spite of the fact that six detachments of the Fire Brigade were quickly on the spot, and ten lines of hose in operation, it was found impossible to save the building. The firemen, however, were successful in preventing the spread of the fire to other parts of the factory. The damage is estimated at about £5,000.

Empire Paper Mills.

Debenture Issue Foreshadows Interesting Developments.

In connection with the issue of £650,000 6½ per cent. guaranteed first mortgage debentures of the Empire Paper Mills (1922), Ltd., Greenhithe, some interesting facts are presented as to the present extent of the plant and future developments. The issue appears with the unconditional guarantee of the *Daily Mirror Newspapers, Ltd.*, and the *Sunday Pictorial Newspapers (1920), Ltd.*

The mills at Greenhithe, with yards and railway sidings, cover about 16 acres, and possess a wharf 605 feet long with jetty extending 455 feet into the River Thames, having a pier head of 605 feet in length in deep water. The present output capacity of the mills amounts to over 600 tons per week, and part of the proceeds of the present issue will be used to instal a new papermaking machine of the latest type which will increase the output to a total of over 800 tons per week.

The deep-water pier on the river provides facilities for the economic handling of raw materials and the delivery of the manufactured product. There are special facilities for the quick handling of coal cargoes, and bunker accommodation is provided for 3,000 tons of coal. The mills also have good railway facilities and sidings adjoining the South Eastern and Chatham Railway.

The water supply, which is such an important factor in paper production, is supplied by two wells capable of yielding from 20,000,000 to 22,000,000 gallons of water per week.

The additional area of freehold land, about 20 acres, owned by the company allows ample room for any further extensions or development of the business. In addition to the mill buildings, wharves, piers, etc., the company also owns about 12 acres of freehold land on a part of which 37 houses and cottages with a total rent roll of £1,475 per annum have been erected.

A valuation of the property by Messrs. Edward Rushton, Son and Kenyon, Manchester, places the total valuation of the Empire Mills as a going concern at £805,125, made up as follows:—Land, water supply, reservoir, railway sidings, wharf and jetty, £131,000; mill buildings, £234,740; plant, machinery, fixtures, office furniture, tools and utensils, locomotives and railway wagons, motor car and motor vehicles, £422,060; residences, dwelling houses and cottages, £17,325.

With regard to the disposal of the paper manufactured, contracts have been entered into with the Associated Newspapers, Ltd. (owners of the *Daily Mail*, *Evening News* and *Weekly Dispatch*) and with the *Daily Mirror Newspapers, Ltd.*, and the *Sunday Pictorial Newspapers (1920), Ltd.*, under which these companies take practically the whole of the present output of the mill for a period of seven years from August 1st, 1922, on the basis of an agreed profit on the cost of production, which alone will furnish the company with a net profit of over £60,000 per annum, after deduction of all expenses and of depreciation of plant and machinery. The Associated Newspapers, Ltd., have the option to take a further 200 tons per week of the company's output as soon as the new machine is installed and in operation. The machine should be running and producing paper within the next twelve months, when the net profits are estimated to exceed £85,000 per annum.

The directors of the Empire Paper Mills (1922), Ltd., are the Right Hon. the Viscount Rothermere (chairman), Mr. A. E. Linforth (vice-chairman) (director, The Amalgamated Press, Ltd.), Mr. Stanley Cousins (director, The Imperial Paper Mills, Ltd.), Mr. E. A. Sursham (director, The Anglo-Newfoundland Development Co., Ltd.), Mr. John Cowley (director, The *Daily Mirror Newspapers, Ltd.*), Mr. A. Baker (general manager, Greenhithe).

DURING the war the manufacture of the well-known "Mentges" Folders was suspended, and since then it has been extremely difficult to obtain delivery and meet the demand that has been made for these machines. The Lanston Monotype Corporation, however, now inform us that the manufacturers have the whole of their factories working again under normal conditions, and orders for all of the various models can now be executed from the Lanston premises in Fetter-lane, London.

Australian Notes.

Home Pulp Experiments—English Methods Not Suitable—Checking Laboratory Work—Wattle Bark Report—Newspaper Company's Record Year—Newsprint Prices Easier—Lamson Paragon Dividend—Panel Envelopes—Penny Postage Restoration Advocated—Books for State Schools—New Periodical—New Newspaper Offices.

(From Our Sydney Correspondent.)

A MELBOURNE correspondent states that tests made at the Perth Laboratory of the Commonwealth Institute of Science and Industry have proved conclusively that high yields of good paper pulp can be obtained from three important Tasmanian timbers. Some time ago samples of Australian timbers were sent to England for the purpose of ascertaining whether they were suitable for the manufacture of paper pulp, and replies were received stating that the wood was valueless for this purpose. It was presumed that the treatment supplied by the British firms was not suitable for the Australian timbers, and efforts were made at the Perth Laboratory to ascertain whether Australian timbers could be utilised for the manufacture of paper pulp.

THE Director of the Commonwealth Institute of Science and Industry (Mr. G. H. Knibbs) states that the method of treatment applied to these timbers abroad was quite unsuited to Australian woods, however satisfactory it may be for northern hemisphere timbers, such as spruce and poplar. The methods of treatment worked out after the tests made in the Perth Laboratory were less costly and were capable of giving a better yield of stronger pulp than those employed in the tests made abroad.

"THE Institute," added Mr. Knibbs, "is now preparing to check the results of the laboratory work by means of semi-commercial scale tests, in which ton lots of pulp will be made and the probable cost of production on a large scale worked out. At the same time the actual papermaking value will be ascertained, and then it should not be difficult to settle the question of the economies of establishing the industry in Australia." Mr. Knibbs also stated that the large scale tests on Tasmanian and other Australian woods would be conducted in Victoria.

THE director of the institute has also received from Christiania, Norway, reports on the manufacture of raw material for papermaking from spent wattle bark and wattle wood. The reports reveal incidentally that there is plenty of valuable material in Australia for papermaking if the economics of the element of manufacture can be satisfactorily controlled. The director points out that there appears to be no reason why Australia should not successfully meet her own requirements in respect of paper, and that the present investigations are tending to confirm that opinion.

THE second annual report of Sun Newspapers, Ltd., for the period ended March 26th, states that since its reorganisation in 1920 the company has steadily prospered, and the year just closed has been a record one in almost every respect. In their report last year the directors referred to the abnormal price which the company had paid for newsprint, and the difficulty of obtaining supplies. The directors in the present report state that they are glad to advise shareholders that the period of "grossly excessive prices has passed, and newsprint can now be secured at prices which are comparatively more reasonable, though the present costs are still much more than double what was customary prior to the war." This factor, the report adds, will continue to operate against material reduction in the selling price of papers, and makes a return to the penny daily paper impracticable at present if shareholders are to receive a reasonable return for the use of their capital.

THE net profit of Sun Newspapers, Ltd., for the year amounted to £103,100. From this amount has to be deducted the four quarterly interim dividends, amounting to

£64,530, leaving a balance of £38,570. Adding £285, the balance brought forward from last year, there is still available an amount of £38,856. The directors propose to deal with this sum by transferring £2,033 to goodwill reserve and £22,000 to contingency reserve, and by declaring a bonus of 2 per cent. on the face value of the old issue of ordinary shares, and an equivalent bonus on the paid up value of the new issue, which will absorb £13,392, leaving £831 to be carried forward to the next year.

INTERIM dividend at the previous rate of 10 per cent. per annum on the 75,000 shares of Lamson Paragon, Ltd., Richmond, has been declared by the directors.

SOME inconvenience has been caused over the question of transparent panel envelopes. The postal authorities notify that large numbers of letters, enclosed in open-face or window envelopes, have been posted since May 1st, and as such envelopes are prohibited by the provisions of the Madrid Postal Convention from transmission through the post, all letters so posted are being returned to the senders. It is pointed out that several notifications have appeared in the press on the subject of these envelopes, the first intimation being that their use was to be discontinued from January 1st, 1922. At the instance, however, of various firms, and with a view to accumulated stocks of envelopes being worked off, the period they could be used was extended to April 30th.

AN agitation is going forward for a reduction in postal rates, and a restoration of the penny postage is asked for. The serious effect of the high charges on printed matter is referred to, and it is shown that compared with 1914-15 the number of packets sent through the post last year decreased by 24½ million. As these packets are made up prin-

cipally of printed matter, the loss to the printing industry can be appreciated.

EFFORTS are being made to get the Education Department of the Commonwealth Government to provide books and materials free for use in State schools, thereby securing a uniformity of books and removing the unfair tax placed upon parents with large families. A resolution on these lines has been passed by the St. Albans Progress Association at Melbourne.

A NEW Australian review is published under the title of the *Forum*, and Messrs. Braham and Cornforth, of Sydney, are being congratulated on the style and character of the periodical.

THE *Herald and Weekly Times, Ltd.*, at Melbourne are having new and larger premises erected which, it is claimed, will represent one of the best equipped newspaper offices of modern design in the world.

Trade in Printing Type.

EXPORTS.—Shipments of printing type leaving this country during the first six months of this year amounted in quantity to 98 tons (of the value of £31,047), as against 182 tons (£65,864) last year, and 129 tons (£31,935) in the corresponding period of 1920.

IMPORTS.—The receipts of printing type into the United Kingdom during January to June amounted to 22 tons (£6,870), contrasted with 18 tons (£8,600) last year and 12 tons (£4,482) in the corresponding six months of 1920.

New Inventions.

Printers' Composing Appliances.

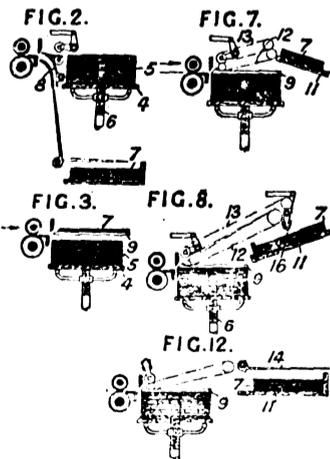

An invention patented in the names of Messrs. Bemrose and Sons, Ltd., and Mr. J. E. Barber, relates to means for setting up and fixing type or other printed matter within a chase or the like. The chase, etc., is placed on a sheet of paper ruled into spaces preferably according to the point system, the spaces being numbered from the centre outwards, as indicated in the Figure. The type, etc., having

been arranged within the chase, wax, cement, etc., is poured into the chase so as to surround and fix the type in position. The chase may have grooves or other devices to be engaged by the wax, cement, etc.

Piling Cut Sheets.

In an invention, patented by Mr. G. Spiess, machines for piling cut sheets are provided with two delivery tables suitably positioned near one another and with means for directing the sheets from the cutters to either of the delivery tables, so that while a completed pile on one table is being removed and the table raised to its initial height, the sheets may be delivered to the second table, thus avoiding the necessity for stopping the machine. As shown in Fig. 2, the main table 4 is lowered automatically by screw spindles 6 as the height of the pile 5 increases, and when the pile 5 is complete the sheets are diverted by a switch 8 to an auxiliary table below the main table to form a second pile 7. In the modification shown in Fig. 3, a grate 9 is provided

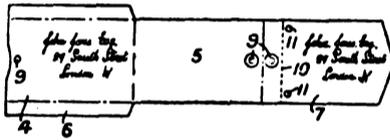

above the main table 4 and is adapted to be lowered so that its pointed forward end diverts the sheets from the pile 5 to the pile 7. Fig. 7 shows a combination of grate 9 and tapes 12, 13, for conducting the sheets to a pile 7 on a rear board 11, and Fig. 8 shows a similar combination with the addition of a roller 16 by which the sheets are turned over before being deposited on the board 11. In the modification shown in Fig. 12, the sheets, when deflected by the grate 9 are delivered on to the board 11 by a flyer 14. The apparatus

may be used to separate out any faulty sheets, the good sheets being delivered to the pile 5, and the switch 8 or grate 9 being actuated by the operator to divert faulty sheets to the pile 7.

Invoice Envelopes.

An envelope to contain an invoice and act as a label for goods, as patented by Mr. S. M. Murray, is formed from a strip of material adapted to be folded into three sections 4, 5, 7. The sections 4, 5 are secured together by gummed flaps 6, or by separate folded strips, to form an open ended envelope, and the third section is folded over the open end. Perforations 9 in the three sections coincide

when the material is folded, and the string for attaching the label to the goods is passed therethrough. The address is printed on the flap 7 and on the section 4, which is normally covered. The flap is detachable along a line of perforations 10, to serve as a receipt for delivery, and may be provided with perforations 11 for filing purposes.

Initials: Their Use and Misuse.

By H. A. MADDOX.

From the very earliest stages of printing initials have played a leading part in the typographic embellishment of the printed page. The efforts of certain fifteenth century craftsmen were, in fact, far more creditable than many of those made at the present time. A comparison of modern with mediæval initials will show very little material improvement in style and use, although in many ways a form of degradation will be noticeable in much of the cheap, ready-made stuff now issued. While exhorting the reader to make a special study of the decorative and useful initials of such old masters as Ratdolt, Simon de Colines, Vascosan, Geoffrey Tory, Holbein and Durer, we ourself must without waste of space proceed to the strictly practical side of the matter.

Certain works, as, for example, those dealing with poetry, mediævalism, legendary lore, decorative and artistic subjects, or the more commercial type devised for advertising purposes, call for embellishment of some description. Borders or head and tail pieces may not at all times be permissible, but there are few instances in which ornamental initials may not be appropriately introduced. Although apt on occasions to be regarded as mere decoration, they have a real purpose of utility. The ostensible mission of an initial is to mark the beginning; to call the reader's attention to the commencement. By strict right, therefore, the letter should be glorified in proportion to its position. Here it should be noted without delay that an initial is not emphatic according to its size; the questions of design, displacement or position and spacing are more important. The first initial in a book or brochure is undoubtedly the pre-eminent one, and may therefore be more conspicuously decorative than those succeeding.

Form and Ornament.

The essential thing with any initial is to secure the form of the letter itself, which must not be confounded with, or disguised by, the ornament. The letter contour must, in fact, be helped and enlivened by the decoration; for legibility is the keynote to typographic success.

A matter considerably affecting this question of legibility is the colour value of the initial. Numerous different effects are attained nowadays by the manipulation of the background pattern of the letter. It may be subordinated in order to throw up the actual initial into relief, as for example, a black letter on a light background, or, *vice versa*, the letter model may appear as white on a dark background. These represent the two extremes, but according to the strength or delicacy of the pattern, any degree of tone may be imparted to the background; furthermore, dependent upon the evenness or

brokenness of the ground, half-tone effect or any degree of monotony or variety may be shown. Where it is desirable to avoid contrast in colour value between the letter and the ornament, initials of an even degree of tone throughout may be chosen, but here is introduced the element of danger in regard to legibility. The chief utility of the even-tone initials is in their harmonious setting to modern face letter, but there is the ever-present tendency to lose the character and decoration which is vital to the success of an initial.

The Paper Factor.

Factors which have a decided bearing upon the colour value of initials are the massed appearance of the printed page, and the tone, texture and degree of hardness of the paper. With the appropriate combination of initials and the massed type-face we have partly dealt; the paper affects both, and must therefore receive some consideration. On a rough-surfaced type of stock a fairly heavy impression is necessary to secure a good black. A light impression would deposit ink only on the top of the grain; hence to get down into the interstices another thickness of paper may be necessary in the make-ready. In addition, a large amount of ink must be carried in order to feed the roughness, and probably, absorbency. This extra pressure and surplus ink creates a slight squeezing tendency, further augmented by absorption laterally, resulting in an exaggeration of any type face.

A deep toned paper would intensify the colour value of the type face, whilst slightly toned paper would lend pronounced strength to the black. Smooth white book-printing paper would accurately render the colour value of type face or initials, but if inclined to blueness of tone, a harsh representation would result. Naturally, the monotone type of initial would be appropriately rendered on smooth white stock.

As a first essential of initials is that they must harmonise with the type face used, it follows that the paper should be so schemed that it will receive and represent the latter to the best advantage. This must not be taken to mean that the paper should be smooth and hard, for in the majority of cases the best and most appropriate effects are secured on matted or even rough stock. In like manner, some attention must be paid to the character, period and atmosphere requisite in the ultimate production. Thus, a mediæval subject in English, German or Dutch style, calling for rather heavy colour values, would base its choice of paper upon the type and decoration, aiming at an inclusion of the characteristics of the paper likely to have been in use at the period with which the theme deals. Cream laid, crisp and rattling stock of pronounced

texture, not too even in the lookthrough absolutely void of wire-pores or large and ugly watermarks, would best fit in with the scheme. Or again, the Italian renaissance and French mediæval or later style would demand a cultured and slender product owing to the more delicate nature of its type face and decoration, the latter usually appearing in pure, thin outline.

The Question of Colour.

The foregoing digression has seemed necessary in order to sustain the contention that initials cannot be planned correctly or appropriately except in combination with the influential factors. The discussion of colour value having been based solely upon black, a few remarks may profitably be devoted to colour. Initials printed in other than black may present a totally different aspect. An initial which appears dense in black shows up medium in vermilion, almost delicate in diluted hues and fairly strong in the saddened or art shades. Hence, with some sense of colour appropriateness, certain sets of initials may be introduced with diverse effects. The question of colour harmony we are not here concerned with, but it is important, especially in the case of two-colour initials. Anent the latter it may be observed that they are often used by modern printers for one colour only, leaving the actual letter form in white. The policy is not a commendable one, particularly when the white letter is scarcely legible amongst a mass of floriation.

Typography which professes to embody a spirit of sober dignity, should confine its initials to black and vermilion, other effects being reserved for light literature and advertising, or where an out-of-the-ordinary effect is desirable. Small or medium sized plain Gothic initials look exceptionally good in vermilion, nothing better, especially when used in conjunction with old style roman, Jenson, or lower case black text faces. Roman initials in vermilion are at their best when designed with an accurate old-style contour and of fairly large size. The pure vermilion shade of an unfadeable ink should be steadfastly adhered to, for the semblance of carmine, crimson or dingy brick colour would totally upset the scheme and degrade the effect.

The Placing of Initials.

The position of the initial on the page is a matter of much importance and cannot be set forth under immutable rules of indentation and alignment. Several factors govern the lines of procedure and these are the size, shape and design or pattern of the initial, the face of type constituting the text and the spacing allowed thereto. Although an indent may appropriately be arranged round a squared-up initial on a page of say 10 point solid, it

The Miehle

Built with precision for exact printing

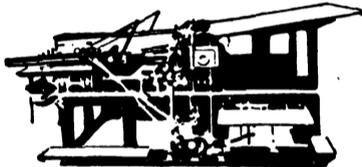

SERVICE

Because it is an all-British machine, built in our Works at Altrincham, Cheshire, we are at all times able (either directly or through our branches and depots) to give not only immediate advice but practical assistance to its users.

This service commences with the installation and is available at all times afterwards.

Although the probability is that your all-British Miehle will never break down (a statement supported by many hundreds of users), accidents occasionally happen, and at such times it is better to be sure of prompt service than to regret the purchase.

You know the quality of the machine — it is the best of its class and its class is the highest

Sole Agents for Australia:—

MIDDOWS BROS. & LINTON, Ltd., Sydney and Melbourne.

would not suffice for a larger size of type, leaded, on a page allowing sumptuous margins. In such a case, 3 ems may be desirable, dependent upon the style of initial and type-face.

The 14th and 15th century printers were somewhat irregular in their mode of treating initials. With comparatively few exceptions their large initials were rectangular bordered. Their method was to square the initial in the text and run the lines of type dead up to and against the borders. With different, and sometimes even the same craftsmen, deviations occurred and in several cases whites, either at the side only, or at the foot, are observed to have been allowed. The use of small caps after the initial letter also differed widely, for while some printers ran out the remaining letters of the word only in small caps, others completed the whole line. Yet again, others set only the second letter of the word in small caps. In the matter of alignment, defects were numerous, and while the great majority of early printers set their first line of type level with the top border of the initial many examples are extant in which it runs slightly higher. Where the initials were ornamented by flourish and no border the alignment was made with the top of the flourish and not with the top of the actual letter.

In imitative styles of mediæval typography the general rules to follow are: No indentation either at side or at foot, the whole of the first line to run out in small caps and alignment to be made with the top of the initial design.

Modern methods of text arrangement round initials are an improvement over earlier ones and make for a better appearance by the allowance of carefully apportioned white space at the side and foot. The old practice of closing up the text to the initial is apt to create a crowded aspect unless the initial is of a particularly delicate and open design. Furthermore it is more often the case than not that a white is created at the foot due to the shoulders of the type and the slight beard of the initial; this makes for an offensive and disproportionate arrangement. If the white is equal all round, even though extremely scanty, it does not make a distasteful effect, especially in the case of a title page set all in caps.

Correct Whiting of Initials.

The present English tendency is to allow one em space all round an initial save where the page is small or the type-face small, heavy and solid. American printers confine themselves more to an en indent, subject again to amendment to suit particular conditions. It must be allowed that American typographers display more adaptability than the majority of English craftsmen; hence their efforts in the treatment of initials are usually more successful. The amount of indentation is a matter which is controlled by the type-face and general character of the page. Correct whiting, in keeping with the style of the initials is an absolute essential to good work; so much so, in fact, that if it cannot be observed it is preferable to omit initials altogether. Where a large amount of white space is shown by the page a more liberal white is essential to the initial. For example, a page of 14-point type, thick leaded, with lavish margins, would require about 3 ems white round the initial to create harmony. Again, nothing less than an em space

should be allowed round an initial on a page of 12-point leaded type of the light faced family, while in the case of a page of 10 or 12-point solid, into which a squared border initial is introduced, one em would suffice. Generally speaking, the light outline initials call for a more liberal allowance of white margin than do the black ground or solidly designed initials. With the latter, a heavy typeface would naturally be selected, constituting a black looking page which ought not to be too suddenly broken up by an expansive white angle round the initial. With lighter faced types and initials the harmony of the page is disturbed by running the matter too close up to the initial. At the same time too much white round an initial is apt to create a sense of isolation, the approach to which ought to be stringently avoided. Small initials rarely call for more than an en white space round, but if a fairly large size of type is used, and particularly if leaded, larger initials should be selected in order to maintain uniformity of character.

The shape of an initial largely influences the indentation and in the case of extravagant forms is apt to constitute a problem of some perplexity. Unadorned initials call for just sufficient white space round to embody dignity without creating a sense of discontinuity between the initial and the completing letters of the word. No attempt at eccentric typography should be made in tracing in type the outline of the initial. In the case of a large initial O, the first line of type may overhang the succeeding lines rather more than usual in order to combine legibly with the initial. With the initial T, the reverse style of treatment may reasonably be adopted, while if an I with imposing serifs forms the initial the text must be arranged to avoid a too close contiguity. The initial A with its sloping sides offers a little problem of its own, to solve which, scheme the indentation from the foot serif, allowing there a harmonious measure of white and setting the remaining lines to the same scale. The top line may then appropriately run up to the A within, an equal measure of white to that allowed at foot, the shoulder of the initial being mortised accordingly. Another point for consideration in the setting of large plain initials is the creation of a visual balance. Such initials as C, G, J, Q, T, V, W, Y, carrying an amount of white space at their left side, when set exact to the side measure are apt to create the illusion of being out of line. To overcome this, these initials should be arranged to slightly overhang the matter, thus correcting the visual balance.

The Problem of Alignment.

Alignment is a subject covering a wide range, inasmuch as it is directly concerned with the form of design adopted as adornment of the initial. One of the greatest errors in the modern design and selection of initials is the arranging of the actual letter itself in such a position that the alignment with it of the completing letters and line is an impossibility. The system of producing stock designs with a cut out panel for the insertion of an ordinary large cap letter is much to blame for this. A better plan, if blanks must be resorted to, is to select the mortised designs, whereby the cap letter may be inserted in such a manner as to align perfectly with the completing letters of the line.

The sense of connection between the initial and the context should be preserved,

for, in reading, the eye must be helped to take in without effort the whole of the first word. A dropped initial forces the eye to assume a quick change of direction in order to couple up the two parts of the word. Ornamental initials of a good class do not embody such defect; they are generally devised with the letter model itself running well up to the head of the design. Where initials are rectangular bordered, alignment should be made with the top of the border line, and not with the top of the letter. For ordinary work the word only should be completed with small caps, but in the case of poetry or exceptional typographic schemes, the whole line may appropriately be set in small caps.

Initials are to be met with in which the ornamentation is scanty, perhaps a floral spray over-runs the top of the letter. In such a case alignment should be made with the top of the letter itself, not the spray. If, however, the ornament is fairly substantial, and embodies a colour value equal to the initial, the alignment should be made with the ornament. No excuse is acceptable for those initials which are constituted by a letter within a plain upright panel devoid of any decoration whatever. To align with the letter itself leaves a disfiguring projection of ugly linework, while to align with the top border betrays the uselessness of the initial. If plainness is desirable, avoid the border altogether and use a simple Gothic or roman form. It seems hardly necessary to observe that the alignment with plain models should be made with the top of the initial, yet in recent productions alignment with the foot has been remarked. When the initial forms a complete word as A or I, alignment with the foot constitutes an unpardonable offence.

In the matter of alignment, as with indentation, the method is determined by the pattern of the initial; it must therefore depend largely upon the artistic sense of the compositor whether the first type line ranges with the letter, border or ornament. The style and amount of decoration round the letter wholly influences the position of the first printed line; the aim of the typographer should be to create restfulness, appropriateness and a nice balance.

Finally, to those printers who are interested in the possibilities of good initials, the productions of Jenson, Ratdolt, Aldus, Geoffrey Tory, Vascosan and Simon de Colines among early printers, and William Morris, F. W. Goudy, and the Chiswick press of modern times may be commended as patterns of perfect taste.

A New Paper Machine.

The following particulars relate to the new book paper machine which the Provincial Paper Mills Co. are installing at their Port Arthur Division: The machine, which will be built and delivered by November next, will be 146 in. wide with 126 in. trim. It will be equipped with 30 dryers, each of 4 feet diameter, with a wire 146 in. wide and 70 ft. long. A Mills-paugh suction couch roll 25 in. in diameter, three sets of main presses, and a capacity of about 25 tons a day are other features of the Fourdrinier. There will be 2.8 roll calender stacks and one English type, surface winding reel and one Moore and White 4 drum winder with slitter attachment.

Trade Notes.

TRADE DISPUTE VICTIMS.—In the House of Commons last week, Mr. Trevelyan Thomson asked the Minister of Labour whether he would invite the Committee which he recently appointed to make inquiries with a view to devising means whereby the innocent victims of a trade dispute should not lose their unemployment benefit to issue their report in time for amending legislation to be passed in the autumn session. Dr. Macnamara replied that he felt sure the Committee would make their report at the earliest possible moment. In any event, he could not undertake to introduce legislation on the subject in the autumn session.

CHEAPER POSTAGE VINDICATED.—Since the lower postal rates came into force the revenue from stamps has steadily increased. For the period April 1st to August 5th the Post Office receipts amounted to £17,550,000 as compared with £15,250,000 in the corresponding period of last year. The ground for demanding further concessions in regard to printed matter and postcards is thus growing stronger.

"FAIR WAGE" PRINTING.—The Southwark Borough Council being desirous of placing a contract for printing rate books, a tender was sent in by a firm of printers who struck out a declaration that they would adhere to trade union rates of pay and conditions in all their departments. The Council refused to consider the tender, and decided to accept the next highest one. This, for six months' printing, was £293 19s. 6d. more than the one rejected, and the district auditor held that it was against public policy to insert such a declaration in a tender.

The "Printers' Biscy" will be held on the Ham and Petersham miniature rifle range on Saturday, September 2nd, when three trophies, 117 prizes and 27 medals will be fired for by members of the printing and allied trades. Part of the range will be reserved for pool shooting, for which the general public are invited to enter on the range. Programmes and entry forms will be forwarded on receipt of stamp by the hon. secretary, A. J. C. Pescud, 158, Erlanger-road, New Cross, S.E.

It is announced that the price of the *Daily Herald* will be reduced to one penny on and after Monday, September 11th. This price reduction is part of a further effort to put the paper on a satisfactory financial basis.

The newspaper committee representing trade unions has decided to offer the editorship of the *Daily Herald*, vacant by the resignation of Mr. George Lansbury, to a certain prominent journalist, whose appointment, however, has to be sanctioned by the Trade Union Congress.

MONOTYPE INSTALLED.—The *Maidenhead Advertiser* has just installed Monotype plant, and its first monotype-set issue appeared on the 26th ult. A special article was included in the issue explaining and illustrating Monotype composition, and readers of the paper received an invitation to call at the printing works and see the machine in operation.

The circulation in Ulster of two Dublin newspapers, the *Freeman's Journal* and the *Evening Telegraph*, has been banned by the Northern Government owing to attacks made on Chief Justice Andrews, of the Ulster Courts, who had sentenced four people, two Roman Catholics and two Protestants to birching for being found with firearms.

DR. THOMAS A. INGRAM, editor of *Hazell's Annual* for the last nine years, has died, aged 53.

The death took place at Shanghai, China, on June 15th, of Samuel Couling, M.A., editor of the *New China Review*, compiler of the "Encyclopædia Sinica," aged 62.

MR. ARTHUR HENRY WALTERS, of H. Walters and Sons, printers, South Castle-street, Liverpool, left £2,084.

MR. FREDERICK ARTHUR CRISP, F.S.A., owner of a private printing press in Walworth-road, S.E., from which he published several genealogical books, who died on April 25th last, aged 70 years, left estate to the gross value of £163,832, with net personalty £136,395.

The competition for the Major Bonsor Cup which is played off yearly by the golfing members of the staffs of Messrs. John Dickinson and Co., Ltd., and Messrs. Millington and Sons, Ltd., has concluded with a victory for Mr. M.

Skeins (Home Park Mills), Mr. W. Ellens (Apsley Mills) being the runner up. The final was played off on the Berkhamstead course.

PAPER MILL PRESENTATION.—A pleasing ceremony took place at the West Marsh Paper Mills, Grimsby (Peter Dixon and Son, Ltd.), recently, when Mr. H. W. Henry, late foreman papermaker, was presented by the employees with a very handsome dressing case and collar box on the occasion of his leaving the employ of Messrs. Dixon's. Mr. Henry, who has been with the firm for the past ten years, is taking up a better position in the papermaking trade in the South of England. The presentation was conducted by Mr. Tinmuth, who was ably supported by Mr. Pat A. Keogh, who, on behalf of the subscribers, expressed good wishes for Mr. Henry's success in his new position. Mr. Henry suitably responded.

KENYA GOVERNMENT is undertaking the publication of a native newspaper which "is intended to make the natives acquainted with the laws which are in their own interests and for their own protection." Articles to foster native agriculture and education will be a feature of the journal.

TYPESSETTING DEMONSTRATION.—Among the interesting exhibits at the Second Educational Graphic Arts Exposition, to be held in Boston, U.S.A., August 28th to September 2nd, will be that of the Trade Composition Association of Boston. A complete plant will be there in operation. Pamphlets, advertising folders and a daily news bulletin—The Trade Composition Bulletin—will be set up in type, made up, locked up and sent to press. Type, leads and rule will also be cast. The plant will be equipped by the Mergenthaler Linotype Co., the Lanston Monotype Co., the Ludlow Typograph Co., the Intertype Corporation, the Hansen Type Foundry and Samuel Stephens.

INVENTION OF LITHO.—An amusing story of how the lithographic process in printing was discovered was told in the official programme of the recent Southwark Pageant. In 1789, the mother of young Senefelder asked him to make a list of articles to be sent to the laundry. A piece of paper for this purpose not being available, Senefelder wrote down the details on the smooth surface of a piece of stone. Later, desiring to rest, he sat down on this piece of stone, and an impression of the writing imprinted itself on the white overalls he was wearing. The pageant tableau representing this scene shows Senefelder's mother rating him soundly for dirtying his clothes; but it was in this simple domestic incident that the present methods of lithographic printing had their germ.

PRINTED BOOKS exported from the United Kingdom during the first six months of the year amounted in quantity to 116,481 cwts. (of the value of £1,381,722), against 143,554 cwts. (£1,742,020) last year and 134,259 cwts. (£1,643,334) in the corresponding six months of 1920.

MESSRS. THOMAS AND GREEN, LTD., Soho Mills, Woodburn Green, Bucks, are sending out in pamphlet form some attractive specimens of their paper under the title of "Facts of interest to the Printer about 288 mill papers and service." The sample sent is typical of the enterprise of this firm, and the tinted papers and particulars will make an appeal to those to whom they are addressed.

German Goods in Australia.

After eight years of prohibition, the embargo on the importation of goods into Australia from former enemy countries has been removed from August 1st. There is considerable speculation as to what effects will follow the lifting of the restrictions, but the general opinion is that the fear that the Australian market will be flooded with German goods is exaggerated. Agents of German firms have undoubtedly been active, operating chiefly from Java, which apparently is to be made a base for German commercial propaganda in the Southern Pacific. However, Mr. Massy Greene, who introduced the Industries Preservation Act into the Federal Parliament, assures the correspondent of the *Daily Telegraph* that the anti-dumping provisions are sufficiently stringent, and will be further strengthened if necessary. German nationals are still excluded from Australia, except on special permit.

Trade Union Matters.

THE ballot of the members of the Typographical Association on the question of a levy of 2s. on each 10s. of wages earned by members remaining in their employment during the present dispute has been carried in the affirmative by an overwhelming majority. The levy is retrospective, and dates from the pay-day in the week ended July 29th.

The secretary of the Typographical Association has forwarded a special circular to branch secretaries detailing various instructions bearing on the strike. It is stated that strike pay will be on the basis of one-third of the case-jobbing rate of the branch of which the drawer is a member. Associate members of the Association will be placed under the same conditions as actual full members of the Association, and must leave their employment if called upon to do so by the branch officials. Honorary members, however, will be allowed to continue their ordinary occupation provided they take no part in the productive work usually performed by Typographical Association members.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

BRAZIL.

A British commission agent in Sao Paulo, until recently partner of a well-known British firm of commission agents in that city, now established on his own account, is desirous of securing the agency of a United Kingdom manufacturer of writing paper and stationers' sundries. (Reference No. 81.)

NEW ZEALAND.

A New Zealand agent resident in Auckland desires to obtain the representation of United Kingdom manufacturers and suppliers of cigarette papers in packets, note paper and envelopes and wrapping paper. (Reference No. 89.)

COLOMBIA.

A firm of general merchants and commission agents in Bogota with branches throughout Colombia desire to obtain the representation of United Kingdom firms for telegraphic apparatus, paper, etc. (Reference No. 146.)

German Papermakers' Association

The German Papermakers' Association was founded at Nuremberg in 1872, and celebrated the 50th anniversary at the same place on June 8th or 9th. It now comprises within its membership 410 out of the 441 paper mills in the Empire.—M.A.

AS AN advertisement of their coloured surface and bright enamel papers, Messrs. Backhouse and Coppock, Ltd., have issued a novel sunset arrangement in which the various tints are represented by Bacop products.

The New London School of Printing

To Open in September.

With the end of the summer session of the St. Bride Foundation Printing School much of the trade interest hitherto focussed upon that well-known centre of printing technology removes to the new London School of Printing and Kindred Trades, which is to be opened next month in the premises formerly used as the Benevolent Society of St. Patrick's School. We find the builders and decorators at work preparing the premises for their new occupants, and we gather that when the St. Bride staff return after the vacation the task of removing will commence.

We gather that all or most of the St. Bride School staff will probably be retained for service at the new institution, and arrangements are being made for the engagement of additional instructors.

The Advisory Council.

For the Advisory Council, the Education Committee has nominated Lord Riddell as the president, and as members: Messrs. C. S. Yeates (Electrotyping and Stereotyping Employers' Federation), E. B. Judd (Master Bookbinders' Association), H. B. Cahusac, G. Eaton Hart, W. H. Hazell, J.P. (London Master Printers' Association), G. Springfield (Weekly Newspaper and Periodical Proprietors' Association, Ltd.), G. W. Mascord (United Newspapers Office), E. W. Whittle (Printers' Managers and Overseers' Association), W. Stevens (Amalgamated Society of Lithographic Printers), W. C. Warren (National Society of Electrotypers and Stereotypers), S. Stubbings (National Union of Printing, Bookbinding, Machine Ruling, and Paper Workers, T. E. Naylor, M.P. (London Society of Compositors), H. W. Howes (Printing Machine Managers' Trade Society), G. A. Isaacs (National Society of Operative Printers and Assistants), R. Kneale (Amalgamated Society of Lithographic Artists), G. A. Eden (Bookbinding Overseers' Association), Messrs. F. Garrett, E. Unwin, the Rt. Hon. C. W. Bowerman, M.P., Messrs. T. W. McAra, and C. A. Bates, Capt. A. U. M. Hudson, Messrs. W. J. Pincombe, J.P., and C. A. G. Manning and Capt. G. S. C. Swinton. The principal of the school, Mr. J. R. Riddell, will also act as advisory member.

Some interesting facts and discussion of various points regarding the new school occupied the members of the Printing, Bookbinding and Kindred Trades Overseers' Association at their meeting on the 1st instant (briefly reported on another page) Mr. Geo. A. Eden explained that, after it had been decided that Stamford Street was situated centrally in London the school there was acquired by the London County Council at an approximate cost of £20,000. The building in Stamford Street was being re-modelled and strengthened, and the technical school, when it was got going, will be one of the finest in the world. There would be accommodation for 2,500 students and the floor space would extend to nearly an acre.

Machinery and Plant.

Mr. Eden next gave a detailed list of the firms which had agreed to loan for an indefinite period machinery and plant for the use of the students. They were: Geo. Mann & Co., Ltd., plate graining machine, etc.; Fry's Metal Foundry, Fryotype melting pot; Amalgamated Press, foundry plant; Intertype Co., Intertype composing machine; Cross Paper Feeder Co., make present automatic feeder up-to-date; Hunters, Ltd., photographic equipment; Canadian-American Machinery Co., Camco folding machine; Lanston Monotype Corporation, D Keyboard and casting machine, etc.; Furnival & Co., litho machine; P. Lawrence Printing Machine Co., photogravure machine; Linotype & Machinery, Ltd., new model linotype; John Haddon, safety platen; W. Canning & Co., Ltd., foundry plant; Hampson, Betteridge & Co., Ltd., binding plant; Smythe-Horne, Ltd., sewing machine; A. W. Penrose & Co. and H. Williams, foundry plant; Electromotors, Ltd., motors and starting gear; Westinghouse Morse Chain Co., chain driving; St. Clements Press, filing system equipment.

He hoped these firms would get their due reward in having their machinery discussed by the rising generation. They would see by the formidable list of machinery that was to be at the disposal of the student that the new school would not be a home for the dilettante, but would constitute a centre for the efficient training of the craftsman.

The Management.

Dealing with the management of the school he said it was an accomplished fact that it would very largely be under the supervision of the trade. Various branches of the industry (employers, employees and managerial) had promised an annual contribution of £2,500 for five years towards its upkeep, and the Advisory Council would consist of employers, one-third; employees and managerial, one-third; and L.C.C. representatives, one-third.

With regard to the question of securing teachers the L.C.C. at first wanted a certain number of students to be guaranteed before the instructors were appointed. This plan was strongly objected to by the trade representatives, who emphasised the necessity of obtaining instructors first and then securing the students. The L.C.C., however, have waived their original intention, and because of the fact they had done this it was up to the overseers to support Mr. J. R. Riddell in encouraging their apprentices to enrol at the new school when it opened in September. He hoped then to see a queue of two or three hundred students waiting outside the door.

Discussion.

Mr. J. Fleming, in opening the discussion said he was particularly concerned about two matters. First, were they going to give greater attention to the practical side in the training of the apprentice. Secondly, he saw on the circular advertising the school that the fee would be nominally 15s. Did that figure apply to students that were living outside the London area? One of his apprentices living in Twickenham was paying over £3 a term to the Camberwell school as against the 15s. that was asked by the new L.C.C. School.

Mr. Eden, replying, said that with the up-to-date machinery that was to be installed and the preponderance of trade representatives on the Advisory Council, they had no fear that the practical side of the training would not receive attention. The question of fees had been under consideration, and they had approached the various educational authorities on the matter. The Middlesex and Kent authorities had come into line and had agreed that where there was no technical institute in their areas they would make a grant for every student attending the new L.C.C. school. He thought they should get the apprentice first, whether from the London area or outside, and arrange with the local educational authorities afterwards.

Mr. B. J. Sanson, in reply to a statement that the binding section of the trade had been neglected, said up to the present they had an excellent array of machinery. The curriculum that had been prepared to cover the five years' training of the bookbinding student would show that their section of the trade was fully catered for.

Mr. G. J. Hellery raised the question of the nature of the work to be turned out by the new school. Would the L.C.C. have their work done there, and would the printing they might do have any adverse effect on the general printing trade?

Mr. Eden said that question had already been discussed, and the new school's council themselves were dead against it. Even their own minutes (the Advisory Council's) were likely to be printed outside.

MR. CHAS. FOSTER is resigning his position with Messrs. L. S. Dixon and Co., Ltd., of Liverpool, having been appointed to take charge and act as sales manager at the Manchester offices of Messrs. Jas. Wrigley and Sons, Ltd., Bury, which will shortly be opened. Mr. Foster has been over 21 years with Messrs. L. S. Dixon and Co., Ltd., and is well known in paper trade circles.

A Link with the Past.

More Particulars of the Warrell Family.

In our issue of last week we gave a sketch of Marchant Warrell, an old papermaker, and four succeeding generations of the family, together with photographs.

We have now received from Mr. Marchant Warrell, who is Eastern District Secretary of the National Society of Operative Printers and Assistants, the following particulars of the history of Reuben Warrell (son of Marchant Warrell) and his descendants:—

Reuben Warrell, was associated with the printing industry, and his descendants have followed in his footsteps in the different branches, typefounding, printing, book-binding, etc.

Reuben Warrell served his time as a hand caster in the Apsley Type Foundry. After he went to London, he worked at Messrs. Thoroughgoods, Fann-street, E.C. From there he migrated to Edinburgh, where he worked for Messrs. Miller and Richard, Nicholas-street. Returning to London, he found employment at Joynson's Paper Mills, Fooks Cray, Kent, and later reverted to his original trade as a typefounder at Messrs. Figgins and Co., Ltd., Clerkenwell, where he remained until his death in 1888.

His only son, Marchant, started work at the early age of nine years, in the year 1860, with Messrs. Skipper and East, printers, Great Tower-street, E.C., leaving there to work at Messrs. Spencer's, bookbinders. About the year 1874 he joined Lloyd's Newspaper Co., with whom he remained till 1896. He was with the firm when the first million copies circulation was reached, also the jubilee number. He returned to his trade as a bookbinder at Messrs. Baxter's, Bartholomew's-close, E.C., eventually finding work with Alabaster, Passmore and Co. of London and Maidstone, with whom he remained until, through the benevolence of the directors, he was pensioned after 20 years' service. Although he has retired, his sons, of whom there are four, carry on the traditions of the family. The eldest, Reuben Warrell, worked with his father at *Lloyd's Weekly News* for a number of years, being present at the time of the aforementioned special editions. He has been employed on the *Daily Chronicle* for the past 12 years and still remains with the firm.

The second son, Marchant Warrell, started in the printing department of Messrs. Alabaster, Passmore, and after some years left to take a position with Messrs. W. H. Smith and Son, Strand, W.C., thereafter joining *Lloyd's Weekly News*. He later proceeded to Glasgow, taking a position on the *Daily Record*. Coming back to London, he worked on a number of the leading newspapers until he joined His Majesty's forces during the great war, crossing to France in 1916. On his return to civil employment he obtained a position on the *Daily Express*, London. He has been an ardent trade unionist during the whole of his career, and in 1919 was appointed District Secretary of the National Society of Operative Printers and Assistants, a position he still retains.

The third son also started work at Messrs. Alabaster, Passmore's London works, and from here went to Messrs. Eyre and Spottiswoode's, the King's Printers. In 1914 he joined the army and did his bit in France. He is now employed in the London newspaper trade.

The fourth and youngest son, Henry, is the only one who has not followed the printing trade. He became a carpenter, and the only time he can be said to have come in contact with the trade was at Messrs. Hampton and Betteridge's, printers and bookbinders' machine engineers, where he was engaged in making composing cases and such like tools for the printing trade.

It will thus be seen that the whole of this branch of the Warrell family, although not paper workers, are indirectly associated with the calling of their esteemed forefather by employing their lives in using the product of that industry, in which he honourably spent his life as a pioneer of machine production, without which one is left to wonder what we should do to-day.

HYDROLOID, LTD.—The offices of this company have been temporarily transferred to 179-180, Upper Thames-street, E.C.4, where inquiries should be addressed for hydroloid paper and board products.

An Advertisement is always working.

Postcard Postage Prize Competition.

SIR,—“The use of picture postcards by the public has been carefully nurtured. I know the difficulties, for my firm introduced them in the British Empire 24 years ago. It took some years before the public formed the habit of using them. Destroy that habit for even a short period, and it will take years to renew it.”

The above was one of the arguments which our managing director, Sir Adolph Tuck, adduced to Mr. Kellaway more than a year ago, when he introduced the picture post card deputation with the object of dissuading him, unfortunately without success, from increasing the postage on picture post cards. The truth of this prediction has been verified by practically the entire retail trade, as it has by all publishers of picture post cards. It is now some two months since the ill-advised increase has been withdrawn, but the recovery of the habitual use of picture post cards by the public is a slow one.

You will agree with us that it is highly desirable that steps are taken to bring about a more speedy revival. The halfpenny post card postage now conceded, even with the five words only, would help much if these had not to be limited to formulas of courtesy or of a conventional character. We suggested to the Postmaster-General some weeks ago to make this practical concession, but we regret to say he has remained obdurate so far. Our correspondence with him on the subject, however, leads us to infer that the case is not altogether hopeless, and that a combined effort of the picture post card trade and the public may induce him to relent, and, if successful, restore the universal popularity which the picture post card formerly enjoyed.

We have therefore decided to contribute our share by inaugurating a popular Post Card Postage Prize Competition, and giving awards amounting to £5,000, of which £3,500 will go to competitors, £1,000 for distribution among hospitals, and 500 guineas to the trade for the most effective window displays.

The enclosed announcement* gives evidence of the topical character of this simple competition, which will interest young and old alike, and for which every Tuck post card held by the Trade is eligible. It includes a Window Display Prize Competition, giving the retailer the chance of securing a cheque for £50 or one of the other 66 cheques for lesser amounts.

This Picture Post Card Postage Competition will be launched to the public by means of important advertisements in the *Daily Mail* and other dailies of large circulation, and will thus spontaneously come to the knowledge of many millions of the public throughout the United Kingdom, and before long will become known to everybody. As a popular practical postage campaign it will enlist the support of the Press throughout the country during its entire progress.

The competition will be open until April 30th, 1923, with a considerable number of special prizes and incentives to competitors to start immediately, and its success for every retailer of picture post cards, though only with a £5 5s. competition stock cabinet on his counter as a start, may be taken as assured. A ten-guinea or a twenty-guinea stock cabinet for larger establishments is, of course, quite a safe investment.

This elegant cabinet holds four drawers, each containing one of the four classes in which Tuck's post cards are divided. This competition cabinet will enable the retailer to effect his sales of Tuck's post cards in the simplest possible manner. No charge whatever is made for either the cabinet or packing case. The contents only are charged, at trade price. All is simplicity itself. The retailer will replenish the drawers from his own stock of Tuck's post cards or send in his repeat orders periodically for any class of card sold out.

All Tuck's post cards are delivered in packets containing six different cards, and it is suggested that the public is asked (wherever practicable) to purchase complete packets, and utilise any post cards not used for this competition for correspondence purposes.

Thus the trade is made worth while, the use of picture post cards is furthered, and again becomes a habit, and a regular remunerative turnover is assured the dealer for the years to come.

SPECIAL PREPAID ADVERTISEMENTS

The Minimum Charges for Three Lines, with an average of seven words to the line, for Advertisements under the headings given below are as follows (extra lines at proportionate rates):—

Situations Vacant.

LONDON COUNTY COUNCIL.

REQUIRED, at the LONDON SCHOOL OF PRINTING AND KINDRED TRADES, Stamford-street, S.E., as from September 11th, 1922, the undermentioned WHOLE-TIME INSTRUCTORS:—

(a) STEREOTYPING AND ELECTROTYPING.—A wide experience of modern workshop methods in the production of duplicate printing plates by stereotyping and electrotyping covering the requirements of newspaper offices and general jobbing necessary, also a knowledge of chemistry and electrolysis as applied to electrotyping.

(b) BINDING AND WAREHOUSE.—A wide practical experience of the various sections of the bookbinders' craft, both hand and mechanical, and ability to develop the desire for good work.

(c) GENERAL KNOWLEDGE (CRAFT AND SCHOLASTIC).—A knowledge of the operations in the various branches of the printing and kindred trades is required, and ability to instruct apprentices in the various classes concerning the operations of their work. This teacher will be required to give lessons in English and Calculations as applied to the printing and kindred trades. Candidates must be graduates.

Scale of salary for (a) and (b), £300 by annual increments of £15 to £425; for (c) £290 by £15 to £550. Commencing salary in each case according to experience and qualifications.

Preference given to candidates who have served or attempted to serve with H.M. Forces. Apply to Education Officer (T.1A), The County Hall, Westminster Bridge, S.E.1. (Stamped addressed foolscap envelope necessary) for form of particulars to be returned by 21st August, 1922. Canvassing disqualified.

JAMES BIRD,
Clerk of the London County Council.
13982

COMPOSITOR wanted; also LINOTYPE OPERATOR wanted. Best location in United States America; business owned and managed by Englishman; give qualifications and references, also wages asked.—Box 13965.

Announcements for distribution to the public and display show cards are supplied with the competition stock cabinet.

To sum up, this timely competition is simply a means to an end, the end being the permanent re-establishment of the popularity of the picture post card; in other words, its habitual use by the public for short correspondence.

We are, yours faithfully,
RAPHAEL TUCK AND SONS, LTD.,
ADOLPH TUCK, Managing Director.
Raphael House,
Moorfields, London, E.C.2.

* The detailed announcement indicates that in the Post Card Postage Competition what members of the public have to do is to send in a reply on the address side of a Tuck's post card to any or all of three questions: A Why do you like receiving or sending picture post cards? B What message would you send to the Postmaster-General to urge him to allow any five words to be sent for a halfpenny on a picture

COSTING and ESTIMATING CLERK wanted in Lithographic Transfer Works in the Midlands.—State qualifications, references and wages, to Box 13980.

TRAVELLER wanted, with good connections in the Printing Trade for Manchester, Liverpool and Midlands, with old-established house; state age and experience; all applications treated confidentially.—Box 13976.

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

Situations Wanted.

ENGINEER'S DRAUGHTSMAN, internal combustion, etc., car experience, desires Position where artistic talent would be of service; ability for advert. lay-out and commercial art.—Address Box 13952.

MINDER (Two revolution) seeks permanency; experienced in Commercial, Book and Three-Colour Work; disengaged.—Box 13973.

MACHINE MINDER.—Centrettes, Wharfedale, etc.—E. C., 32, Hargrave Park, Highgate, N.19. 13974

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Machinery for Sale.

COTTERILL, 60 by 40, Two-revolution machine, for sale; room wanted; best offer accepted; can be seen running by appointment.—Apply, Box 13970.

"PALATIA" ROTARY GRAVURE MACHINE for sale, cheap, little used; complete with two copper cylinders 42-in. long, 10-in. diameter and all accessories.—Box 13968.

Miscellaneous.

AN opportunity occurs to ACQUIRE A SMALL PRINTING PLANT, in running order, within a short distance of Liverpool-street; lease of basement premises, about 2,000 sq. ft., at a low rent, may also be had if desired.—Full particulars from D.E., c/o Dixon and Roe, 17, Walbrook, E.C.4. 13981

CITY OF LONDON.—City-road, few doors from, Splendid WAREHOUSE or FACTORY; newly erected, exceptionally strong, about 10,000 ft.; would be divided; plenty of light; to be LET or SOLD (Freehold or Leasehold); possession may be had; alterations effected if decided as one, so as to be ready before September 29th.—Ring up Holborn 1326, between 10 and 12 13979

COLONIAL NEWSPAPER CUTTINGS, dealing with the Paper, Printing, Stationery and Allied Trades, are wanted by Advertiser.—Communicate, stating terms, to Box 13882.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

PHOTO PRINTS.—Object Photography, etc.; Practical and Skilled Operators at your service; Modern Studies specially planned for all Object Work.—For efficient service send your work to The Nickeloid Electrotpe Co., Ltd., Photo Engravers and Electrotypers, 10, New-street-hill, London, E.C.4. 13963

TYPE METAL RULE BORDERS, LEADS AND CLUMPS.—Send for samples and prices. Best Alloy used for all these materials.—The Nickeloid Electrotpe Co., Ltd., 10, New-street-hill, London, E.C.4. 13964

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By James Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E.C.4.

post card? (In the event of the Postmaster-General allowing any five words to be sent on a picture post card for a halfpenny before the close of the competition, question B automatically changes to: "Why is the Postmaster-General wise in making this concession?" but all answers to the original question B received up to that period retain their chances of winning a prize.) C Which eight of a given fifteen messages of five words of courtesy or of a conventional character (which can already be sent for a halfpenny) do you consider will be the most popular?

Norwegian Paper Market.

In the paper market kraft is more in demand than is usually the case at this time of the year; but so far prices have not improved. The market for news continues quiet, and for other sorts unchanged.—Farmand.

THURSDAY, AUGUST 10, 1922.

Another Week of the Strike.

We feel that the Typographical Association has little cause for self-congratulation on the position in which it finds itself in this the third week of its strike against the award of the Industrial Court. Whilst it is true that large numbers of the T.A. membership remain obedient to their executive—whatever their view of the executive's blunder in the matter of the ballot—it is also the fact that very many T.A. members have returned to work at the reduced wages awarded by the Court. The number of these recalcitrant members is still increasing, and the situation possesses possibilities of serious danger to the constitution of the Typographical Association as well as to the friendly co-ordination of the many unions in the printing and allied trades. That the T.A. should give reasonable consideration to the views of other unions and the effect of its actions upon members of those other unions is a matter primarily for those unions themselves. The whole trade, however, must share our astonishment at the way the T.A. seems to have ignored those unions' existence and to have declined even to discuss with them the unhappy state of affairs which the T.A. has brought about. We should have thought, too, that the constitution of the Printing and Kindred Trades Federation would give that body a claim to receive at least some notification of the course that the T.A. is pursuing and the outcome of meetings at the union's headquarters. On inquiry, however, of Mr. A. E. Holmes, secretary of the Federation, we find him expressing himself a little disappointed that the T.A. should refrain from communication with the Federation, thereby impeding that body in its wish to use its good offices in promoting a settlement of the dispute. That no stone should be left unturned to find a way back to normal working conditions is vitally necessary. Countless thousands of pounds are being lost weekly to both employers and employed through the stoppage of work. The employers claim that in insisting upon the award of the Industrial Court they are fighting for a principle vital

to the whole of the country's industries. The Typographical Association—whose representatives stated at a Joint Industrial Council meeting that they were prepared to ballot their members on a proposed 10s. reduction—are fighting for half a crown. They are fighting, moreover, on the false ground of a misunderstanding of a signed agreement—so that to many onlookers it appears that they are fighting in order that a signed agreement may be broken.

A Wages Settlement.

CONGRATULATIONS are due to all who were instrumental in bringing about an amicable settlement of wages in the envelope making and manufacturing stationery industry. The question was approached on both sides in the right spirit and the negotiations were conducted in a friendly manner, prompted by confidence. All such problems are capable of settlement if only the correct attitude is adopted, as was evidently the case in this instance. No industry can readily afford rupture at the present time, and the wisdom revealed in the envelope making negotiations will, there is little doubt, help in a revival of business generally, and particularly in a recovery of export markets. Never was the necessity for trade recovery greater than now, and it is in the interests alike of employers and employed that nothing should be allowed to clog the wheels. The fact that wages in the industry referred to have been stabilised until June 30th next year should go a long way in the fulfilment of this consummation.

The Post Card Postage Competition.

MUCH interest will, we think, be roused in the printing trade by the competition announced in Sir Adolph Tuck's letter printed in this issue. Besides its private value to the firm which is going to such great expense in the venture, this competition cannot fail to benefit the whole of the picture post card trade, stimulating, as it must, the use, production and selling of this class of printed matter. Messrs. Tuck are appealing first, we understand, to the sellers of picture post cards in order that the dealers may be prepared by the time a big publicity scheme is launched to bring the public demand for cards with which to participate in the competition. From the dealer's point of view, it seems to us a very attractive proposition that he will receive the necessary special cabinet without charge, and that every Tuck card he may have in stock will be good for sale for competition purposes. The prizes for window display are a further attraction. But the best feature of the whole thing, from our standpoint, is that the attention of many thousands of the general public will be riveted upon the "five word" restriction—which has done so much to negative the benefit of the return of halfpenny postage. A Post Office regulation should at least be understandable by the public to which it applies. The line, however, which separates the five words "of a conventional character" from other groups of five words is so indeterminate that not only is the public in doubt as to what is permissible, but even the Post Office officials in some places seem unable to grasp the distinction. We hear of cases where five words of obviously conventional character have been surcharged—with consequent annoyance to both sender and recipient of the card. It is high time this petty-fogging restriction was removed. Even if Messrs. Tuck's competition did no more than assist toward this end, it would be worthy the support of the trade. We wish it the success it deserves.

Government Printing and Paper.

THERE has been a lot of comment in the Press and a great amount of interest in print-

ing circles over the model Blue Book produced as a result of the investigations of the Committee appointed to select the best faces of type and modes of display for Government printing. On previous occasions we have had similar reports from committees appointed to investigate the merits and demerits of modern paper. It is a striking commentary on the utility of such Committee work that the present publication should reveal all the merits of typographic excellence on paper which flouts the findings of any commission on the subject of durability and character of paper for publications of permanent value. It is useless to improve Blue Books or any other Government publications at the printing end unless equal regard is paid to the recipient structure. There are weekly newspapers today produced on paper equal to that which is deemed suitable for a symposium on typographic excellence.

Printers and the Ream.

DISCUSSING the matter of the 500 sheet ream with a well-known paper salesman last week, we were surprised to hear his statement that nine out of ten printers refused to accept 500-sheet reams, and would only place orders for the old-style reams. We can only hope and assume that the odd nine were local cock-robin printers, who buy in quires, leaving the tenth man as the progressive printer with the big consumption. It is impossible to conceive of any printer who knows anything of paper or printing preferring a ream of 480 sheets to one of 500.

Personal.

LORD NORTHCLIFFE'S condition is reported as very grave.

SIR CAMPBELL STUART, managing director of *The Times*, curtailed his visit to the United States. He sailed last week in the Cunard liner "Aquitania."

THE Lord Mayor (Sir John Baddeley) and the Lady Mayoress of London are spending a holiday at Totland Bay, Isle of Wight.

MR. T. E. NAYLOR, M.P., is at present, we understand, staying in the Isle of Wight on holiday.

It is proposed to commemorate the seventy-seventh birthday on October 23rd, of Dr. George Saintsbury, by an appropriate recognition of his work and his influence on the world of letters. For twenty years—1875-95—Dr. Saintsbury was a journalist in London, being in the later of these years assistant editor of the *Saturday Review*.

FOUR employees of Messrs. Chas. Thurnam and Sons, printers and booksellers, Carlisle, have a combined length of service with that firm of 208 years. They are: Mr. G. Baty, assistant overseer, 50 years' service; Mrs. Innes, bookbinders' forewoman, 54 years' service; Mr. R. Smart, works overseers, 50 years' service; and Mr. R. Sowerby, printer, 54 years' service.

ON the eve of the annual Carlisle works holiday, gifts of gold watches were made to Mr. Smart and Mr. Baty, whose 50 years of continuous service has just been completed. Presents were also given to their wives. Mrs. Innes and Mr. Sowerby were presented with a piece of silver plate on the completion of their 50 years' service four years ago.

MR. H. SMART, late deputy manager of the London Paper Mills, Dartford, with which he was connected for 20 years, has been appointed manager of Messrs. Reed's mills at Aylesford.

AT a smoking concert held at the "Eleven Cricketers," Dartford, he received as a parting gift from his old colleagues a roll top desk and revolving chair, a gold brooch being provided for Mrs. Smart.

The Strike in Its Third Week.

More Members of the Typographical Association Accept the Court's Award.

The most notable feature of the wages dispute, at the time of writing, is the substantial increase in the number of members of the Typographical Association who have returned to work on the basis of the award of the Industrial Court.

Where Work is Resumed.

At Bristol, last week, some 50 men resumed their work with Messrs. Mardon, Son, and Hall, and on Friday 81 men resumed work with Messrs. E. S. and A. Robinson. In both these establishments the number of Typographical Association men employed is very small relatively to the total numbers whose employment would have been prejudiced by the absence of this class of labour. We gather that there have since been further big defections of T.A. members in the Bristol area and that the return to work is now general. It is reported that the conference at Bristol, convened by the Lord Mayor, was held on Saturday, and resulted in a local settlement which was afterwards endorsed by the members of the Typographical Association. Work is to be resumed immediately upon a wage reduction of 3s., but, should there be any variation of the Industrial Court award, it shall apply to Bristol, employers agreeing to recommend their Association to stabilise wages until January next. Bristol has always been regarded as one of the strongholds of the Typographical Association, and the decision reached is bound to have considerable effect upon the men in other areas.

Among other groups of T.A. members who have returned to work on the basis of the award are the men employed by the *Birmingham Gazette*, the *Western Morning News* at Plymouth, the *Northern Echo* at Darlington, the *North-Eastern Daily Gazette* at Middlesbrough, the employees of the *East Anglian Daily Times*, Ipswich, the staffs of the *Western Times* and *Express and Echo*, Exeter, members of the Typographical Association employed by the *Worcester Journal and Daily Times*, and the staff of the *Eastern Daily Press*, Norwich. The members of the Typographical Association employed in Warwick and Leamington offices and in Stafford, Barnstaple, Rugby and Ripon have also accepted the award.

The proprietors of the *Liverpool Post* and *Liverpool Courier* gave notice to the members of the Typographical Association in their employment in the following terms:—"As the repudiation by the T.A. of the Industrial Court's wage award has raised a point of principle, vital not only to the printing industry but to all others, the management feel compelled hereby to give you a formal fortnight's notice of their intention to conform with the terms of the award."

The Typographical Association workpeople of the *Evesham Journal*, *Norwich Mercury*, *Hereford Journal* and *Coventry Standard*, returned to work on Tuesday on the terms of the Industrial Court award.

Serious Unemployment Caused.

It is pointed out by the Federation of Master Printers and the Newspaper Society that the cessation of work throughout the country represents a loss to members of the Typographical Association of £80,000 a week in wages, and as other workpeople in the industry become involved the wage loss may soon reach £250,000 a week. While there is serious interference with general printing, daily newspapers are rapidly recovering from the disorganisation with which they had to deal at the beginning of the strike, and this may account for the disposition which is being shown by many T.A. members to give up the fight.

As the printing trade unions other than the T.A. have agreed to the wage reductions there is no objection by the workers available in the offices to assist in the production of newspapers by the application of emergency methods. A curious feature of the situation is that improvised papers in most cases are being got out by trade union labour.

Belfast has been without local newspapers for a fortnight, and no attempt has been made to publish a paper locally. Mr. J. M. Andrews, for the Government, attempted to arrange a conference of the employers and the Typographical Association men during the week-end. The men's representatives express

their willingness to meet the employers, but the latter state that they can only hold such a conference if the Industrial Court's award is accepted as a basis of settlement.

T.A. Assertions Challenged.

The employers' representatives have issued statements to the Press strongly objecting to certain representations made by the Typographical Association. They state that it cannot be too strongly emphasised that no suggestion of a ballot on the Court's decision preceded the reference of the dispute to the Industrial Court, and that this question as to a ballot had no reference to the decision of the Court.

At a meeting of the J.I.C. Sir David Shackleton stated to the general president of the T.A. "as to whether you had it in your mind that you were going to submit the award to ballot was never in my mind, nor in the minds of any of my friends, and it cannot possibly have been in my mind, because it has never happened before. What could have been, and what possibly your rules might have asked you to do was to submit the question whether you could go to the Court of Arbitration. Once you, the chairman, the secretary and the officials said you were going to the Court that ended it. No question of ballot can arise on that."

The employers' representatives of the Federation of Master Printers and the Newspaper Society on the Labour Committee were to meet in London on Wednesday, as were also the Executive of the Printing and Trades' Federation.

Envelope Makers and Manufacturing STATIONERS.

Wages Settlement.

Agreement has been reached in adjusting wages in the envelope making and manufacturing stationery industry, which is an important section of the allied trades. The proposed reductions were submitted to a ballot of the workpeople concerned, the result being in favour of acceptance. A slight delay took place in obtaining the results of the ballot owing to the trade holidays in Edinburgh and Glasgow, the readjustment proposals having been the subject of conferences on July 6th.

The following reductions of the schedule rates of wage, therefore, come into operation on the dates provided, viz.:-

2s. 6d. from the wages of adult male and 1s. 6d. from the wages of skilled female workers on the pay day in the week ending August 12th, 1922.

2s. 6d. from the wages of adult male and 1s. 6d. from the wages of skilled female workers on the pay day in the week ending November 4th, 1922.

2s. 6d. from the wages of adult male and 1s. from the wages of skilled female workers on the pay day in the week ending January 6th, 1923.

It is agreed that, subject to these reductions being made on the dates provided, wages in the industry shall be stabilised until June 30th, 1923.

Discussing the agreement with a representative of this journal, Mr. F. L. Armstrong, the employers' secretary, intimated that negotiations had been somewhat prolonged owing to the fact that a sliding scale basis of adjustment was prepared by a sub-committee, including, in addition to others, the president and vice-president of the Employers' Federation and the general president and general secretary of the National Union of Printing, etc., and Paper Workers, and this scale was submitted both to the Council of the Employers' Federation and to the Executive Council of the Union.

Mr. Armstrong expressed his personal regret that the sliding scale had not proved acceptable to the branches, but further negotiations had followed for reductions which should stabilise the wages of the industry for a period, with the result set out above.

DIVIDENDS AND REPORTS.

BENN BROTHERS.—Profit for year to June 30th, 1922, was £38,219, plus £8,453 brought in, making £46,672, of which directors' percentages absorb £11,332. It is proposed to add further £4,000 to general reserve, bringing this account up to £12,250. Dividend of 17½ per cent. on ordinary shares, carrying forward £11,417.

ARMITAGE BROTHERS.—Profit of Armitage Brothers for year ended April 29th, 1922, was £12,419. After providing for bad and doubtful debts, depreciation, directors' remuneration, corporation tax and all other charges, together with balance brought forward, amount available is £33,032, less interest on debentures, mortgages and other advances and dividend on preference shares for year, Directors recommend dividend of 7½ per cent. on ordinary shares and that £22,810 be carried forward.

COLTHROP BOARD AND PAPER MILLS, LTD.—Accounts for year ended May 31st, 1922, after provision for depreciation of paper mill, show profit of £539, which has been carried to reserve for depreciation; £3,885 brought forward remains to be carried forward.

NEW COMPANIES.

ST. SWITHIN'S SYNDICATE, LTD.—Issue on April 11th of £1,500, on April 26th of £500 and on June 27th, 1922, of £1,000 debentures, parts of a series already registered.

WATSON AND BALL, LTD. (paper merchants, paper bag manufacturers, etc., Birmingham).—Satisfaction (a) to the extent of £1,500 on January 8th, 1918, and (b) to the extent of £1,500 on July 18th, 1922, of debentures dated June 21st, 1909, securing £3,000.

F. BENDER AND CO., LTD. (stationers, etc.).—Debenture dated July 31st, 1922, to secure £6,500, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Barclays Bank.

BANKRUPTCIES, etc.

RE CLEMENT JOHN LIVERMORE, printer, 44-46, Hampstead-road, N.W., trading as "Livermore and Keetch," also as "The Conway Press." Under a receiving order made against this debtor on July 19th, the first meeting of creditors was held last week at the London Bankruptcy Court. The official receiver reported that it appeared from the debtor's statement that he had throughout been connected with the printing trade. About 1900 he commenced trading in partnership with another at 7A, George-street, Euston-road, N., but after two years' trading his partner retired and debtor continued the business alone, retaining the trading name of "Livermore and Keetch." In 1913 he transferred the business to 44-46, Hampstead-road, N.W., where his business increased and he installed better plant. The outbreak of war seriously affected his trade, but he obtained an order to print flags used on the occasion of the first Russian flag day, and for this reason he was advised to obtain further capital, and decided

to convert the business into a limited company in 1915. In 1916 a receiver was appointed by a debenture holder. About the beginning of 1918 the plant, machinery and materials were bought from the debenture holders under a hire-purchase agreement, and debtor entered into an agreement with the purchaser under which debtor was to receive one-third of the net profits and to part manage the business. In December, 1918, they decided to dissolve partnership, and the dissolution was gazetted in April, 1919. Subsequently debtor continued the business on his own account, and about June last he introduced the trading name of "The Conway Press." He estimated his total liabilities at about £3,300, of which £1,650 was due to unsecured creditors. The assets were estimated to realise £58. His present position was attributed to bad debts, over purchase of plant, and heavy overhead charges. A resolution was passed for the appointment of Mr. A. G. White, chartered accountant, 14, Old Jewry-chambers, E.C., to act as trustee, assisted by a committee of inspection.

Re JOHN BRADLEY, Papermakers' Agent and Merchant.—At the London Bankruptcy Court last week before Mr. Registrar Hope, an application was made for the discharge of John Bradley, residing at Whippendell House, King's Langley, Herts, and carrying on business at 37, Queen Victoria-street, E.C., and 15, Bankside, Southwark, S.E., papermakers' agent and merchant. The official receiver reported that the receiving order was made on February 22nd, 1922, on debtor's own petition. The statement of affairs showed liabilities to rank for dividend amounting to £26,612, but the trustee estimated that the total liabilities would amount to £37,065, owing to certain partly secured creditors having proved for more than the amount expected by debtor. The assets in the statement of affairs were returned at £649 2s. 11d., but they had only realised £233, although it was expected that a further £10 would be received. The debtor was formerly employed as manager by a firm of paper manufacturers, but in 1914 he commenced a similar business on his own account in Edmund-street, Birmingham. In 1916 he was joined by a partner, who paid £300 for a half share, and the business was fairly successful. In September, 1917, debtor joined the army and disposed of his interest in the business for £150. Until 1918 he served as a private in the A.S.C. In January, 1919, with a capital of £3,200, he again commenced business on his own account at 37, Queen Victoria-street, as a papermakers' agent and merchant, dealing chiefly in strawboards, which he obtained from Holland. The business was successful until early in 1920, when a shipping strike occurred at Rotterdam and Amsterdam, and subsequently at the de Halm Mill, from which he obtained his chief supplies, and which prevented him obtaining the delivery of goods on order. When he eventually obtained the delivery of the goods, the price of strawboards had dropped considerably, with the result that he made a heavy loss. He also made losses in his payments to Dutch firms, owing to the adverse rates of exchange. In December, 1920, he had stock valued at £17,500, and during 1921 prices continued to fall, so that for the eight months ended August, 1921, he made a loss on trading of about £14,000. He attributed his insolvency to general depression in trade; to depreciation in the value of goods bought abroad and to the adverse rate of exchange, but in the official receiver's opinion a contributory cause was the debtor's excessive drawings from the business. The debtor had kept proper books of account, and balance sheets were prepared from time to time. The balance sheet for the year ending December, 1920, showed a deficit of £1,901, and the bankrupt admitted that this result was arrived at by writing down the value of his stock. He also admitted that since then he had incurred unsecured liabilities amounting to about £7,000. The official receiver submitted the debtor had committed the following offences against the

Bankruptcy Act: That his assets were not equal to 10s. in the £ on the amount of his unsecured liabilities; that he had continued to trade after knowing himself to be insolvent; and that he had contributed to his bankruptcy by rash and hazardous speculation and unjustifiable extravagance in living. The debtor pointed out that since his failure the trustee had sold his furniture for about £1,000, which would come into his estate, in addition to the assets mentioned by the official receiver. He denied that he had speculated. With regard to his drawings, they included travelling expenses, the up-keep of motor cars for use in the business and other business expenses. Several of his creditors were anxious that he should start in business again and were quite willing to give him further credit. He had been caught in the slump, and it was a case of misfortune; therefore he asked for an immediate discharge. The learned Registrar said under all the circumstances, the discharge would be suspended for three years.

Re HERBERT DAVID HACKETT, Waste Paper Merchant, 47, Leage-street, Old-street, E.C.—The public examination of this debtor was held at the London Bankruptcy Court on Friday before Mr. Registrar Francke, the accounts showing total liabilities £782 (unsecured £421) and assets valued at £47. Questioned by Mr. Vyvyan, official receiver, the debtor said he had carried on business as above for 25 years, and with success up to November, 1920, when it declined owing to importation of large quantities of paper and wood pulp. He closed it down in June, 1921, and attributed his failure to loss of trade owing to the low price of new paper principally from abroad. The examination was concluded.

Re GEORGE CLARK, papermakers' agent, late of 39, Victoria-street, S.W.—On July 28th, at the London Bankruptcy Court, Mr. Walter P. Bowyer, senior official receiver, presided at the first meeting of the creditors. The receiving order was made on July 12th upon the petition of creditors. The chairman reported that the debtor had stated that prior to December, 1918, he was employed in the paper trade. He then entered into partnership with a Mr. Robert Winten, and they traded under the style of "Winten and

Clark"; each provided £150 capital, and it was agreed that the profits should be equally divided. The business was carried on with success until early in 1919, when, owing to bad trade, they decided to close the business and dissolve the partnership. An accountant was appointed to realise the assets, pay the liabilities and distribute the balance between them; he had not yet reported to the debtor, and the latter was unable to ascertain his present financial position, except that he owed about £900, and anticipated that his interest in a patent was of more than sufficient value to pay all his debts in full. Since early in 1919 he had had no fixed occupation, but had carried through a little commission business. He attributed his failure to depression in trade, and loss on a theatrical venture. The meeting was adjourned for three weeks.

A FAMOUS PRINTER.—The official reports of the proceedings of Parliament, popularly known as "Hansard," the somewhat meagre circulation of which is stated to be causing some anxiety at the Treasury, derive their title from, although they were not actually founded by, a famous old printer named Luke Hansard. He was originally in the service of Mr. John Hughes, who in the latter part of the 18th century and later held the position of printer in the House of Commons. Hansard first attracted the notice of Pitt by being able to decipher Pitt's handwriting. This was brought prominently to the great statesman's notice upon one occasion when, having drafted a secret report on the French Revolution, he was himself doubtful of its legibility. Hansard was sent for, and after reading the manuscript over to Pitt tore it into minute portions in order that its confidential nature might be preserved when in the hands of the compositors. For many years afterwards there were several survivors of this famous man, and one of the last, perhaps the very last, Mr. T. C. Hansard, who died in 1891, is remembered by older habitues at St. Stephen's as a familiar character in the Lobbies of the Chamber. As for the meagre sale of the "Official Debates" there is no need to look for further explanation than the fact that the price a few months ago was threepence and is now a shilling a copy.—*Dublin Herald.*

New Paper Tester.

Messrs. B. F. Perkins and Son, Inc., Holyoke, Mass., manufacturers of the Mullen Testers, have finally perfected the Perkins Tensile Tester, and are placing it on the market.

The new Perkins Tensile Tester is of the vertical type, and is hydraulically operated. The cylinder is filled with a liquid which is compressed by a solid metal plunger, which fits the cylinder with a very accurately ground and lapped fit, and has no packings to wear out or get out of order. This plunger is attached to the upper or stationary clamp by means of a stirrup which brings the pull in a straight vertical line without cramping and without side pull. The lower or moving clamp is attached to a vertical screw which is operated by means of a handwheel on the side of the machine.

The pressure is indicated on a specially made standard gauge which is acted on by hydraulic pressure from the cylinder. The readings are given in pounds per inch breaking strength of a strip of paper or other material. The stock to be tested is therefore cut into strips one inch wide.

Removable and interchangeable stop-gauges are provided which automatically separate the clamp jaws one inch, two inches, or four inches apart, as desired, so that strips of these lengths may be tested easily.

The material is inserted and clamped uniformly and without side cramping by means of a device whereby the clamp jaws are held rigid during the insertion of the piece to be tested. As soon as the test begins to be made, the clamp jaws are freed so that they are on a swivel, and the strain of the material is thus taken up uniformly.

When the handwheel is turned, the piece of paper or other material under test is subjected to a direct pull. This operates on the fluid in the cylinder, which simultaneously acts on the standard pressure gauge. The pointer on the gauge stops automatically as soon as the material breaks, and thus accurately indicates the tensile strength of the material to the exact breaking point in pounds per inch, the pointer remaining stationary until it is released by pressing a button on the side of the gauge.

Linotype Small Cap Lay-out.

Need for a Standardised Practice.

The desirability of the adoption of a standard lay-out for small cap cases on linotype machines is stressed by Mr. Frank S. Roberts, of Messrs. E. Hulton and Co., Ltd., of Manchester, who writes to us as follows: "As against the present system of each operator in each office adopting his own lay-out for his small cap case, I have initiated in our office a 'standard' lay-out, as inclosed (plan herewith). With our 63 machines this is an important matter to us, because if there is not uniformity a great deal of time is wasted when an operator is not permanently working one machine, which very often happens with a big installation. Again, operators have a

Suggested Standard Lay-out for Lino. s.c. Cases.

tendency to hide 'sorts' for their exclusive use. This is a pernicious system that prevails in most large offices, greatly to the detriment of the output. It occurs to me that if the trade papers could see their way to advocate the enclosed lay-out (or any better lay-out that could be decided upon) by publishing it in their journals, we might get uniformity not only in the offices, but in the branches and throughout the country. This would be a distinct gain not only to the employers but to the operators, for when they move from town to town they would 'know their boxes' just as the compositor does in the standardised lay-out of the upper and lower cases."

We entirely agree with our correspondent in condemning the practice of allowing every operator to use a lay-out of his own choosing. This practice has been, and doubtless still is, responsible for a great deal of trouble, and the adoption of a standard lay-out is surely a matter of great importance to the trade. Arrangements somewhat similar to that illustrated have been used, but we are inclined to vote for a lay-out corresponding as closely as possible to the arrangement of characters on the linotype keyboard. We should be glad if some of our linotype specialists would send us their views for or against the arrangement suggested by our correspondent. The desirability of a standardised lay-out seems obvious. But what is the standard to be?

COMPLAINTS having been received by the Queensland Master Printers and Allied Trades Association regarding the action of the wholesale paper houses supplying small quantities of paper to the printer's customers, a letter has been written to all wholesale paper merchants and stationers asking them to refrain from continuing this practice.

DEALINGS in Empire Paper Mills new debentures began last week on the basis of 6 to 7 premium, and the script left off at 6 premium.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

Held at St. Bride Institute, the usual monthly meeting of the Association on Tuesday of last week was not so largely attended as usual, this being due no doubt to the holiday season. The chair was occupied by the president, Mr. A. W. Hunt, and at the close of routine business the Association's technical representative, Mr. Geo. A. Eden, opened an interesting discussion on the new printing school.

The minutes of the last general meeting and several items of correspondence being disposed of, the following candidates for membership were put before the meeting, and approved: Messrs. J. W. Ashforth, overseer,

with regard to technical education in London as a result of the new technical school. The meeting then terminated.

The Harris Offset Press.

An automatic high speed Rotary Machine with a speed of 6,500 per hour.

The Harris Card and Envelope Press.

This Machine will print all styles of commercial and open-end made up envelopes, and attains a speed of 5,000 per hour.

The "Craftsman" Unit.

An Automatic Platen that produces the highest quality of three and four Colour Work at a uniform speed of 2,200 impressions per hour.

The "Wright" Perforating Machines.

Operated by foot power, belt power or motor drive.

The "Miller" Printers' Bench Saw.

A Machine that will satisfactorily perform all ordinary operations of sawing, trimming and mitreing.

The Harris Letterpress Printing Machine.

An automatic high speed Machine with an out-turn of 8,000 per hour.

The "Boston" Wire-Stitching Machine.

These machines have been on the market for over twenty years, and are recommended for all classes of work. They are self-regulating.

The "Wright" Punching and Loose-Leaf Machinery.

For quality and rapidity of work there are no machines on the market to equal the "Wright."

The "Wright" Drilling Machines.

These Machines will handle a ream of paper at a time for the full number of holes desired, whether one or eight.

The "Miller" Automatic Platen Press Units.

The "Miller" Automatic Platen Press Unit is supplied in the following three sizes: 8" x 12", 10" x 15" and 12" x 18".

Australian Notes.

Imports of Paper Goods—Still Behind Last Year's Figures—United Kingdom the Chief Supplier of Paper and Stationery—Waste in Government Printing Office—An Example of Extravagance—J. Fielding and Co., Ltd.

(From Our Sydney Correspondent.)

THE figures relating to the imports of paper goods into the Commonwealth for the month of April are as follows, those given in parenthesis being for the corresponding month of last year:—Cardboard and other paper boards, £17,270 (£21,758); printings, £150,237 (£306,430); wrappings, £27,859 (£91,665); writings, £29,907 (£94,367); all other paper, £62,076 (£79,613); directories, etc., £59,087 (£72,426) and all other stationery, £35,541 (£63,789). Totals, £381,977 (£730,048).

DURING the same month paper exports were valued at £1,945, against £5,410 in April last year, and stationery at £9,214, against £7,333; the totals being £11,159 (1922) and £22,743 (1921).

FOR the ten months ended April of 1921-22 the imports of the various classes of paper, etc., were as follows, the figures in parenthesis being for the corresponding period of 1920-21:—Cardboard and other paper boards, £120,733 (£329,993); printings, £1,683,967 (£3,335,497); wrappings, £236,942 (£613,288); writings, £277,773 (£907,186); all other paper, £519,245 (£1,002,465); directories, etc., £767,282 (£935,824), and all other stationery, £440,907 (£744,402). Totals, £4,046,849 (£7,868,655).

THE exports during the ten months were:—Paper, £40,758 (£71,558); stationery, £163,238 (£183,674).

THE total arrivals of goods under the heading of "paper" for the six months ended December—amounting to £1,674,446—show that the United Kingdom heads the list with £590,062, followed by Canada with £412,556, United States £139,704 and Japan £6,330. Of stationery imports—amounting to £788,227—the leading position is easily held by the United Kingdom with £610,235, the United States coming next with £114,009, followed by Japan, £4,601 and Canada £3,558.

A SEVERE indictment as to waste in the Government Printing Office appears in the report made by Mr. Wm. Brooks. A great deal of unnecessary printing is done, he says, and he places the blame for the waste of money on the politicians and the departmental heads. Waste in printing also, of course, means unnecessary use of paper, but

Mr. Brooks apparently makes no reference to this side of the case. He is mainly concerned with printing of matter which is not needed, and especially refers to costly tabular work.

SINCE the report was issued another example of Government printing extravagance is commented upon. It condemns an official record book sent to schools throughout the Commonwealth. Each book costs £11, and it will take 70 years, it is said, to use one up.

OFFICIAL notification is given of a resolution to reduce the capital of Messrs. J. Fielding and Co., Ltd., from £200,000 to £180,000.

Price of News-Print.

No Increase this Year According to Canadian President.

"The persistent rumours of an increase in the contract price for news-print before the end of the year can have no substantial basis, inasmuch as a sufficiently large proportion of the Canadian manufacturers are already committed for the remainder of the year to ensure price stability." This is the statement of Mr. Geo. M. McKee, president of the Canadian Pulp and Paper Association.

He adds: "While it is generally admitted, even by informed publishers, that the current price of news-print does not yield an adequate return when current production costs are taken into account, the prospects for improvement in that direction are not encouraging, but must await the developments of the future."

Mr. McKee has also something to say concerning the reports as to the flourishing condition of the paper market generally in Canada, and its rapid approach to the high level of prosperity it enjoyed in 1920.

"While the news-print industry may be said to be in a better position than it was a year ago, or even six months ago," he says, "it is certain that there is no real ground for the over-optimistic statements and rose-coloured forecasts that are being spread abroad, presumably for their effect upon the stock market speculations."

"It is quite true that most of the Canadian mills are at present producing a greater volume of paper than they did during the slump period of last year. We hope that this is more than a passing condition brought about by seasonal influences and the desire of the newspaper publishers to forestall delayed shipments owing to the coal strike and to threatened labour troubles within the industry itself, but this cannot be determined accurately until the summer has further advanced and the publishers are able to estimate their full requirements. At present newspaper circulation and advertising volume show a gratifying increase over last year, which, if it continues, will undoubtedly help the situation."

Cigarette Paper.

Imagine a ribbon of fine white paper, just over an inch wide, stretching from London to Penzance, and thence to John o' Groats—a distance of, roughly, 900 miles. That ribbon would represent, says a writer in *Pearson's Weekly*, the amount of cigarette paper required by the smokers in the British Isles for just one week's supply of cigarettes!

Taken altogether, the manufacture of cigarette paper is quite an important industry. There are large mills specialising in the produce in France, Italy, Spain and Austria, and also, though not to such a large extent in England, America and Germany. As typical customers of these mills, Mexico and Central America may be quoted, their purchases amounting to nearly £150,000 each year.

The principal components of good cigarette paper are linen rags, hemp and flax. The finest results are obtained by the use of china grass, but this material is rarely employed now owing to its excessive cost.

White paper is used almost exclusively in the majority of countries, but in Spain and South America brown shades are preferred. Such papers are known as Spanish types, and each different shade has its own name. Several of the types are made sweet-tasting, while others are given the appearance of tobacco leaves.

Compared with other countries, the cigarette papers used in England are very light. The usual American paper is twice the weight of ours, the Spanish three times, and the Turkish four times, while those used in Arabia and Persia are remarkably like our sugar-bags!

Taxation of Playing Cards in Italy.

The Italian *Gazzetta Ufficiale* for June 3rd contains a Royal Decree, dated May 14th, which provides that from July 1st (the date on which the State Monopoly lapses), there shall be levied on playing cards, whether manufactured in Italy or imported, a tax of 1½ lira per pack of ordinary cards and 3 lire per pack of so-called "luxury" cards. "Luxury" cards are defined as those with letters or signs in the corners or at the sides, excluding cards for "torocchi" (a special type of playing cards used in Italy). Cards of a size of 33 mm. by 45 mm. or less are considered as toys, and are exempt from the tax.

From the same date (July 1st) the exemption of playing cards from municipal taxation is repealed.

The right to import playing cards into Italy will no longer be reserved to the State, and such cards of foreign origin may be imported subject to the payment of the Customs duty (150 "gold" lire per 100 kilogs.) and the tax mentioned above.

Drying Stereo Matrices

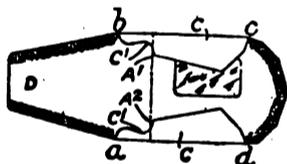

An invention patented in the names of Messrs. Iliffe and Sons, Ltd., A. H. Howell and W. F. Proter, relates to the construction of a stereo matrix press. To facilitate drying of the matrix, a ventilating member consisting of a number of layers of gauze is interposed between the blanket and the platen of a stereo-matrix press. As shown, the ventilating member consists of layers of wire gauze

secured together by a frame E₃ of U-section which may have a back plate E₄. Fig. 4. Perforations E₅, E₅, may be provided in the frame and back plate. The ventilating member may be loose or may be attached to the platen A₁.

Transparent Panel Envelope.

An envelope, of the kind having a transparent panel located lengthways of the envelope for exposing the address on the enclosure, as patented by Mr. M. Demignot, is provided with internal fastening means for localising a sheet of notepaper folded to smaller dimensions than the envelope. In the example, showing an envelope partly unfolded, the depth a b is made equal to the length of the longest side of an ordinary commercial envelope, and the length b c has any desired greater length. The top and bottom

flaps C are notched at C¹ so that when the gummed side flap D is sealed over the flaps C it also adheres to the front of the envelope through the notches C¹, and thus prevents access of the enclosure into the part of the envelope beyond the line A¹A². In addition, the side flap D may be gummed transversely to adhere to the front of the envelope along the line A¹A², or the notches C¹ may be omitted in this case.

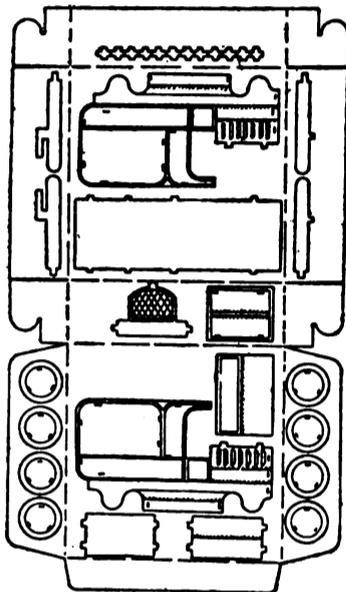

Pictures in Colour.

An invention by Mr. H. A. Rogers refers to apparatus comprising a composite picture and a line screen movable relatively thereto to produce moving or changing effects; variations of colour are produced by the use of a coloured screen in conjunction with coloured, black and white, or neutral tinted pictures; the lines of the screen may be opaque or wholly or partly translucent or transparent. The lines forming the composite picture may be consecutively in different colours, for example red, yellow and blue, or each line may itself comprise more than one colour. Alternatively the picture may be printed by an ordinary three-colour process. The composite picture may be made by photographing three subjects through a line screen, using the negative to make process blocks or collotype printing surfaces, and successively printing from the blocks, etc., in different colours. The coloured line-screen may comprise transparent material which bears white or coloured opaque lines, or is wholly covered with recurring series of coloured transparent lines or such lines alternating with transparent colourless lines. The screen may be made by embossing or excoriating celluloid so as to produce corrugations which enable the picture to be seen only where the ridges of the screen are

in contact with it. Colour may be obtained in such a screen by covering the celluloid with coloured powder or a thin sheet of coloured celluloid before embossing and afterwards removing the colour from the ridges.

Convertible Cardboard Boxes.

Mr. D. M. Gauld has patented an invention by which collapsible or other boxes, or wrappers of stiff paper, cardboard, or thin wood, of the ordinary form and without any structural alteration or the addition of separate parts, are so formed that, after their contents have been removed, they may be converted into

scale model houses, shops, motor cars or the like, or into games, such models or games being capable of being made by a child following the instructions printed on the box. The collapsed blank of a box from which a model motor car can be made is shown in Fig. 2, in which the hard lines indicate parts to be cut, the portions to be bent or hinged being shown by shaded lines.

FROM July 1st the warehouse at 97, Farringdon-street, occupied by Messrs. Alex. Pirie and Sons was taken over by Messrs. Pirie-Appleton and Co., Ltd., for the sale of cut papers, envelopes, cards, etc. All flat papers manufactured by Messrs. Alex. Pirie and Sons, Ltd., were transferred to 10-11, Aldgate, E., and are being sold in the name of the Wiggins, Teape and Alex. Pirie (Sales), Ltd.

Printing Inks: Their History and Composition.

An Extract from this Year's Cantor Lectures (Royal Society of Arts) by C. Ainsworth Mitchell, M.A., F.I.C.

The earliest block book in the British Museum dates back to 1470, and there is some reason to question the belief that block printing preceded the use of movable type, at all events in Europe. In all probability, printing ink, which was used either with blocks or movable type, originated with the Chinese, who had only to add a drying varnish to their ordinary carbon writing ink to obtain a suitable medium for the purpose.

Early Printing Inks.

One of the earliest descriptions of the manufacture of printing ink is that given by Canneparius in his book *De Atramentis*. This ink consisted of a mixture of lamp-black, linseed oil and juniper gum, which was heated over a slow fire until sufficiently thickened.

Moxon in his *Mechanick Exercises* (1683) states that Dutch printing ink of that date was superior to the English product, and he attributes this difference to the use in this country of too much resin and to the admixture of train (*i.e.*) blubber oil with the linseed oil, which caused the ink to become oily and to separate in the printed page.

Savage, who wrote on *The Preparation of Printing Ink* (1823), considered that Moxon was justified in his criticisms of the English printing ink of the seventeenth century but asserted that the English ink of the early nineteenth century was much superior to the ink made by the early Dutch method. He considered it essential to carry the heating of the linseed oil to the stage technically known as "burning."

A standard ink based upon similar lines to Moxon's Dutch ink, was made by Breton, printer to the King of France, in 1751. The varnish was made by boiling nut oil (*i.e.*, walnut oil) for two hours, and then removing the cover so as to "burn" the oil, this process being repeated several times. The use of litharge was condemned as being liable to cause the ink to clog the type.

Modern Ink-making.

Since the day of Savage various modifications in the process of preparing the lithographic varnish have been devised, and it has been shown that the method of "firing" the oil is not an essential part of the process.

It is important to use an old well-matured oil for the purpose, for crude oil contains impurities which will interfere with the colour and the yield of the varnish. In this respect modern experience confirms the statements of the older writers, such as Moxon and Savage.

In some of the modern processes of making the varnish steam-jacketed kettles are employed, whilst in others the oil is

heated by means of a steam coil, while air is blown into it through a series of small orifices. Varnishes made by heating the oil with superheated steam dry rapidly, but are often much darker in colour than those consisting of oil "boiled" by the older processes.

In order to prevent such discoloration in the preparation of the varnish, processes in which the oil is oxidised at a moderate temperature by means of oxygen are sometimes used, whilst in other processes ozone is used as the oxidising agent.

The substances which are introduced into the varnish, either to obtain a cheaper product or for some special purpose, include various resins, oil of turpentine, semi-drying oils, such as soya bean oil, paraffin oil, "driers" of various kinds and soap. In the case of the so-called "gloss ink," a rapid drying copal varnish is often added.

The nature of the substances to be added will depend upon the use for which the ink is intended. For rapid newspaper work, for example, a cheap ink which dries rapidly is required, whilst for the finest book work a pure pale oil varnish is essential, and the rate of drying is of secondary importance.

The Various Blacks Employed.

The blacks used in printing ink range from common pigment such as bone black (made by calcining bones) or vine black, also known as vegetable black, which is obtained by carbonising vegetable material to pure carbon blacks, such as lamp-black and gas black. Modern lamp-black is prepared by processes analogous in principle to some of the early Chinese methods. It is made either from oil or from pitch, resin and the like. For example, in Dreyher's apparatus gas derived from vapourised resin is burned in a series of lamps beneath a rotating cylinder upon which the black is deposited, and subsequently removed by means of iron catchers coated with flannel. The best kind of lamp-blacks are obtained by a fractionating process analogous to that already described as being used by the Chinese.

The best kind of black is that commercially known as *gas black* or *carbon black*, which is now prepared in large quantities from the natural gas issuing from the oil wells in the United States. This is mainly made by the so-called "Channel" process, in which the gas is burned in a series of jets beneath steel channels grouped in tables of eight, and the black deposited on the smooth underside of these is scraped off into hoppers through a reciprocating motion of the channels.

Various factors, such as the pressure of the gas, the air supply and the speed of

scraping, all have an influence on the quality of the product.

In examining gas blacks or lamp blacks, the "strength" or tinting power is determined by mixing weighed quantities with zinc oxide and oil, and comparing the tone with that given by a standard black under the same conditions whilst the richness of tone (or colour) is compared in the same way with the standard black mixed in the same proportion with oil.

The carbon blacks upon the market vary considerably in composition. Analyses by Perrott and Thiessen (*J. Ind. Eng. Chem.*, 1920, 12,234) show the following extremes: Amorphous carbon, 85 to 90 per cent., water, 1 to 7 per cent.; hydrogen, 0.5 to 0.8 per cent., and oxygen 2 to 8 per cent. Some degree of relationship has been established between the composition and the behaviour of the blacks in printing inks.

Mineral Pigments.

The mineral pigments commonly used for printing inks include vermilion for red; Prussian and other ferrocyanide blues, and ultramarines; chrome yellows, chrome greens, chrome yellow orange (a mixture of normal and basic lead chromate), orange mineral (a combination of lead oxides), Indian and Venetian reds, burnt umber and burnt sienna for browns.

In examining these, the tests to be applied include the colour, the covering power, fineness of division, miscibility with oil, and absence of grittiness. Organic lakes, consisting of dyes fixed upon a base such as alumina, are important pigments, and alizarine pigments and diazo dyes are superior in permanency to light to many of the mineral pigments.

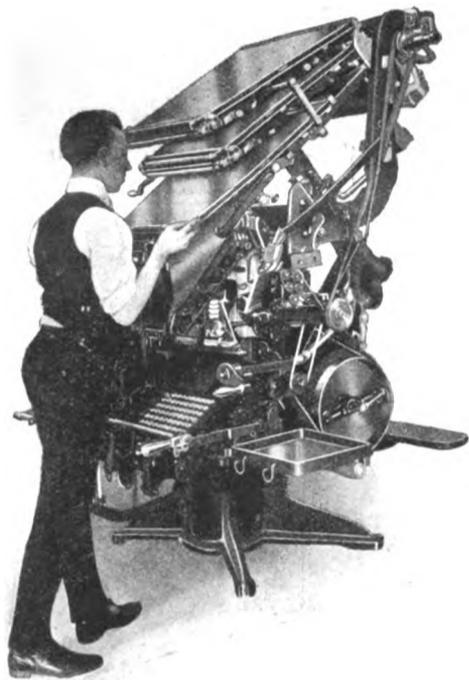

The property of "bleeding" or forming a solution in the oil medium of the ink, is associated with some of the aniline dye lakes, and these are quite unsuitable for the manufacture of printing inks.

One of the main essentials in the preparation of printing ink is that the pigment should be in absolutely uniform state of fine division and be free from gritty matter, and that it should be perfectly and evenly incorporated with the oily medium. The more recent developments of the manufacture are in connection with machinery, such as grinding and incorporating mills, designed to effect perfect admixture.

As in the case of marking inks, the results of physical tests and of trials under the conditions for which the preparation is intended, are of greater importance than a chemical analysis, although this is sometimes necessary.

In addition to the properties already mentioned, practical tests should be made of the

drying power, the flowing capacity, permanence to light and air, absence of "bleeding," or of "striking through" the paper, and the behaviour on the printing press.

Paper Trade Statistics.

Overseas Countries' Imports and Exports of Paper.

The quarterly return dealing with the figures up to June 15th, 1922, issued by the Board of Trade, gives the following interesting statistics relating to the imports and exports of paper of certain foreign countries and British Possessions:—

FINLAND.—During the three months ended March, packing paper was exported from Finland to the extent of 6,455 tonnes (of the value of 30,579,000 marks), compared with 2,409 (11,116,000 marks) last year, and 7,080 (19,545,000 marks) in the three months two years ago. News-print exported during the three periods stood at 27,836 tonnes (107,162,000 marks), 16,595 (77,399,000 marks), 15,481 (41,314,000 marks). The figures relating to the export of pasteboards were: 3,652 (9,924,000 marks), 1922; 1,804 (6,046,000 marks), 1921; and 11,579 (17,152,000 marks), 1920.

NORWAY.—Printing paper exported from Norway amounted to 30,504 tonnes during the first three months of the present year, 19,664 in the corresponding period of last year, and 31,620 two years ago. Packing paper exported reached 14,530 this year (three months), 3,346 last year, and 19,487 in the first quarter of 1920.

SWEDEN.—The exports of paper of all kinds from Sweden up to the end of April stand at 54,226 tonnes, against 36,593 last year, and 98,338 in the corresponding four months of 1920.

DENMARK.—Paper and paper manufactures, given in 1,000 kroner, were imported into Denmark during the three months ended March to the extent of 4,975, contrasted with 6,432 last year, and 9,501 in 1920.

GERMANY.—Fancy, coloured, varnished, etc., paper exported from Germany during the first three months 1922, given in 100 kilos, amounted to 30,213 (of the value of 85,259,000 paper marks), compared with 68,988 (5,045,000 gold marks) in the corresponding three months of 1913. Statistics relating to photographic paper show that 2,934 were exported during January to March, and 3,711 in the three months last year.

NETHERLANDS.—Printing and writing paper (including news-print) were imported into the Netherlands for the four months ended April to the extent of 11,044 tonnes (of the value of 2,448,000 gulden), 9,560 (4,802,000 gulden) in 1921, and 7,989 (3,725,000 gulden) in the four months of 1920. This country's exports for the same classes of merchandise reached 10,437 tonnes (2,761,000 gulden) for January-April, 7,649 (3,955,000 gulden) last year and 3,760 (1,935,000 gulden) in the four months of 1920. The exports of strawboards during the respective periods were:—44,964 tonnes (3,527,000 gulden), 1922; 27,301 (4,608,000 gulden) 1921; and 37,063 (6,250,000 gulden) 1920.

BELGIUM.—Imports into Belgium of paper and cardboard amounted to 8,387 tonnes during the first quarter of the year, 5,172 last year and 6,932 in the three months of the preceding year. Similar classes of goods exported amounted to 8,132 tonnes, contrasted with 6,635 last year and 3,245 in the 1920 period.

FRANCE.—Paper and manufactures (which include books) in 100 kilos, were imported into France during the first three months to the extent of 277,180 (47,939,000 francs), against 312,160 (101,117,000 francs) last year and 290,162 (115,308,000 francs) in the three months of 1920. The exports of paper stood at 80,182 tonnes for the three months this year, 81,391 in 1921, and 67,260 two years ago.

SWITZERLAND.—Printing paper exported from Switzerland, in 100 kilos, reached 36,270 in the three months ended March compared with 10,811 last year and 35,283 in the corresponding period of 1920. The quantity of printed books exported over the respective periods were as follows:—1,079 (1922), 1,072 (1921) and 1,686 (1920). Printed books imported during the three-monthly periods were:—7,320 (1922), 5,499 (1921) and 12,910 (1920).

SPAIN.—Paper for cigarettes exported from Spain during the twelve months ended December last year amounted to 3,248 tonnes, compared with 3,357 in the twelve months of 1920 and 2,612 in the year before. The exports

of books and other printed matter during twelve months were:—1,148 tonnes (1921), 1,501 (1920) and 1,505 (1919).

CZECHO-SLOVAKIA.—Given in 100 kilos, the exports of cardboard from Czecho-Slovakia during the first two months of the year amounted to 4,284, against 8,327 in the corresponding two months last year. The three following classes indicate decreases against the figures for last year (two months), viz.: packing paper 26,800, against 33,535; printing paper, 13,865, against 19,330; and writing paper, 1,562, against 9,035.

GREECE.—Printing paper imported into Greece reached 2,729 tonnes during the eight months ended August, 1921, compared with 3,153 in 1920 and 1,397 in the corresponding period of 1919. Writing paper for the same periods stood at 687 (1921), 942 (1920) and 780 (1919).

EGYPT.—Imports into Egypt during the three months ended March, 1922, were as follows, the figures for the 1921 period being given in parenthesis: Cardboard, 1,094,148 kilos (697,210); cigarette paper, 89,725 (128,291); printings, 1,463,003 (533,491); wrappings, 2,595,913 (1,686,378) and writings and envelopes 378,121 (317,994). Cigarette paper exported in the three months only amounted to 10 tonnes, against 27 last year and 96 in the year before.

BRAZIL.—Paper and paper manufactures entering Brazil amounted in quantity to 22,504 tonnes for the nine months ended September, 1921, compared with 30,781 in the previous year and 45,010 in the nine months' period of 1919.

ARGENTINA.—Paper for newspapers imported into Argentina during the nine months ended September, 1920, represented 24,612 tonnes, against 35,507 in the previous year and 19,274 in the corresponding nine months of 1918. The imports of paper for books during the respective periods were: 9,044 (1920), 6,503 (1919) and 4,967 (1918). The value of the imports of paper manufactures (including books) for the three nine-monthly periods are as follows: 1,459 pesos (1920), 985 pesos (1919) and 838 pesos (1918). (Peso = 4s. od.)

JAPAN.—Packing paper entering Japan during the two months ending February, given in piculs, reached 34,550, compared with 11,070 last year and 27,008 in the corresponding two months of 1920. The imports of printing paper for the three periods were:—59,441 (1922), 8,858 (1921) and 25,200 (1920). The combined value of these imports stands at 1,812,000 yen for the present year, 744,000 yen for the two months of 1921, and 1,670,000 yen for the 1920 period. The quantities of the exports of paper and paper manufactures are not given, but the values for these during the two months' periods were:—2,744,000 yen (1922), 3,277,000 yen (1921) and 4,795,000 yen (1920). [Picul = 133½ lbs. avoirdupois. Yen = 2s. od.]

SIAM.—Unprinted paper, given in tonnes, imported into Siam for the first three months of the year amounted to 427 (of the value of 193,000 ticals) contrasted with 488 (456,000 ticals) last year and 342 (270,000 ticals) in the three months of 1920. [Paper tical = 2s. 1d. in 1922.]

BRITISH INDIA.—Paper imported into British India during the twelve months ended March, 1922, was of the value of 2,052,200 rupees, contrasted with 6,84,07,000 rupees in the previous twelve months and 96,68,000 rupees in the 1920 period.

CYLON.—Imports for January-February were as follows:—Printings, 3,086 cwts. (of the value of 99,000 rupees); writings, 1,129 cwts. (76,000 rupees); and other paper, 8,394 cwts. (1,26,000 rupees).

NEW ZEALAND.—Paper was imported into New Zealand during the twelve months of 1921 to the extent of 366,170 cwts. (of the value of £1,019,000), 340,948 cwts. (£876,000) in 1920, and 313,595 cwts. (£612,000) in the twelve months of 1919.

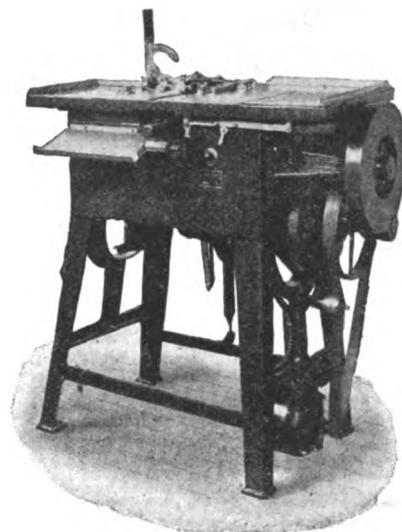

BRITISH SOUTH AFRICA.—Printings received into British South Africa during the twelve months of 1921 amounted to 290,954 (of the value of £769,000) and in the previous twelve months to 295,180 cwts. (£962,000). Wrappings amounted to 72,833 cwts. (£224,000), comparing with 73,344 cwts. (£269,000) in the preceding year. Stationery imported was of the value of £898,000 last year (twelve months) £1,340,000 in 1920 and £826,000 in 1919. For the two months ending February of the present year 30,544 cwts. of printings were imported, as against 78,885 cwts. in the two months of last year. As regards wrappings, the figures for the two months were 12,117 cwts. (1922) and 30,010 cwts. (1921).

EVERY organisation is a reflection of the man at the top.

Ludlow Typograph Progress.

Newspaper Field Entered.

It is interesting to notice that the Ludlow typecaster—about which we had some favourable comments to make on its introduction into this country—is demonstrating its practical utility and is gaining ground in quarters where expert judgment supervises the choice of printing plant. Perhaps not unconnected with Mr. Geo. Eaton Hart's recent visit to the United States to inspect the most up-to-date American printeries was the fact that St. Clement's Press installed a Ludlow typecaster at the beginning of this year. That this step was not regretted is indicated by the installation at St. Clement's, a few weeks ago, of a second Ludlow, the matrix equipment being also doubled. We hear, too, that the Cornwall Press is now using a second Ludlow machine, and has more than doubled its initial matrix equipment. This certainly

The Ludlow Type-Caster.

suggests that the Ludlow method of display typography—despite some criticism from those favouring other methods—is growing in favour with firms that cannot be charged with extravagant or inefficient management.

A more important step, however, in the history of the Ludlow in this country is its entry into the field of newspaper production. The *Daily Express*, as we mentioned in a recent issue, now has the Ludlow typecaster at work. It thus becomes the first newspaper in this country—indeed, the first in Europe—to produce display lines by this method. That the *Daily Express* is much impressed by the capabilities of the Ludlow is evident from what has appeared in the columns of that newspaper—as, for instance, the following: "Hitherto all display type has been set by hand. The type itself does not last long under the great pressure to which it is subjected every day in the stereotyping process, and after a few months' life in a newspaper office becomes ineffective—loses its sharpness, and has to be renewed at a very heavy cost. Advertising type has been hand-set up to the present, and a glance at the *Daily Express* will give some idea of the amount of display type used in one issue. The Ludlow does away with all this. A compositor places brass 'matrices' of letter-moulds, into a 'stick,' locks them tight, and puts the stick into the Ludlow. Molten metal is forced up against the mould, held there for a moment, and—whizz! a beautiful cast of the letters is shot out into a tray—the line complete, ready for the stereotyping, all in one piece, with nothing movable and a bold firm 'face' that will print as black as black can be!"

It is officially stated that the number of persons recorded on the Live Registers of the Employment Exchanges in Great Britain as wholly unemployed, on July 24th, was 1,362,300. This was 6,974 less than in the preceding week, and 461,407 less than the figure recorded at the beginning of last January. The number working short time and drawing benefit for intervals of unemployment was 72,900 on July 24th, as compared with 85,249 on July 17th last, and 934,786 on July 1st, 1921.

Aug. Brehmer's (British) Successor

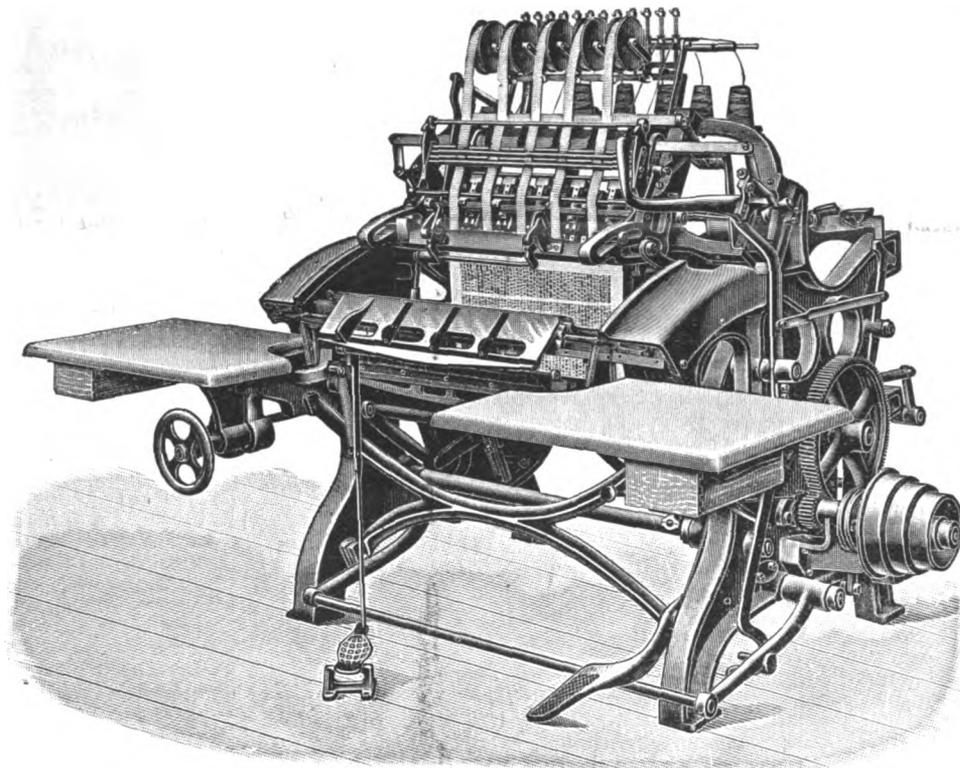

THOMAS McAULLIFFE.

Wire Stitching Machines for every purpose.

Thread Stitching and Knotting Machines for School Exercise Books and Calendar Work.

Thread Book Sewing Machines for Sewing Light Letterpress and Heavy Account Books.

Glueing Machines, End Sheet Pasting Machines and Folding Machines (Hand or Automatic Feed).

No. 33 Thread Book Sewing Machine.

THIS Machine is intended for sewing the heaviest Account Books, Letter Copying Books, Guard Books, etc., and is made in two sizes, one to take books up to 22 in., and the other up to 28 in. in length. According to size, one to six books may be sewn at one time and cut asunder afterwards, each separate book having kettle stitches at its ends and also between the tapes. Speed of Machine, according to size of work, is up to 35 Sections per minute.

Trade Notes.

POST OFFICE FINANCE.—On behalf of the Post Office, it is denied that the increase of revenue since the reduction of postal rates can fairly be attributed to that reduction, there being various other factors which must be taken into consideration. Reiteration is made of Mr. Kellaway's recent statement that it would not be possible for some time to come to give any definite figures as to the effect of the reduced postage rates upon the business and revenue of the Post Office.

BOGUS NOTE FACTORY.—Having been charged by a tobacconist to whom he had offered a forged pound note, Frederick Martin, 39, upholsterer, of Queen's road, Peckham, was remanded at Woolwich on Friday on a charge of "forging and uttering" Treasury notes. It was stated that a number of forged notes were found at his address, and an outfit for forging them.

FATAL MISPRINT.—A misprint of a single word is reported to have had fatal consequences to Georges Dupuy, of Lannepax (France). The error occurred in printed instructions regarding the control of a motor car, and led to the car being overturned.

WILLIAM MILLER, a printer's machine-hand, of Walton-road, Aylesbury, is lying in the Hampstead General Hospital in a precarious condition. He was found in a Metropolitan train at Finchley-road on Monday suffering from severe injuries to the head, but how he came by them is a mystery.

The partnership heretofore subsisting between Mr. F. W. Dickenson, Mrs. A. Dickenson and Mr. E. A. Bristow, under the style of Dickenson and Son has been dissolved, and the firm ceased to exist as from July 31st. Mr. Bristow, therefore, commenced trading on his own account as from August 1st under the style of E. A. Bristow and Co., papermakers' agents, at the same offices, Temple Bar House, 23-28, Fleet-street, and with the same staff.

It is reported that Mr. Lloyd George's book of memoirs has been purchased for £90,000 (including both the American and British serial and book rights), the contract being made between Mr. Curtis Brown and Sir William Berry. The volume will be published in England by Messrs. Cassell, in which firm Sir William has a controlling interest.

WIRELESS TYPEWRITER.—A new apparatus for use in wireless telegraphy is at present on trial at the Post Office. It is an invention called the teletype, which has already been adopted by the United States Navy Department for use in aeroplanes. The messages are sent out on an ordinary typewriter keyboard without any preliminary "punching" of a paper tape, and emerge automatically at their destination on long type-written slips. Forty-five words a minute can be sent and received.

DONSDIE PAPER MILLS.—Aberdeen Town Council received petitions from 75 residents in Chanonry, High-street, and College Bounds, and from Aberdeen University Court, complaining of "enormous and incessant heavy motor traffic" passing to and from Donsdie Paper Works. The petitioners stated that they had no desire to hamper an industry of such importance to the community, but they were convinced by painful experience of the utter unsuitability of those streets for traffic of such a character and quantity, and of the consequent risk to life and property. They asked that measures be taken at once to divert the traffic to roads more fitted for it. The petitions were remitted to the Streets and Roads Committee for a report.

MR. ARTHUR GRIFFITH, president of Dail Eireann, whose death after a short illness came with startling suddenness on Sunday, started his career as a printer, and it was largely through the allied profession of journalism that he acquired his immense influence as a national leader. Born in Dublin in 1872, the son of a printer, he himself was trained as a compositor, and subsequently became a printer's reader on a Dublin paper. Returning to Ireland in 1898, after a visit to South Africa, he founded and edited the *United Irishman*, conducting that publication with remarkable ability.

MR. ANDREW MEIKLE, editor of the *Express and Star*, Wolverhampton, died on Monday at the age of 75. After seven years' apprenticeship as compositor on the *Dunfermline Press*, he became a reporter on that paper.

He later acted as reporter on the *Teviotdale Record*, Jedburgh, and the *Bolton Guardian*, and as chief reporter of the *Bolton Chronicle*. At a later period he was editor of the *Somerset County Herald*, and was also editor and manager of the *Warrington Examiner*. He has been associated with the *Wolverhampton Express and Star* and the allied papers owned by the Midland News Association, Ltd., for 38 years.

The sudden death of Mr. Robert Stockwell, aged sixty-four, printer, of Wavertree-road, Streatham-hill, which took place while he was seated in his motor car at Stratford was investigated at an inquest at Lewisham on Friday. Mr. Stockwell had been for a run, and just before his death had assisted the chauffeur to fix the hood of the car to protect him from the rain. A verdict of "Death from natural causes" was returned.

MR. HENRY S. HILL, one of the oldest journalists in the West of England, has died at Plymouth, aged 77. Mr. Hill was for 36 years with the editorial staff of the *Western Morning News*.

The death occurred at Carmarthen, on Friday, of Mr. John P. Pryse, for many years a linotype operator at the *Western Mail* office, Cardiff.

MR. ALFRED HARRIS, of the Romney Press, Fenchurch-street, London, E.C., printer, left £19,324.

Four Limerick newspapers—the *Chronicle*, the *Munster News*, the *Leader* and the *Echo* last Friday announced their intention of temporarily suspending publication owing to the conditions prevailing in the country. These newspapers refused to submit last March to censorship by the Irregulars, and as a result closed down for a fortnight.

N.Y. PRINTING INDUSTRY.—The Merchants' Association of New York has published a new analysis of the census of manufactures made by the Department of Commerce in 1919. This shows that printing is the second industry of New York City (following clothing) with a total production of \$345,989,264. This makes it 1-15 of the entire manufactured output of the city.

"HONOR HALL."—One of the numerous interesting items to be seen at the Second Educational Graphic Arts Exposition, to be held at Boston, U.S.A., from August 28th to September 2nd, will be what is known as "Honor Hall" where will be shown samples of some of the best work done recently by various printing houses. In this "Honor Hall" each printer will be allowed to place one specimen that he considers the finest work ever put out by his firm. There will be examples of fine printing, colour work, and binding.

BOOK EXPORTS TO U.S.—The Treasury Department at Washington has temporarily suspended the ruling that books must be marked with the phrase, "Made in ———." Books now held in the Customs House will be released without further marking. It is hoped that the plea of the book trade will be heard and that this Treasury Department ruling will not be applied to books, since they are, for all commonsense purposes, already so marked.

PLAYING CARDS IN THE U.S.—The reports of the Commissioner of Internal Revenue indicate that the United States produces between 25 and 30 million packs of playing cards a year. American imports of playing cards amounted on the average to somewhat less than 100,000 packs, valued at 10 or 15 cents a pack. In normal times U.S. exports of playing cards have a value of less than \$500,000, representing roughly 1,000,000 packs. Consequently the conclusion is reached that the United States consumption of playing cards is equal to practically the whole of its production. In other words, each family of four people in the United States uses on the average one new pack of playing cards each year.

KOVNO EXHIBITION.—"Printing and Statistical Data" will form one of many sections at an Agricultural and Industrial Exhibition to be held under the auspices of the Lithuanian Agricultural Association at Kovno from September 10th to 20th. Prospectuses can be obtained from the Lithuanian Legation or from the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1. Applications will be accepted up to August 20th. The address of the Exhibition Bureau is No. 15, Keistucio Gatve, Kovno (Kaunas), Lithuania.

Two GERMAN journalists, Herren Winter and Kämpfer, belonging to the staff of the *Münchener Morgenpost*, have been arrested, accused of high treason.

Trade Union Matters.

"NATSOPA" AND ACCIDENTS.—The governing council of the National Society of Operative Printers and Assistants has instructed the executive to make a careful inquiry into the causes of accidents in machine rooms, in view of the increased number reported to the society in recent years, and to make any suggestion for the prevention of same. The Executive Council now request every branch committee and every chapel to give this matter their consideration. Chapels are requested to report to branch committees any condition in the machine-room that has led to accidents, or any machine improperly guarded, insufficiently guarded, or placed in such fashion to contribute towards injury to members. The attention of chapels is called especially to various types of machinery where men have to plate the press under great personal inconvenience, owing to insufficient room allowed in the machine for that purpose. The question of reel hoist, starting buttons, faulty floors, and all other circumstances under which members work are also matters for consideration.

TECHNICAL EDUCATION.—Mr. J. Hobday, branch secretary of the National Society of Operative Printers and Assistants, writes:—"The experimental classes which were held last session at St. Bride Institution proved highly satisfactory from every point of view, and we congratulate members upon their success at the examination which was held at the Stationers' Hall in the spring, when first-class awards were gained by J. W. Shillingford, E. T. Keenan, H. A. Noon and R. Askew; second-class awards by J. Gurney and E. C. Read. The committee would call attention to the fact that these classes will restart in September, when it is hoped that there will be sufficient interest shown to make two classes practicable—a class for juniors and a separate class for adults. To encourage the juniors to attend, the committee offer a prize to the junior who heads the list at the examination, and F.O.C.'s are asked to make this known among their colleagues."

T.A. Sued for Breach of Contract.

Newcastle Bench Finds Employers Justified
in Enforcing Industrial Court's Award.

In connection with the strike of the Typographical Association against the reduction of wages awarded by the Industrial Court, a most important step was taken on Friday, when ninety-seven men concerned in the dispute were sued at Newcastle Police Court by the *Newcastle Chronicle*, Ltd., and the *Mail and Leader*, Ltd., Newcastle, to recover £10 damages in each case for breach of contract by neglecting or refusing, without lawful excuse, to follow their employment on July 21st and subsequent dates.

Mr. H. S. Mundahl (instructed by Messrs. Keenlyside and Forster), appeared for the plaintiffs, and Mr. Edgar Meynell (instructed by Messrs. Watson, Burton and Coeder) for the defendants.

Among those present were: Colonel Sir Joseph Reed, Mr. Munro Sutherland of the *Newcastle Chronicle* and *North Mail*; Mr. J. B. Leslie Smith, president of the local Master Printers' Association; Mr. Walter Doig, hon. secretary, and Mr. John English, secretary of the North-Eastern Master Printers' Alliance; Mr. J. D. French, general president of the Typographical Association; Mr. J. D. Harvey, a member of the Executive Committee and president of the local branch of the Typographical Association; and Mr. Joseph Tinker, local secretary.

The Employers' Case.

Opening the case for the employers, Mr. H. S. Mundahl said the object of the proceedings was not the recovery of money, because any damages would be inadequate compensation for the actual loss sustained, but it was to vindicate the position of the newspaper proprietors. Should the Court decide that a case was made out, therefore, it had been agreed that the damages should be the nominal sum of 25s. in each case. The case of one of the men, George Renwick, would be taken, and the remainder would stand by it. Defendants were all members of the printing staffs of the *Newcastle Chronicle* and *North Mail*, and all members of the T.A., in which wages were regulated by the national agreement.

Mr. Mundahl proceeded to outline the movements of wages in the printing trade since pre-war days, and sketched the history of the present dispute, stressing the agreement to refer the dispute to the Industrial Court. The agreement, he pointed out, was signed by representatives of both sides, including those of the Typographical Association, who were Mr. French and Mr. Skinner, the president and secretary. The matter was referred "for settlement." The hearing took place on July 4th, and the award was made on July 7th, and was issued on July 8th, providing for a reduction of 12s. 6d. by four instalments.

The Breach of Contract.

The president and the secretary of the Typographical Association expressed dissatisfaction, and they threatened to withdraw their labour. On July 21st the men threatened to leave their employment without giving any notice. Negotiations took place, but the men did leave without notice. It was admitted, and the rules of their own society so provided, that a fortnight's notice was necessary on either side for the termination of employment. The breach of contract complained of was that the men had left their work without notice.

Mr. Mundahl said the men's case, as he understood it, was that reference to the Industrial Court was not binding on the members by virtue of the rules of the society, and they said "if you put it into force we are entitled to strike without notice." Before reference to the Industrial Court there was no reservation as to a ballot, but before the proceedings commenced, Mr. French, president of the society, intimated that any award would have to be submitted to a ballot.

Mr. Mundahl said it was an unpleasant thing to suggest, but he did contend that when Mr. French said they could not act without reference to a ballot of the members, it was not a frank and ingenuous statement. It was done for the purpose of saving his own face, and he (counsel) said that for two reasons. In the first place, the rules made no provision that any decision must be referred

to a ballot of the members. In the second place, the only rule dealing with the matter was rule 7, clause 3, which said "The function of the Executive Council shall be to administer the rules of the Association for the general benefit of the members. They shall not sign any agreement without submitting the proposed agreement to the vote of the members."

If the executive had had any doubt as to their authority, Mr. Mundahl contended that they would have submitted to ballot the signing of the agreement to refer the dispute to the Industrial Court for settlement. Nothing of the sort was done, and no attempt was made to take a ballot until the award was made, and found to be unsatisfactory. Then they sought to upset the whole proceedings by means of that ballot which they alleged to be necessary.

"I say," said Mr. Mundahl, "that the protest of July 4th was not genuine and honest. It was simply a means of saving their own faces in case the award went against them," declared Mr. Mundahl.

Counsel having read voluminous correspondence between the parties, said that it was decided that the finding of the Court should be resisted, and that the men should strike without notice immediately the employers proposed to put the reduction into effect. There was no legal justification for doing such a thing. When the employers agreed to withdraw their notices and agreed to the matter going to the Industrial Court, the position was this: The contract was to continue and the wages paid were to be determined by the award. It was a bargain to go on working on the usual terms, and each side agreed to work on these terms. There was absolutely no justification in law for the course that had been taken by the Executive Committee to cease work on the 21st.

The Clerk: The legal point which the magistrates have to consider is whether there was an agreement to go to the Industrial Court, and whether the action of your Executive was binding upon the men, and what were the conditions in which they accepted them?

The T.A.'s Defence.

Mr. Meynell (for the defence) replied that these questions all arose, and then proceeded to urge that it was common ground that 14 days' notice must be given. There was no suggestion that in the terms agreed the 14 days' notice should be waived. On the assembling of the court, Mr. French got up and made a statement in the clearest possible terms. He said: "But I want it to be clearly understood, so that there can be no doubt about it in the minds of either the Court or my friends the employers, that under no circumstances can we as an Executive Council accept as final the decision of the Court."

The Chairman: Can you suggest why he did submit it to the Court? After making that statement, why did he not say, "We will not be bound by your decision unless it be in our favour?"

Mr. Meynell: He was scarcely likely to say that. What he did say was distinctly that they were not bound by it. They would recommend it to the ballot of the members.

Mr. Meynell contended that the only persons bound by the agreement were the members of the executive, who were not summoned. Other newspapers had given 14 days' notice before enforcing the award, but the *Chronicle* was determined to get rid of this society and run as a non-union business. His case was that the proprietors themselves broke the agreement by enforcing the reduction without notice.

The Magistrates' Decision.

The magistrates retired, and were absent about 25 minutes.

The Chairman, on the return of the magistrates to the court, said the Bench had considered the matter very carefully in all its bearings, and this was the conclusion come to:—

"The Court finds, on the admitted facts, that the officials of Typographical Association acted within their authority in submitting the question of a wage-reduction for settlement by the Industrial Court, and that,

consequently, the findings of such court are binding upon all the parties to the submission. The Court therefore finds that the plaintiffs were justified in reducing the wages in accordance with the award of the Industrial Court, and that consequently the defendants were not justified in leaving their employment without first giving proper notice.

"Judgment is accordingly given in the plaintiffs' favour for the agreed damages of £1 5s. and costs in each case."

At the request of Mr. Meynell, the Bench agreed to state a case for the opinion of the High Court.

Messrs. Benn Bros.' Good Year.

Factors to which Success is Attributed.

At the annual meeting of Benn Bros., Ltd., held on Friday, Sir E. J. P. Benn, Bart., C.B.E., presided, and was able to report that his company had had a good year and had done extremely well. They were, he said, in a better position than ever, turnover and profits continuing to advance satisfactorily.

In looking round for the reason for their success Sir E. J. Benn remarked that they had not found it necessary to go into the insurance business, they offered no premiums, and paid no shopping bills for subscribers, but merely published newspapers and books, devoting the whole of their brain power and effort to making those newspapers and books just as good and serviceable as possible.

Another point was the fact that nearly one-fifth of all the people employed are shareholders in the company. The men and women who carry on the work of the company, the working directors and the staff, own between them nearly half the capital.

Benefits of the Five-Day Week.

Sir E. J. Benn laid special stress on the benefits which the firm had derived from the five-day week. "It is very remarkable, and indeed I think a unique, thing," he said, "for a newspaper publishing house to limit its work to five days a week. It causes in sundry little ways sundry little inconveniences, but as against this we believe that it gives us great advantages. We claim that we do more work in five days than most people do in five and a half; we very much enjoy our long week-ends, and the balance sheet . . . would seem to prove that no financial disadvantage results from the arrangement. The five-day week movement has not developed as I expected that it would when we were among the pioneers. Some of those who started it have dropped it, but I call attention to its success in our case in the hope that others may be encouraged to try the experiment. The five-day week, if it became general, would, I believe, lead to economy, efficiency, and, most important of all, contentment, and have a happy reaction upon the industrial situation as a whole."

The Corporations Tax.

Referring to the Corporations Tax, he protested against it on the ground that it penalises limited companies as distinguished from every other form of trading organisation. "If we as a nation," he said, "really desire prosperity, if we are in earnest about providing employment for everybody, if we want our trade and commerce to thrive, then we should surely see that the principle of the joint stock company is fostered and nourished and improved so that every incentive is offered to suitable persons to join themselves together for industrial purposes. This corporation profits tax is a blow at that great movement, and must be brought to an end. Notwithstanding all the talk of economy, the tax-gatherer still takes from your coffers an enormous proportion of your profits, while if all the money which flows into the Exchequer as a result of our activities, all the taxes paid by our employees, as well as by the company, were added together it would be found that the State takes nearly twice as much as those who own the business."

Turning to the outlook for the future, the speaker said he took the most optimistic view of the trading situation. It seemed to him that there was every prospect of a steady advance all round; our industries had touched bottom and were now on the mend.

The meeting approved a dividend at the rate of 17½ per cent. per annum, less tax, to be paid in respect of the year ending June 30th, 1922.

Death of Viscount Northcliffe.

A Creator of Newspapers.

By the death of Viscount Northcliffe, which took place at 10.12 a.m. on Monday at his London residence, 1, Carlton-gardens, this country loses a distinguished journalist, a great newspaper proprietor and one of the foremost figures of his time. He dies at the age of 57, when it seemed likely that his immense energies and limitless enterprise had still many years in which to put on record further sensational achievements in the realm of newspaper production. The funeral takes place to-day (Thursday) in St. Marylebone Cemetery, Finchley, the interment being preceded by a service at Westminster Abbey at noon.

Master Business-BUILDER.

Alfred Charles William Harmsworth began his association with the Press in most humble fashion, but the story of his successes constitutes a romance of modern industry, as he succeeded in building up three great businesses—the Amalgamated Press (which owns *Answers* and some 80 more publications), the Associated Newspapers (which owns the *Daily Mail*, *Evening News* and *Weekly Dispatch*), and the Anglo-Newfoundland Development Co. The combined profits of the two first amounted last year to about £600,000, and the weekly issue of their publications to nearly thirty million copies. The Anglo-Newfoundland Development Co. now owns 3,400 square miles of forest in Newfoundland, with water power, railways, the town of Grand Falls, a port, steamers for the transport of paper to England, and one of the largest paper mills in the world.

In addition to establishing and supervising these undertakings, he reconstituted the *Times* and took a leading part in founding the *Daily Mirror*, with its circulation to-day of one million.

His Influence on the Press.

Lord Riddell—vice-chairman of the Newspaper Proprietors' Association, and one exceptionally well qualified to judge of the influence exerted by this prince of newspaper magnates—writes of him:—"It must be confessed that he placed the newspaper trade on a new footing, both by the magnitude of his operations and the new spirit which he introduced. Not the least notable of his innovations was the increased remuneration paid by him to journalists. He set a new standard, which had far-reaching effects, and the working journalist will always have cause to bless his memory in this respect. He was a hard taskmaster, but he paid well, was a good friend to fellow-craftsmen in distress and a generous contributor to trade charities.

"It is difficult to describe the extent of his influence upon the Press. The way for his operations had been paved by greater educational advantages among the masses of the people, and his appearance coincided with the introduction of cheap paper and mechanical improvements which rendered possible the speedy production of newspapers and periodicals in enormous quantities at low prices. These facilities he used to the fullest extent, also adopting the critical and vituperative methods which aroused the animosity of public men in the time of Lord Mansfield, and which, in their modern dress, Lord Northcliffe largely borrowed from the American Press."

Interest in Printing.

Though he was a journalist and newspaper proprietor rather than a practical printer, it was his boast that he had been familiar with the printer's craft since his boyhood. Mr. G. S. Jealous, of Hampstead, a neighbour and friend of his father's, who was at that time proprietor of the *Hampstead and Highgate Express*, gave him, while he was still a child of five, a small printing press and a case of type, so he knew how to set type before he was seven. He had a natural bent for machinery, which led him to introduce the best plant in his offices and to neglect no mechanical device.

Tributes from all quarters of the globe are now testifying to Lord Northcliffe's genius and influence. Lady Northcliffe has received telegrams of sympathy from the King, the Queen, Queen Alexandra, Princess Victoria, Princess Christian, ex-King Manoel, the Duke of Connaught, M. Poincaré, and many others. Mr. Harding, the printer-President of the United States, sent to Lady Northcliffe a message through the American

SPECIAL PREPAID ADVERTISEMENTS

Embassy expressing "full appreciation of the high qualities of your distinguished husband, his exceptional ability, his dominant personality, and his devotion to the service of mankind," adding that he "deeply deplores his untimely end."

Mr. George A. Isaacs, general secretary of the National Society of Operative Printers and Assistants, writes to the *Daily Mail* expressing on behalf of his trade union and himself personally a "sense of loss at the passing of Lord Northcliffe" and voicing "appreciation of his attitude towards those of his employees that I have the privilege to represent."

ACCORDING to an inquiry conducted by the U.S. Department of Labour, there are 113 newspapers and 14 magazines in the U.S. owned and directed by negroes.

The Egyptian Ministry has suspended the newspaper *Al-Ahram*, which has never before been suspended during its 47 years' existence

COMPOSITOR wanted; also LINOTYPE OPERATOR wanted. Best location in United States America; business owned and managed by Englishman; give qualifications and references, also wages asked.—Box 13965.

COSTING and ESTIMATING CLERK wanted in Lithographic Transfer Works in the Midlands.—State qualifications, references and wages, to Box 13980.

TRAVELLER wanted, with good connections in the Printing Trade for Manchester, Liverpool and Midlands, with old-established house; state age and experience; all applications treated confidentially.—Box 13976.

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

Situations Wanted.

ENGINEER'S DRAUGHTSMAN, internal combustion, etc., car experience, desires Position where artistic talent would be of service; ability for advert. lay-out and commercial art.—Address Box 13952.

MINDER (Two revolution) seeks permanency; experienced in Commercial, Book and Three-Colour Work; disengaged.—Box 13973.

MACHINE MINDER.—Centurettes, Wharfedale, etc.—E. C., 32, Hargrave Park, Highgate, N.19. 13974

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Miscellaneous.

AN opportunity occurs to ACQUIRE a SMALL PRINTING PLANT, in running order, within a short distance of Liverpool-street; lease of basement premises, about 2,000 sq. ft., at a low rent, may also be had if desired.—Full particulars from D.E., c/o Dixon and Roe, 17, Walbrook, E.C.4. 13981

COLONIAL NEWSPAPER CUTTINGS, dealing with the Paper, Printing, Stationery and Allied Trades, are wanted by Advertiser.—Communicate, stating terms, to Box 13882.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

NOTTINGHAM.—TO BE LET ON LEASE, early possession, Palatial Modern-built BUSINESS PREMISES, corner Carrington-street, facing fountain (best side the street), all cars stop at door, said to be 50,000 to 150,000 people pass daily; 20,000 feet super floor space, 175 feet frontage; quite near new Port of Nottingham (world's seaports to Nottingham v. Hull direct); opportunity for Grand Stores de Louvre; suit limited company; illustrated map posted.—Cooley, Market-street, Nottingham. 13983

PHOTO PRINTS.—Object Photography, etc.; Practical and Skilled Operators at your service; Modern Studies specially planned for all Object Work.—For efficient service send your work to The Nickeloid Electrotype Co., Ltd., Photo Engravers and Electrotypers, 10, New-street-hill, London, E.C.4. 13963

TYPE METAL RULE BORDERS, LEADS AND CLUMPS.—Send for samples and prices. Best Alloy used for all these materials.—The Nickeloid Electrotype Co., Ltd., 10, New-street-hill, London, E.C.4. 13964

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By James Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E. C. 4.

Printing on Thin India Paper.

Hints for printing on very thin India paper are given in a pamphlet issued by the S. D. Warren Company, Boston. Ink must be non-penetrating. Very often comparatively opaque thin paper appears to be transparent when the real trouble is caused by the oil or varnish in the ink penetrating the stock to such an extent that it shows on the other side of the sheet. Consult your ink man, giving him a sample of the paper you plan to use and he should be able to help you.

If half-tone engravings are used, make them so far as possible, not over 120 screen. A screen of 133 lines might possibly be used if it is necessary to hold the detail of the subject.

It is advisable to avoid large sizes and black-face type as much as possible. Types of this description have a greater tendency than light faces to show through any paper. And this tendency will naturally be accentuated on very thin paper.

Wage Negotiations Resumed.

THE gratification felt in the trade at the resumption of negotiations between the employers and the Typographical Association is heightened by the fact that the parties have been standing apart for a period of nearly four weeks, whilst the inconveniences and losses inseparable from a stoppage have been felt in many quarters. At the time of writing the conference is still proceeding, but in view of the return to work of compositors and linotype operators in many towns, and the fact that the unions other than the Typographical Association affiliated to the Printing and Kindred Trades Federation had no part in the dispute, there were hopes that the resumption of negotiations would be the prelude to a settlement.

The Newcastle Decision.

THE case brought by the Newcastle newspaper companies against members of the Typographical Association and resulting in a judgment whereby the strikers were mulcted in nominal damages and costs is one of great interest to the trade not only because of the important bearing the decision has upon the present dispute, but also because of its bearing upon the future status of the Industrial Court, and, moreover, upon the general question of the law as affecting signed agreements between employers and trade unions. In the opinion of the printing trade employers, the judgment of the Newcastle magistrates is a most satisfactory endorsement of their contention by an unprejudiced and impartial body of men to whom the facts had been presented with great ability by counsel for both sides. The case, however, has points of complexity. As a matter of common fair play it may be obviously absurd for the representatives of the T.A. to act as they did in solemnly signing an agreement, on the strength of which the employers withdrew their notices, and then, having removed the immediate threat of stoppage of work, pleading that they were not authorised to make an agreement which would be bind-

ing upon their members. But common fair play and the letter of the law are not necessarily identical. If the case goes to the High Court the root question to be decided, it seems to us, is whether or not the representatives of the T.A. were legally empowered to commit their union, as they apparently did, to accept whatever adjustment of wages the Industrial Court might decide. That such responsibility was taken for granted and that the signing would become a farce if the authority were not assumed, might count for nothing in the eyes of the law. Rules and precedents would have to be vigorously scrutinised and all tacit understandings barred. The fact, we suppose, that the Newcastle magistrates agreed to state a case, indicates that they feel there is further ground for discussion on points of law involved. Such further discussion would probably be very interesting and instructive to all who, on the side either of the employers or of the men, have to do with the making of agreements.

The Passing of Lord Northcliffe.

THE burial to day of Viscount Northcliffe—to be preceded by a funeral service in Westminster Abbey—makes a great finish to a career that is one of the romances of modern industry. He wished to be numbered among the great ones of the earth, and it is clear to-day that he realised this ambition. He made many enemies. That was inevitable in view of his autocratic temperament and of the fact that policies and principles served him mainly as counters in the game of business, to be taken up or laid down in accordance with the exigencies of the moment. Yet he is now recognised everywhere as a prince of journalists. His originality, foresight and daring not only made his own newspapers successful, but brought a new era in the style and methods of British journalism. Illustrative of the largeness of the man's thought is the fact that his entry into the sphere of papermaking—a mere sideline—resulted in a gigantic enterprise, itself a life-time's task for a smaller mind. It is as journalist and newspaper organiser, however, that he goes down to history. Though the world should forget his excursions into world politics, and though it should forget (as it will) his ever-shifting attitude to most big subjects of human interest, he will be remembered for ever as a newspaper maker who was a great master of his craft, and who has written his name big over a large part of this planet.

Rating of Machinery.

IT seems possible that a little more effort on the part of all concerned might result in the passing at an early date of the Rating of Machinery Bill, a measure which aims at revising the rating practices throughout the country, so as to remove some very unfair disparities pressing heavily upon many printers and other users of machinery. It is good to see that the Association of Chambers of Commerce is making a very determined effort to prevent the Bill being crowded out this session. It has been arranged that the Chambers of Commerce in all towns where they exist, shall directly urge the local members of Parliament during the recess to write to Mr. Chamberlain, as leader of the House, pressing for special facilities for the measure during the autumn session. Further pressure on the part of master printers would seem also to be opportune.

Railway Rates.

MANY factors are entering into the questions of improving business and easing the burdens on industry. Not the least is the reduced railway rates which operated from August 1st. It is not without reason that the hope is entertained that the 25 per cent. off the pre-war charges will help to promote trade revival and reduce costs. The freight

alterations, however, only apply to England and Wales, and there is need for similar concessions in Scotland. The Scottish Chambers of Commerce, at a meeting in Glasgow, passed a resolution expressing surprise and grave concern at the reported decision of the Scottish railway companies not to accord to traders concessions on rates and charges similar to those given by the English companies. The matter is being taken up by the Federation of British Industries, and doubtless sufficient pressure will be brought to bear upon the Northern railway companies to compel them to come into line with those in the Southern half of the kingdom.

Marketing British Paper.

Not a few British papermakers perhaps can offer criticism of the methods adopted in selling their paper to consumers. A correspondent writes to point out how paper produced in this country is placed at a disadvantage as against the foreign article, and he quotes a particular case in illustration. Thus his firm found that some paper which they supplied at 20s. was retailed in quite a good quantity at 33s. per cwt. He goes on to explain how different are the conditions governing the sale of foreign-made wrapping papers. Here, we are informed that it is admitted by the middlemen that they cannot get more than a 5 per cent. margin. When the different margins are considered—5 per cent. foreign, 60 per cent. British—is it any wonder that the user buys foreign paper? asks our correspondent, who adds that a tariff or publication of the price of paper appears to be the only way of checking this practice of penalising home-made paper.

Fall in German Paper Imports.

An interesting variation in the imports of German paper is shown by a comparison of the figures for May and June. Taking the three main classes of paper—printings, packings and coated—the imports into this country from Germany last month were less than in May to the extent of £23,836. Other paper goods probably increase the total deficiency, which is put in some quarters at over £33,000. The largest item of the three grades mentioned is packing and wrapping paper (including tissue). In May the value of these which were received in this country from Germany was £52,995, a figure which declined to £32,560 in June. Printing paper not coated fell from £8,362 in May to £5,748 in June, and coated paper from £7,271 to £6,485. Whether the change is due to local economic conditions in Germany or a falling away of demand on this side by reason of prices, the British papermaker will welcome a lessening of competition.

Paper Trade Golfing Society.

In addition to the cups already presented to the Paper Trade Golfing Society by its president, Mr. Frank Lloyd, by Lord Riddell, and by Mr. G. R. Hall Caine, we are now able to announce that a further cup, to be known as "The Cardiff Cup" has recently been kindly presented by Messrs. Thomas Owen and Co., Ltd., of the Ely Paper Works, Cardiff, to be competed for by members of the Society with handicaps of 12 and over.

Wages Conference at Last.

Employers and the Typographical Association Meet in London.

Very general relief was, no doubt, felt throughout the trade when it became known at the week-end that the Typographical Association had asked the employers for a conference. We understand, by the way, that the conference was quite definitely requested by the T.A. A statement was made in the Press last week on behalf of the employers' committee that "In the hope of seeing the dispute ended nationally rather than sectionally, the committee had decided to make it clear that if the Typographical Association at any time asked the employers for a national conference no objection would be made to granting one." Some effort was made to represent this as indicating weakening on the side of the employers—rather than as evincing a reasonable desire to permit no unnecessary obstacle to delay the resumption of normal working in the industry. It is as it should be that the conference was called at the definite request of the T.A. The significance of this is heightened by the fact that it is not many days since Mr. French, as president of the men's union, declared it would be useless to confer with employers whilst they remained unyielding on the question of the proposed reduction in wages. The change is probably due largely to the result of the Newcastle test case and to the return to work of many of the branches. It is also stated that pressure has been brought to bear by kindred trade unions.

Conference began in London on Tuesday between the Typographical Association and representatives of the Federation of Master Printers and of the Newspaper Society. Mr. James Maclehoose, M.A., LL.D., presided. After sitting until about 10 p.m. it was agreed, at the request of the Typographical Association, that the conference should be adjourned until the following day, resumption being made at 10 a.m. yesterday (Wednesday). When discussion began at 2.30 on Tuesday it was believed that both sides were prepared to submit modified proposals. The employers, bound by their determination that the recent award of the Industrial Court in regard to wage reductions must stand as a matter of principle, could not give way on the total amount of the reduction or the distribution of the four consecutive "cuts," but they were prepared to put forward an offer that if the reductions were accepted, wages in the industry should be stabilised until the end of 1923. This would ensure to the members of the T.A. a substantially higher standard of payment, taking full account of the rise in the cost of living, than they received before the war. The proposal, we understand, was put before the T.A. representatives but did not lead to agreement, and a counter proposal is said to have been made by the T.A. that the first three stages of the wage reductions, amounting in all to 9s. a week, should be agreed upon and that the last reduction of 3s. 6d. should be left over for negotiations at a later date.

Stoppage Affects Further Newspapers.

The entire linotype, composing and reading staff of the *Yorkshire Observer* struck work after finishing Friday's issue, and the newspaper was produced on Saturday as a mixture of type-setting and photographed typewritten copy.

On Monday four Leeds newspapers—the *Yorkshire Post*, the *Yorkshire Evening Post*, the *Yorkshire Evening News*, and the *Leeds Mercury*—were published under emergency conditions, as practically all the linotype hands were out. All papers on Saturday had lengthy accounts of the position, stating that they could carry on, and craving the indulgence of their readers and advertisers. The *Yorkshire Evening Post* compositors finished on Friday night, and it was the first paper in the city to turn out an issue under the new conditions. It was a very fair production. The inside pages, mostly concerning sport, were the same as usual, the articles having been set earlier in the week. The *Yorkshire Evening News* published as usual, but on Monday all Leeds papers were being produced by means of the typewriter and the aid of a few compositors. There was accordingly a phenomenal demand for typists in the city.

After having got out a weekly newspaper on Saturday the compositors on the *Huddersfield Daily Examiner* ceased work. They have not accepted the terms of the Industrial

Court award and will remain on strike. Efforts will be made to publish the *Huddersfield Daily Examiner* in an attenuated form daily and weekly during the progress of the strike.

Plymouth men on the *Western Morning News* have returned to work on the terms of the award, and the staffs of several Devonshire local papers have also accepted the cuts. The *Torquay Times* has arranged a return to work "pending settlement."

There is no change in the printing dispute in Belfast and no local newspapers are published. At the week end notices were posted on the newspaper office windows inviting clerks and typists to apply for vacancies to learn linotype operating. The notice at one newspaper office states: "An opportunity for clerks to become tradesmen. Simple work. You touch the keys, the machine does the rest."

Personal.

THE Prince of Wales has accepted an invitation to preside at the diamond jubilee dinner of the Newspaper Press Fund, in May next.

LORD MARSHALL left London last week for Scotland.

MR. ALFRED LANGLEY, of the Euston Press, vice-president of the London Master Printers' Association, is paying a holiday visit to East Anglia.

A LIST of new magistrates for Swansea issued on Saturday contained the names of Mr. David Davies, editor of the *South Wales Daily Post*, and Mr. John Davies Williams, editor of the *Cambria Daily Leader*.

MR. A. EDMUND SPENDER, of the *Western Morning News*, has been appointed editor of the *Shrewsbury Chronicle*. Mr. Spender was Mayor of Plymouth in 1909. He joined the staff of the *Western Morning News* in 1896.

MR. ALEXANDER KEITH, of the literary staff of the *Aberdeen Journal*, has been presented by his colleagues with an oak writing bureau on the occasion of his marriage.

MR. FREDERIC W. GOUDY, art director of the Lanston Monotype Machine Co. in America, has recently had a further honour conferred upon him. The American Institute of Architects held a meeting recently in Chicago and expressed its appreciation of Mr. Goudy's work for the arts by presenting him with the good medal as detailed in the following telegram which was sent in advance: "For your meritorious work in the art of typography and your devotion to its advancement the board of directors of the American Institute of Architects in Chicago assembled, has bestowed upon you the allied arts gold medal of the institute."

MR. HENRY FEATHERSTONE on Aug. 5th celebrated his 50th birthday and was the recipient of numerous messages of congratulation from his many business and private friends.

MR. E. A. BRISTOW (E. A. Bristow and Co.), is paying a fortnight's visit to the Continent.

MR. W. KING, late of Powell Lane and Co., Ltd., has joined the outside staff of E. A. Bristow and Co., which takes the place of Dickenson and Son.

MR. A. J. WILLIAMS, of Messrs. Holman and Williams, 23, Budge-row, E.C., met with an unfortunate accident on Friday. Just after leaving business Mr. Williams slipped and fractured his thigh bone. He was taken to St. Bartholemew's Hospital, and is likely to be laid up for some months.

MR. NORMAN BOLTON, who passed in Class 1, Final Grade, of the City and Guilds examination in paper technology and secured a silver medal, is chemist at the Sun Paper Co., Ltd., Feniscowles, near Blackburn.

MR. FRED HAWORTH, who secured a bronze medal in Class 1, Grade 1, is assistant manager to the Roach Bridge Paper Co., Ltd., Samesbury, near Preston.

DIVIDENDS AND REPORTS.

DE LA RUE (THOMAS) AND CO.—Accounts of De La Rue (Thomas) and Co. for 1921 state that after providing £18,612 repairs, £17,491 directors' remuneration and fees, £52,680 loss on branches and £38,848 interest on debenture stock and loans, loss results of £89,599. To this is added £7,692, amount short realised on India contract, 1919 and 1920, and £3,500 for dividend on preference shares for half year to June 30th, 1921, and this total debit balance has been extinguished by £88,425 brought forward, £9,849 transferred from general reserve and £2,517 over reserved for taxes.

ABERDEEN UNIVERSITY PRESS.—Net profit of Aberdeen University Press for year ended June 30th, 1922, after providing for depreciation, was £1,896, plus £1,863 brought in, making £3,759. Directors recommend 12 per cent. dividend on ordinary shares, less tax, carrying forward, subject to directors' and auditors' fees and corporation tax, £2,036. Meeting, Aberdeen, August 22nd, 12.30 p.m.

SPICERS, LTD.—Report of Spicers for the year ended March 31st, 1922, states that after paying directors' fees, debenture stock interest, note interest and interim dividends on preference and ordinary shares there remains, including £86,207 brought in, £107,598. Directors recommend final dividends on 25,000 preference shares at rate of 5 per cent. per annum for six months £8,750, on 30,000 preference shares at rate of 5 per cent. per annum for seven months (paid in accordance with amalgamation agreement of May 12th, 1922) £8,750, and on 50,000 ordinary shares £15,000, leaving to be carried forward £75,098. Directors regret that accounts are issued rather later than usual owing to amalgamation of business of James Spicer and Sons with this company, which was confirmed on June 8th last. Figures could not show any economies to be effected under or other advantages to be gained by the amalgamation. Decrease in profits is accounted for by general depression in trade and further reduction in stock values, stocks having been written down to current prices.

NEW COMPANIES.

WILSONS, PRINTERS (CASTLEFORD), LTD.—Capital £5,000 in £1 shares (750 preference and 450 ordinary). To take over the business of a printer, bookseller and stationer, carried on by H. L. Wilson at Castleford, Yorks, as Alfred Wilson. Private company. First directors: H. L. Wilson, H. Pinder and F. Vavasour. Registered offices: 10, Station-road, Castleford.

DENNY AND COOK, LTD.—Capital £700 in £1 shares. Printers, publishers, advertising agents and contractors, etc. Private company. First directors: C. E. Denny and J. A. Cook. Registered office: 6, Staff-street, Old-street, E.C.

FARWOOD PUBLISHING CO., LTD.—Capital £1,000 in £1 shares. Proprietors and publishers of newspapers, journals, magazines, etc. Private company. First directors: W. Simms, A. C. Huckstepp and W. Saunders. Registered office: 10A, Temple row, Birmingham.

CALCULATING SERVICES, LTD.—Capital £500 in £1 shares. Commercial calculators, printers, stationers, advertising agents, auctioneers, valuers, appraisers, law writers, typists, duplicators, and business agents for solicitors and others in stamping deeds, etc. Private company. Subscribers: D. Smith and A. Duncan. First directors: D. Smith, A. Duncan and W. A. Todd Hunter. Registered office: 51, North John street, Liverpool.

PHILIP PALMER PRESS, LTD.—Capital £10,000 in £1 shares (8,000 "A" ordinary and 2,000 "B" ordinary). To take over the business of a general printer, bookbinder, stationer and bookseller carried on by P. Palmer at 101 and 103, King's-road, Reading, as the Philip Palmer Press. Private company. First directors: P. H. Palmer, H. J. Kearse and H. E. Wilby. Registered office: 101-103, King's-road, Reading.

JASCO LOOSE LEAF, LTD.—Capital £5,000 in £1 shares (1,000 preference and 4,000 ordinary). To adopt an agreement with C. E. H. Wann and to carry on the business of manufacturers of and dealers in loose-leaf books in paper of all kinds, and articles made from paper or pulp, stationers, lithographers, etc. Private company. First directors: C. E. H. Wann and E. M. Wann. Registered office: Hepworth's Chambers, 148, Briggate, Leeds.

UNIVERSAL PAPER AGENCIES, LTD.—Capital £5,000, in £1 shares; salesmen or agents for the sale or purchase of all goods manufactured by paper and cardboard makers and pulp manufacturers, stationers, printers, lithographers, etc. Private company. Subscribers: C. B. Scott and H. M. Stevenson, junr. Registered office: 19, Barwick-street, Birmingham.

CHARLES AND SON, LTD.—Capital £15,000, in £1 shares (10,000 7 per cent. cum. pref. and 5,000 ordinary) to take over the business of a printer and publisher carried on by W. Charles at 10, Paternoster-square, E.C., and elsewhere as Charles and Son. Private company. First directors: W. Charles and W. E. Charles.

SANDERS RAG AND METAL MERCHANTS, LTD.—Capital £200 in £1 shares; rag, skin, bottle, metal, paper stock and general merchants, etc. Private company. Directors: M. J. Anstee, A. Sanders and A. H. Sanders.

NORTHERN STATIONERY CO., LTD.—Capital £100, in £1 shares; manufacturers of and dealers in paper, printed matter and the like. Private company. Subscribers: S. G. W. Norton (?) and A. Keith. Subscribers appoint first directors. Registered office: 174, Oxford-road, Manchester.

FRY AND CRUMP, LTD.—Capital £500, in £1 shares; manufacturers of toys in wood, metal or otherwise, printers, lithographers, stationers, bookbinders, fancy goods dealers, etc. Private company. First directors: H. J. Crump and C. F. Fry. Registered office: 227, Camden-road, N.W.1

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

JOHN PETERS, LTD. (print sellers and publishers, etc., Birmingham).—Particulars of £1,500 second debentures authorised May 10th, 1922; charged on the company's undertaking and property, present and future, including uncalled capital; whole amount issued.

FIELD PRESS, LTD.—Satisfaction to the extent of £105,000 on July 22nd, preference

debenture stock covered by trust deeds dated July 31st, 1919, and September 9th, 1921, securing £210,000.

GEO. HARRISON AND SONS (BRADFORD), LTD. (printers, stationers, etc.)—Satisfaction in full on July 17th, 1922, of mortgage or charge dated January 4th, 1917, securing all moneys due to mortgagees in respect of a guarantee to bank overdraft, not exceeding, £10,000.

J. G. TOMKINS, LTD. (printers, etc., West Bromwich).—Mortgage dated July 26th, 1922, to secure £500, charged on certain machinery, etc. Holder: A. Richards, 160, Whitehall-road, Great Bridge, Tipton, Staffs.

FORD AND BRANCH, LTD. (manufacturers of paper bags, envelopes, wrappers, etc., Gloucester).—Satisfaction (a) to the extent of £150 on July 25th, 1911, and £500 on May 26th, 1922, of debentures dated March 9th, 1912, securing £1,600, and (b) to the extent of £100 on June 30th, 1922, of debentures dated March 30th, 1912, securing £1,050.

LONGMANS, GREEN AND CO.—Issue on July 28th, 1922, of £500 debentures, part of a series already registered.

IRVINES, LTD. (manufacturers of office supplies, printers, etc., London).—Issue on July 27th, 1922, of £100 debentures, part of a series already registered.

HEWITT AND RUDGE, LTD. (printers, etc.)—Further charge on certain freehold hereditaments and premises in Whitley, Northumberland, dated July 27th, 1922 (supplemental to mortgage dated November 24th, 1921), to secure £199 11s. Holders: North Shields Standard Permanent Building Society.

HUNTERS, LTD. (manufacturers of printing machinery, London).—Issue on August 1st, 1922, of 2,000 debentures, part of a series already registered.

"LINCOLNSHIRE CHRONICLE," LTD.—Satisfaction in full (a) on June 17th, 1922, and (b) on November 13th, 1919, of first and second mortgages, both dated June 8th, 1914, securing £6,000 and £4,000 respectively.

MCARA PRINTING CO., LTD. (London).—(a) Satisfaction in full on July 31st, 1922, of debentures dated July 5th, 1913, securing £4,000 and (b) filed particulars of £4,000 debentures authorised July 31st, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; whole amount issued.

CHARLES WALMSLEY AND CO., LTD. (manufacturers of papermaking machinery, etc., Bury).—Trust deed dated July 20th, 1922, to secure £178,440 7 per cent. debenture stock, charged on the company's undertaking and property, present and future, including uncalled capital, Trustees: J. Byron, Heaton-grove, Bury, and J. H. Holt, Lower Walshaw, Bury.

WILLIAM WHITE, LTD. (tobacconists, stationers, etc., Birmingham).—(a) Satisfaction in full on July 26th, 1922, of mortgage dated June 24th, 1920, securing £1,500, and (b) registered mortgage on 156-164, Summer-lane, Birmingham, and machinery, etc., dated July 28th, 1922, to secure all moneys due or to become due from the company to London Joint City and Midland Bank.

REAY GEARWORKS, LTD. (manufacturers of and dealers in gear wheels in iron, paper fibre, etc., Gateshead).—Particulars of £2,000 debentures authorised July 28th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; whole amount issued.

PRINTING TYPES.—The Harvard University Press has announced August 25th as the date of publication of an important book on "Printing Types: Their History, Forms and Use," by D. Berkeley Updike—which will be in two volumes, set up and printed at the Merrymount Press.

The Anomalous Position of the Overseer.

SIR,—Since the correspondence on the above subject appeared I have had the opportunity to discuss this matter with a number of both overseers and masters. On each side there appears to be a consensus of opinion favourable to the idea of a separate or affiliated organisation for overseers if the prime difficulties can be overcome. The overseer's position appears to be (here I am open to correction if wrong in any way) that as a member of the T.A. he pays his subscription because he is bound to belong to the union and because he is thereby ensured of superannuation and other benefits including strike pay. He is not entitled, I understand, to vote or to attend meetings, and in many other ways he is looked at askance by the union as likely to be almost antagonistic to union aims. In the present dispute the position of the overseer is indefinable; he is serving a month's notice in some shops, went out on the first day in others. He is doing productive work in some places and is debarred in others. Through his union membership he shares in a reduction which is applied to him in some cases and not in others, yet in general he has been compelled to strike along with the body.

The difficulties in the way of forming a separate organisation for overseers are mainly concerned with superannuation, protection, the definition of overseer, and the attitude of the trades union.

On the first point: the majority of overseers are elderly men well on the way to benefit. They would not make any change which involved the loss of benefits towards which they have been contributing for so long. If the Federation framed any scheme it would just have to embody compensating advantages, under which head many privileges would be rendered possible which are unworkable under the present condition of things.

On the second point, there is the quite real difficulty of the case of men who cease to become overseers and go back to the position of ordinary workers. For solution of this problem it is necessary to know the attitude of the trades union toward the scheme.

On the third point an overseer is something different from a purely working foreman, but the best definition from the present point of view would be one based on the number of hands over which he exercised supervision. In other cases the inclination of the foreman conjointly with that of his employer would point the way to solution.

Lastly the attitude of the pure trades union is a leading factor and one on which there is so far no authoritative information. So far as that is concerned there would also require to be some sort of a referendum sent out to those who occupy the positions of overseer or foreman in all our establishments. That is the first step and will go far toward deciding the issue. Perhaps if this correspondence goes no further in these columns, it will at least result in giving a lead in the direction of this referendum.

Yours truly,

H. M.

August 14th, 1922.

Is Commercial Lithography a Profitable Proposition?

SIR.—I would very much like to hear a discussion of opinion from those in a position to express views on the economy of lithography and the offset process as applied to commercial work. At the outset I would say that such opinion would be valueless unless based upon findings under the Federation Costing System. In the experience of my firm commercial lithography is not a paying proposition and never was, although until we were definitely assured by the Weekly Cost and Value of Production sheet we had some sort of a notion that the department was possibly paying its way. Now we know that money is lost every week on labour and only the paper can pull the work through. Commercially it is essential to keep the litho-room in being because of the work it brings to other departments.

In our case we run two rotary offsets and two flat-bed machines and we concentrate on commercial work up to three colours only after a long experience of mixed colour and commercial which served to prove conclusively that the two classes could not be

handled except to the detriment of one or the other and a general loss on both. Since concentrating on commercial work we have closely followed the records and examined the data relative to individual jobs. We find that transferring takes an inordinately long time on most jobs. Patching and searching for various plates, delays over proofing and the heavy cost of alterations go part way to explain this but fundamentally it seems that transferring is a process which makes up a cost out of all relation to a job unless there is a long run to afford prospect of recovery. Unfortunately quite the majority of commercial litho jobs are of small quantity, and instead of recovery at machine there is further loss. The traditional slowness of the process is continued at machine, and after an hour's setting or making ready for a small order we are presented with a running average of 500 per hour or perhaps 600 to 700 on a good run.

On the offset side the transferring is subject to the same limitations, with extra time waste when the copper-plates are engraved for flat bed. Customers will not pay for new plates and budge at alterations. Then again altered plates often cause extra transferring time. The saving that should ensue from storing zinc machine plates for future repeats is very frequently lost through alterations of one sort or another. In machining we are given about 1,000 impressions per hour from a machine built to yield the limit of any feeder. The litho trade is so barren of keen offset pressmen that the rotary offset press straightway loses 50 per cent. of its inherent efficiency. Over in America long runs and automatic feeders are the order of the day but in England they are the exception. In point of quality there is no comparison. We appear to have got quite a poor race of men in our litho industry and largely we believe they are to blame for the unprofitable nature of the trade. But other factors influence the issue and it is on this score that we solicit experienced opinion for the benefit of the trade at large. Put in very simple language the case of my firm and many others is this: That we cannot charge to our customers the price that our commercial litho work is costing us, except on long runs of offset work.

Yours truly,

DEBATABLE.

August 14th, 1922.

Continental Paper Trade.

France.

During the month of May, 12,400 tonnes of paper were imported into France, whilst the imports for the year 1921 only totalled 13,000. At Paris mills are working to about 80 per cent of their capacity. Prices are stationary, except in the case of large orders, when concessions are made.

During the first nine months of last year the "Papeteries J. B. Weibel," France, show net profits 573,000 francs, the dividend being fixed at 100 francs net per share. The company is to restart the Besancon mill, with four machines.

Austria.

Since the dissolution of the monarchy in Austria there has been no parchment paper works in the country. It is now reported, however, that Messrs. Joh. Wolczik are to begin manufacture at their mills, the daily production being 2½ tonnes daily.

Belgium.

The accounts of the Antwerp Paper Mills for 1921 show a net profit of 2,028,457 francs, allowing a dividend of 60 francs per privileged share, 15 per capital share, and 22.91 per dividend share.

Greece.

There are only three paper mills in Greece, producing a total of 4,079 tonnes of demi-fine, ordinary, and millboard. In 1921 the imports represented 3,700 tonnes.

Italy.

The Cartiera Italiana at Serravalle Sesia, with 18 machines and employing 2,000 workmen, closed down last month, and discharged all employees. This decision, according to the newspapers, has nothing to do with wages, which have always been better than elsewhere. The reason is said to be a marked tendency on the part of the staff to neglect quality. On resumption of work a strict selection will be made of all utilisable elements.

The Paper Outlook.

Mr. William Corke's Optimistic Views.

Mr. William C. Corke, C.C., of Messrs. Chas. E. Corke and Co. and Corke, Sons and Co., has just returned from an extended visit to Norway, Sweden and Finland and he is quite optimistic as to the prospects of the paper market. Mr. Corke's confidence in the ever-increasing consumption of paper is unabating. He points out that the army of paper users is augmented with every day that passes. Not only because of the normal increase in the population of civilised countries, as statistics for the last 30 years show, but also because of the extended use and demand of paper in every walk of life. The extraordinary depression of the last 20 months was simply the swing back of the pendulum from an equally abnormal boom, and the depression in usage combined with a form of international financial paralysis cramped with malicious effect the consumption of paper.

"This depression did not indicate a lessened demand for paper," says Mr. Corke, "but simply that the inflated prices which had previously existed, naturally followed by continuously tumbling prices, had frightened buyers out of every semblance of enterprise. Happily, the position is now steadily improving, and the export markets, particularly those of Japan, India and Australia (in which this country is principally interested), are evincing a much more confident feeling in their purchasing."

"Customers generally seem to have recovered their confidence and courage; and confidence after all is the finest tonic for business. There is no possibility of any further landslide in regard to prices. Intelligent buyers know quite well that the average papermaker in any country is selling to day, if not at an actual loss, at least without any margin of profit, and therefore he feels perfectly safe in buying reasonably large quantities for his requirements. I think the English papermaker generally has emerged out of the last two year's nightmare with conspicuous credit; and the home trade in my view has nothing whatever to fear. After all, we do not want boom periods; what we do require is steadiness in business."

"The reduction in railway rates and the easement in the bank rate will prove most helpful factors in the permanent revival of trade."

Referring to his recent visit to Finland, Mr. Corke remarked: "There I found quite an optimistic view prevailing in regard to trade. They are holding firm to their prices, and far from any tendency to a further weakening in quotations, there is, on the contrary, distinct evidence that an advance will be obtained in many grades of paper. For instance, sulphites and krafts are already showing an advance of several pounds per ton above prices obtainable three months ago. Another factor which must ultimately strengthen the paper situation is the great improvement in the selling price of timber, and as the two industries are so closely allied, this fact must have a corresponding effect, first on pulp, and ultimately on paper prices. I was very much impressed in Finland by the statesmanlike manner in which the general government of the country is being conducted, and the breadth of outlook which the leading men are evincing in the development of the country's industry."

Asked as to what was the position of the news-print market, Mr. Corke remarked: "The general policy of the Finnish mills is to stand firm in the matter of price and to endeavour to maintain and develop their business by an improvement in the quality of their papers in every possible way; and there is no doubt that during the last 12 months wonderful improvements have been made by all the mills in the Finnish Paper Mills Association. They are now producing news-print which is unexcelled by mills in any other country."

Incidentally Mr. Corke mentioned that English china clay is now finding a market in Finland and replacing an inferior quality of the same commodity previously imported from another country.

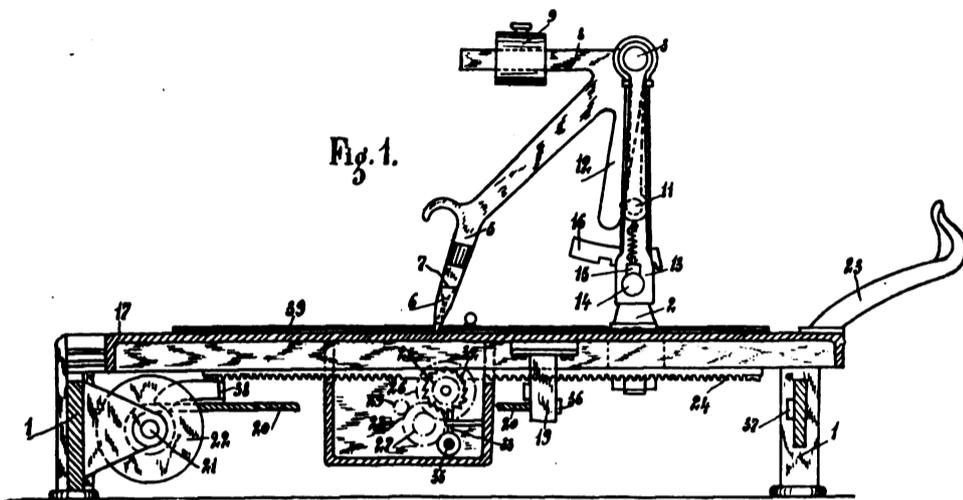

On his way back from Finland Mr. Corke visited both Sweden and Norway, where he found that notwithstanding that trade generally showed an improvement on last year, nevertheless the severe financial difficulties which both these countries had experienced during the last two years had had effects, the results of which are not likely to be eradicated for some considerable time.

Testing the Sizing of Paper.

A British patent has been granted to Mr. J. Denoel covering improvements in and relating to apparatus for testing the sizing of paper.

The apparatus comprises a table to receive the paper to be tested, a series of tracers rotatably mounted on a common axis, the distance between the points of the individual tracers being permanently set, and increasing regularly from one tracer to the next of the series, thereby causing the lines ruled to increase regularly in thickness, and a mechanism for producing a relative movement of the tracers and the table.

Referring to the drawings, the apparatus comprises a frame 1, upon which two columns 2 are mounted, said columns supporting a rotatable spindle 3 at their upper part.

Sockets 4 are threaded on this spindle, eight in number in the example given, to which the stems of the tracers 5 are attached. These tracers terminate towards the bottom in two points, which are set at an invariable distance from each other (Fig. 2). The interval or space between each pair of points communicates with an ink holder 6 bounded at the top by a well defined plane 7. The inclination of the tracer stems is the same for all the tracers, but the intervals between each pair of points increases from left to right (Fig. 2). Each tracer is provided with a horizontal arm 8 upon which a weight 9 can be adjusted and fixed in position to give the necessary pressure of the tracer on the paper.

Two sockets 10 are keyed on the spindle 3, and serve to support a lifting bar 11, which constantly rests against arms 12 formed integral with the tracers 5. To operate this lifting bar the spindle 3 is provided with a lever 13 having a knob 14 movable thereon, and interdependent with a spring catch 15, which moves in front of a sector 16 mounted on column 2. To raise the tracers simultaneously it is only necessary to move the lever 13 to the left (Fig. 1) until the catch 15 engages in a notch in the sector 16.

The movable table 17 is mounted in the frame 1 on rollers or balls 18, the frame and table being provided with suitable rolling surfaces. The table carries a lug 19, to which the end of a cable 20 is attached, the other end of the cable being attached to an axle 21, supported by bearings fixed on the frame 1, and upon which a spiral spring enclosed in a box 22 is mounted. When the table is moved to the right (Fig. 1), for example, by pulling the handle 23, the spiral spring 22 becomes extended, and the spring will draw the table to the left as soon as it is released. To regulate the return motion the table 17 is furnished with a rack 24 gearing with a toothed wheel 25, which through the agency of the toothed wheels 26, 27, 28, 29, causes arms 30 to rotate, the arms being mounted on an axis carried by the frame 1. In order that these arms may only be operative during the movement of the table under the action of the spring, a coupling can be provided mounted on the hub 31 of the wheel 25, so that this hub is only coupled with the system of wheels 26, 27, 28 and 29 during the motion produced under the action of the spring.

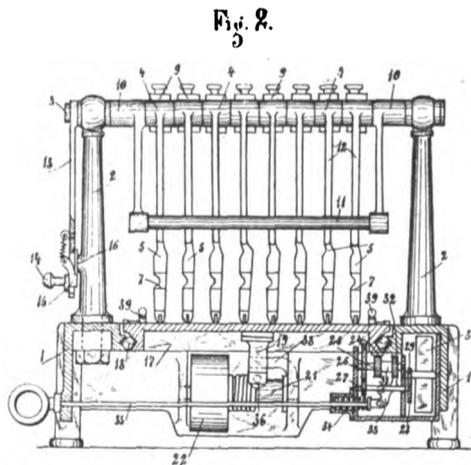

A ratchet wheel 32 is also mounted on the hub 31, the wheel being secured in position by a pawl 33 controlled by a spring 34, and which can be displaced by traction exerted on a rod 35. Finally, to limit the movements of the

table, the rod 19 has two stop pieces 36, which impinge upon fixed stops 37, 38.

To make a test a sheet of paper is fixed on the table by means of spring clips 39. The tracers are in the raised position and their ink holders filled to the brim preferably by means of a drop counter. The table is then brought to the right (Fig. 1) as far as possible where it is fixed in position by the pawl 33. The lever 13 is then operated with one hand and the tracers lowered whilst with the other hand the rod 35 is pulled to release the mechanism. Lines are then drawn regularly by slow displacement of the table to the left. At the end of the movement the handle 23 strikes against the lifting bar 11 pushing it back to automatically raise the tracers until the catch 15 engages in the notch in the sector 16.

The sheet of paper can then be removed to dry before examining it. On the sheet there are lines of equal length and with a regularly increasing width, for example, from $\frac{1}{4}$ to $\frac{2}{4}$

millimetres. The amount of ink deposited increasing with the width of the lines it is noted that starting at certain lines the ink passes through the paper and appears on the back. If, for example, the paper remains white under the fourth line and is stained under the fifth, sizing can be represented by $\frac{4}{5}$ for a specified thickness of paper. Moreover

the degree of sizing in paper being, other things being equal, proportional to its thickness (that is to say to its weight per square metre) it will suffice to place under this value, as denominator, the weight of the paper per square metre used in the test, to obtain an exact and comparable formula for the degree of sizing of this paper. Thus, for example, if the weight of the paper is 60 grammes per square metre, the formula of the degree of sizing in figures will be $\frac{4}{60}$.

It is obvious that pens can be employed instead of tracers although the results obtained are not so good as with tracers. The table can also be kept fixed and the frame supporting the tracers be made to move by furnishing this frame with the mechanism previously described for the table 17.

In either case the essential advantages of the present invention will be obtained, viz.: uniformity of relative speed of the tracers and the paper, of the pressure on the paper, of the length and width of the lines, of the quantity of ink deposited, of the gradation in width of the successive lines and consequently comparable results with ink of a known brand.

Paper Progress.

A Few Outstanding Developments

The progress made in the paper industry during the last 25 years, which in the long history of this industry is a relatively short time, has been remarkable. Perhaps at the very top place in this mechanical development should come the greatly increased speed of the paper machines. How great has been the progress in this particular can be realised when it is remembered that all previous records were broken about a quarter of a century ago when paper was made at the rate of 500 ft. a minute. Now paper is actually being made at the rate of more than 1,000 ft. a minute, or double the speed! That fact itself is a revolution in the annals of the industry which has caused many readjustments and will cause many more as an increasing number of machines are speeded up and new, big machines are made to run at this high speed. Even now the machine builders are talking about paper machines which will run at 1,500 ft. a minute! This means that the manufacturers must step lively or step out of the procession. It means that the antiquated, slow machines, especially the news-print machines, will be put on other grades of paper or dismantled.

Another remarkable development has been in the use of electricity for power in the mills. The power plant has been termed by mill engineers "the heart of the mill."

Another great and very interesting development during the last quarter of a century, and one which is going on at the present time, is the change in the "furnish" of the paper. There was a time when rags alone were considered the strength-giving material in the manufacture of paper. Chemical pulp was later discovered to be a very effective substitute in most instances. Now the relatively high cost of chemical pulp in comparison with groundwood has caused experiments to be made in the use of specially prepared groundwood to serve the same purpose and which enables the manufacturers to cut down the proportion of sulphite in their paper without decreasing the strength or quality of the product.

Moreover, in the manufacture of paper scientific methods enable the manufacturers to make paper that has a uniform character and is very excellent in quality. This manufacture of uniform product makes possible the sale of the finished product by modern sales methods, in large quantities to consumers who know that the quality is guaranteed. Also the modern methods have developed paper possessing qualities never before made, such, for instance, as waterproof papers and board, which find widespread use in a growing number of ways. In fact, the entire output of some mills is devoted to supplying specially prepared paper and board to converters who make containers and other products used to pack standard, nationally advertised products sold to millions of consumers in every corner of the world.

At the same time the new uses to which paper is being put is constantly growing, and this demand is passed back to the paper manufacturers who are asked to produce a sheet to meet the new needs. It seems that there is no limit to the uses to which paper can be put; and pulp, too, for that matter, because pulp is now being directly used in the manufacture of finished products, such as barrels, etc. There is every reason to believe that the uses of paper will be multiplied as time goes on, thus increasing the tonnage of paper consumed and speeding up the progress in the industry.—*The Paper Mill.*

STEREOTYPING READY RECKONER.—The minimum price list of the Electrotyping and Stereotyping Employers' Federation, bearing date January 1st, 1920, gives the scale of prices for plates of 8 sq. ins. and price per sq. in. afterwards. These prices were advanced 15 per cent. on October 17th, 1921, and to check invoices for the different classes of plates necessitates a somewhat complicated calculation for buyers of stereos. To obviate the need for this, the Dalziel Foundry is issuing gratis to customers a very useful chart, calculated on the federation price list figures and showing the charges for supplying mounted and unmounted stereo plates, nickelled or not nickelled. It has been checked by a firm of chartered accountants, and it may safely be accepted as being absolutely correct for checking invoices for stereos.

The Importance of Paper.

A description of the manufacture of paper which should arrest the attention of "The Man in the Street" appeared recently in the *Manchester Evening Chronicle*.

If there is one thing more than another which is accepted without wonder, says the writer, it is that most wonderful of common things—paper.

Yet it is paper, even more than love, which makes the world go round. A world without paper is unthinkable. Take away paper, and commerce and government would be impossible. There would be no books, no newspapers, no letters, no ledgers, no sugar bags,

no posters, no census forms, no cigarettes, no accident insurance schemes, no City Council minutes . . . the list is interminable.

Everything is done to-day by paper. The pen is mightier than the sword, but the pen would be very helpless without paper.

A man could not even make his will without it. Mr. Lloyd George could thrill the House of Commons with the magic of his perorations, but there would be no headlines if there were no newspapers. But for the evening papers, how would the man in the street know the three o'clock winner?

Paper—ordinary, common paper, that you carelessly light the fire with—is a daily miracle. And yet the great mass of the people who use it every day of their lives haven't the foggiest idea how it is made.

Until quite recently (to confess the shame-

ful truth) I was one of that ignorant multitude The pigeon-hole in my mind labelled "Paper and How It Is Made" was a void; and not even an aching void.

But my darkness has been lightened, I have had the pleasure of seeing paper made at two of the biggest paper mills in the country—the Darwen Paper Mill and the Hollins Mill, Darwen—and after seeing those marvellous masses of machinery at work, I cannot regard even the commonest sheet of paper without astonishment—not even the income-tax demand.

NORWAY and Sweden are competing keenly with Finland and Canada for the news-print trade in the United States. The United States is consuming more news-print than ever before.

Australian Notes.

Wasteful State Printing—New Government Printer—Label Printing Campaign—New Sidney Company—A Reduction of Capital—Label Action—Patent Lawsuit—New Fortnightly—Labour Journal Fined—Personal Items—Students' Work Exhibited.

(From Our Sydney Correspondent.)

A good deal of stir has been caused in Australia by an exposure of the waste attaching to the Government Printing Office. At the request of the treasurer, Mr. Cocks, an inquiry into the Government Printing Office was conducted by Mr. Brooks, M.L.C., one of the most prominent employing printers of Australia and perennial president of the Master Printers' Association. Though Mr. Brooks found there was "nothing wrong with the machinery and plant, or the efficiency of the managers and overseers," he indicates the existence of gross waste of taxpayers' money in unnecessarily voluminous and belated Government publications. The cost of production was high as compared with that of private firms, this being largely due to concessions to employees in the matter of leave, holidays, short hours, and salaries.

THE Cabinet recently considered the appointment of a successor to the late Mr. Gullick (Government printer), and decided, on the recommendation of the Public Service Board, that Mr. J. E. Spence, B.A., LL.B., an inspector under the Public Service Board, should be appointed for a period of 12 months to re-organise the Government Printing Office. At the expiration of that period the position is to be reviewed, and a permanent appointment considered.

MESSRS. SHEPHERD AND NEWMAN, of Sydney, in association with Mr. B. A. Butcher, are conducting a campaign to educate the manufacturer to improve the standard of his printing. They assert that Australian manufacturers are losing thousands of pounds yearly through cheap labels and faulty packing of products exported. Sydney now possesses the world's most modern machinery for printing and varnishing processes, they state, but the manufacturers need to be educated that attractive labels on products is a matter of extreme national importance.

AN important new company has been registered in Sydney under the title of Printers, Ltd. It has a registered capital of £35,000, in £1 shares. The objects, as set out in the memorandum, are to acquire the business of George T. Petheridge and Thomas Allan McKay, trading at Sydney as "The Speciality Press." This will be carried on as general stationers, printers, publishers, manufacturers, lithographers, engravers, etc. The subscribers are T. A. McKay, Peter Hockley, C. Clayton, E. E. T. Petheridge, Ethel R. McKay, G. T. Balcombe and G. T. Petheridge.

IN connection with the petition for the reduction of the capital of J. Fielding and Co., Ltd., the resolution, confirmation of which is sought in the petition, provides for the reduction of the capital from £200,000, in 20,000 7 per cent. preference and 180,000 ordinary shares of £1 each, to £180,000 in ordinary shares only, by the return of the amount of the preference shares and the cancellation of that class of capital.

THE *Daily Mail* Newspaper Co., Ltd., issued writs against the proprietors of the *Daily Telegraph* and *Sydney Morning Herald*, claiming from each £10,000 damages. It is understood that the subject of the action is a paragraph contained in an election advertisement recently inserted in the newspapers by the Loyal Orange Institution of New South Wales, headed "Rome's Campaign for Temporal Power," in which, it is alleged, appear references to the *Daily Mail*.

MR. ALEXANDER S. H. SPEARS, a linotype and machinery expert, who also carries on the business of a general agent in Sydney was recently the plaintiff in an action to recover £2,000 from John Glen Newman, alleged to be due to him in respect of commission on the

sale by defendant to James Hardie and Co., Ltd., of certain patent rights relative to improvements in paper matches and their manufacture. The jury awarded him £1,000.

A NEW fortnightly journal, known as the *Forum*, has been organised by Mr. J. W. Cornforth and Mr. D. D. Braham. Mr. Cornforth is a well known journalist, having been engaged in writing leading articles for the *Sydney Morning Herald*. Mr. D. D. Braham recently resigned the editorship of the *Sydney Daily Telegraph*, after having held the position for seven and a half years. Prior to that Mr. Braham had a seat on the board of directors of the *London Times*, of which journal he was foreign editor. These gentlemen will be joint editors of the new paper.

THE Australian Workers' Union was on July 24th fined £300 and two union officials and the editor of the labour newspaper, *The Worker*, £100 each for encouraging the shearers' strike.

MR. F. W. WRAY, chief of the *Daily Telegraph* (Sydney) stereo. department, who is retiring after 37 years' service, was recently presented by his colleagues in all departments with a gold watch—a token of their esteem. The presentation was made by Mr. F. J. Boyle, father of the chapel, and there was a large gathering of friends to bid the recipient farewell. Mr. Wray will reside at Blackheath.

MR. FRANK SHEEDY, who has been for three years Sydney manager of the *Australian Leather Journal* and *Australian Brewing and Wine Journal*, has died in St. Vincent's Private Hospital. Mr. Sheedy was for many years connected with Melbourne and Sydney publications.

MR. W. FARMER WHYTE, formerly editor of the *Brisbane Daily Mail*, has become editor of the *Daily Telegraph*, Sydney. Prior to leaving Brisbane Mr. Whyte was the recipient of several valuable presentations. He was also farewellled by the Queensland Premier and his colleagues.

MUCH interest attached to an exhibition of printing held recently to show the work of the apprentice students at the Printers' Trade School in Adelaide. The school is under the supervision of the South Australian Education Department, and the headmaster is Mr. James Trotter, who came to Australia from England in 1916. Mr. Trotter was formerly instructor at one of the printing colleges at Newcastle, England, and at the Leicester Art School. After his arrival in Australia, Mr. Trotter was connected with Messrs. Osboldstone and Detmold's, of Melbourne. He was chosen as the first headmaster of the Printers' Trade School, and he personally gives instruction in the machining class.

British Crepe Paper in Chile.

Owing to the adaptability of crepe paper for so many uses, there has been an increasing demand of late in northern Chile for this commodity. According to the American Vice-Consul at Antofagasta, crepe paper sells well at all times, particularly during the winter holiday season. The United States is at present the principal source of supply, Great Britain and Japan ranking next. Although American paper costs a little more than the product of the other two countries, it is preferred because of its high quality. Stationery and novelty shops handle crepe paper, most of them importing direct from abroad, while the smaller concerns buy from the large importing houses in Valparaiso.

It is reported that the economic situation in Northern Chile, owing to the stagnation of demand for nitrate is so poor, and the exchange so depreciated, that the outlook for increased imports of any commodity is not encouraging. During 1920, imports of crepe and allied lines of paper into Chile amounted to 70,271 kilos., of which Great Britain supplied 4,889 kilos., her contribution being exceeded by the United States, Norway, and Sweden in the order named.

If business is slack with you, tighten your belt, and go to it.

Fleetway Press Sports

Successful First Annual Meeting.

The first annual meeting of the Fleetway Press was held on August Bank Holiday at Osterley Park, when employees and friends to the number of about 300 attended as the guests of the managing director, Mr. W. R. Masters.

Although the day opened cold and dull, and rain threatened, by about 2 p.m. a little wind and sunshine had dried off the surface of the ground sufficiently to permit the commencement of a varied and lengthy sports programme. This was carried out successfully under the supervision of Mr. H. Austin (clerk of the course), with Mr. W. R. Masters, as chief starter, assisted by an able body of sports officials and stewards. The principal events and winners were as follows:—Gent's Inter-departmental Tug-of-War (for silver challenge cup), presented by Mr. J. S. Phillips—Compositors' "A" Team; Gent's 100 Yards' Handicap—1st, Mr. F. G. Dament; 2nd, Mr. F. Marlow; Veterans' 100 Yards' Handicap—1st, Mr. A. W. West; 2nd, Mr. F. Marlow; Inter-departmental Relay Race—Compositors' "B" Team; Ladies' 100 Yards' Handicap—1st, Miss Eva Jay; 2nd, Miss Freeman.

The remainder of the sports programme comprised the usual races for ladies, gents and children.

Lunch and tea were provided for all guests, and after the sports programme was completed an *al fresco* concert was given, during which Mrs. W. R. Masters kindly distributed the prizes. After the distribution, Mr. Masters in a short but humorous speech, said how glad he was to see so many happy faces, and thanked the committee both for himself and on behalf of his guests for the way they had worked to make the day what he felt sure everyone would vote a great success.

Mr. Gask (chairman of committee), replying, said it had been a great pleasure to work to make a happy day for so many folks, and thanked Mr. Masters for making all the necessary provision and also for providing the bulk of the magnificent prizes. Thanks were also due to Mrs. Masters, who so kindly distributed the prizes, and who gave a word of congratulation and encouragement to each recipient. He called for a vote of thanks to their host and hostess, which was given with musical honours.

"Auld Lang Syne" at 8.30 p.m. brought the close to a very happy and successful meeting.

Mention must be made of one important attraction—the cocoanut shy. Everything necessary was provided by Mr. Masters, and under the enthusiastic management of Mr. Waddingham a sum of over £9 was realised for the funds of the Printing and Allied Trades Charity Sports Association, of which Mr. Masters is president for this year.

Colthrop Board and Paper Mills, Ltd.

New Board Plant Operating.

At the fourth annual general meeting of the Colthrop Board and Paper Mills, Ltd., on the 3rd instant, Mr. Shirley W. Cropper (the chairman) said the effects of the universal depression in trade had been more severely felt in the paper industry than in any other trade in the country. Since the accounts were made up, however, the company's business had shown decided signs of improvement. They claimed to have an undertaking which must succeed against all ordinary competition, having regard to the fact that their plant and machinery were of the most up-to-date kind, and to the location of the works, including excellent railway, road and water transport facilities, and plentiful and comparatively cheap labour, all tending to economic production.

With regard to the new large board plant, that had been eminently satisfactory, and the new machinery was now running well and meeting the requirements of the allied companies, Messrs. Cropper and Co. Ltd., and Containers, Ltd.

Proposing a vote of thanks to the chairman, Mr. Hardy said while the shareholders were naturally disappointed, though not surprised, at the absence of a dividend, they were grateful to Mr. Shirley Cropper and the other members of the board for bringing the company through a difficult time without heavy losses. There was a great future for the container business in this country.

New Inventions.

Printing Presses.

Mr. C. L. Friel, of Chicago, has patented a printing press of the kind having a tiltable platen and an oscillating bed. A forme-carrying chase is intermittently movable on the bed from one position to another, so as to print from the same type at rest in each of the positions whilst the platen and bed are in engagement. Business headings may thus be printed from the same type in several positions on sheets comprising several checks. Means may be provided to adjust the distances between these positions. A carrier for the chase may be guided by engagement with parallel side cleats on the bed, the position of the carrier being controlled through suitable linkage from a rotating cam driven from the driving shaft of the press so that the chase moves intermittently vertically upwards and prints a cycle of impressions from the lowermost to the uppermost position. In the form shown, the

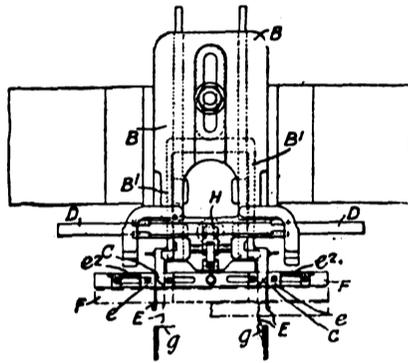

vertical bed 13, Figs. 1 and 5, is integral with legs 11 pivoted to the frame A of the press, and the tiltable platen B and the bed 13 are operated from the driving shaft C in the frame A. The chase 18 is removably locked in a carrier 16, Figs. 4 and 5, preferably by the engagement of tongues 19 on the chase 18 with lips 20 on the carrier 16; and the carrier 16 has extensions 15 sliding in parallel cleats 14 secured by screws or otherwise at the sides of the bed 13. The carrier 16 is operated by rods 21 pivoted at their lower ends to reciprocable extensions 22 of levers 23 fulcrumed at their ends 24 to a support 25, the position of the levers 23 being controlled by the engagement with a rotating cam 26 of an anti friction roller 50 carried by a V-shaped frame attached to the levers 23. The cam 23 has three circular peripheral segments 26^a, 26^b, 26^c, so that the chase 18 is moved intermittently vertically upwards through three successive positions and is then returned from the uppermost to the lowermost position. The segments 26^a, 26^b of the cam 26 may be radially adjustable, for instance, by screws 39, 40, so that the distances between successive positions of the chase 18 can be adjusted. The cam 26 may be rotated from the driving shaft C.

Box-making Machines.

This invention, patented by Messrs. Stokes and Smith Co., and E. T. Burlton, relates to means for turning over and tucking in, by means of one set of operating devices, the covering flaps of the vertical edges that occur

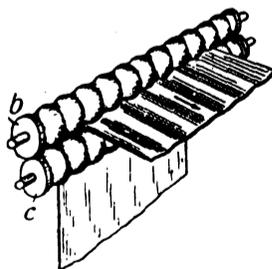

in drop-front and other boxes, and in box lid having fewer than four sides. The Figure shows in plan that half of the machine operating upon one end of the box or lid. The turning over is effected by fingers E mounted on blocks e slidable in slots formed in a bar F carried by a depending extension B' of a slide which carries operative parts of the ordinary covering mechanism. The blocks e are urged inwardly by springs e', but in the position shown (by the full lines) are prevented from moving by stationary wedge pieces C

yieldingly mounted on brackets c adjustable on the slide bar D which itself is also carried by fittings on the depending extension B'. The bar F can, as indicated by the dotted lines, be moved forwardly, this movement being derived by means of links and a bell-crank lever from reciprocating motion given to a vertical rod H. Assuming the apparatus to be in the position shown in full lines, the fingers e lie just outside the small flaps g, which have to be turned over the vertical edges of a box or box lid. The first forward movement of bar F releases the blocks e from the wedges, and the fingers E therefore approach each other as they advance forward, consequently the flaps g become folded into the positions indicated on the left-hand side of the Figure. A further advance of bar F into the second position shown in dotted lines causes the completion of the tucking-in operation as is indicated on the right-hand side of the Figure. Specifications 19966/01, 19967/01, and 19902/13 are referred to.

Feeding Sheets.

An invention by the Deutsche Maschinenbau- und -Vertriebs-Ges. is intended to facilitate the feed motion, particularly of thin paper in the case of paper working machines such as copying machines employed in offices,

the stiffness of the paper is increased by crimping or fluting transversely, as with rollers b, c, by which the paper is deformed sufficiently as not to disappear at once but gradually to disappear of its own accord. In a copying machine, one pair of rollers may be provided for the originals and another for the copies.

Light Designs on Dark Grounds.

In this invention, which is patented by Messrs E. Aurich and F. Wolf, designs in the form of a light colour on a dark ground are printed lithographically from a stone or grained metal surface on which the design is drawn in a rapid drying grease-resisting ink. The design is drawn in reverse, and the

whole of the stone and design is coated with a greasy printing ink which resists and repels water. The whole is then treated with a solution of phosphoric acid in gum, gummed, and washed with turpentine which removes the greasy ink from the design, and thins it on the background, and finally by rubbing with water the ink is removed from all parts of the design. The final print gives a light design on a dark ground. The design is preferably drawn in an ink formed of 1 oz. of water, 1/2 oz. of a solution of 1 oz. of phosphoric acid in 16 oz. of gum, 1/2 oz. of lampblack, 1/2 oz. of oxalic acid, and 3 drops of glycerine, and the greasy printing ink is preferably formed of 1 oz. of asphalt diluted in turpentine, 1 oz. of turpentine, 1/2 oz. of black printing ink, and 1/2 oz. of ether.

Next Week's Great Graphic Arts Exposition
at Boston Recalls some Interesting Historical Facts.

All eyes in American printedom will next week be centred upon Boston, into which city there will pour a great influx of men and women connected with the printing trade in all parts of the United States, together with many visitors from overseas. From August 28th to September 2nd Boston will, as we have previously announced, be the scene of the Second Graphic Arts Educational Exposition which is being conducted by the Boston Club of Printing House Craftsmen, and held in connection with the third annual convention of the International Association of Printing House Craftsmen. The Exposition, as before stated, is being organised on a big scale, and promises to be a most interesting and informative demonstration of the present-day machinery, processes and products of the printing and binding trades.

This concourse of printers at Boston recalls the fact that from the early days of colonisation printing has played an important part in the life of the people of Massachusetts, the State of which Boston is the capital.

First U.S. Printing Press.

The first printing press in the United States was established at Cambridge, Mass., just 19 years after the Pilgrims landed at Plymouth. The first printer was Stephen Daye, brought from England by the Rev. Jose Glover. Glover died on the way over. Thus Stephen Daye became the first American printer. The first productions of the press under Daye and his son Matthew were "The Freeman's Oath," of which no copy can be found, the lost almanac of 1639, and "The Whole Booke of Psalmes, Imprinted 1640," sometimes known as "The Bay Psalm Book." These were followed by a number of books or pamphlets of a religious, legal, and educational nature.

Through marriage with the Widow Glover, Henry Dunster, first president of Harvard College, gained control of the printing office. Several years later he was sued by Stephen Daye for the recovery of \$500, which he said was due to him as an unpaid balance for former services. He presented a petition to the General Court for a grant of three hundred acres of land as "Recompense of His Care and Charge of furthering the work of Printing." This was granted and he withdrew from the business, leaving it to his son, Matthew. From his work it appears that Matthew made great strides in skill and craftsmanship. His later works show an elimination of the mistakes and blunders of the apprentice and the craft of the finished printer. Much of his work was for Harvard College. He died when only 29 years old, but to him is

due much of the credit that is generally accorded his father.

Two Famous Bible Printers.

Samuel Green was the third colonial printer. He operated two presses in Cambridge, one of them belonging to Harvard College, and the other a press brought from England for the purpose of promoting the education of the Indians. Green was the first to print the Bible in the Indian language. It has been said of him that, although not the first printer, his name is the most glorious in the history of printing.

One other name must be mentioned among the early printers, and that is the name of Marmaduke Johnson, an English journeyman printer who came to America in 1660 to assist in the printing of Eliot's Indian Bible. He was a capable workman, but was continually in debt and in conflict with the authorities.

These were the first printers in Massachusetts, and it is interesting to note that all of them were located in Cambridge.

Johnson at one time was desirous of establishing a press in Boston, but he was frowned upon by the authorities of Harvard College, who presented a petition to the Government which resulted in an edict that there should be no printing outside of Cambridge. It was nearly ten years before this ban was removed.

Of the printers who set up in Boston, Benjamin Harris deserves mention. He has been called the "Father of American Journalism," because in 1690 he issued a news-letter entitled "Public Occurrences Both Foreign and Domestic," which he proposed to furnish once a month, or oftener, if required. This publication consisted of four pages, one of them being blank for correspondence. Only one copy of this is known to be in existence, having been discovered during a search in the State Paper Office in London by the historian of Salem, Mass.

Earliest American Newspaper.

In the establishment of Bartholomew Green, in Boston, was printed the first American newspaper, the *Boston News-Letter*, a weekly. The first copy of this was dated April 24th, 1704, and was printed for John Campbell, postmaster.

To Benjamin Franklin belongs much of the credit for developing the art of printing. Born in Boston, Franklin, at an early age, went to work as an apprentice in the office of his brother, who had established a printing shop. Later, when his brother published a newspaper known as the *New England Courant*, Franklin secretly wrote short articles and slipped them under the door of the printing shop where his brother

found them in the morning. This was the beginning of his work as a writer. After a more or less stormy term with his brother, Franklin quit him and looked elsewhere for work. He met with considerable difficulty, however, for his brother, feeling aggrieved, visited the other printing houses in Boston and induced the owners to refuse to give young Franklin a position with them. Franklin went to Philadelphia, and from that time on his work was associated with that city.

Boston's Prowess in Printing.

Regarding the development of printing, Boston and Cambridge have led the way in many instances. The Washington hand press was a Boston development, and the first so-called steam press for printing by power was operated in Cambridge. About 1890, photo engraving began in Boston, and the three establishments of that time have now grown to 20 operating galleries for illustrated work. In the fine arts publishing field are many developments which contribute to educational, artistic, and social interests.

Boston ranks fourth in volume of matter printed, being exceeded only by New York, Chicago and Philadelphia. In quality of workmanship it is recognised that Boston holds first place. Some years ago at the St. Louis Exposition, two Boston men, Bruce Rogers and B. D. Updike, received the highest awards in an international exhibition of printing. Including the large printing houses in Greater Boston and Norwood, this section of the country has more book printing and binding of first-class quality than any other part of the United States.

Boston does not figure largely in the field of national publications. However, the *Youth's Companion*, *National Magazine*, *Architectural Forum*, *House Beautiful*, *Modern Priscilla*, *Boston Cooking School Magazine*, and several religious publications are all printed in Boston.

Boston's printing of to-day has an unrivalled background in the political, literary and educational leadership. The publications of the Boston school book houses are distinguished by the regard shown for standards and technicalities. There are traditions and principles in book-making which cannot be easily acquired, and the books of these houses show well arranged type a high quality of illustrations, suitability in paper and an excellence in binding that allow them to rank technically as the best produced anywhere in America.

Whilst in quantity of fiction and some other lines of publishing, a few other cities may outrun Boston, there are now located there two of the largest publishing houses issuing books for the general trade, and

The Miehle

Built with precision for exact printing

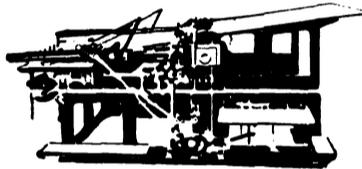

SERVICE

Because it is an all-British machine, built in our Works at Altrincham, Cheshire, we are at all times able (either directly or through our branches and depots) to give not only immediate advice but practical assistance to its users.

This service commences with the installation and is available at all times afterwards.

Although the probability is that your all-British Miehle will never break down (a statement supported by many hundreds of users), accidents occasionally happen, and at such times it is better to be sure of prompt service than to regret the purchase.

You know the quality of the machine — it is the best of its class and its class is the highest

Write direct to the manufacturers of the all-British Miehle for specification and full details.

Sole Agents for Australia —
MIDDOWS BROS. & LINTON, Ltd., Sydney and Melbourne.

five of the ten largest school-book houses. Boston was one of the first cities in the country to make drawing instruction in the public schools compulsory, and it is now offering many opportunities for instruction in printing. The first step in nearly all instruction in printing is in the direction of drawing and lay-out for dummy forms.

A comparison of the figures showing the increase in property value, value of stock and material, wages and number of people employed in the printing industry for a period of 20 years in Massachusetts shows a steady increase. Printing ranks as the seventh industry in size in Massachusetts.

The Second Educational Graphic Arts Exposition will be of even greater value educationally than the one held last year in Chicago, for there will be more room to exhibit than there was there. An attendance of 250,000 is expected.

Tuck's Competition Cabinet.

The accompanying illustration shows the competition stock cabinet—gold blocked on crimson ground—which Messrs. Raphael Tuck and Sons, Ltd., are supplying to picture post-card retailers in connection with their post-card postage prize competition (particulars of which appeared in our issue of the 10th inst.).

The cabinet is intended to hold Tuck post-cards on sale to the public for use in competing for the 1,000 prizes, totalling £3,500, offered for the best replies to certain questions. As previously stated, there is a further £525 of prize money offered to the trade for the best window displays, whilst competitors will also be able to win £1,000 for the benefit of hospitals.

Canadian Demand for Esparto Papers

Exports of esparto papers from the United Kingdom have been on a fairly substantial scale of late to Canada. The demand is chiefly for printings, writings and blue duplex papers. A selling company, under the style of the British Esparto Papers, Ltd., Montreal, has lately been incorporated with a capital of \$10,000.

THE *Board of Trade Journal* for August 10th contains the final form of invoice and combined certificate of value and origin to be used in the case of goods consigned to Australia, New Zealand, Union of South Africa, Newfoundland, and such other parts of His Majesty's territories as may from time to time be notified in the *Journal*. The final form of explanatory memorandum for the guidance of exporters using the certificate is also given, the invoice and certificate being printed as appendices to the memorandum.

Paper Demand and Prices.

A Word of Caution.

Caution against such increases in prices for paper as would retard the return of real prosperity in the autumn is advised in the monthly review of the paper industry by the *Paper and Pulp Industry*, the monthly bulletin of the American Paper and Pulp Association.

"The outstanding feature of the paper market," says the Association, "is that while there has been the falling off of orders which was to be expected during July and August, the drop has not been so severe as has been the case in many typical years. In other words, these months are, as one authority has phrased it, a breathing space during which further strength will be gathered for bigger business in the fall.

"Present stocks are inadequate to fill the demand that is certain to appear, and there is every reason to anticipate a period of greater general business activity in volume than has been seen for some years. The general business situation indicates that the prospective demand will have real purchasing power at the back of it. In the fact of this condition, many careful buyers are placing their orders during the summer, to avoid the chance of concentration at a time when the large volume of business is to be expected."

Various authorities are quoted, however, as fearing that there are symptoms of a too rapid resumption after the business depression, which might defer the sound and substantial basis which will be better for all lines of industry.

A Cardboard Contract.

At the Manchester Assizes (civil trials) recently, judgment was given in the action brought by the Cone Tube Co., Ltd., Timperley and Manchester, against the Premier Box Co., Ltd., folding cardboard box manufacturers, Worsley-street, Hulme, to recover the value of goods sold and damages. The defence was that the goods were not according to sample. The trial of the action had occupied the court more than three days.

The case for the plaintiffs was that they accepted a contract from the defendants for a large quantity of brown cardboard, which was to be delivered according to sample. Some of the material was supplied, and the defendants alleged that it was not in accordance with sample. A large amount of scientific and other evidence was given, some of it of a very conflicting character.

The Judgment.

The Judge said that upon the evidence he had come to the conclusion—and he found as a fact—that the cardboard was not in accordance with sample. The defendants said that, with regard to what had been delivered, they ought not to be required to pay the price or anything like the price which the plaintiffs asked; with regard to that which had been delivered and paid for they made a claim for damages; finally, with regard to that portion which had not yet been delivered, they said they were entitled to refuse delivery.

On the last point, the judge said the defendants must give the plaintiffs credit, not only for the waste value of the material, but for the quantity of pounds and shillings which represented the fall in price as between the dates of the contracts and the date of delivery. He had applied his mind to that point, and on the evidence before him he had come to the conclusion that judgment must be for the defendants for £515, with costs.

News-Print Corporation.

Mr. George F. Steele, formerly general manager of the Canadian Export Paper Company, has returned to New York following a visit to Scandinavian countries covering three months. He has announced that he has formed, under New York State laws, a paper sales concern to be styled the News-Print Corporation. Mr. L. Calder and Mr. F. W. Westlake are named with him as incorporators in papers filed at Albany; \$200,000 is the amount of the capital stock.

New South Wales Wants Printers

Comps, Lino Men and Machine Minders.

The Federation of Master Printers is advised by the New South Wales Master Printers and Connected Trades Association that there are vacancies in Sydney for compositors, linotype operators and letterpress machine minders.

The members of the N.S.W. Association are not prepared to pay passages, as the Australian law does not allow contracts with imported men. Inquiries made at the Immigration and Settlement Department, Australia House, London, elicited the fact, however, that it would be possible to arrange for nominations to be effected on behalf of men desiring to fill the vacancies, and reduced passages would thus be obtained.

Applications should be addressed to the secretary, N.S.W. Master Printers and Connected Trades Association, 242, Pitt-street, Sydney, N.S.W. Intending applicants may obtain some further details by writing to the Federation of Master Printers, 24, Holborn, E.C.1.

American News-Print Production.

Giving statistics for June, the News-Print Service Bureau, N.Y., states: All the companies reporting produced 203,930 tons and shipped 206,280 tons during June. Shipments exceeded production by 2,350 tons. Production figures include 750 tons of hanging, of which 518 tons were made in Canada. The average daily production of news-print by mills reporting for June amounted to 93.3 per cent. of the average daily output during the three months of greatest production in 1920 or 1921, with allowances for new machines.

Comparing production during the first six months of 1922 with that of the same period for 1921, the United States companies reporting show an increase of 88,209 tons, or 17 per cent.; the Canadian companies an increase of 142,518 tons, or 38 per cent., and the total of all the companies reporting show an increase of 230,727 tons, or 26 per cent. Strikes at the mills in 1921 largely account for the big difference in production during these periods.

Stocks during June decreased 1,038 tons at United States mill points, and decreased 1,482 tons at Canadian points. Total stocks at all reporting mills amounted to 25,823 tons, or 2,520 tons less on June 30th than on May 31st, and were equivalent to three days' maximum production.

"The Good Old Papers."

Some useful points are touched upon by Mr. Sydney Spalding, of Messrs. Spalding and Hodge, in the course of an article on paper which he contributes to the summer number of *M.A.B.* (Mainly About Books). This is one of a series of short popular articles by experts on the methods and materials of modern book production. Mr. Spalding mentions that the variety of paper to-day is almost beyond enumeration, and even buyers with some knowledge of paper admit that paper is such an impalpable thing in its multiplicity of varieties and texture that they despair of ever mastering the numerous and subtle differences. Another aspect of paper brought out refers to the extending use of art paper, especially for fine illustrations. "On the whole," says Mr. Spalding, "it may be said that modern photography and the invention of the process block have enabled results to be obtained on cheaper papers that were not possible in the old days of wood engraving, which has unfortunately become a lost art. It is sometimes said that we cannot to-day buy the good old-fashioned papers of sound quality of long ago, but this is not true. To day, hand-made paper is just as good as ever it was, and machine-made paper can be made equal in quality to anything that has ever been made in former times. It is purely a question of price. High quality means good materials, and, in the case of machine-made papers, good materials added to slow running of the paper machine, but the spirit of the age is to run 400 to 500 feet a minute with a wire cloth 140 inches wide."

Channon's Patent Glue, Ltd.

THE GLUE for SMYTH-HORNE Machines is CHANNON'S

Two Extracts from Users:—

ADDRESS ENQUIRIES
TO—

Sales Dept.,

3, Cloak Lane,

London, E.C.4.

Trade Notes.

PRINTED MATTER POSTAGE.—The Postmaster-General has intimated in correspondence with the Association of British Chambers of Commerce that the regulation providing that printed matter must be posted not later than the nearest previous collection to 3.30 p.m. in order to obtain advantage of halfpenny postage, which was the subject of a resolution passed at the last quarterly meeting of the Association on July 19th, is on the lines recommended by the Geddes Committee, and he cannot see his way further to extend the scope of the reduced rate which is unremunerative. Mr. Kellaway adds that he does not see that any useful purpose would be served by receiving a deputation from the Association on the subject.

THE programme for the session 1922-1923 of the Department of Technology of the City and Guilds of London Institute has just been published by John Murray, Albemarle-street, London, W.1, price 3s. 6d. net. It includes the usual detailed outlines of subjects of examinations, among the sections being typography, lithography and bookbinding.

BOOKBINDING TEXT BOOKS.—As text books and works of reference in the subject of bookbinding, the Department of Technology of the City and Guilds of London Institute recommend the following:—"The Art of Bookbinding," Zaehnsdorf (Bell and Sons); "Bookbinding, and the Care of Books," by Douglas Cockerell (John Hogg); Report of the Committee of the Society of Arts on Leather for Bookbinding (Bell and Sons); any current price lists of bookbinding materials and appliances.

BOOKFOLDER'S DISEASE.—At an inquest at the London Hospital last Friday on Rosetta Victoria Browne, an 18-year-old bookfolder, it was stated that one afternoon she complained of pains in her head, and the following day her left thumb began to turn black. Asked if she could account for it she replied "I suppose I cut it with paper at the works." At the hospital it was stated that death was due to pyæmia.

HENRY WILLIAMS, 57, a printer, who had a fatal seizure in the library of Rowton House, Whitechapel, and upon whom an inquest was held at the London Hospital last week, was stated by a witness to have been "without a known relative in the wide world."

SOUTHWARK coroner recorded a verdict of Suicide during Temporary Insanity on Monday in the case of Geo. Wm. Davies, 56, a stereotyper, of Walworth, who cut his throat. Davies had fretted because he was unable to work on account of a nervous breakdown.

DAVID WILLIAM BIRD, a compositor was remanded at Derby on Saturday, charged with shooting his father. The shooting was alleged to be the outcome of 25 years' quarrelling.

On a charge of forging and uttering £1 Treasury notes, Frederick Martin, aged 39, an upholsterer, of Queen's-road, Peckham, was at Woolwich committed for trial at the Central Criminal Court. He was also charged with having in his possession two blocks which might have been used for the making of one-pound notes. It was stated in evidence that in a back room occupied by Martin were found 52 genuine £1 notes, 72 genuine 10s. notes, 13 forged £1 notes and 12 unfinished forged £1 notes. There was also a quantity of gold leaf, two blocks, bottles of paint, gum, varnish, two sheets of tracing paper, with the tracing of Treasury notes upon them, a rubber printing outfit, a box of paints, a box of engraving and drawing instruments, a quantity of chalk, carbon and crayons.

MR. DANIEL CONNER LATHBURY, of Burton-court, Chelsea, S.W., for many years editor of the Guardian and later of the Pilot, formerly on the staff of the Saturday Review and of the Spectator, later joint editor of the Economist, in his Oxford days President of the Union, who died on June 14th, aged 91, left estate of the gross value of £2,663, with net personalty £2,503.

ONE case of lead poisoning was reported in the printing industry during July.

VAN OF PAPER ABLAZE.—A van load of paper burst into flames last week while passing along Crawford street, Marylebone. By the time the horse had been unharnessed the flames reached across the road, and were with difficulty extinguished by the firemen.

It is thought that the fire was caused by a cigarette thrown from the top of a passing bus.

THE Government of Northern Ireland announced last week that: "Owing to the attacks of a scandalous nature upon the judiciary of Northern Ireland which have appeared in the Irish Catholic, the Northern Government has prohibited the circulation of this paper in Northern Ireland until September 18th, 1922."

THE Cork Examiner, which had to suspend publication owing to the damage done to its plant by the Irregulars during their occupation of the city, appeared again last Thursday.

THE printers' strike at Frankfurt-on-Maine shows no signs of ending, although the unions are issuing no strike pay. The strikers refuse to allow even newspapers arriving from other cities to be sold, though it is not difficult to obtain them from furtive street hawkers.

A PARIS newspaper reported on Sunday that the French Government has come into the possession of a confidential document of the Greek Government. This document, it says, is nothing less than a list of French newspapers receiving subsidies from Greece, and included in this list are a number of newspapers which have distinguished themselves by their readiness to denounce "the hand of the foreigner" in French national affairs.

MR. RAHAT, the editor of the Hindu weekly, Bharatitilak, has been sentenced to a year's rigorous imprisonment for sedition, in connection with the publication of two articles.

MARR TYPE-FACES.—A United States correspondent who sends us an inquiry for type cast from matrices of the Marr Typefoundry Co., late of Edinburgh, is informed that so far as we are at present able to ascertain such type is not now obtainable. We understand that when the Edinburgh firm went out of business, the matrices were sold as old metal and are no longer available.

THE Autoknockups Co., Ltd., of Reading, inform us that up to the end of August—when busy season commences—their special offer holds good to deliver and erect their machines free of charge.

FROM Intertype Limited, 15, Britannia-street, King's Cross, we have received a copy of "Intertype Talk," a magazine which has amongst its contents much information about the Intertype machine, with examples of printing from Intertype setting.

PRINTERS' formes and type entering Portuguese East Africa are subject to a "contribution" or additional tax of ½ per cent. ad val.

Trade Union Matters.

T.A.'s APPEAL TO HIGH COURT.—The Typographical Association has decided to take to the High Court the decision of the Newcastle magistrates whereby, as we reported fully last week, certain of their members were ordered to pay damages and costs for leaving their work without adequate notice during the recent printing dispute.

MR. G. H. ROBERTS, M.P., repudiates the allegations of the Typographical Association Executive Council that in a recent speech he cast a reflection upon the administration of the Union's affairs. He says he referred to another organisation altogether.

A WARNING has been received by the T.A. against their accepting situations in America and Canada during the 44 hours dispute.

CAXTON HALL, Chapel-street, Salford, Manchester, is still the address of Mr. Hunt, the secretary of the Manchester Branch, who retains the old offices despite the change of the headquarters to "Beechwood."

Newnes and Pearson's at Cricket.

Ministry of Pension Patients Entertained.

About thirty of the patients of the Richmond Ministry of Pensions were entertained by the cricket club of Messrs. Newnes and Pearson, at the latter's ground at Sudbury, on Saturday, August 19th. The event proved to be an enjoyable day's outing for all concerned. The soldier patients, captained by Mr.

Williamson, totalled up 80 runs all out when an adjournment was made for tea. After liberally regaling themselves, play was again resumed, Messrs. Newnes and Pearson's wielding the willow; they however fell easy victims to the bowling of Messrs. Wych and Hastings, the latter taking six wickets for 16 runs, a very fine performance. The fielding of the soldiers was exceptionally smart and the last wicket of the printers' team fell with their score at 42.

De La Rue and Co.

At the meeting of the convertible debenture holders of Thomas de la Rue on Tuesday, called for the purpose, which was duly achieved, of amending the trust deed, the chairman entered into a full explanation of the financial position of the concern.

The company, as was pointed out by Mr. Stuart de la Rue, comprises, in addition, the businesses of Charles Goodall and Son and J. A. Weir, while the close association with Warrillows, of Birmingham, is likely to become still closer in the near future. Charles Goodall had been a successful business, and practically the only British competitor of De La Rue in the playing card line. J. A. Weir were papermakers of long standing, and had also a lucrative record to their credit, and Warrillows could be termed the largest stationery and jewellers' sundries business in the Midlands. Those businesses, successful by themselves, should surely be even more prosperous when joined under the same management and when duplication of expense was eliminated. Regarding the balance-sheet, the chairman explained that the loss of £89,599 was made up of interest on debentures, bank interest, and £51,000 loss on the American and French businesses. The debenture stock, he stated, was covered by substantial assets, so that if fresh debentures for £400,000 were issued the bank loan and a portion of the item "sundry creditors" would be wiped out. Since April there is a marked improvement in the business, and the transfer and fusion of the manufacturing side of the Goodall playing cards business to the Bunhill-row factory had practically been completed. The scope of the security printing branch had been extended, and the returns after a few months' working show promising results. The resolution was unanimously adopted.

"Key Letters" as Imprint.

"In the name of His Majesty's Attorney-General," Detective-Sergeant Allensummoned H. Millson, of Theobalds-road, before Mr. C. K. Francis, at Lambeth Police Court, for unlawfully publishing a betting circular, advertising a business carried on by him in the name of "Douglas Marsh," on which the name, address, and place of business of the person printing the same were not printed. There were also summonses against Messrs. Edwin Frowde and Henry William Frowde, printers, of Old Kent-road, for printing the circular without attaching the name of the firm thereon. The prosecution contended that the key letters used on the circular did not constitute the imprint required by the Act.

Mr. Fox Andrews, appearing for Messrs. Frowde, explained that they were members of the London Master Printers' Association, and that the key letter assigned to them was "F.H.London." They were under the impression that in printing a circular of this kind it was not necessary to put their full name and address. A solicitor appearing for Millson said he was told that the letters "F.H.Ldn" were a sufficient compliance with the law.

Mr. Francis ordered Millson to pay a fine of 40s. and three guineas costs. The Messrs. Frowde were each fined 20s. and one guinea costs.

Lord Northcliffe's Funeral.

All Classes Pay Impressive Tributes.

Last Thursday's funeral service at Westminster Abbey and burial of Viscount Northcliffe in St. Marylebone Cemetery, Finchley, made very plain the immense hold upon all classes of the community which it is possible for a great journalist to obtain.

Amongst the crowds inside and outside the Abbey during the service were people from all ranks of the nation, and many are the expressions of appreciation that have been paid to the great qualities which Lord Northcliffe possessed.

Besides a large gathering of family mourners, headed by Lady Northcliffe and Viscount Rothermere, Brigadier-General Trotter was there for the Prince of Wales, Sir Edward Grigg attended on behalf of Mr. Lloyd George, and Mr. J. E. Stephenson for Mr. Churchill. The British Overseas Dominions were strongly represented, and noticeable among the Ambassadors were the Comte St. Aulaire (France) and Mr. George Harvey (America).

All the London papers, the provincial Press, and the foreign Press were represented. A number of newspaper men walked in procession from Fleet-street to the Abbey.

Among directors and members of the staffs of the Northcliffe publications were: Mr. John Walter (chairman of *The Times*), Sir Campbell Stuart, Mr. H. Wickham Steed, Mr. Thos. Marlowe, Sir Andrew Caird, Sir George Sutton, Mr. W. Lints Smith, Mr. W. G. Fish, etc. All the newspaper organisations of both employers and employed sent representatives.

At a meeting of the committee of the Press Club the following resolution was adopted: "The committee and members of the Press Club desire to tender their profound sympathy to Viscountess Northcliffe, on the death of Viscount Northcliffe, and to express their sense of the great loss journalism and the working journalist have sustained by the death of a man who did so much for both." The chairman of the club, Mr. W. H. Lock, attended the service in Westminster Abbey as the representative of the club.

Various tributes to Lord Northcliffe have been made by the workpeople employed upon his various publications. Mention was made in our columns last week of the appreciative letter contributed to the *Daily Mail* by Mr. George A. Isaacs, on behalf of the National Society of Operative Printers and Assistants. At the quarterly chapel of *The Times* composers, held on Friday, an entry was made in the chapel minute-book recording their profound sorrow at the death of their chief, Lord Northcliffe, and expressing their lasting gratitude "for his sound and honest work in the welfare of the newspaper fraternity." Mr. A. B. Maitland, Imperial Father, in proposing the resolution, related instances of Lord Northcliffe's practical sympathy with those who were in adverse circumstances. Lord Northcliffe, he said, was not only a master, but a brother in every sense, both to the staff of *The Times* and to every man identified with the newspaper trade. The resolution was seconded by Mr. C. Baker, and carried in silence.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NEW ZEALAND.

H.M. Trade Commissioner in New Zealand reports that the Dominion of New Zealand Post and Telegraph Department invites tenders for the supply of manilla envelopes. The envelopes required are printed on the face, size $3\frac{1}{8}$ ins. by $5\frac{1}{8}$ ins., similar to a sample which has been forwarded to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1, by H.M. Trade Commissioner. The quantity required is one million. The goods are to be banded in fifties, boxed in five hundreds, and packed in strong cases (oil or tin lined) in lots of 50,000. Tenders must reach the Controller of Stores, Post and Telegraph Department, Wellington, New Zealand, by 5 p.m. on October 11th, 1922.

Linotype Small-Cap Lay-out.

SIR,—I was much interested in the chart of a proposed standard Linotype small-cap lay-out, published in your issue of the 10th inst.

It appears to me that a lay-out as shown would be rather difficult for an operator to memorise. He would never be sure he had picked up the right letter except by counting the boxes until he came to the one he wanted. Even then, if the accents are placed in the same boxes as the small-caps, would not the operator be apt to pick up an accent instead of a small-cap when his boxes were getting short of sorts?

Would it not simplify matters if the lay-out tallied with the keyboard thus?

E	S	C	V	X
T	H	M	B	Z
A	R	F	G	
O	D	W	K	
I	L	Y	Q	
N	U	P	J	

As for the miscellaneous sorts—accents, fractions, etc.—instead of placing them flat in the boxes as you would the small-caps, let them lie in the boxes with the index side of the matrix standing straight up and facing you, filling up each box fairly full to prevent the matrices falling back on to their sides. This enables the operator to see at a glance what accents he has and where they are.

By using this lay-out you could, if desired, get two complete small-cap founts and accents in one case, and could separate them by painting a white line straight down the case at the end of the "X."

We have standardised this lay-out for many years. It does not need memorising, because the operator's hand mechanically goes to the right box. It also prevents an operator hiding sorts in the boxes—though it will not prevent an operator hiding them in his pockets, which is the most likely hiding place!

I have no doubt nine out of every ten operators would prefer our lay-out to the one in question, and am quite sure it would save considerable time in an office where small-caps are set from the side-case.

Yours truly,

PERCY YATES,
Managing Director,
Record Composition Co., Ltd.
3, West Harding-street, E.C.4.

Electric Lighting in the Printing Office.

SIR,—As I find the renewal of lamps in the composing-room of frequent occurrence, due, perhaps, to a certain amount of vibration caused by machinery on the floor above, or to an unsuitable lamp, I should be glad if any of your readers could give me the benefit of their experience. Each frame has a separate lamp. If a lamp—either vacuum or gas-filled—with a fairly long life, with number of watts specified, could be recommended, I should be glad of the information on the score of economy. There is also another important feature to be studied—that of the eyesight of the compositor. Perhaps a tried reflector which collects and distributes light where it is wanted could be mentioned.

Yours truly,

MASTER PRINTER.

London, Aug. 21st.

Printing Trade Union Anomalies.

SIR,—Now that the air has been cleared by the settlement of the wages dispute of country printers, surely negotiations in regard to London should not present any serious difficulty.

The spirit of reasonableness should be brought into play and employers and workers should regard as of paramount importance the maintenance and expansion of the British printing industry.

In regard to piece rates—whether by hand or machine—the present rules and regulations belong to a by-gone age, and should be wiped out entirely.

Let a rate be agreed to, but let that rate cover work actually done. Many a compositor claims for headings that he does not know really exist until he sees the paper published.

The employer is willing to pay an agreed rate for actual work produced. Why should he pay for work twice over?

There are standing headings for weekly features of a journal, and why a compositor,

if by chance he has the first take, should be credited with heading space is, to say the least of it, most mystifying.

These remarks refer to a few of many anomalies, unjust and devoid of common sense, which drive work out of London, perhaps into the country, but more likely into foreign hands.

Yours, etc.

A. BURR.

London, Aug. 19th.

Employment in Allied Trades.

Moderate in Papermaking; Generally Bad in Printing.

The official report on conditions in the printing, paper and bookbinding industries states that employment continued moderate on the whole in the papermaking trade; some slackness was reported owing to shortage of orders, but at several centres overtime was worked.

In the printing and bookbinding trades employment generally remained bad, though some improvement was reported with letterpress printers in London; in the provinces employment was affected at the end of the month by the dispute involving members of the Typographical Association. There was slight improvement with lithographic printers, but a good deal of short time was worked both in this and in the bookbinding section.

Unemployment in the printing and paper trades continues to show a steady, if slight, falling away, but especially in the case of papermaking and straining. Of the total of 59,380 workpeople estimated to be employed in papermaking and staining, 4,438 were shown to be totally unemployed at July 24th, 3,379 males and 1,059 females; the percentage unemployed of 7.5 represented a decline of 1.1 as compared with June 28th. Short time workers claiming benefit at July 24th were 706, of whom 533 were males, and the percentage on short time of 1.2 marked a decline during the month of 1.4.

In manufactured stationery the estimated number of insured workpeople is 68,810, of whom 4,277 were totally unemployed on July 24th (1,730 males and 2,547 females). The percentage of 6.2 is less than at June 26th by 0.2 per cent. Short time workers numbered 230, the majority of whom were females, and the total percentage of 0.3 is lower than the June figure by 0.9.

Of the 213,620 insured workpeople in the printing, publishing and bookbinding industries 13,506 were unemployed (9,907 males and 3,599 females) at July 24th, a percentage of 6.3, or a decline of 0.3 compared with June 26th. The number of short time workers was 759, of whom 468 were females, the percentage of 0.4 being a decline of 0.4 in the month.

The improving tendency which the above figures denote in the paper and kindred trades is also indicated by the figures from Norway and Sweden. In Sweden, out of a trade union membership of 4,678 paper workers, there were unemployed at May 31st 10.7 per cent., which compared with 18 per cent. on April 30th and 33.6 per cent. at May 31st, 1921.

With regard to Norway, figures concerning printers and bookbinders (Christiania) only are available. Out of a trade union membership of 2,371 printers at June 30th last, the percentage of unemployment was 6.0, which compared with 11.2 at May 31st and 9.0 at June last year. Among a much smaller number of bookbinders (Christiania) the percentage of unemployment was 18.6 at June 30th, 19.6 at May 31st, and 26.4 at June 30th, 1921.

PAPERMAKING CLASSES AT THE MAIDSTONE TECHNICAL INSTITUTE.—The following students attending the Maidstone Technical Institute took the papermaking examinations of the City and Guilds of London Institute:—Final stage, 1st class: William Henry Boardman, Hider Arthur Bowers. Papermaking, grade 1—1st class: John James Garrett, Samuel Mills, Edward William George Cooper, Archibald Howard, John Ralph. 2nd class: Archibald Howard Wells. These successes carry awards by the Papermakers' Association as follows: Final grade, 1st class, 30s.; 2nd class, 20s.; Grade 1, 1st class, 15s.; 2nd class, 10s., in each case with diploma. Eight students sat and all passed, seven with first class—of which two were in the final grade.

Australian Notes.

Government Printer Dismissed—Five-Day Week Threatened—Buying School Books—Printer's Good Record—Libel Action Fails—Unions and Wages.

(From Our Sydney Correspondent.)

SOME strong feeling has been roused in printing circles by the news that the Government Printer and Brisbane, Mr. A. J. Cummings, has been dismissed following a quarrel with the Premier, Mr. Theodore. Mr. Cummings had been Government Printer for twelve years and had given efficient service. The trouble arose through a speech made by Mr. Cummings in which he charged the Government with unbusinesslike methods and with interfering with the proper control of his department. Mr. Cummings has denied the Premier's allegation that he has acted in the interests of the Nationalists, and stated that the whole trouble had come about through his feeling so keenly men being retired. One man, Walter Tomlin, the best finisher in the bookbinding department, in every way capable, had been retired. He had taken it to heart so much that he had died in the train on the way to his home. Another man, George Hardy, overseer of the ruling department, had suffered a paralytic stroke, and had to be carried in from a motor car to receive from his old comrades a gold watch and illuminated address.

NO SATURDAY work was one of the concessions extended to the printing office employees in the time of the late Labour Ministry. But if the Fuller Ministry is in power next year it will be possible to print anything required on Saturday. It is intended to bring the hours and other conditions in the Government Printing office into line, as far as possible, with those ruling in private offices, and the free Saturday is marked for excision.

A SYDNEY newspaper stated recently that the Education Department was losing something like £5,000 a year by the methods adopted in buying school books. The newspaper remarked that some years ago it was the custom of the Department to call for tenders for the supply of school books. The successful tenderer, it was estimated, made a profit of 7½ per cent. Then the Department turned round and said: "We will save this 7½ per cent. We will buy the books direct from the publishers." This change, the newspaper alleged, was costing the Department thousands of pounds a year, as the Department was not able to buy at the advantageous terms secured by private firms, and as a tidy little staff had been built up to handle this matter alone; whilst the books rarely arrived in time.

THE Minister for Education (Mr. Bruntnell) countered all these statements. The system adopted by the department, he stated, is that it purchases direct from the publishers at special cut rates. These special rates are obtained owing to the fact that the department is one of the largest purchasers of educational text books in the Commonwealth. When the department purchased through the local firms the procedure was simply that the order was handed to the firm securing the contract, who in turn placed it through their buyer in London, and there apparently their interest in the matter ended apart from collecting their profits. The books were delivered straight from the ship's side to the departmental stores where they were opened up and whence they were despatched to the schools—this work being done not by the contractors, but by the department's own store staff. Moreover, whilst the Department, like local booksellers, had had difficulties about deliveries during the war, deliveries were now much more prompt. He failed to see the way to the saving suggested.

FIFTY years' service in the Government Printing Office has been completed by Mr. A. E. Dyer, overseer of the photographic and photo-mechanical branches of that department. In that time he served under three Government Printers, and had an unusually varied experience, passing through the reading, composing, machine, lithographic, photo-

Situations Vacant.

COMPOSITOR wanted; also LINOTYPE OPERATOR wanted. Best location in United States America; business owned and managed by Englishman; give qualifications and references, also wages asked.—Box 13965.

COSTING and ESTIMATING CLERK wanted in Lithographic Transfer Works in the Midlands.—State qualifications, references and wages, to Box 13980.

TRAVELLER wanted, with good connections in the Printing Trade for Manchester, Liverpool and Midlands, with old-established house; state age and experience; all applications treated confidentially.—Box 13976.

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

Situations Wanted.

ENGINEER'S DRAUGHTSMAN, internal combustion, etc., car experience, desires Position where artistic talent would be of service; ability for advert. lay-out and commercial art.—Address Box 13952.

MINDER (Two revolution) seeks permanency; experienced in Commercial, Book and Three-Colour Work; disengaged.—Box 13973.

MACHINE MINDER.—Centurettes, Wharfedale, etc.—E. C., 32, Hargrave Park, Highgate, N.19. 13974

graphic, photo-mechanical branches. He introduced the process of photo-engraving in the G.P.O., and under his supervision also was the manufacture of rubber stamps first entered upon in the department.

THE jury returned a verdict for the defendants in the action for alleged libel brought by John Kelly Powell, formerly organiser of the 'Taxpayers' Association of N.S.W., against the proprietors of the *Sydney Morning Herald*, in which £2,000 damages was claimed.

ON July 6th a Judge in the Industrial Court took only two hours to reduce the weekly wages of 23 unions by 4s., in accordance with the recent cost of living declaration. Among the unions affected were:—Letterpress Machinists, Lithographic Workers (males), Bookbinders (males), and Compositors (males), (Cumberland and Newcastle), Cardboard Box Makers (State), and Stereotypers and Electrotypers (Cumberland and Newcastle).

FRENCH ladies are finding interest in making seaside hats from paper.

TENDERS WANTED.

BOROUGH OF HAMPSTEAD.

THE Council of this Borough invite Tenders for the supply of (1) Printing and (2) Books and Bookbinding, for one-and-a-half or three-and-a-half years, at the option of the Council, from 1st October next.

Specimens of the various items can be inspected on application to the Town Clerk, from whom printed schedules with full conditions and form of tender can be obtained upon deposit of £1 is. for each Tender, which will be returned if a bonafide Tender be sent in by the day and time mentioned below, but will otherwise become forfeited to the Council. In the event of a Tender being withdrawn the deposit will also be forfeited.

Tenders must be received at my office not later than 4 p.m. on Friday, 15th September, 1922. The Council does not bind itself to accept the lowest or any Tender.

By Order,
ARTHUR P. JOHNSON,
Town Clerk.

Town Hall,
Haverstock Hill, N.W.3.
19th August, 1922.

PRINTERS' WAREHOUSE OVERSEER desires berth in Printers or Wholesale Stationers; excellent knowledge of all classes of Paper, Buying, Estimating, etc.—Cribb, 17, Fariton-road, S.W.18. 13984

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Miscellaneous.

AN opportunity occurs to ACQUIRE a SMALL PRINTING PLANT, in running order, within a short distance of Liverpool-street; lease of basement premises, about 2,000 sq. ft., at a low rent, may also be had if desired.—Full particulars from D.E., c/o Dixon and Roe, 17, Walbrook, E.C.4. 13981

COLONIAL NEWSPAPER CUTTINGS, dealing with the Paper, Printing, Stationery and Allied Trades, are wanted by Advertiser.—Communicate, stating terms, to Box 13882.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

NOTTINGHAM.—TO BE LET ON LEASE, early possession, Palatial Modern-built BUSINESS PREMISES, corner Carrington-street, facing fountain (best side the street), all cars stop at door, said to be 50,000 to 150,000 people pass daily; 20,000 feet super floor space, 175 feet frontage; quite near new Port of Nottingham (world's seaports to Nottingham v. Hull direct); opportunity for Grand Stores de Louvre; suit limited company; illustrated map posted.—Cooley, Market-street, Nottingham. 13983

PHOTO PRINTS.—Object Photography, etc.; Practical and Skilled Operators at your service; Modern Studies specially planned for all Object Work.—For efficient service send your work to The Nickeloid Electrotype Co., Ltd., Photo Engravers and Electrotypers, 10, New-street-hill, London, E.C.4. 13963

TYPE METAL RULE BORDERS, LEADS AND CLUMPS.—Send for samples and prices. Best Alloy used for all these materials.—The Nickeloid Electrotype Co., Ltd., 10, New-street-hill, London, E.C.4. 13964

Testing Fibre Board for Strength.

The strength of paper or fibre board varies greatly according to the amount of moisture in it, and this amount is continually changing with the atmospheric conditions. As the relative humidity of the air increases the strength of fibre board declines very rapidly. A piece of corrugated board tested at the Forest Products Laboratory showed a decrease in strength, by the Mullen test, of 59 per cent. when the relative humidity was raised from 65 to 97 per cent.

When fibre boards were subjected to a low, then to a high humidity, and later tested at the low humidity, the results were practically identical with those obtained before the increase in moisture. This proves that the boards had not been injured by the change in humidity, and that variations in the strength of the boards at different humidities are entirely due to a change in moisture content.

This work shows that when fibre board is bought on strength specifications, the humidity at which tests are made must be stated.

THURSDAY, AUGUST 24, 1922.
A Deplorable Strike Ended.

THE Typographical Association members' return to work throughout the country marks, we trust, the end of this very unfortunate dispute. It is to be hoped that every effort will now be made to get the wheels of business into normal motion again as quickly and as harmoniously as possible. The damage caused to the industry is obvious. A large part of the general printing trade was brought to standstill, and although some of the lost ground will be regained, some of the loss is irretrievable. Serious harm has been done also to many a provincial newspaper, which will long suffer from the interruption of advertisements, etc., entailed by the strike. The workpeople of the Typographical Association and of other unions affected have to mourn the serious financial set-back inseparable from a strike of this magnitude. Weeks of stoppage have supplied, indeed, one more object lesson as to the two-edged character of that destructive and dangerous weapon the strike. Nor has the damage effected been limited even to employers and employed in the printing and allied trades; suspension of newspaper publicity and of other commercial uses of printing has had much detrimental effect on business generally. Thus the head of a large Blackburn drapery firm writes to the Press stating that the suspension of the newspapers during the printers' strike had been the greatest blow suffered by the business community in the whole of his experience. In less than four weeks, he said, the whole of the headway in trade had been wiped out, and commercial men had become the victims of a sudden and calamitous slump.

The T.A. Ballot.

THOUGH the members of the T.A. are resuming work, the new agreement still awaits confirmation by ballot. We believe this confirmation will be given. The ballot paper, we understand, recommends in no equivocal manner the acceptance of the terms provisionally agreed, and it lays due stress on the

financial strain which the stoppage has brought upon the union. It will be remembered that when the Industrial Court's terms were put to the members a substantial majority voted for acceptance. Many more members have realised since then, we believe, that for the union to fight that decision was a grave mistake. And now the memory of the weeks of stoppage should make plain the unwisdom of renewing the conflict. We imagine that the minority who want that renewal will be very small.

Straightening Things Out.

DISPUTES such as this cannot but exert a rather severe strain upon the good will which has for so long been a pleasant feature of printing trade negotiations. There is no reason, however, why good relations between employers and employed should not continue unimpaired. The willingness with which most of the T.A. members went back to work would seem to indicate that, in the circumstances, the new terms are not felt to be unreasonable. We have heard, too, of instances where employers who have not sufficient work in hand to keep all their pre-strike employees busy, have stretched a point in the cause of peace and reinstated them without exception. Good will on both sides is now a prime necessity in order that the industry may not be hampered in making a strenuous effort to retrieve the losses suffered.

The Paper-Buyer's Problem.

THE problem of the trend of trade and direction of market prices is one that is engaging the attention of many houses in the paper and print trades. For about two years prices have been going down step by step, notwithstanding assertions from the prophets at intervals that rock bottom had been attained. Each succeeding stocktaking has entailed the distasteful process of writing down stock values. The hopes based on a period of trading have finally hinged on relative values of stock at one stocktaking compared with another, only to be dispelled by the fallen value which never fails to materialise. Small wonder that buying has been limited to strict requirements and that stock capacity has on all hands diminished to meagre amount. The fear of the diminishing value of stock and the possibility of lowered paper prices has been at the back of the paper user's mind since the summer of 1920. It is even now impossible to claim that prices are at zero, for we all know they are not. It may be some considerable time before we have a further fall, but it can hardly be accepted that twice pre-war value is the stop. The surest sign of rock bottom prices will be the return of ample and sound trade. That will certainly not be this year, and unless the European and Eastern situation improves it will not be next.

British and Foreign Wrapping Paper.

THE anxiety which British manufacturers of wrapping paper feel with regard to the quantity of the foreign material consumed in this country is not relieved by an examination of the statistics. Comparing the first 22 weeks of this year with the corresponding period of 1921, it is seen that the proportion of British paper consumed is a lessening quantity, while that of the foreign product is increasing. A close calculation of wrapping paper manufactured by the mills in this country gives an estimate of 31,816 tons for the 22 weeks of 1921. This figure compares with 18,997 tons of similar paper imported. Thus the weight manufactured at home mills was 12,819 tons, or 40 per cent., more than what was imported. On the assumption that the total consumption was equal to the weight manufactured, imports represent 37 per cent. and home manufactures 63 per cent. The figures for the corresponding 22 weeks of the present year indicate to what extent British

manufacturers are having to give ground to the foreigner. Home wrappings represent an estimated tonnage of 55,372, and imported goods 52,542. Thus the difference is only a matter of 2,830 tons, or 5 per cent., in favour of the home product. Again, assuming that the weight manufactured is absorbed by consumers, the total of 107,914 tons gives a percentage of importation of 48, as against 37 last year; and in the case of the British paper 52 per cent., comparing with 63 per cent. Therefore, in the twelve months, the tonnage proportion of wrapping paper imported has increased by 11 per cent., and the weight made in our own mills has decreased 5 per cent. The tendency here indicated naturally arouses apprehension for the future of British industry.

Personal.

MR. A. E. GOODWIN, secretary of the Federation of Master Printers, has this year for the third year in succession had his holiday arrangements upset by a trade dispute. We hear, however, that he is now snatching a few days' much-needed respite in North Wales—at his native town of Newtown, Montgomery. He will be back in London to receive the result of the T.A. ballot.

MR. EDGAR WHITELEY, manager of the National Labour Press, Ltd., has tendered his resignation. He has been secretary and general manager since the foundation of the Press at Manchester in October, 1909.

MR. JOHN BARLING, a director of the *Cumberland Evening Mail*, has been presented by the staff of that journal with a silver rosebowl on the occasion of his marriage. The presentation was made by Mr. Peebles, works manager.

MR. C. J. BEX, the managing editor of the *Hereford Times*, has been the recipient of a solid silver cigarette case from the Hereford Master Printers' Association on leaving Hereford to take up the editorship of the *Yorkshire Herald*.

MR. R. HURNER, late of Messrs. Aug. Brehmer's British Successors (Thomas McAuliffe, Ltd., 12, City-road, E.C.1), has been appointed agent for Messrs. Gebrüder Brehmer, Leipzig, specialists in all the latest machinery for the printing, bookbinding and box-making trades. The name of the firm is R. Hurner, Ltd., with offices at 121-123, Rosebery-avenue, E.C. Telephone, Clerkenwell 1568.

MR. W. R. TROTTER has been elected vice-president of the International Typographical Union of America and Canada. Mr. Trotter is well known on the North-East Coast. He was a member of the Newcastle Branch of the T.A. for about twelve years before going abroad.

MR. TROTTER met his English friends during the war when he came over as the Canadian representative of the Trades and Labour Congress. He attended the Hull and Portsmouth Convention of the British Labour Party and of the Scottish Trade Union Congress at Edinburgh and Dunfermline.

MR. PHILLIP T. DODGE, president of the International Paper Co., and Mr. Allen Curtis, vice-president of the company and manager of the Department of Manufactures, are making a two-months' tour of papermaking countries in Europe, and will study industrial conditions generally.

MR. DODGE, who is also president of the Mergenthaler Linotype Machine Co., will visit the company's two large factories in England and Germany.

MR. A. M. LUKE, of the Vale Paper Works, Denny, N.B., has been on a visit to London

MR. S. H. M. KILLIK, J.P., was re-elected a director of the Colthrop Board and Paper Co., Ltd., recently. He has been a director of Cropper and Co. ever since its inauguration some thirty years or more ago.

Settlement of the Wages Dispute.

T.A. Members Return to Work on Modified Terms.

The welcome news was made public last Thursday that in the early hours of the morning of that day the dispute with regard to the wages of the Typographical Association had at last been settled.

The Terms of Agreement.

The following are the terms of the agreement:—

The Executive Council of the Typographical Association agree to recommend their members who are out to resume work immediately, accepting a first reduction at the rate of 12s. 6d. per week.

The Executive Council of the Typographical Association further undertake to ballot their members in England and Wales and Belfast with a recommendation to accept the following reductions in their rate of wages—viz., 3s. per week, to be effective immediately; a further 3s. per week on pay day in the week ending September 9th, 1922; a further 3s. per week on the pay day in the week ending November 11th, 1922; and 3s. 6d. per week on the pay day in the week ending May 5th, 1923, making a total reduction of 12s. 6d. per week.

It is agreed that wages shall be stabilised until December 31st, 1923, and no applications for reductions or increases shall be made in the rate of wages payable under the terms of the national agreement during that period.

The employers' organisations agree to recommend their members to re-instate their T.A. members in their former positions, and the T.A. agree not to expel members as a consequence of the latter remaining at or returning to work on the terms of the award of the Industrial Court.

Members of the T.A. now working at the old rates of wage shall not be brought within the provisions of this agreement until they have received fourteen days' notice from their employers.

The agreement is signed, on behalf of the Master Printers' Federation, by R. A. Austen-Leigh (president), A. E. Goodwin (secretary); on behalf of the Newspaper Society, by Sir James Owen (president) and F. L. Armstrong (secretary); and on behalf of the Typographical Association, by J. D. French (general president) and H. Skinner (general secretary).

Work Resumed.

It appears, at the time of writing, that wherever work is available T.A. members throughout the country have resumed their employment. Many T.A. members, including the full composing staffs of both the Nottingham morning newspapers resumed work immediately the settlement was made known. At Leeds, members of the T.A. concerned in the dispute, decided on Friday to return to work. It was also decided to leave each office chapel to make its own arrangements regarding the date for restarting, but the newspaper staffs resumed on Friday night. Members of the Manchester T.A., who have been on strike, presented themselves for employment at their respective works on Monday, and the majority made normal resumption.

Belfast newspapers were published on Monday for the first time for a month. They had been stopped in consequence of the strike.

The compositors at a printing establishment in the Leigh district went on strike on Monday on the ground that one of their number, Mr. J. W. Bibby, J.P., secretary of the Leigh Labour Party, was not among those who were reinstated. The other printing establishments were all working as usual.

The T.A. Ballot

Approval was given at the headquarters of the Typographical Association on Saturday to the form of ballot paper to be issued to the members in regard to the suggested new terms of settlement. The papers were to be distributed early this week, and it was expected that the result would be known at the end of this week. All the branches will send the returns of their voting to Manchester, where the result will be announced.

THE late Mr. Ambrose Clarke, of The Gables, Ullathorne road, Streatham Park, S.W., until recently a director of Spicer Brothers, Ltd., New Bridge-street, E.C., paper merchants, left £5,099.

Scottish Printers' Wages.

Reduction of the "Cut."

It will be remembered that after prolonged negotiations the Scottish printers agreed last May to a reduction in their wages of 15s. per week, following a prior reduction of 7s. 6d. per week. The reduction was to be made in three instalments of 5s. each—namely, on June 3rd, on September 9th, and on January 6th, 1923. In the event of any other union in the printing trade securing better terms the Scottish printers were to get equally favourable terms.

The lithographers refused to accept the reduction, and they were locked out. After they had been out for three weeks, an agreement was come to on a basis of a reduction of 12s. 6d. per week in instalments.

As these terms were more favourable than those secured by the printers, the latter's agreement thus came to be readjusted. That has accordingly been done as follows: The total reduction has been modified to one of 12s. 6d. per week. A first instalment of the reduction was made on June 3rd last; the reductions of 5s. each that were to be made on September 9th and January 6th are cancelled, and the following reductions are substituted: 2s. 6d. on December 30th, 2s. 6d. on January 6th, and 2s. 6d. on July 7th, 1923,—a total of 12s. 6d. The women's wages will be reduced by 1s. 6d. and 1s. respectively on these dates.

One of the clauses in the May agreement provided that in the event of no improvement in unemployment resulting from the reduction in wages, a conference would be held in March, 1923, to consider the state of unemployment, with a view to giving assistance to the unions, if necessary; or, if the state of trade warranted it, favourably considering an increase of wages. As the result of the modification of the agreement financially the employers declare themselves released from the provisions of this clause.

Monotype operators are to receive 5s. per week above the minimum wage of the district, and linotype operators 7s. 6d.

The foregoing applies to the book, jobbing, and general printing trade in Scotland, and not to daily newspapers. A reduction of 7s. 6d. per week has been intimated to the employees on daily newspapers in Aberdeen, Dundee, and Glasgow.

Waste Paper Fortune.

Mr. Joseph Phillips, managing director of Messrs. Phillips, Mills and Co., Ltd., waste paper merchants and contractors, who died on July 11th last, aged 77 years, left estate of the gross value of £136,078, with net personalty £85,508.

The testator left £300 to Mr. Hall, Government Inspector, H.M. Stationery Office, as a memento of their long-standing association; £100 to Mr. Wightman, Assistant Controller, H.M. Stationery Office, as a similar memento; £100 each to W. J. Alford and Edwin B. Fiske, his associates in the business of Messrs. Phillips, Mills and Co., Ltd.; £200 to his bank manager, Mr. Bishop; £100 each to Goodman Smith and Mr. Knight, managers, if still in the service of Messrs. Phillips, Mills and Co., Ltd., and not under notice; £50 each similarly to Arthur Whitney, waste paper foreman, Mr. Collett, foreman wheelwright, and Miss Slyfield, manageress of his waste paper business; £10 similarly to each of the forewomen; £5 each to Cutts, sen., C. Panks (packer), Frank Charrill, Charles Lunnis ("Sailor"), Jim Elliott, Arthur Lee, A. Holt, Walter Burden, and Charles Brook, if still in his service, or that of any company in which he held a controlling interest; £100 to his coachman, Tom Huntley, his groom, George Derrick, and his chauffeur, Clement Kinsey, and each other domestic servant of two years' service; and he directed that the Thames Paper Co., Ltd., of Purfleet, should have the option of the purchase of his interest in Messrs. Phillips, Mills and Co., Ltd.

THE Whitefriars Press and Club Institute, Tonbridge, will hold their annual athletic sports on Saturday, September 9th, in aid of the Printers' Pension Corporation. The events will be the Amateur Athletic Championships of Kent County and will cover 1,220 yards, 880 yards and one mile relay race.

The Bookbinder.

Notes and News.

The Ill-advised Strike.

The printers have returned after a strike which availed them very little and which created for others an irretrievable loss. As a matter of fact the wages lost by the printers themselves amounted to a sum far in excess of the extra they will receive by the slight amendment to the award. Incidentally the Typographical Association has created for itself a reputation which will long be remembered by the other unions. A more independent or more selfish attitude has rarely been assumed in trade unionism than that adopted by the T.A. throughout the events of recent weeks.

Some of the Hardships Caused.

Obviously the ill effect of the strike upon members of allied unions had no concern for the printers and any suffering caused by their action counted for nothing in their view. As a matter of fact there are not many general establishments in which feeders and female helpers were not thrown out of work with no opportunity of claiming unemployment pay. Binders and rulers were reduced to short time and much valuable work that should have been executed by union labour went to non-union houses. Had there been a principle at stake the fight might have been worth the consequences, but never was a strike called for a more unworthy object than this one for the repudiation of an arbitration court award which had been given at the signed request of the contending parties.

The State of Trade.

It is difficult in the circumstances to say whether conditions of trade in the commercial bookbinding industry are improved or otherwise. Certainly there was rather more business about than usual just when the strike began, but large orders were still scarce. For a few weeks binders in the provinces will be busy pulling up arrears. Publishers' binders are busy enough in many cases and there are definite signs of a revival in this branch of trade. With paper prices at a low level and no prospect of further reduction this year and with printers' and binders'

wages stabilised for a long period there is no further excuse for publishers waiting for a drop in prices.

Binders' Time Dockets.

It is regrettable to observe that no organised effort is being made to get time dockets accepted by the binders. Only those houses which are progressive enough to apply proper cost-finding methods to their production can appreciate the inconvenience caused and disorganisation created by the lack of progressive time records in the binding-room. Week after week the exact standing of other departments in the business is shown but it is frankly impossible to know whether binding jobs are being charged right, whether excess of time is lost or whether the room is profitable or otherwise. After a six months' trial at striking averages through the given times on finished jobs we have despaired of securing anything like a useful record until the times can be collected progressively, *i.e.*, daily. Meantime, through the very lack of knowledge of binding times and costs, cut-throat competition is going on throughout the country.

Ignorance of Costs.

We do not for one moment suggest that daily time dockets will suffice to put an end to reckless quoting, for they have not by any means accomplished this at the printing side of the trade. It must, however, be remembered that the majority of printers are not working by the Federation costing system, hence they hold their whole business in the same condition that costing establishments do their bookbinding department. It is quite certain that for lack of knowledge many progressive houses are selling and quoting their binding at a distinct loss without knowledge of the fact. Time dockets would at least put the best houses right, and it is a fact of common acceptance that the costing houses have been responsible for influencing other less efficient printers in their charges. Had it not been for this the trade of to-day would have been infinitely worse than it is.

The Line of Progress.

It is but reasonable to expect that in due course of time dockets in the bindery will lead to an improved state and more profitable nature of the industry. If dockets were agreed to to-morrow by all the binders in the country, not many establishments would take advantage of the concession, but there is not the shadow of a doubt that those who did would be those who could and would eventually treat their men the best in matters of remuneration.

Bookbinding Materials.

The market for materials remains steady, and no new reductions are to be recorded. There is no announcement yet as regards bookcloths, despite the expectancy which has long prevailed among consumers. That a reduction is overdue admits of no manner of doubt. The fact that a competitor has produced a range of bookcloths quite equal in quality to that manufactured by the combine and at a price which gives the consumer an advantage of $\frac{1}{2}$ d. per yard on small orders and 1d. per yard on 50 rolls should go some way toward forcing the issue.

Attractive Leather Prices.

Leather manufacturers are complaining of lack of business from bookbinders, despite the low prices which are now ruling. We have seen high quality basils offered at 7d. and 8d. per sq. ft., pig skins at 1s. 3d., and anglo-russias at 1s. 6d. Skivers are quoted from 4 $\frac{1}{2}$ d. to 6d. per sq. ft. and pastegrains are on offer at 5d. These are low figures, and the only reason the trade is not doing big buying is because it has not got the big business yet. Added to this is the fact that nobody can afford to carry stocks of pre-war bulk, there is not the loose capital available.

Strawboards.

Strawboards have eased to the tune of 10s. per ton, but many agents are not offering any advantage to buyers. To day's price for small orders from store is £11 per ton for thick board.

Technical Training for Binders and Warehousemen.

Gone for ever are the days when the working bookbinder could scoff at the idea of the apprentice learning something worth while about the binding craft by attending classes at a school. The value of the training in various arts and crafts available at certain technical schools and colleges is to-day accepted as unquestionable, and too often the problem that has to be solved is not whether it is worth while for the apprentice to attend a class, but whether it is possible to provide the training facilities desired. One remembers, for instance, the recent unsatisfactory state of affairs at the St. Bride Institute, where there has been a long waiting list of would-be students whom the limited resources of the school made it impossible to admit. The plentiful supply of students and the willingness of up-to-date employers to allow their apprentices both time and money for technical schooling are sufficient testimony to the practical utility of the instruction provided.

It is a fact that the apprentice who attends classes can have many of his difficulties smoothed away and can quickly and thoroughly gain information which could only be slowly and imperfectly acquired in the course of workshop routine. Indeed,

there are matters in which a well-trained student can give points to even a veteran of the trade, for it often happens that the latter, although he may know what has to be done, does not always know why he has to do it—and the understanding of whys and wherefores often saves a lot of trouble. Many a young craftsman, moreover, owes much of his enthusiasm and consequent progress in his craft to the inspiration gained from the instructor whose classes he attended.

Good Instructional Equipment Essential.

In regard to instruction in bookbinding there has perhaps in the past been some ground for the complaint that the instruction given should have been more practical. Thoroughly practical instruction can be given only where there are tools, machinery and materials available to enable work to be done under conditions approaching those which obtain in the trade workshop. The St. Bride binding classes, we believe, have been crippled for lack of the proper necessities in this respect. It is welcome news, however, that when the St. Bride Printing School activities are transferred to the new Institution at Stamford

Street—the London School of Printing and Kindred Trades—this handicap will be removed.

The new school, we understand, is to be equipped with the latest and best machinery for modern bookbinding and associated crafts. An innovation of special interest will be the fact that ruling will be included amongst the branches of the trade in which instruction is afforded. The teaching will be given by well qualified practical men, and the classes run as nearly as possible on workshop lines, the students being made acquainted with commercial practice and not merely enabled to turn out special work to meet the tests of connoisseurs. Another important feature, we notice, is that the classes in practical, as well as theoretical, bindery work will be available in the evening to meet the requirements of journeymen and others who cannot make it convenient to attend during the day.

There will, of course, be day-time classes for apprentices. St. Bride has had some 500 apprentices attending classes in composing, machine, and litho subjects, the majority of whom had their fees paid by their employers, who also allowed them the necessary time off during business hours.

There is every reason to hope that there will be a large number of bindery apprentices receiving instruction at the new school under similar conditions.

A Comprehensive Curriculum.

The course for apprentices, as already drafted, covers a period of five years, and has been designed to include as far as possible every section of the bindery work, and warehouse" is as follows:—

The curriculum for "commercial binding
First Year.—Historical; applied scholastic education; technical terms and general knowledge; handling and care of paper; tying up and marking reams; paper terminology; mill numbers; sizes, sub-divisions of paper; counting; gathering; interleaving; collating; wire-stitching; holing and eye-letting; strip gumming; section and map folding; methods of obtaining the correct setting for folding to print; tools and appliances; materials; technical terms in binding; board lining and case making; joint making; covering magazine and catalogue work.

Second Year.—Classes of paper; selecting and keeping stock; relative weights; giving out paper for different departments and what percentage of overs to allow; thread stitching by hand and machine; millboards and strawboards; flush and turned in binding; shorthand notebooks; tradesman's pass books; writing and blotting pad making; pocket book making; manuscript books; parcel books; bill books and common half-bound work; forwarding and cloth case making; round cornering, bevel edging and pattern book work.

Third Year.—Judging paper; making up and sewing; sewing machines suitable for different bindings; numbering; cutting and squaring flat paper; book cutting; fitting and adjusting knives to self clamp and screw platen machines; rounding backing; paring by hand and machine; reading book library style; account book half-extra quality; leaf and skeleton guard books; transfer case making; portfolios; board weight for quirage; forel and vellum tucks; turned edge leather pass books; construction and feeding ruling machine; cross lines, simple feint and down work; fixing straps, handles, locks, keys and shoes.

Fourth Year.—Preparation of copy; dissection posit; inks and their suitability for different paper surfaces; hand pen machine; automatic pen striker; disc machine; leather manufacture; dressing, staining, dyeing, graining, marbling; preparation of gum; colour grinding; various styles of marbling; book-edge gilding; loose-leaf ledger binding; extra style account bookwork; loose curtain cover making; vellum projections and tabbing; finisher's plant and use of tools; blind finishing; blind blocking; simple gold finishing; index backing; cutting and stamping one and two letter indexes.

Fifth Year.—Single and double laced bander work; top and bottom laced bands; single russian underbands; flexible and open back letterpress binding; fancy leather work; vowel indices and proportionate indices; index through; indexing to scale; scales; preparation of porous leathers and the different fillers required; heat testing; lettering; tooling vellum; leathers, velvet, cloth; blocking; ink gold, dutch metal, coloured foils, aluminium leaf; cards; leather; rexines fabrics; cost finding, estimating, departmental management; hygiene; bindery Factory Acts.

This seems to us a very comprehensive outline of study, and will doubtless attract many progressive bindery workers to the new printing school when it opens its doors for enrolment on the 18th of next month.

U.S. and Elaborate Bindings.

"The London binders," says the *New York Publishers' Weekly*, "are just learning that the demand for gorgeous bindings by 'rich Americans' is on the decline. They can hardly believe that American buyers have turned discriminating collectors all at once. They do not apparently realise that these costly books were sold by agents and dealers who are now giving them little attention and are concentrating upon genuinely rare books and manuscripts for which there is a quicker and safer market.

THE export duty on cardboard (cartonul asfaltat) from Roumania has been fixed at 3 per cent. *ad valorem* by a decision dated July 1st.

Human Skin for Bookbinding.

The varieties of materials that have been employed for the covering of books are beyond enumeration, but of all the strange things that have been resorted to surely one of the weirdest is the occasionally heard of leather made out of human skin. A German writer has been to the pains of collecting a number of instances where this material has been used for bookbinding, and his collection (as cited in the *American Inland Printer*) make rather interesting reading.

Of the historical writer, Granier de Cassagnac (1806-1880), we know that he owned a copy of the "Constitution de la République Française de l'an I., which was bound in human skin, another copy of the same work, also bound in human skin, is still in the Museum Carnavalet, at Paris. It is to be found in the so-called Bastille Room (No. 12) of the museum. In 1872 there was sold at the auction rooms of Drouot (Paris) a "Constitution of 1791," similarly bound. In 1878 a Parisian book dealer sold a copy of Eugene Sue's "Mysteries of Paris," in which was a label giving the information that "the binding is that of the skin of a woman and was done by M. Bautaille in the year 1874." Without such an explanation one might have taken the binding material for ordinary calfskin.

The sale of a noted French private library in 1913 caused much talk, because among the books disposed of were two which were bound with woman's skin. That they were highly paid for goes without saying. The library was founded by one M. Chevany, who had a fine nose for spicy specialties. The title of one of the books was (translated) "The Good that Has been Told About Woman," and bore the inscription, "Bound in woman's skin, testified to by three witnesses." The other a copy of Anacreon's Poems, printed on Chinese paper, was announced as "bound in the skin of a negress."

Not seldom was the skin of executed murderers used for bookbinding. A servant at the University of Anatomy robbed the corpse of Pranzini of a part of the skin, to make therefrom two visiting card cases. The deed was discovered and the authorities caused both cases to be destroyed. On the other hand, they gave permission that the skin of the murderer Campi be utilised for bookbinding.

Distinctly recognisable is the Sadistic trait that is shown by corpse mutilators in such cases where the skin of a celebrated person is taken to bind books. For instance, that of the poet, Jacques Delille, whose notable work was the translation of "Georgica." One copy of it was bound in his own skin. One of his ardent admirers, A. Leroy, a student of law, stole into the room where the body of the poet was to be embalmed and cut two strips of skin from it. It has even happened that men of this perverted nature would order that after death skin should be cut from their bodies, to be used in binding copies of their own books. At least this is what is related of Allemand Kauffmann, who had compiled a book entitled, "Two Hundred Celebrated Men," which had received scant public notice until there was found in his will the injunction that one copy should be bound in his skin. Two other books in his library were also to have the same binding, one Lesage's "Gil Blas" and the other "Episodes in the Lives of Insects."

Professor August Reverdin, of Geneva, is said to have been testamentarily given the skin of one of his friends, together with a small sum of money. The will did not say what was to be done with the skin. The heir contented himself with cutting a piece from the breast about as large as a hand. But in all Geneva not one could be found who would tan it for him. After some search some one in Anney announced a willingness to undertake the job. Professor Reverdin, however, when the tanned product, a lusterless, oily, rather dark piece of leather, was returned to him, could not master his revulsion, and begged a friend, Marcellin Pellet, to take it from him. The latter accepted it and had a copy of the "Almanac of the Prisoners under Robespierre" bound with it. At the end of the nineteenth century we learn of a similar testamentary gift, this time from a woman. It was the Countess St. Agnes who gave to the astronomer, Camille Flammarion, the skin of her beautiful shoulders to be used for bookbinding. He had a copy of a new book that just then appeared, "Heaven and Earth," bound with it.

Fortune Goes Begging for Binder

An interesting case has occurred in the United States in which a missing bookbinder figures as heir to a fortune. The United Typothetae of America is making an extensive search for William Weldon, bookbinder, to whom it is desired to convey news of the bequest.

The U.T.A. *Weekly Letter* quotes the following letter from the firm of Mayson and Johnson, attorneys, of Atlanta, Ga.: "Some years ago there lived in Atlanta a William Weldon, who was by trade a ruler or bookbinder. He left there in 1920, going to St. Augustine, Fla., and while there resided at the Craddock House. He left there and went to Tallahassee, Fla., where we have been informed he was employed by Messrs. Appleyard and Co., bookbinders. He has left there and we are unable to find any further trace of him. A bequest of a considerable amount was left to Mr. William Weldon by his brother, Thomas Hillock Weldon, who died in Bermuda on March 22nd of this year. We are very anxious to get in touch with Mr. William Weldon and put him in possession of the information regarding the estate left him by his deceased brother. If you can get this information to Mr. Weldon and have him communicate with us we are sure he will be very grateful to you."

Binder Suspected of Forgery.

A press for the manufacture of spurious currency notes, it is alleged, was found in the possession of Jacob Klinger, a bookbinder, of Cambridge-terrace, who was brought up on remand at the Guildhall on Monday. The charge was that of being a suspected person frequenting Houndsditch, for the purpose of committing a felony. On the application of the police, who said the Treasury proposed to take up the matter, a further remand was granted, no bail being allowed.

It was alleged that on the afternoon of August 12th two detectives saw Klinger throwing away pieces of paper which he had torn up, and these were picked up and found to be transfers of £1 currency notes. Klinger disappeared, but on the 15th he was seen again with a suit-case about to enter a taxi-cab. He was arrested, and the bag was found to contain a press, supposed to be for the purpose of manufacturing spurious currency notes, some chemicals, and paper cut in strips. Similar articles were found later at his address.

Charles Parker, superintendent of the Stamping Department at Somerset House, said his department had control of the supply of all British currency notes. He had experimented with the chemicals mentioned, and found it was possible with a mixture of them to make transfers of genuine notes, and it would be possible to multiply the notes by means of a press and the chemicals. On public grounds he should prefer to say nothing further on this occasion.

Old Foil in the Bindery.

When hot-stamping with white, aluminum or bronze foil considerable trouble is sometimes experienced in getting the foil to stick properly, says a writer in the *American Printer*. Especially is this true of foil which has been on hand for some time. Even though it be sized on one side, old foil seldom gives satisfactory results.

If the design is stamped on cloth, such as book covers, etc., the article may be covered with a thin solution of prepared size. Although size is best for the white foil, gilding powder will prove more useful in connection with aluminum and foils of other colours. Foil which has heretofore been deemed unfit for use on account of its age may, in this manner, be utilised. Of course, the best results depend a great deal on the skill of the operator, but experience will show when and when not to use size or powder on the different kinds of foil. In several cases the writer had to resort to powder in hot-stamping with the coloured foils. Aluminum will hold its colours indefinitely, but imitation gold and coloured foils tarnish in a year or less.

DIVIDENDS AND REPORTS.

HUDSON AND KEARNS.—The report of Hudson and Kearns' printing and stationery business, which became a public company in 1920, indicates that the state of trade during the past financial year has not been sufficiently good to warrant the payment of any dividend on the 8 per cent. preference shares. It is considered best to conserve the financial resources, but there are signs of gradually improving trade, so that the "postponement is of a very temporary nature."

NEW COMPANIES.

PICTURESCOPE, LTD.—Capital, £1,000, in £1 shares; inventors, designers, chemists, investigators, patentees, licensees, licensors or concessionaires, and to develop or exploit any invention or discovery connected with the graphic arts, printing, photogravure, colotype photography, cinematography, photographic and mechanical colour printing, sensitive photographic materials, optics, etc. Private company. First directors: J. E. Thornton and W. L. Bayley. Registered office: 4-10, Chenies-street, W.C.1.

BRENTANO'S LTD.—Capital, £2,500, in £1 shares; proprietors and publishers of newspapers, journals, magazines and books, printers, stationers, advertising agents, etc. Private company. First directors: A. Brentano and C. H. Daniels.

LETTER FILES, LTD.—Capital £500, in £1 shares; to take over the business of letter file and office sundries makers, carried on by W. H. Smith and A. J. Smith. Private company. Subscribers: G. A. Ashcroft and Miss D. E. Rushby. Directors: G. H. Sculthorp, W. H. Smith, A. J. Smith and G. R. Sculthorp.

ST. STEPHENS'S ADVERTISING AND GENERAL AGENCY, LTD.—Capital £1,000, in 1s. shares. Private company. Subscribers: E. R. B. Graham and A. Maclean. Subscribers appoint first directors. Registered office: 67, Newmarket-street, Oxford-street, W.1.

BRUCE (BATLEY), LTD.—Capital £500, in £1 shares; to carry on at Batley or elsewhere in the United Kingdom, the business of manufacturers, importers and exporters of and dealers in dyes and dyewares, paper and paper goods, etc. Private company. First directors: W. E. Bruce, Mrs. A. Bruce, W. T. Stone and F. J. Mann. Registered office: Wheatcroft, Batley, Yorks.

HENRY WILLS, LTD.—Capital £1,000, in £1 shares; manufacturers of and dealers in paper and articles made from paper or pulp and materials used in the manufacture or treatment of paper, including cardboard, railway and other tickets, millboards and wall and ceiling papers; stationers, lithographers, publishers and printers; manufacturers of and dealers in cardboard and other boxes, newspapers, periodicals, playing cards and fancy

goods, paints, varnishes, printing inks, etc. Private company. First directors: W. Bond and W. M. Cox. Registered office: 37, Walbrook, E.C.

BARNETT, ISAACS AND CO., LTD.—Capital £10,000, in £1 shares (6,000 cum. pref. and 4,000 ordinary); to adopt an agreement with Barnett, Isaacs and Co., and to carry on the business of warehousemen, manufacturers, importers and exporters of fancy goods, prints, music and books, printers and publishers of prints, etc. Private company. First directors: J. Barnett, J. Isaacs, L. Zigmund and M. Davis. Registered office: 20, High-street, Stoke Newington, N.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory.)

BURY ST. EDMUNDS PRINTING AND PUBLISHING Co., LTD.—Particulars of £5,000 debentures, authorised June 1st, 1922, charged on the company's undertaking and property, present and future; whole amount issued.

BURY ST. EDMUNDS PRINTING AND PUBLISHING Co., LTD.—Satisfaction in full on July 28th, 1922, of debentures dated May 12th, June 19th, September 18th, and October 13th, 1903, and March 11th, 1904, securing £2,000.

G. F. WILSON AND Co., LTD. (printers, lithographers, stationers, etc.)—Particulars of £2,000 debentures, authorised July 27th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; whole amount issued. Also mortgage of even date to secure all moneys due or to become due from company to L.J.C. and Midland Bank, charged on certain property in Southampton.

CHAS. DAVY AND Co., LTD. (printers and stationers).—(a) Satisfaction in full on June 20th, 1922, of debenture dated February 19th, 1912, securing £950, and (b) filed particulars of £6,000 debentures authorised June 14th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; whole amount issued.

MIDLAND UNITED NEWSPAPERS, LTD.—Two mortgages dated July 25th, 1922, to secure £2,400 each, charged on 5, 6, and 7, and 3A and 4, Priory-street, Dudley, and works in rear of Nos. 3A and 4. Holders: Dudley and District Benefit Building Society.

BANKRUPTCIES, etc.

RE MAXIMILIAN DE SHEYDER SHOTTLAND, 1, Adam street, Adelphi, W.C.—The public examination of this debtor, who has carried on various publications, was held before Mr. Registrar Francke at the London Bankruptcy Court, on August 15th, the accounts showing liabilities £4,322 and assets nil. In reply to Mr. Warren, official receiver, the debtor said he was a Pole and came to this country in 1905. During the next nine years he was employed by various newspaper companies in London. In January, 1914, he, in partnership with another person, purchased for £2,000 a magazine called the *Tourist*; his partner retired in the following June, and witness taking over the assets and liabilities, continued the publication at 353, Strand, W.C., until August, 1914, when the landlord distrained, and the business came to an end. In June or July, 1915, witness took premises at 26, St. James's-street, S.W., and commenced a periodical called the *Anglo-Russian Trades Journal*, but as it was a failure, it was discontinued after a month or two. Then in October, 1915, he endeavoured to exploit an anti-aircraft bullet which he had invented. He had also carried on business as an art dealer, and in March, 1916, transferred that business to the "Adelphi Art Galleries, Ltd." His failure was caused by excess of expenses over income, and to the

collapse of the *Tourist* magazine on the outbreak of war. The examination was concluded.

RE GEORGE CLARK, papermakers' agent late of 39, Victoria-street, S.W.—The adjourned first meeting of creditors herein was held on August 18th, before Mr. W. P. Bowyer, senior official receiver, at the London Bankruptcy Court. The debtor formerly traded in partnership at Byron House, Fleet-street, E.C., as "Winten and Clark," papermakers' agents, but the business was closed down in 1919, when an accountant was appointed to realise the assets, discharge the liabilities, and distribute the balance between the late partners. The accountant's report has yet to be received. The chairman reported that a statement of affairs had now been lodged by the debtor, showing total liabilities £1,846 (unsecured £1,021) and assets valued at sufficient to show a surplus of £147 after payment of all debts. He (official receiver) considered that the assets were over valued, and he was of opinion that the statement of affairs would have to be amended. A resolution was passed for Mr. Cyril Temple (Temple, Gothard and Co.), accountant, 4-5-6, King-street, Cheapside, E.C., to act as trustee, and for the official receiver to apply in due course for an order of adjudication in bankruptcy. Messrs. Winten, Shaw and Hammond were elected to serve as a committee of inspection, and the fidelity bond to be given by the trustee was fixed at £300.

RE W. A. FIELD, deceased, Wholesale Fancy Stationer, 35, Selhurst-road, South Norwood.—The creditors herein met on August 21st, at the London Bankruptcy Court, under an administration order recently made against the estate. Mr. W. P. Bowyer, senior official receiver, reported that Mrs. Field, the widow, had lodged a statement of affairs showing unsecured liabilities, £2,961; a fully secured debt, £220 (security valued at £300); and preferential claims, £93, against assets valued at £438, and consisting of stock (cost £1,000), to realise £250; fixtures, £25; good book debts, £83; and the estimated surplus of £80 from the security held by the fully secured creditor. It appeared that the deceased debtor commenced business 28 years ago, and that the failure was attributed to the expenses of a long illness and general slackness of trade. Mr. M. H. Moody (Muir, Moody and Co.), I.A., 20, Newgate-street, E.C., was elected to wind up the estate with the assistance of the following committee of inspection, viz., Messrs. Johnston, Hall, and Morton.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

C. F. Moore and A. Marriott, under the style of Moore and Marriott, Barker Gate, Nottingham, wholesale paper merchants.

A. A. Brown and A. T. Johnson, ink manufacturers, 82, 84, and 86, Duke-street, Liverpool, under the style of Brown, Johnson and Co.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

Luis Tulio Bonifoux, *The Times*, Printing House-square, London, E.C., August 18th. Public examination, November 29, at Bankruptcy buildings, Carey-street.

AMALGAMATED PRESS.—A resolution will be submitted to a meeting of the contributories of the Amalgamated Press (in liquidation) to be held on 25th August, authorising the liquidator to divide in specie among the Ordinary shareholders 679,428 fully-paid Preference shares for 10s. each in the Imperial Paper Mills, and 2,038,284 fully-paid Preference shares of \$1 each in the Anglo-Newfoundland Development Company in proportion to their holdings.

Paper Standardisation.

The work already under way, and plans under consideration for the standardisation of paper were described at a two-day conference at Washington between Dr. S. W. Stratton, Director of the Bureau of Standards, and Mr. F. A. Curtis, chief of the Paper Section of the Bureau, and the Advisory Committee from the paper industry for the Paper Section of the Bureau of Standards.

The conference outlined some of the great problems faced in any effort to formulate standards of weights, sizes, colours and the like, and it was evident that the work already done, important though it has been, is only the first step in a long and highly technical programme, says the American Paper and Pulp Association.

Some definite accomplishments resulted, however, through the conference between the Bureau officials and the representative manufacturers, not the least being the decision to name sub-committees of manufacturers to consider questions relative to standardisation in the various grades. Members of these committees would be men who were particularly conversant with special branches of the industry.

On this subject, Mr. W. N. Caldwell has this to say: There is one thing which has come out of the war, which I trust is not only here to stay but will develop further in the future and that is a greater simplification and standardisation of paper products. That was an end towards which I earnestly looked and am glad that some of the mills have had the foresight to take definite action in this regard. There always were too many lines of paper with endless duplication and with insignificant names attached to grades. If definite grades of paper could now be established by all mills and adhered to with names signifying a definite grade and finish and all these grades could be kept as few as possible, the industry could not help but be benefited considerably. The old practice of making different lines of paper with different dandies just to suit the passing whim of some customer was always an expensive procedure which only complicated manufacturing and merchandising, and for which there never was an adequate return. And so I feel that any effort which has been made toward the simplification of the different grades of paper is a step in the right direction.

No Paper "Dumping" from Europe

The Customs Service of the Treasury Department at Washington which has been making exhaustive studies into the "dumping" on the American market of news-print paper, pulp and kraft paper from German, Canadian and Scandinavian countries has completed its work on all of the investigations except the dumping of news-print on the American market from Canada.

Reports which have been in the hands of the customs officials for some time have now been thoroughly analysed and it has been found that there is no "dumping" of either news-print paper, pulp nor kraft paper from Germany nor the Scandinavian countries, nor is there any dumping of either pulp or kraft from Canada. This leaves the customs officials with only one paper case pending and that is as to whether or not there is dumping of news-print paper from Canada.

Preliminary reports which are now in the hands of the officials show that there is no such dumping, although no official notification has yet been made on the latter point.

Lendrum, Ltd.

Another pleasant social function is being arranged by the staff of Lendrum, Ltd., for Friday, August 25th, at the Hotel Cecil. It will be remembered that in February last Mr. R. E. Cook, who for some years was in the export department at St. Paul's Churchyard, left to take up an appointment in the Yokohama office of the company. On September 1st next Miss Cicely Richards is to sail for Japan to join her fiancee, and their marriage will take place on her arrival.

In order to wish Miss Richards *bon voyage*, the happy idea was suggested of holding a social evening on the 25th. The programme includes a reception, dancing, supper, and music—and amusing stunts. It is hoped to make the party a happy memory for Miss Richards during the years she will remain abroad. Friends who wish to attend can obtain all particulars from Mr. A. P. Jackson, 28, Maybury Mansions, New Cavendish street, London, W.1.

Post Office Orders and Cheques should be made payable to the Publishers, STONHILL & GILLIS, 58, Shoe Lane, London, E.C.4.

Sittingbourne Paper Mills.

Sports Meeting.

An athletic sports meeting, in connection with the Sittingbourne Paper Mills, was held on Aug. 12, on the new Sports Ground, and was largely attended. Rain fell throughout the proceedings, but the programme was carried through in its entirety. Mr. Frank Lloyd, the head of the firm of Edward Lloyd, Ltd., was present and distributed the prizes, and he was accompanied by Mr. Harry Lloyd, Mr. Percy Denson, Mr. Gerald Denson, Mr. A. J. Evans. The principal events resulted as follows:—100 yds. handicap: 1, T. Hadler; 2, J. Furner; 3, A. Brown. One mile handicap: 1, A. Clark; 2, A. Black; 3, E. Hada-way. 120 yds. hurdles: 1, W. Gee; 2, T. Goodyer; 3, E. T. Croucher. One lap veterans' race (over 45 years): 1, T. Hadler; 2, A. Jackson; 3, E. Anderson. Quarter-mile handicap: 1, Wilfred Ball; 2, W. Gee; 3, E. Clark. A big event was the tug-of-war for the Mascord Shield, given by Mr. Mascord (United Newspapers, Ltd.), for competition between the London and the Sittingbourne firms. The shield was won in 1914 by the Sittingbourne Paper Mills, and it had not been competed for until Saturday. The Londoners brought down a good team, and they proved the winners by two pulls to one. The inter-departmental tug-of-war was won by the engineers (Sittingbourne), who beat the London transport department. The inter-departmental relay race was won by the engineers. A marathon race, 8½ miles, was won by A. Black in the good time of 55 mins. 27 secs., E. Plowman was 2nd, 3 minutes later, and R. Rossiter 3rd.

Preserving Newspapers.

How to so "pickle" newspapers that they can be preserved indefinitely in the public libraries is a problem which has apparently been solved. Eight years of experimenting, participated in by three big New York newspapers at a cost of £1,000 a year each, under the supervision of the New York Public Library, has taught librarians how to preserve for posterity newspaper files. The solution seems simple, being the mounting of each newspaper sheet between two sheets of thin Japanese tissue, shutting the air from the original sheet, reducing its legibility but slightly, and strengthening the page.

When newspapers were printed on rag stock, they were tough and durable, but with the broader circulation of newspapers and the introduction of wood pulp, the paper became brittle upon exposure. Bound volumes of the mounted pages are now in constant daily use, and are free from the wear and tear which destroyed the untreated newspapers.

The New York experiments have been so successful that a big Chicago newspaper has sent representatives to New York to study and adopt the practice for use there. The first investigation was made in Boston, and the library there tried to persuade the newspapers to print library editions on an extra paper, but the expense was too great. This is now done by a London paper, and was tried by a Brooklyn paper, but the cost was prohibitive. In the New York experiments silk was first

used, but the Japanese tissue was found the best for the purpose as it hermetically sealed the newspaper pages from the air. Shellacs, varnishes and other substances were tried, with little success. Under the method now in use the operator wets a glass or steel-covered table, lays down a sheet of tissue with the pasting machine, rice paste is put on, then in turn the newspaper page, paste and tissue, when the page is dried and pressed under a gas-heated mangle.

Anything in Colour!

Better, Quicker & Cheaper than can usually be obtained.

PICTORIAL LITHOGRAPHED POSTERS

(in sheets up to 44 by 64 inches)
For Shipping, Railways, Pleasure Resort Announcements, Cinemas, etc.
We do the Job Complete, or will be pleased to assist you with any part of it.

We also undertake every kind of Colour Printing, as Showcards, Labels, Wrappers, Coloured Supplements, Magazine Insets, Children's Picture Books, Picture Post Cards, View Books, etc.

Bookbinding Machines.

A British patent, in the name of Mr. J. Murray, relates to a rounding and jointing machine for shaping the backs of books in bookbinding, in which a jointing roller is moved in an arcuate path conforming to, and with pressure upon, a rounded back of a book by means of a mechanically-operated linkage above and out of the path of the book. Prior to the action of the jointing roller, the back of the book is rounded by rounding rollers mounted in recesses in clamping heads which grip the books during the jointing operation, these rollers being rotated and moved towards the book so that they project beyond the faces of the heads. Means are provided for conveying books into the machine, for elevating them one by one from the conveyor to a position between the clamping heads where they are held with sides vertical and back horizontal during the

by spring action, and the lengths of the links A^4 is varied, so as to raise or lower the roller B^{11} , by a double screw coupling A^3 rotated by a rack A^2 operated by a lever D^2 controlled by a second cam on the shaft C^4 . The back of the book is rounded prior to the action of the roller B^{11} by rollers J, J' mounted with their axes parallel to the sides of the book in recesses in heads E, E' which clamp the book during the jointing operation of the roller B^{11} . The rollers J, J' may be adapted to deal with

rounding and jointing operations, and for discharging them from the machine on the conclusion of these operations. Means are also provided to adjust the machines for books of varying thickness so that the central plane of the book lies in the same position for all thicknesses. In the form shown, the jointing roller B^{11} , Fig. 1, is mounted on side links B^{10} moved by adjustable crank or eccentric devices in the form of eccentric pins B^6, B^7 on rotary discs B^3, B^4, B^5 mounted on horizontal shafts B, B^1, B^2 . The links B^{10} are pivoted to the pins B^7 and the pins B^6, B^8 are connected by horizontal links B^{20}, B^9 to the pins B^7 and intermediate points on the links B^{10} respectively. The discs B^3, B^4 are rotated by the engagement of pinions on the shafts B, B^1 with a rack quadrant C^2 reciprocated by a rod C^3 pivoted to it and carrying a roller operated by a cam on the driving shaft C^4 of the machine. The path of the roller B^{11} may be adjusted by radial adjustment of some or all of the pins B^6, B^7 on the discs B^3, B^4, B^5 , each pin being mounted on a block which slides radially on the disc, which is adjusted by a spindle mounted on the disc having worm engagement with the block, and which is locked in position by a screw-threaded V-shaped wedge engaging a corresponding recess in the block. The shafts B, B^1, B^2 and quadrant C^2 are mounted in side frames A^6 supported by pivoted links A^4, A^5 on a bracket A adjustable horizontally on the frame A^2 of the machine so as to adjust the central position of the roller B^{11} to the centre of the book. The links A^4 are held in position

books of different substance and are moved into contact with the book by endways movement of bars J^2 , Fig. 8, provided with studs engaging diagonal slots in slide blocks J^3 carrying the rollers J, J' , this movement being produced from a spindle J^8 by means of cranks J^7 and links J^9 , springs J^{12} being interposed between the sliders J^{10} on the links J^9 and bosses J^{11} on the bars J^2 so that the rollers J, J' are forced against the books by spring action. The spindle J^8 is linked to a shaft K^2 reciprocating by a rack controlled by a cam on the shaft C^4 . The rollers J, J' are rotated by the engagement of pinions on their spindles with rack bars J^{18} , these bars J^{18} having second racks engaged by pinions K on a shaft K^2 rotated by a rack controlled by a cam on the shaft C^4 . On the conclusion of this rounding operation, the books are gripped between the heads E, E' by the motion of the head E' towards the stationary head E , this motion being produced by a toggle linkage E^2 acting between the head E' and an adjustable anchor piece E^3 and operated by a link E^7 comprising a spring buffer device which gives under excess pressure, the lower end of the link E^7 being connected to a lever E^8 operated by a cam on the shaft C^4 . The books B^{10} are fed into the machine by a conveyor device comprising a series of fixed horizontal rails G^3 , on which the books rest, and a series of horizontal rails G moved approximately elliptically and positioned so that they lift the books B^{10} from, and move them forward on, the rails G^3 during part of their motion. The horizontal motion of the

rails G is produced by a lever G^6 connected to the ends of the rails, and having a tappet roller G^7 operated by a cam on the shaft C^4 , whilst the vertical motion of the rails G is produced by cranks G^4

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!* The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E. P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES :

- | | |
|---|--|
| <p>1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.</p> <p>2.—It occupies a space of only six feet on the run, and is quite noiseless.</p> <p>3.—The power required is such a small amount that it can be driven from any existing shafting.</p> | <p>4.—Centres of any kind or width can be worked on the machine.</p> <p>5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.</p> <p>6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.</p> |

The First All-Slug Periodical Appears.

Though not New in America the All-Slug Method in the Achievement Here Recorded is a Notable Innovation for this Country—and Europe.

On the day on which our last issue was published, August 24th, there appeared also another London periodical which, because of the unusual manner of its production is arousing considerable interest amongst printers. The periodical to which we refer is the *Near East*, and the printery to whose credit the innovation stands is the St. Clement's Press, Portugal-street, London, W.C.2—the managing director of which is Mr. George Eaton Hart, that veteran of the printing trade who, despite his years, is still in the running with the most go-ahead young hustlers of the craft.

St. Clement's Press has often by its resourcefulness helped a newspaper proprietor out of a tight fix, and the present achievement places one more such good deed to its account. The *Near East*, we understand, suddenly found itself in the alarming predicament of having the whole of its customary printing facilities—standing advertisements included—cut off, with only a few working days available before the date of publication. Inquiry was made of St. Clement's Press, with the result that copy for the periodical (which runs to 40 pages, 13½ in. by 9 in.) was at the printers' a little before mid-day on the Saturday, and the whole of the composition was completed by the Tuesday evening, *i. e.*, in about 15 hours of working time. The most interesting point, however, about the job is the fact that this periodical—as we have ascertained by inspecting forms—was set up throughout its 40 pages with scarcely a particle of movable type. We say "scarcely," for on examining the forms we spotted an advertisement block in which it had been necessary to alter a two-figure number, and, as it happened, a couple of figures in moveable type had been let into the block. One other case of an advertisement with a few pieces of moveable type was pointed out. These exceptions, however, are hardly worth mentioning in view of the fact that the forms were, to all intents and purposes, absolutely all-slug.

The Display Difficulty Overcome.

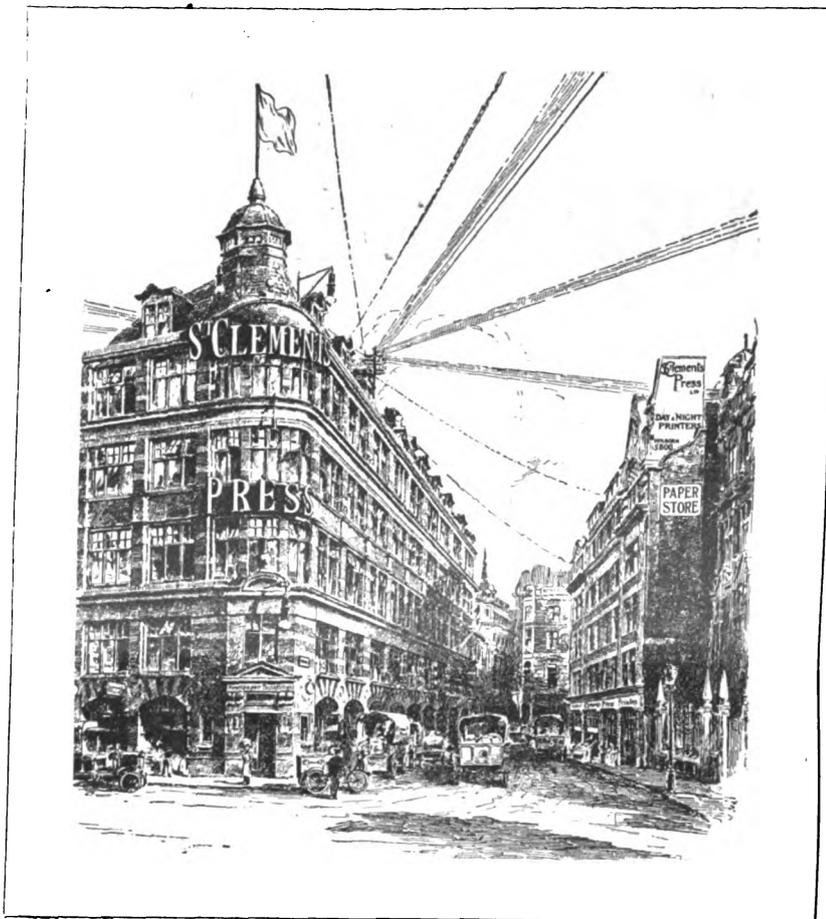

The chief feature of innovation was the use of the Ludlow typesetter to supply the principal display lines; and as about 12 of the 40 pages consisted of miscellaneous displayed advertisements, the successful accomplishment of the task says much for mechanical composition. The Ludlow's sister machine the Elrod Rule-Caster, was responsible for all rules and borders, including column rules. All the straightforward text matter was done on the Linotype, whilst use was made of the Intertype for the whole of the smaller display lines. From our own inspection of the printed periodical we can vouch for the excellence of the result. We doubt if any British printer glancing over those 40 pages, with their profusion of well-

displayed advertisements, would notice anything to raise the suspicion that the customary quota of hand composition had been dispensed with.

In a chat we had the other day with Mr. George Eaton Hart, we found him highly

The Man Behind the Innovation.

On visiting America last year, it will be remembered, Mr. Hart was much impressed to see what great progress had been made in the adoption of mechanical composition. He was especially surprised to find some offices

St. Clement's Press, as Approached from Kingsway.

gratified with this proof of St. Clement's capacities in the way of machine composition. He maintains (and, we think, rightly), that this is the first time in this country—indeed, in Europe—that a substantial periodical has been produced, in ordinary commercial style and under ordinary commercial conditions, on the all-slug basis.

practically destitute of moveable type. Since his return to London he has been engaged in systematically organising the all-slug resources of St. Clement's Press—with the result recorded above.

Not every printery, however, even were it endowed with the most extensive resources in the way of slug-casting plant, would be able

A constant supply of clean and properly mixed metal

In use in all Countries—over 200 in the United Kingdom alone.

largely contributes to the general efficiency of the composing machine and stereotyping departments, yet costs but little to obtain where

THE **JM** AUTOMATIC METAL FURNACE

is employed. It is the opinion of users that this is the most economical and effective furnace ever constructed for printers. Write for particulars of its special features and operation.

 LONDON.

to rival this neat little exploit by St. Clement's. Mr. George Eaton Hart's printery has some rather special advantages. It has, in the first place, Mr. George Eaton Hart—and not every printing office contains a man whose progress from journeyman to foreman and from foreman to small manager and from small manager to managing director of a big concern has given proof of so much energy, enterprise and ability. In visiting Mr. Hart's office, one notices hanging on the wall a framed photograph of the late Viscount Northcliffe. This was given to Mr. Hart by Lord Northcliffe himself, who inscribed thereon his autograph together with the following words: "To one of the biggest and best printers." And Lord Northcliffe was not a bad judge of printers.

Then St. Clement's Press has a staff brought up in an atmosphere redolent of technical efficiency. At this printing office technical training is always insisted upon as a *sine qua non*. Mr. Hart gained his own technical education under considerable difficulties, and appreciates its value. Accordingly he stresses the need of it for his employees, with the result that his chief assistants in all departments—even foremen, clickers, etc., in the works—are technical school graduates, many of them being honours students. And when any sort of revolution in printing methods is attempted, the house that is most likely to be successful is the one with staffs that have had a sound technical education and that reflect the enthusiasm and enterprise of their chief.

It is interesting to note that St. Clement's Press, which is identified with the present innovation, was the first printery (nearly 30 years ago) to utilise the Linotype for setting a London morning daily newspaper—namely, the *Financial Times*—that innovation, also, being made under Mr. Hart's direction. It was at St. Clement's, too, that there was installed, a few weeks ago, the first Vertical American Miehle to be set up in this country. To-day St. Clement's has no less than 50 Linotypes, together with a growing battery of Intertypes and Ludlows. Some idea of the output from this printery is given by the fact that its weekly composition bill runs to about 25,000,000 (twenty-five million) ens. In view of the enterprise it has shown and the high degree of efficiency it has attained, we think St. Clement's Press well deserves the success which it is achieving.

A Papermaker's Complaint.

By C. KING SMITH.

Several inquiries have recently been received for copies of the clever lines which were written some years ago by Mr. C. King Smith, of the Golden Valley Paper Mills, Bitton, near Bristol, and we think the best way of answering the inquiries will be by again printing the verses. They originally appeared in the *World's Paper Trade Review* under the title of "A Papermaker's Complaint," and were reproduced in American periodicals under the caption, "One Inch Square." Moreover, in one particular instance authorship was claimed. In the following reprint the first two lines are revised by Mr. King Smith:—

You send us a sample which we must match,
 And return intact, without a scratch;
 We must promise exactly to get your shade,
 And to use no pigments which might fade;
 We would test the colour with every care,
 But—the sample is only one inch square.

The fibre you say, is rag and wood;
 Before giving our price, we would make this good,
 The bulking, too, must be matched, we see,
 We must keep exactly to '003;
 But the loading, we fear we cannot test,
 And we have to guess at all the rest;
 We cannot try if the ink will bear,
 For the sample is only one inch square.

We notice the paper has to pull,
 On the "Leunig" a mean of 20 full,
 And the "Mullen" and "Southworth," too, must show
 To full advantage their quid pro quo;
 But we scarcely can judge 'em the finger tear,
 From a sample only one inch square.

Whether pattern is plated, or simply rolled,
 If it shrinks, or stretches, in heat or cold,
 If it fold one hundred or only ten,
 And will stand the rubber, as well as the pen;
 These matters, we fear, can only be guessed,
 For we cannot apply a single test;
 And we think, perhaps, it was scarcely fair
 To send us this sample one inch square.

"Do you keep stationery?" asked the lady of the tall, well-dressed man in the stores.
 "No, madam," he replied sadly. "You see, I'm a shop-walker."

The Paper Trade Golfing Society

Following on the success of the first annual dinner, and the first golf meeting held at Addington in June, arrangements are now rapidly being carried out by the above society for their autumn fixtures.

Active preparations are in progress in connection with the competition for the silver cup, presented by Lord Riddell, to be won outright as the result of a knock-out competition. Entry forms have been circulated to all members, and the returns down to the present amply prove the great popularity of the competition. The matches will be played over 18 holes, on handicap, under match play conditions, and the final match will take place at the spring meeting next year.

It will be remembered that at the inaugural dinner, Mr. G. R. Hall-Caine kindly promised to present a silver cup for a four-somes competition. The committee recently had the matter under consideration, as a result of which it has been arranged that the competition for this cup will take place over the Temple golf course on the morning of Saturday, October 7th next, a medal round being arranged for the afternoon.

A silver cup designated "The Cardiff Cup" has recently been presented by Messrs. Thomas Owen and Co., Ltd., of the Ely Paper Works, Cardiff, for a bogey competition to be played for my members with handicaps of 12 and over. All arrangements for the competition will be made at a meeting of the committee to be convened in the near future. It is hoped to play for the cup this year at a meeting to be held early in November.

Since the general meeting, the membership of the society has been considerably increased, and is fast approaching the 200 mark. The hon. secretary, Mr. R. G. Harvey Greenham, of 11, King's Bench-walk, Temple, E.C.4, will be pleased to give prospective members full information with regard to the society.

Papermaking in Newfoundland.

Developments by Armstrong, Whitworth and Co., Ltd.

The plan for establishing a large paper-making industry on the Humber River on the west coast of Newfoundland, abandoned last winter, has been revived. The original scheme was promoted by the Armstrong, Whitworth Co. and Reid Newfoundland Co., on the understanding that the Newfoundland Government would guarantee the bonds to some extent. It is announced that the Armstrong, Whitworth Co. proposes to buy out the interests of the other company and that the British and Newfoundland Governments will each guarantee the bonds.

Tests of Leather Belting.

Tests made for a period of two months by the Leather Belting Exchange, Philadelphia, in the research laboratory at Cornell University show that under reasonable shop tension a leather transmission belt with its flesh side in contact with the pulleys will average only 50 to 60 per cent. as much power as when the grain side is in contact. At higher tensions the flesh side will do much better, averaging from 50 to 100 per cent. as much power as the grain side, according to the belt, the tension, and the conditions of service. In the tests five 4 in. single belts of different manufacture, 30 ft. long, and weighing from 16 oz. to 18 oz., were employed. The conditions were standardised, and the belts were all thoroughly "run-in" before the experiments.

As an illustration of the lower efficiency of a new belt, one of the belts tested transmitted 12 h.p. when first put on the pulley at a slip of 1.2 per cent.; but after running for five hours it reached 19 h.p. with the same percentage of slip and the same tension, while after 13 hours it transmitted 24 h.p., and after 20 hours 31 h.p., with a slip of 1.6 per cent. According to the horse-power tables its scheduled transmission should have been 26 h.p.

Trade Notes.

PRIME MINISTER'S BOOK.—It was announced last week that Mr. Lloyd George has elected to devote to war charities the whole of the profits of his forthcoming book on the events of the war. For this work, it is stated, he is to receive no less a sum than £100,000.

At a meeting of the Gloucester Board of Guardians a letter was read from the Typographical Association complaining that the body of a member of the Association who was entitled to funeral benefit had been sent to an anatomical school without their knowledge. It appeared that the man, when admitted to the workhouse, said he had no friends, and when told the decision of the Board to send the bodies of inmates who had no friends to an anatomical school, made no complaint.

DERBY magistrates dismissed last Thursday the charge against David William Bird, 24, compositor, of shooting at his father, William Bird, with intent to do bodily harm. The father said that he heard a revolver fired, but did not feel anything. Medical evidence was given that the wound on the father's head could not have been caused by a bullet.

CAMBERWELL SCHOOL.—Mr. W. H. Amery sends us a well-printed folder reminding us that the trade classes at the Camberwell School of Arts and Crafts begin again on the 25th of next month. There are afternoon classes for composing and machine apprentices, and evening classes for composing and machine work, bookbinding, drawing and lithographic drawing.

The Aberdeen Booksellers', Stationers' and Newsagents' Association has received replies from local and district members of Parliament with reference to the strong opposition of the Association's members to Mr. Macquisten's Small Shop Assistants and Shopkeepers (Facilities) Bill, 1922. The members stated it was essential their shops should be open before nine o'clock in the morning and after five o'clock in the afternoon to carry through the sale and delivery of newspapers.

The death has occurred at his residence, Sunderland, of Mr. Christopher Swann. Mr. Swann, who was 70 years of age, was a native of Preston. He was a printer by trade, and when a young man was the news correspondent of a Barrow paper in the Isle of Man. He went to Sunderland and joined the staff of the *Sunderland Daily Echo* a few months after the establishment of that newspaper, and remained there for the long period of 48 years, retiring from the position of overseer of the composing department in December last on a pension.

MR. IRWIN COX, J.P., D.L., M.P. for Harrow from 1899 to 1906, died at his residence at Mill Hill on Monday, at the advanced age of 84. Mr. Cox, in 1879, became principal proprietor of the *Law Times*, *Field*, *Queen*, etc., the chief of the papers produced for so many years at 346, Strand, the establishment founded by his father, the late Serjeant E. W. Cox, and he remained in that position until recently, when these papers changed hands.

While on his way back to Russia, Mr. Frederick William Rennet, a well-known journalist, has died at Lubeck, Germany, at the age of 52. After his studies at Aberdeen University, and training in an Aberdeen daily newspaper office, Mr. Rennet was for a time on the staff of the *Pall Mall Gazette*, and then joined the Exchange Telegraph Co., and subsequently Laffan's Agency, representing the latter agency in most of the European States.

MR. ALFRED PICKUP, 47, a paper manufacturer, of Kirkham (Yorkshire), was instantly killed through his motor-car overturning at Hodden Valley last week. A friend, Mr. Alfred Rutter, was seriously hurt. The driver was attempting to pass a motor-coach when the motor car swerved and overturned.

MRS. MARGARET SIMMONS (26), of Victoria-road, Mill Hill, who was found dead in bed after having had her breakfast in her mother's house at Church-end, Finchley, was the wife of Mr. F. L. Simmons, of J. Simmons and Co., Ltd., wholesale stationers, Hill-street, E.C.2.

The funeral of Mr. William Hewitt, of the firm of Messrs Smith and Hewitt, printers, St. Helens, took place last week.

MR. GEORGE KING, of Purley, Surrey, a director of the *Sphere* and *Tatler*, Ltd., and Technical Journals, Ltd., who died July 12th, left £28,337.

MR. WILLIAM EDWARD ABRAHAMS, of Brixton, for nearly forty years printer of the *Morning Advertiser*, who died July 13th, left £1,968. It will be remembered that the testator left £250 to the Lloyd Memorial Seaside Convalescent Home, Deal, for the endowment of two beds to be known as the "William and Mary Anne Abrahams Beds."

MR. RICHARD DALTON, of Park House, Cotnam Park, Bristol, printer and stationer, formerly of Messrs. Marden, Son, and Hall, now absorbed in the Imperial Tobacco Co. (of Great Britain and Ireland), Ltd., a director of the latter company and chairman of the St. Anne's Board Mill Co., who died on June 21st, aged 68, left estate of the gross value of £165,907, with net personalty £158,070.

The late Mr. William Asch, a retired stockbroker, who left £83,417, bequeathed £50 to John Cottle, "the street news vendor who usually stands in front of 7, Lothbury, and who can be identified by my secretary." The news of the bequest has brought Mr. Cottle embarrassing publicity.

A new weekly publication has made its appearance at Cardiff—*Welsh Sport Illustrated*, sixteen pages, price 2d.

From the London Gazette.

BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

S. Cohen, trading as the Finsbury Rag and Metal Stores (married woman), residing at 58, Darent-h-road, Stamford Hill, and carrying on business at 10, Paul-street, Finsbury, London, rag, metal and waste paper merchant.

A. Farrant, 6, Portwood-road, carrying on business as George Phillips and Co., 12, High-street, Southampton, stationer.

Trade Union Matters.

MEMBERS of the National Union of Journalists have decided, by 738 votes to 399 in a ballot, against a levy of 2d. a member per annum in support of the *Daily Herald*. About one-quarter of the membership voted.

CONSIDERATION has recently been given by the Executive Council of the Typographical Association to the question of honorary members of the Association returning to the printing trade as journeymen and claiming unemployment benefit. The Executive Council have informed branch secretaries that by the decision of the recent delegate meeting at Hastings such members must have sixteen consecutive weeks in full employment before they can be entitled to the full Association benefits.

The London Machine Managers Society recently approached the Typographical Association on the question of associate members' subscriptions. It was urged that as the members of the Society had an exceptional contribution at the present time, contributions of associate members of the Typographical Association should be paid direct to headquarters. As the Association would no doubt have an extra contribution, it was thought their members would likewise prefer to pay direct. This suggestion has been agreed to by the Executive Council of the Typographical Association.

NICKELOID ELECTROTYPE CO., LTD., of 10, New-street-hill, London, E.C.4, send us particulars and prices of the ranges they stock of leads and clumps, rules in a variety of faces, and an attractive selection of type borders.

MESSRS. MARTIN AND CLARKE'S new stock and price list appears this month printed on a new line of blue manilla paper. We notice that the effect of this firm's advertising has been to reduce the bulk of their clearance lines, and that their regular stocks are being frequently renewed. Amongst their range of thin papers is included a new stock line in medium weight banks.

Mr. William Fieldhouse.

By the death of Mr. William Fieldhouse, of Otley, Wharfedale has lost another link with the staple industry of the town—the manufacture of printing machines. He was a well-known personality in connection with the industrial and religious life of Otley, and has died at the age of 60 after a short illness. Mr. Fieldhouse was a director of the firm of Messrs. Fieldhouse, Crossfield and Co., printers' engineers, with which firm he had been associated for 46 years. His father, the late Mr. John Fieldhouse, was one of the pioneers of the Wharfedale printing machine industry. He came from Bradford to Otley in the very early days of manufacture of printing machines in Wharfedale, and after assisting in the construction of the first "Ulverstonian"—the predecessor of the present "Wharfedale"—was one of the founders of the present firm of Fieldhouse, Crossfield and Co. In 1898 the business was converted into a limited liability company, and Mr. William Fieldhouse was appointed on the directorate.

Outside business, Mr. Fieldhouse was chiefly identified with the United Methodist Church, in Westgate, tley, and had held many offices in connection therewith. Mr. Fieldhouse leaves a widow, one son and a married daughter. The funeral was largely attended, and the mourners included a large number of employees of Messrs. Fieldhouse, Crossfield and Co.

Manchester College of Technology.

We have received a copy of the new general prospectus of the Municipal College of Technology, Manchester, covering the courses of instruction for the session 1922-3, also a copy of the special prospectus of courses in printing and photographic technology.

The printing and photographic department, the director of which is Mr. Charles W. Gamble, O.B.E., M.Sc.Tech., is well equipped for its work. The letterpress printing section of the department contains a composing room and a machine room. In the composing room there are 36 frames and cabinets, with a supply of type of standard faces. There are three Linotype machines, and hand presses for proofing. The machine room contains a double demy Miehle machine, demy Summit machine, a double crown Wharfedale machine, Phoenix, Caxton and Arab platens. The lithographic printing section is equipped with a demy lithographic printing machine, two Mann rotary "offset" machines, a power demy transfer press, five hand presses, a power plate graining machine, a collotype hand press and copper plate press. The photographic section includes pure photography and the photo mechanical processes. There is a good equipment for teaching those processes in which the methods of photography are applied to producing surfaces for printing which are used for illustration purposes, as photo engraving, photo lithography, and offset photo lithography. The etching room has the necessary equipment—including two etching machines—for block making, photo lithography and collotype. The finishing room is fitted with Royle router, power saw, guillotine, and other plant used in the mounting of photographically engraved blocks. The bindery is fitted for work in forwarding and finishing, and contains a blocking press and a ruling machine.

A wide range is covered by the various courses of study arranged. There are full-time day vocational courses, part time vocational courses, part-time day apprentice courses, and evening classes.

Viscount Northcliffe's Will.

Future of "The Times."

Discussion upon the possibilities arising out of the will of the late Viscount Northcliffe has been precipitated by the news that three caveats have been entered by interested parties at the Probate Registry, Somerset House, against the grant of probate of the will or letters of administration to the estate. The first caveat in the case of Lord Northcliffe, who died August 14th, was entered August 16th by Messrs. Russell and Arnholz, solicitors, of 3 and 4, Great Winchester-street, E.C.; the second on August 18th by Messrs. Ellis Piers and Co., solicitors, of 17, Albemarle-street, W.; and the third on August 22nd by Messrs. Nicholson, Graham and Co., solicitors, of 19 and 21, Moorgate, E.C. Appearances to the caveats have been entered by Mr. Henry Preuss Arnholz and Sir George Sutton, Bart., the executors and trustees of the will dated March 22nd, 1919, and four codicils thereto, dated respectively June 13th, 1919, June 23rd, 1920, October 8th, 1921, and April 27th, 1922.

Mr. H. P. Arnholz is a solicitor and an old acquaintance of Lord Northcliffe. Sir George Sutton, Bart., is chairman of the Amalgamated Press, Ltd., and one of Lord Northcliffe's oldest friends and colleagues.

Mr. J. L. Garvin wrote in last Sunday's *Observer* a striking article dealing with the future of *The Times* newspaper—the most important of the 200 or so publications controlled by the late Viscount. Mr. Garvin said: "Counting all expenses, direct and indirect, Lord Northcliffe must have paid nearly £900,000 to get it, and from first to last its proprietorship must have cost him two millions and a half at least. It is thought in some quarters which have considered the matter that *The Times* could be bought for £500,000. I do not think so for a single moment. The competition was not decided last time, nor will it be now, by purely financial reasons. Other considerations forced up the price and will again. Any serious bidder must be prepared to offer more than half a million, and perhaps even to pay as much as Lord Northcliffe paid."

Tentative offers for the acquisition of the Northcliffe interest in *The Times* are stated to have been already forthcoming. The other chief shareholder in *The Times* Publishing Company is Sir John Ellerman, one of the leading shipowners and commercial men in the country. He holds no fewer than 128,424 shares. According to the last balance sheet, issued on June 30th, 1921, the capital of *The Times* consisted of 320,000 £1 fully-paid preference shares, and 645,000 £1 fully-paid ordinary shares, and of these the late Lord Northcliffe is believed to have held 506,970. Under the articles of association, these shares are under the control of the directors, who may allot and dispose of them as they think fit. Ordinary shares can, however, only be transferred to holders of ordinary shares so long as any member holding ordinary shares is willing to purchase the shares at the price specified in the transfer notice, such price to be specified by the legal holder. There is, however, a clause in the articles which gives power to the company in general meeting to vary the rules as to the mode of offering shares to members holding ordinary shares, and in particular empowers the company in general meeting to give a preferential right of purchase to any member; but until otherwise determined the shares shall be offered in proportion to the existing holdings of the members.

"MASS PRODUCTION" IN FRANCE.—One of the curiosities of the City of Tours, says the *Exportateur Francais*, is called the "Creusot du Livre," and is well known under the name of "Maison Mame" (firm of Mame), from the name of the family that has directed it since 1796. It includes huge printing and binding establishments, which produce eight million books annually, and a sales department which can store in its reserve space an average of six million volumes. Its shops work principally at the making of its own editions, but sometimes the "Maison Mame" will take outside work in printing, stitching or binding, when it is not too busy with its own publications and if the work to be done is important. Mame and his family also own paper mills on the Creuse river near la Haye-Descartes.

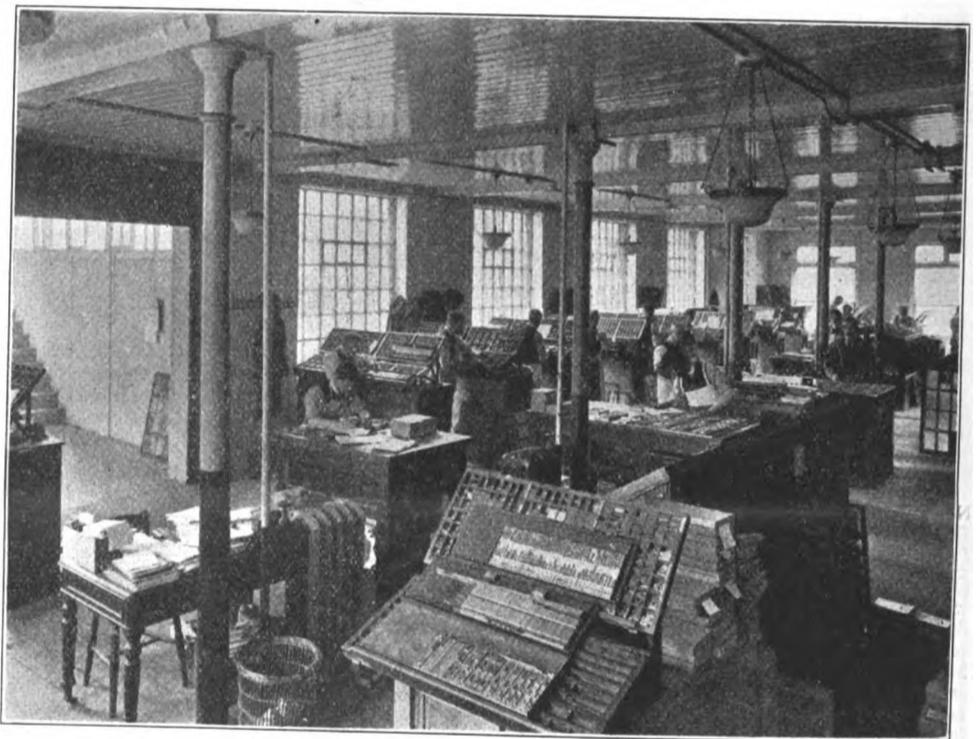

The barriers are not yet erected which shut out aspiring talent.

Electric Lighting in the Printing Office.

SIR,—The letter on the above subject in your last issue attracted my attention, having myself experienced the difficulties "Master Printer" has encountered in the use of electric light.

My firm has been enabled largely to overcome the breakages due to vibration, and to remove entirely the detrimental effect caused to eyesight by ordinary hanging lamps with top shades, by the installation of semi-indirect lighting. 100-watt $\frac{1}{2}$ -watt lamps are used, suspended over an opal dish, which hangs by triple chains and circular band within two feet of the ceiling. We have not found it necessary, but if vibration is excessive, this could be greatly reduced by a centre chain carrying the lamp-holder, and through the links of which the flexible should be threaded. The ordinary hanging lamp, too, gets many

Lighting Arrangement in Composing Room of Birmingham Printers, Ltd.

an accidental knock, which may account for some of the breakages attributed to vibration. Our ceilings are coated with "Velure" paint, which secures a perfectly reflected light. Six of these lights will illuminate in a first-class manner about 14 double composing cabinets, as well as giving a considerable amount of light to the imposing surfaces, lead racks, etc., in the centre of the room, and effecting a considerable saving in current as against the one-man-one-light plan. An important point is that the opal dishes should be cleaned every week, otherwise a considerable amount of light is lost.

Yours, etc.,
FRANK H. BRUFF.

Birmingham Printers, Ltd.,
42-44, Hill-street, Birmingham.
August 25th, 1922.

"The Future of Colour Work."

SIR,—Prior to delivery of my lecture at Derby on the above-mentioned subject, shortly reported in your issue of April 6th last, I had been permitted to read in manuscript a book by Mr. A. E. Bawtree, which I understand is shortly to be published. In this book Mr. Bawtree deals with his discovery of the fact that "lemon yellow is not produced by a mixture of red and green light, as was generally believed, but by a mixture of green and yellow light" and draws certain conclusions therefrom.

In my lecture as delivered, I pointed out that Mr. Bawtree was entitled to credit for his discoveries in connection with this subject, and had dealt with it in his book, but in the necessarily condensed report published in your paper this acknowledgment is not made plain. Mr. Bawtree has called my attention

to this omission, and as I am naturally anxious that he should secure the fullest credit for his work in the investigation of colour problems in relation to printing, I desire to make it quite clear that I was making no claim to any discovery of my own on the subject.

As the report might conceivably give rise to misconception in this respect, I shall be grateful if you will allow me the opportunity of giving this explanation.

Yours faithfully,
W. GAMBLE.

109, Farringdon-road, London, E.C.1.
August 25th, 1922.

Russian Printing and Publishing.

The Russian State Publication Department exhibited specimens of its work at the Florence International Printing Exhibition. The director of this department, O. U. Schmidt, states that Western European experts took a keen interest in Russian Soviet

literature of all kinds. He was able during his stay abroad to arrange for the exchange of a large number of Russian publications for those of Western Europe, and for the printing abroad of a large number of scientific books, including textbooks and treatises. He also bought many recently published works for translation into Russian.

Publishing in Russia is increasing rapidly, and the State Publishing Department printed in June of this year seven times as much as in any month of last year. By the autumn the Department will have completed its editions of 150 different textbooks for the schools. A Russo-German company, the "Kniga," is carrying on publishing work on a large scale. The Commissariat for Education has appointed a special commission on publishing, which has come to an arrangement with scientific societies abroad, by which Russia obtains a constant stream of valuable information for moderate payments. A company formed under the new economic policy, the "Book Trade Association of 1922," seems to be well known abroad amongst the buyers of European literature. The shareholders of this company include the State Publication Department and three firms of publishers in Moscow.

BIBLES AND PRINTERS.—No chronology has a right to be printed in our Bibles, says a correspondent of the *Times*. It is a man-made, a printer-make addition and should be abandoned because it is untrue and misleading. It is not a part of the text of Genesis or of any other book of the Bible.

SPECIAL PREPAID ADVERTISEMENTS

The Minimum Charges for Three Lines, with an average of seven words to the line, for Advertisements under the headings given below are as follows (extra lines at proportionate rates):—

	Three Lines
Agencies	3 0
Situations Wanted	1 6
Situations Vacant	3 0
Machinery for Sale and Wanted ...	3 0
Businesses for Sale and Wanted ...	3 0
Shares for Sale and Wanted	3 0
Partnerships and Investments	3 0

Three Insertions Charged as Two.

The following are the rates for Advertisements classified as under:—

	Per Line
Sales by Auction	2 0
Tenders	2 0
Patents for Sale	2 0
Legal and Financial Announcements	2 0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe Lane, London, E.C.4 for which a fee of 6d. is charged to cover postage of replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.
Telephone: 8407 City.

Situations Vacant.

COMPOSITOR wanted; also **LINOTYPE OPERATOR** wanted. Best location in United States America; business owned and managed by Englishman; give qualifications and references, also wages asked.—Box 13965.

COSTING and ESTIMATING CLERK wanted in Lithographic Transfer Works in the Midlands.—State qualifications, references and wages, to Box 13980.

FIRST-CLASS PHOTOGRAVURE ETCHER wanted, for Cylinder and Flat Work of the best quality.—Full particulars to Box 13985.

TRAVELLER wanted, with good connections in the Printing Trade for Manchester, Liverpool and Midlands, with old-established house; state age and experience; all applications treated confidentially.—Box 13976.

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

Situations Wanted.

ENGINEER'S DRAUGHTSMAN, internal combustion, etc., car experience, desires Position where artistic talent would be of service; ability for advert. lay-out and commercial art.—Address Box 13952.

MINDER (Two revolution) seeks permanency; experienced in Commercial, Book and Three-Colour Work; disengaged.—Box 13973.

MACHINE MINDER.—Centurettes, Wharfes, etc.—E. C., 32, Hargrave Park, Highgate, N.19. 13974

TENDERS WANTED.

BOROUGH OF HAMPSTEAD.

THE Council of this Borough invite Tenders for the supply of (1) Printing and (2) Books and Bookbinding, for one-and-a-half or three-and-a-half years, at the option of the Council, from 1st October next.

Specimens of the various items can be inspected on application to the Town Clerk, from whom printed schedules with full conditions and form of tender can be obtained upon deposit of £1 is. for each Tender, which will be returned if a bonafide Tender be sent in by the day and time mentioned below, but will otherwise become forfeited to the Council. In the event of a Tender being withdrawn the deposit will also be forfeited.

Tenders must be received at my office not later than 4 p.m. on Friday, 15th September, 1922. The Council does not bind itself to accept the lowest or any Tender.

By Order,
ARTHUR P. JOHNSON,
Town Clerk.

Town Hall,
Haverstock Hill, N.W.3.
19th August, 1922.

PRINTERS' WAREHOUSE OVERSEER desires berth in Printers or Wholesale Stationers; excellent knowledge of all classes of Paper, Buying, Estimating, etc.—Cribb, 17, Farlton-road, S.W.18. 13984

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Miscellaneous.

AN opportunity occurs to **ACQUIRE a SMALL PRINTING PLANT**, in running order, within a short distance of Liverpool-street; lease of basement premises, about 2,000 sq. ft., at a low rent, may also be had if desired.—Full particulars from D.E., c/o Dixon and Roe, 17, Walbrook, E.C.4. 13981

COLONIAL NEWSPAPER CUTTINGS, dealing with the Paper, Printing, Stationery and Allied Trades, are wanted by Advertiser.—Communicate, stating terms, to Box 13882.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

NOTTINGHAM.—TO BE LET ON LEASE, early possession, Palatial Modern-built **BUSINESS PREMISES**, corner Carrington-street, facing fountain (best side the street), all cars stop at door, said to be 50,000 to 150,000 people pass daily; 20,000 feet super floor space, 175 feet frontage; quite near new Port of Nottingham (world's seaports to Nottingham v. Hull direct); opportunity for Grand Stores de Louvre; suit limited company; illustrated map posted.—Cooley, Market-street, Nottingham. 13983

Proclamation provides, *inter alia*, that catalogues and pamphlets containing recommendations of a business nature which German business houses export for commercial purposes, also printed matter which German business houses send to their branches and representatives abroad for the purpose of bringing their business conditions to the notice of their foreign customers may be exported without licence.

The Price of Paper.

PAPER prices are very stable, and the view is held in almost every quarter that the present level will see this year out. At least one merchant of our acquaintance has laid in his winter stock at to-day's prices, secure in the belief that the tendency through the coming months will be of a hardening nature. There is no reason to hope for lowered costs of production in any sphere of papermaking for some time. The rigours of winter in the pulp-producing countries create difficulties and delays, which harden prices of materials. In our own country coal, rail and wages have done their bit toward bringing costs down, and nothing further can be counted upon this year.

U.S. Paper Trade Customs.

IT is probably not realised by the majority of papermen and printers to what extent the trade of this country differs from U.S.A. so far as commercial paper is concerned. The most striking difference is the approximation to standardisation in American papers and the vast miscellany which characterises English practice. Practically it may be said that American office stationery, business forms and industrial records depend solely upon bond paper. Here we use E.S. and T.S. creams and azures, laids and woves, writings and printings, bonds and banks, and a wholesale variety of special papers from G.I.P.'s to hand-mades. Much the same thing applies to account book papers, for while we use anything from cheap cream laid E.S. up to hand-made ledger, the States adhere mainly to T.S. cream and azure wove. The net result is that the English paper merchant and printer or manufacturing stationer is compelled to outlay heavy capital on a large and varied stock, much of which remains in idleness, while his American confrere expends his capital more usefully in standard stock, which is constantly turning over. A wider issue is the economy of standard paper as affecting mill production, and again the economy of printing and stationery production which can be effected by combining several jobs under one process when standard paper renders the operation possible.

Need of Combined Effort.

PROPOSITIONS of the character of those in the foregoing paragraph give rise once again to the reflection that there will never be that singleness of aim toward real organisation, co-operation and progress in the papermaking, printing and allied trades until they are thoroughly linked up by the appointment of a representative and permanent Progress Committee whose sole business will be the promotion of new methods and the development of trade. Standardisation, organisation, distribution, costing, propaganda, increased use of paper and print, direction of research, protection against foreign competition, elimination of waste energy, capital and effort; these are a few of the big questions waiting to be tackled. But only a Super Committee can do the thinking and planning and the backing up would be provided by the very capable sub-committees of each industry now in existence. The various associations and federations are separately fairly well organised, but it remains to be thoroughly realised that each is fundamentally dependent and interrelated to the other.

Representatives:

London—Mr. STANLEY J. GILLIS, 58, Shoe Lane, E.C.4

 Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, AUGUST 31, 1922.

The T.A. Wage Settlement.

THE optimistic note struck in our columns last week, in regard to the Typographical Association's ballot upon the provisional wages agreement, has since been justified by the announcement from T.A. headquarters that a majority of members had voted that the agreement be accepted. The figures have not been made public, but it can now be assumed that this unfortunate dispute—which, to little or no purpose, has inflicted four weeks of dislocation and loss upon the printing industry—is at an end. Now that something like normal conditions seem to have been resumed all over the country it is to be hoped that the agreeing of an adjustment of wages in the small section of the trade still to be dealt with will be carried through with as little controversy and as much dispatch as possible. That accomplished, a period of stabilised wages should enable both employers and employed to devote all their energies to regaining lost ground and hastening the advent of better times for everyone in the industry—as cannot be done in the midst of the distraction caused by continually recurring wages disputes.

German Publicity Enterprise.

THE large amount of advertising matter coming to buyers in this country from Germany is now a matter of common knowledge. Not only are British business men being approached by letter—in regard to cheap printing amongst other lines—but catalogues and pamphlets are being broadcast in the effort to attract British business across the Channel. That these would-be exporters have their Government behind them in their efforts is evident from a statement in the *Deutscher Reichsanzeiger* for August 8th to the effect that certain amendments are made as from the latter date in the Proclamation of April 5th, 1921, relating to the exemption of various classes of goods from export licence requirements on account of the circumstances in which they are imported or of the use to which they are put. The new

T.A. Wage-Reduction Ratified.

Work Resumed Everywhere.

The Federation of Master Printers and the Newspaper Society just before the week-end received a telegram from the general secretary of the Typographical Association to the effect that the result of the ballot taken upon the provisional agreement under which work was being resumed by members of that trade union last week is that the majority of members have accepted the agreement. The figures were not stated, nor have they since been made known. The fact of the ratification, however, has relieved tension in the trade and has facilitated the complete resumption of work the movement towards which was already well advanced last week.

The hitches which occurred in several towns, delaying a complete return to work, have now, we understand, all been negotiated and normal conditions have been restored throughout the industry.

According to the ratified agreement, a wage-reduction of 3s. per week became effective immediately; a further 3s. per week will become due on the pay day in the week ending September 9th, next; a further 3s. per week on the pay day in the week ending November 11th, next; and 3s. 6d. per week on the pay day in the week ending May 5th, 1923, making a total reduction of 12s. 6d. per week.

It is agreed that wages shall be stabilised until December 31st, 1923, and no applications for reductions or increases in the rate of wages payable under the terms of the national agreement shall be made during that period.

Negotiations with L.S.C. Resumed.

On Tuesday afternoon representatives of the London Society of Compositors and of the London Master Printers' Association resumed negotiations on the question of wage reduction. The matter was discussed afresh in the light of the settlement made with the Typographical Association, and the outcome, we understand, was that an undertaking was given by the L.S.C. that the whole position is to be placed individually before the union's members, and another meeting with the employers will be held in a few weeks' time.

The St. Bride Portfolio.

Once again—and for the last time under its old name—the St. Bride Printing School sends us its annual portfolio of specimens of printing executed by students. Past portfolios have always been excellent, but the latest one succeeds, both as to variety and quality of work, in eclipsing previous efforts.

These specimens supply very clear evidence of the wide scope of the instruction given at the school, and show that the artistic principles underlying good modern printing are not overlooked, although students are kept well in touch with the exigencies of practical commercial work. The examples range from commercial catalogue pages, advertisements, letterpress posters, up to high-grade booklet work, and include also an abundance of colour printing and of illustrations by a great variety of processes. Worthy of special notice, perhaps, on account not only of the excellent printing shown in its letterpress and various illustrations, but also of the interest of its subject matter, is the booklet entitled "The Church and Parish of Saint Bride, Fleet-street."

STATISTICS have been published showing the value of the imports of paper into Japan from the United Kingdom and the U.S.A., which cover the periods of the first four months of the present year and the corresponding period of last year. During January to April last year Great Britain sent to Japan paper of the value of 776,583 yen, as compared with 1,254,611 yen sent by the United States. The share of Great Britain, however, for the four months of the present year amounts to 1,490,867 yen and 1,065,395 yen, that of the United States.

OWING to a strike of printers no newspaper was issued in Perth, Western Australia, on Wednesday of last week.

The Industrial Court.

A Lesson from the Strike of the T.A.

Those interested in trades unionism and industrial matters generally have had their attention drawn, by the recent strike of the Typographical Association, to the subject of the status of the Industrial Court and the question whether or not any new legislation or regulations are requisite to ensure the future utility of that court.

Mr. G. D. H. Cole, the well-known writer on economics, treats of this subject in an article contributed to the *Westminster Gazette*. After first indicating the deadlock reached after the ballot—the employers maintaining that the arbitration proceedings had been reduced to a farce, and the men appealing to the T.A. rules as justification—Mr. Cole proceeds as follows:—

The T.A. Rules.

"There was in this muddle clearly a principle involved which went far beyond the local dispute. Many trade unions have rules similar to that of the Typographical Association, and the position which recently arose may easily arise again. Clearly such a union, if it has to consider using the Industrial Court, can only do so under its rules if it first obtains by ballot the assent of its members to the reference, and to the acceptance of any award that may be made. This would put the matter right, so far; and this course might clearly have been followed on the present occasion. Why, then, was it not followed?"

"Because, I am inclined to believe, of a misunderstanding. The Industrial Courts Act of 1919 set up two separate types of court for dealing with trade disputes. The first is the Industrial Court, a permanent body consisting of a number of panels composed of full-time State officials. The Industrial Court is a voluntary Court of Arbitration. Disputes can be referred to it only with the consent of both parties. When it is so called in it gives a decision only on the immediate points at issue in the dispute, after hearing the arguments on both sides. Its decision is supposed to be binding; but there is no machinery for enforcement if either party refuses to accept its awards.

"The second type of court is the Court of Inquiry, constituted specially for each occasion, and empowered to take evidence, and to issue a report dealing not only with the points immediately at issue, but with the whole economic background of any dispute which comes before it. A Court of Inquiry can be constituted by the Minister of Labour to deal with any dispute, with or without the consent of the parties concerned. But its influence is purely moral. It issues, not an award, but a report or series of recommendations, and there is no obligation on either of the parties to accept its findings. It is intended rather to inform public opinion, and to give impartial advice, than to arbitrate between the disputants."

The Two Courts.

"The distinction between these two types of Court and their respective powers is still very imperfectly understood. It seems clear that the Typographical Association, when it agreed to go before the Industrial Court, was confusing its functions with those of a Court of Inquiry. The probability is that the members would have refused to refer the dispute to a Court whose decision was understood to be binding. For Government Courts of Arbitration are not popular in labour circles. Most of the unions which have rules providing that no settlement may be ratified except by a ballot vote would refuse so to alter their constitutions as to give their executives the power at will to refer any dispute to a binding arbitration. Still less would they be inclined to do so if action were taken on the proposal, now being widely made, that the awards of the Industrial Court should be made really binding by the addition of legal sanctions.

"The repetition of the recent incident must be prevented by spreading a clearer knowledge of the differences between the Industrial Court and the Court of Inquiry; but any proposal to widen the powers of arbitration or to make it compulsory would merely make matters worse. It is far better, as a rule, to leave differences to be settled by negotiation, with the Court of Inquiry ready to be called in as an advisory body, than to introduce coercive machinery which will only hamper voluntary negotiation and cause friction instead of removing it."

Personal.

SIR GEORGE ROWLAND BLADES, BART., M.P., the well-known chairman of Messrs. Blades, East and Blades, Ltd., is amongst the six aldermen one of whom will, on Michaelmas Day, be elected Lord Mayor of London, in succession to Sir John J. Baddeley. This year, however, Alderman E. C. Moore is indicated as the candidate likely to be chosen.

SIR WILLIAM AND LADY BERRY on Saturday gave a garden party at their residence at Long Cross, Surrey, to the directors, managers and heads of departments of the various newspapers under the control of Sir William Berry and his brother, Mr. J. Gomer Berry. The guests numbered 300.

MISS KATHLEEN HARDY, daughter of Mr. Harold H. Hardy (Burnell, Hardy and Co.), was married at the Chapel Royal, Savoy, last Thursday to Mr. T. Coade, a master at Harrow School.

THE marriage was solemnised at the City-road Wesleyan Methodist Church, Old Trafford, last Thursday, of Mr. George Mould, journalist, a sub-editor in the office of *Thompson's Weekly*, Manchester, and Miss Anne Constance Fairlie Colquhoun.

MR. and MRS. ENDECOTT A. LOWE celebrated their silver wedding on Saturday last among their family and a number of old and young friends. Mr. Lowe has represented Messrs. Slater and Palmer in London and home counties for over twenty years. He is actively identified with various efforts on behalf of printers' charities, and has many friends in the trade.

MR. GEORGE EDGCOMBE DUNSFORD, the York correspondent of the Press Association, has celebrated his diamond jubilee as a journalist.

THE name of Mr. H. W. Southey, founder, and for many years proprietor and editor of the *Merthyr Express*, is included in a list of new J.P.'s for that town. Mr. Southey is already a J.P., for the County of Hereford. Settling in Merthyr in 1857, he first served on the staff of the *Merthyr Telegraph*. In 1864 he founded the *Merthyr Express* and for many years acted as an industrial correspondent for *The Times*.

Mr. J. F. L. Corkett Gains B.Sc.

Among the successful candidates in the last examination for the London B.Sc. degree was John Frederick Line Corkett—eldest son of Mr. F. T. Corkett, managing director of Pictorial Machinery, Ltd., and inventor of "Corkett Art Intaglio" printing, used with other processes in printing the present 10s. and 20s. currency notes.

Mr. J. F. L. Corkett was one of the earliest volunteers in 1914, going into the Royal Engineers, etc., and went to France early in 1915, where he remained until after peace was declared. In France he had a very varied experience, not the least being his work in the wireless detection of airships. Most folks know now that the whereabouts of German airships was almost always known to ourselves, and this by means of wireless; in fact a few minutes before the German airship went down at Potters Bar she was exactly located and her messages were being received and de-coded by the special detection staff of the British wireless men located in France.

Latterly Mr. Corkett had special work at Versailles and as despatch rider between the Supreme War Council and the French and English Ambassies, often taking the King's Messenger bags into Paris, while there was hardly one of the notabilities at Paris that did not know him as a despatch rider. Mr. Corkett delivered many important dispatches to Foch, the late General Wilson, Lloyd George, President Wilson, etc., and consequently had many curious and interesting experiences.

Mr. Corkett was educated at New Rochelle High School, New York, and Sutton Surrey County School. He has made a special study of electricity and mechanics, and his degree now obtained is granted by the Faculty of Engineering.

DIVIDENDS AND REPORTS.

WYMAN AND SONS announce dividend of 10 per cent., free of tax, on ordinary shares for year, placing £10,000 to special reserve for taxes, further depreciation, etc.

RAPHAEL TUCK AND SONS.—The profits for the year ended April 30th, 1922, after providing for directors' and managers' remuneration amount to £42,136. The directors recommend a final dividend at the rate of 12 per cent. for the six months, making 10 per cent. for the year. The amount transferred to special dividend reserve fund in accordance with the articles of association is £2,795, against £2,586, leaving £5,727 to be carried forward. For the year that ended on April 30th, 1921, the trade done was the largest in the history of the company, being even above that of the previous 12 months, which was then the highest on record, but the expenditure was abnormally high. Probably the past year's results have been affected by a similar experience.

"FINANCIAL TIMES."—Directors recommend dividend of 7½ per cent. free of tax, on ordinary shares for year, placing £15,000 to investments depreciation account and carrying forward £30,807. For preceding year ordinary shares received 15 per cent.

NEW COMPANIES.

BAXTER AND EWIN, LTD.—Capital £3,000 in £1 shares; to take over the business of printers, lithographers and manufacturing stationers, etc., carried on at 7, Frith-street, Soho, W., and to adopt an agreement with A. T. Baxter and F. H. D. Ewin. Private company. Directors: A. T. Baxter and F. H. D. Ewin. Registered office: 26, Martin's-lane, E.C.

BROWN, GARDNER AND Co., LTD.—Capital £1,000 in £1 shares; to take over the business of printers and stationers carried on at 8, Bevis Marks, E.C., as Brown, Gardner and Co. Private company. Subscribers: M. Nutt and Mrs. E. L. Nutt. Registered office: 8, Bevis Marks, St. Mary-axe, E.C.3.

PRECISION PHOTO PRINTING PLANT, LTD.—Capital £10,000 in £1 shares; to acquire from S. H. Morse his interest in a certain patent, and to carry on the business indicated by the title and that of engineers, etc. Private company. First directors: E. W. Smith and S. H. Morse. Registered office: 120, Moorgate-street, E.C.

UNOTIS, LTD.—Capital £2,000 in 1,800 preference shares of £1 each and 4,000 ordinary shares of 1s. each; advertising and general publicity contractors and agents, manufacturers of and dealers in apparatus and appliances, employed by advertising contractors, etc. Private company. Subscribers: L. W. Davies and G. E. Smith. Subscribers appoint first directors. Registered office: 9, Park-place, Cardiff.

A. TURNBULL AND Co., LTD.—Capital £500 in £1 shares; to acquire the business carried on at Market-lane, Newcastle-on-Tyne, as A. Turnbull and Co., and to carry on in the U.K. or elsewhere the business of importers and wholesale dealers in fancy goods, stationery, etc. Private company. Subscribers: A. Turnbull, Mrs. D. Turnbull and Miss A. B. Sands.

BRITISH HOTEL PUBLISHING Co., LTD.—Capital £2,000 in 1,000 10 per cent. preference shares of £1 each and 2,000 ordinary shares of 10s. each; publishers of hotel or other pamphlets, brochures, catalogues, guides, etc. Private company. First directors: A. A. Scanlan and J. C. Lawrence. Registered office: Diamond House, Hatton Garden, E.C.1.

J. W. HOOPER, LTD.—Capital £2,000, in £1 shares; to carry on at Newport, Mon., or elsewhere, the business of drapers, manufacturers of and dealers in leather goods, stationery and fancy goods, etc. Private company. First directors: J. W. Hooper, Jessica Hooper and C. E. Hurley. Registered office: 102, Chepstow-road, Maindee, Mon.

V. K. ROTARY Co., LTD.—Capital £10,000, in £1 shares; to acquire the business carried on at "Woodstock," Baring-road, Grove-park, Lee, as the "V. K. Rotary Co."; to adopt an agreement with V. W. G. Kemp, F. W. Kiddie, P. W. Kemp, and A. L. Dalton, and to carry on the business of manufacturers of and dealers in duplicating machines, supplies and accessories, office paste, etc. Private company. First directors: V. W. G. Kemp, F. W. Kiddie, P. W. Kemp and L. D. Wood. Registered office: "Woodstock," Baring-road, Grove-park, S.E.

BURBAU AND OFFICE STATIONERS, LTD.—Capital £1,000, in £1 shares; stationers, printers, cabinet-makers, etc. Private company. First directors: V. A. P. Stokes and W. J. Bullimore. Registered office: St. Lawrence House, 48, Mark-lane, E.C.

HIRST DRONFIELD, LTD. (LONDON).—Capital £500, in £1 shares; manufacturers of and dealers in boxes and cases of card, wood or otherwise, printers, publishers, stationers, etc. Private company. Subscribers: D. N. Forbes and C. E. Mayes.

HAROLD E. CLOSS AND Co., LTD.—Capital £10,000, in £1 shares; manufacturers of and dealers in leather goods, stationery, fancy goods, etc. Private company. Subscribers: J. E. Nash and C. H. Perry. First directors: H. E. Closs and A. T. Evans.

A. L. LEASK AND SONS, LTD.—Capital £3,000, in £1 shares; general merchants and agents, importers and exporters, dealers in all kinds of paper, wooden or pulp ware, etc. Private company. First directors: A. L. Leask, A. L. H. Leask and T. H. Leask. Registered office: 124, St. Vincent-street, Glasgow.

MARBRO PIPE Co., LTD.—Capital £2,000, in £1 shares; to take over the business of a pipe manufacturer formerly carried on by L. Marder at 318 and 320, Goswell-road, E.C., as the Marbro Pipe Co., and to carry on the same and the business of box-makers, printers, manufacturers of and dealers in fancy goods, etc. Private company. First directors: L. Marder, A. Manders and B. Wilkins. Registered office: 318 and 320, Goswell-road, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

BURN BROTHERS, LTD. (stationers, etc., Manchester).—Satisfaction in full on August 12th, 1922, of mortgage dated April 29th, 1920, securing £3,000.

HAZELL, WATSON AND VINEY, LTD.—Satisfaction in full on June 22nd, 1922, of mortgage dated June 22nd, 1920, securing £11,000.

STANDIDGE AND Co., LTD. (engravers printers, etc., London).—Issue on August 14th, 1922, of £100 "B," or second debentures, part of a series already registered.

JAMES GORDON AND Co. (STATIONERS), LTD.—Mortgage dated July 26th, 1922, to secure £790, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: C. Hughes, "Iona," South-road, Chorley Wood, Herts.

DENNY AND COOK, Ltd. (printers, publishers, advertising agents, and contractors, etc., London).—Particulars of £550 debentures, authorised August 15th, 1922, charged on the company's property, present and future, including uncalled capital, whole amount issued.

M.P. ADVERTISING Co., LTD. (London).—(a) Satisfaction in full on August 11th, 1922, of debentures dated September 28th, 1921, securing £1,000, and (b) filed particulars of £1,500 debentures authorised August 11th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; whole amount issued.

RADIUM ADVERTISING Co., LTD. (Liverpool).—Particulars of £1,200 debentures authorised July 19th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

HUDSON SCOTT AND SONS, LTD. (printers, etc., Carlisle). Satisfaction to the extent of £1,000 on August 9th, 1922, of debenture dated October 1st, 1919, securing £8,000.

R. FLETCHER, LTD. (printers, etc., London).—Debenture dated August 9th, 1922, to secure £150, charged on company's property, present and future, including uncalled capital. Holder: Miss E. Braby, 13, Carlton-road, Putney, S.W.

J. T. AND E. DAVALL, LTD. (book-edge gilders, etc., London).—Debenture dated August 14th, 1922, to secure £100, charged on the company's property, present and future, including uncalled capital. Holder: J. T. Davall, 58, Stroud Green-road, N.

CHARLES WHITTINGHAM AND GRIGGS (PRINTERS), LTD.—Particulars of £10,000 second debentures authorised May 22nd, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; present issue £500.

MARSDEN AND Co., LTD. (proprietors and publishers of Textile Mercury, printers, manufacturing stationers, etc., Manchester).—Satisfaction in full on July 27th, 1922, of second mortgage debentures dated August 16th, 1921, securing £8,000.

WESSEX ASSOCIATED NEWS, LTD.—(a) Satisfaction in full on June 24th, 1922, of mortgages dated July 19th and October 22nd, 1912, securing £6,500 debenture stock and £3,500 second debenture stock; and (b) registered trust deed dated June 27th, 1922, to secure £20,000, charged on 33, Westgate-street, and 23, Oldfield-road, Bath, and company's undertaking and property, present and future. Trustees: Sir Harry T. Hatt, Kt., Sunnycroft, Bloomfield Park, Bath, and D. Owen, Richmond House, Weston Park, Bath, and others.

MESSRS. LORILLEUX AND BOLTON, LTD., of 31-34, Cursitor-street, E.C.4, send us a copy of a handsome brochure, "Primary Inks," which should prove of much interest and utility to ink users. It contains progressive prints of the individual colours and combinations of colours in different strengths graduated from solid to the most delicate process work. This should be a valuable aid when selecting inks to match a blockmaker's proofs. We note that Messrs. Lorilleux and Bolton are making a speciality of inks suitable for simultaneous colour printing (Tandem-Miehle, Lambert and Huber machines), and invite inquiries.

OPTIMISM is the yeast of business, it raises the dough.

Decimal Standard Weights.

Some of the Advantages Explained.

There is by no means unanimity on the question of the practicability of adopting standardisation in relation to paper, and even in America, where the subject has been pushed forward vigorously and ceaselessly, progress is slow.

Quite recently the National Association of Purchasing Agents passed a resolution in favour of the American Decimal Standard of Weights for all kinds of paper and paper boards "as a substitute for the present various basic ream weights, because of the economy, accuracy and general convenience arising from the use of the standard." Accordingly all paper and paper board manufacturers, brokers and dealers are requested to adopt the decimal standard.

Under the heading of "the advantage of decimal standard of weights" Mr. F. E. Stapleford read a paper before the paper conference of the National Association of Purchasing Agents at Rochester, N.Y., and his observations are interesting. Mr. Stapleford's paper is as follows:—

A Complicated System.

The general system of weights and measures in use by the English-speaking nations of the world is without doubt the most complicated known to civilisation. I refer particularly to our inch, foot rod, acre, pint, quart, gallon, ounce (both wet and dry measure), pound, ton, etc. But of all these systems of measure there is none, absolutely none, that compares in complexity, with all attending inconvenience and inaccuracy, with our American system of basic weights for paper.

The paper industry, five or six years ago adopted a system known as "Substance Numbers." This system comprehends the establishment of the weight of some particular stock size as the standard of weight for that particular class of paper. For example: in book and litho papers, 25 x 38 has been adopted as the standard or basic size and the weights in this size are made in various weights equivalent to the weight of the standard or basic size. For instance, basis 25 x 38-50 lbs. in size 28 x 42 weighs 62 lbs.; it was formerly stocked 28 x 42-60 lbs. or two pounds lighter per ream of this size, without regard to any standard.

The weakness, if not defect, of this system lies in the fact that the substance number or weight applies to one class of paper only. Book papers, writing papers, cover papers, etc., each have their special basic size and respective substance numbers as just enumerated. There are at present from twelve to fifteen classes of paper stock, more or less used by printers, with corresponding basic sizes. The "substance" number of some particular grade of paper has no relation whatever to the same identical "substance" number of another. It may indicate either a greater or lesser basic weight.

The whole present system of basic weights is extremely complicated as to the process of figuring, increases the cost of estimating and checking and greatly increases the chances of error. To find the weight of a sheet 20½ x 36 on a basis of 25 x 38-50 lbs. four distinct operations are necessary—20½ must be multiplied by 36; 25 must be multiplied by 38; the product of 20½ and 36 must be multiplied by 50; and the result divided by the product of 25 x 38.

Paper is sold by the ream; the printer sells his converted product by the thousand count. This causes not only a constant clerical effort in translating five hundreds into thousands, but I believe there are few printers of experience who have not been embarrassed at one time or another, either by their own or their competitors' errors, in figuring half the amount of paper required.

This chaotic condition in due course brought the Pulp and Paper Division of the War Industries Board to the realisation that some simplified and otherwise efficient system of basic weights for paper was absolutely essential for the economic welfare and convenience of the paper making and associated industries. The American Decimal Standard of Weights for Paper was the outgrowth of that very urgent demand.

The Decimal Standard System was devised largely by Mr. Thos. E. Donnelley as director of the Division of Pulp and Paper, U.S. War Industries Board about five years ago.

Briefly, the D. S. System comprehends the unit of 1,000 sheets of paper or board, each

sheet containing 1,000 square inches as a basis. This may be more readily visualised as 1,000 sheets size 25 x 40. The weight of such a parcel of paper is the "Decimal Standard Number."

It will be seen that the ream is entirely eliminated. Everything is figured by the thousand sheets. The D. S. N. is the "substance" number. For instance—a paper of No. 150 substance would mean that 1,000 sheets each having an area of 1,000 square inches would weigh 150 pounds. It does not make a particle of difference what the grade or quality of that paper might be.

To find the weight of a quantity of odd sized sheets you simply multiply the area of that sheet by the D. S. N. which at once by one single mathematical operation gives the weight of 1,000 sheets. This product applied to the quantity of sheets, naturally produces in terms of pounds the weight of the lot, be it fifteen sheets or fifteen carloads.

There has developed no valid criticism, except that such a system would involve the expense to the merchants of new samples and that during the transition period there might be some duplication of stocks in paper warehouses.

On the other hand the advantages are:—

1.—It avoids confusion because: (a) The system is readily explained and easily understood; (b) there is but one substance number for the same weight of stocks for all classes; (c) there would be no confusion between the substance number and the actual weight of the stock, as the substance number is a basis unit and not the weight in pounds of some stock size used as a standard.

2.—It will eliminate the necessity of reducing reams to 1,000 sheets and any errors that might result.

3.—It makes unnecessary the acquiring of technical knowledge of the various sizes by men new in the business or laymen.

4.—It eliminates all chance of misunderstanding as to weight of sheets being furnished.

5.—It is generally convenient especially in the calculation of weights of odd sizes.

6.—It is accurate to the highest degree.

A great deal has been done, more said and many well meaning resolutions passed, relative to and in support of the D. S. system. If, on the other hand, anything of a material nature has been accomplished, it has never come to my attention.

For the prime purpose of determining the nature of the reception that might be accorded the D. S. System by book paper manufacturers at first blush, I wrote to two coated paper mills and after a short explanation of the application in their lines, asked them to give serious consideration to the adoption of the D. S. System in their billings.

One mill writes as follows: "While this is a matter which has our hearty approval from the theoretical standpoint, we are actually able to do but little to initiate such a system, as our product is taken by the jobbing trade and we must cater to their wishes in the matter. Up to date, we have never had any expression from them which would lead us to the opinion that they were other than apathetic on the subject."

This attitude I consider representative of that of the major portion of the manufacturing industry and suggests a definite basis for action—the jobbing trade.

The other mill writes: "Your favour of the 18th inst. received relative to the Decimal Standard System, and since the receipt of it we have been going over this matter quite carefully here, and I have made various inquiries among my friends in the paper trade in this vicinity; and while possibly this is something that will be universally adopted in the near future, I do not think from my investigation during the past week or ten days, that it is so far considered, by the paper trade, at least, to be something that should be adopted by them at this time."

"In looking over our own records here we find that if we adopted this system on all shipments to our larger customers since the first of the year we would have been out quite a little item. This, of course, may be only a coincidence, but it so happened that in figuring out the D. S. Number that the fractions have nearly all been in favour of the purchaser and this leads me to ask: What is the objection to carrying this D. S. Number out to say two decimal points so as to come to a more accurate result?"

"Our folks here have figured out a great many examples based on shipments since the first of January, and they claim that there is absolutely no saving in time. Of course, this may be from lack of experience."

This letter raises a point on which I personally am not clear: Are the present estab-

lished standard basis of weights, such as 25 by 38-50, 60, 70, etc., to be changed to the extent of the variation effected by the application of a D. S. N. without fraction which will come nearest to producing an equivalent substance number?

If the answer is yes, then I fear our task will be indeed arduous.

If not, then it will be necessary to carry out the D. S. N. to one if not two decimal places. To get the thing started I believe the latter course should be pursued.

For example, the D. S. N. for 25 by 38-50 lb. is given on a list recently published as 105. As a matter of fact it should be 105.25.

Likewise, the D. S. N. of 25 by 38-60 is 126.3 not 126; 25 by 38-70 is 147.35 not 147; 25 by 38-80 is 168.40 not 168; 25 by 38-90 is 189.45 not 189.

I think this phase of the application of the D. S. System should receive the consideration of a committee composed of members who are familiar with manufacturing conditions. It is important that this association put itself on record and lend its moral support to the American Decimal Standard. More than that—we must devise ways and means by active co-operation, looking to its universal adoption.

Australian Paper Trade.

Import and Export Figures.

The values of paper and paper goods imported into and exported from the Commonwealth during the periods mentioned were as follows:—

Imports.			
	May	1921	1922
Cardboard and other

South African Pulp Boards.

The Asbestos Cement Co., of Natal, imported an expert from Canada to supervise the production of pulp boards from their mill suitable for the bookbinding trade, and the specimens so far produced give evidence of proving of some utility to the trade, says the *South African Printer and Stationer*. The proposition, apparently, is to produce a substitute for strawboards. The first productions are strong and serviceable boards, and will doubtless be considerably improved upon as experience is gained with the raw materials available locally.

The first newspaper printed as a commercial venture in a native language in the Congo has appeared at Stanleyville. It is the *Kirongozi*, a Swahili monthly.

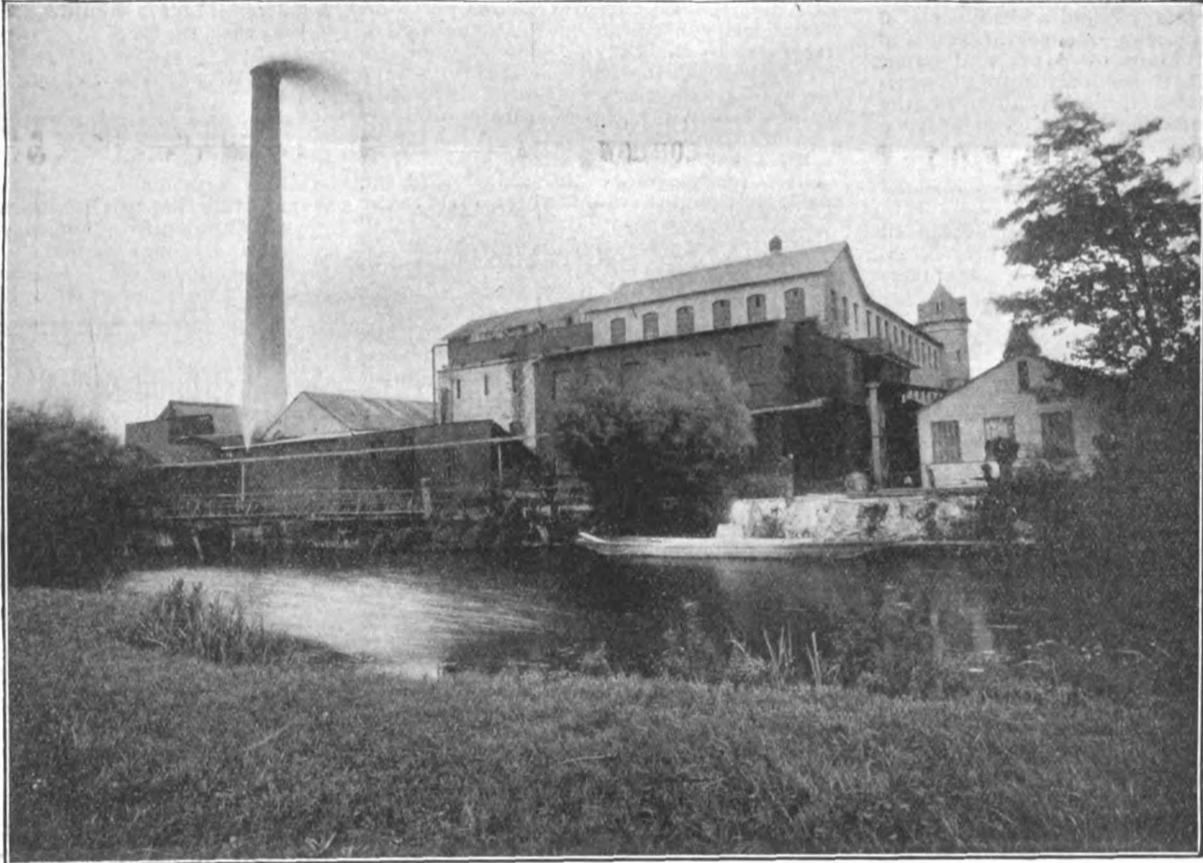

Wolvercote Paper Mill.

In "The Oxford University Press 1468-1921" (5s. net), which was recently reviewed in our columns and which comes from the Clarendon Press, Oxford, there is an interesting reference to Wolvercote Paper Mill and the special papers produced there. The two

The water-wheel has long ceased to play more than a very minor part in the driving of the mill, which now has two modern papermaking machines, 72 and 60 ins. wide respectively. The power used is partly steam, but a large part of the plant has quite recently been electrified.

Most varieties of high-class printing paper are made at Wolvercote, which besides feeding the Press does a considerable trade with

books as the Concise Oxford Dictionary, the Concise Dictionary of National Biography, or the Oxford Survey of the British Empire is obvious; and many people like to read the poets and the classics in thin and light volumes. The Oxford Homer will go into a pocket, though it has 1,374 pages; and the India paper Shakespeare and Oxford Book of English Verse are delightfully easy to carry and handle.

A General View of the Wolvercote Paper Mill.

illustrations produced in this issue are among several included in the volume, and we are indebted to the proprietors of the Oxford University Press for the loan of them.

The first mention of papermaking in or

other printers. The paper made for the Oxford Dictionary and some other books is of the finest rag, and is probably as durable as the best hand-made paper of former times. But the mill is best known for its

The controller of the mill is Mr. Douglas Clapperton (a name well known in the paper trade), who succeeded Mr. Jos. Castle in 1916.

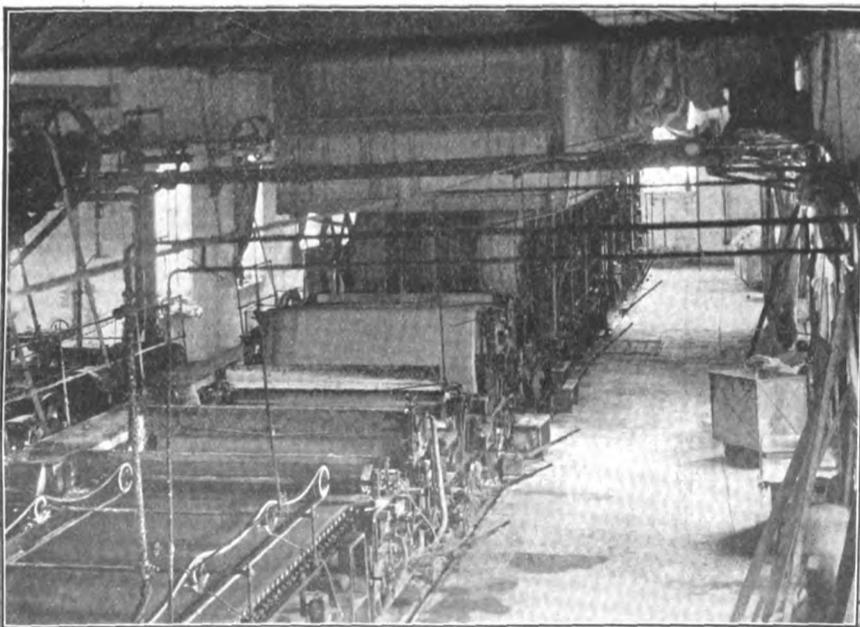

Paper Competition in Egypt.

British Imports Decline, German Rise.

Some statistics are published by the Board of Trade which show the imports into Egypt of paper and paper goods from both the United Kingdom and Germany over the periods January to May in 1921 and 1922. In nearly every instance decreases are recorded in the value of the imports from the United Kingdom, while imports of similar German goods have increased.

The imports of news-print from the United Kingdom amounted to £E3,451 during January to May, 1921, and £E148 in the five months of the present year. Imports from Germany rose from £E920 to £E7,927. British stationery in January-May, 1921, was valued at £E20,479, and in 1922, £E7,898. On the other hand German stationery increased from £E4,146 to £E10,661; thick cardboard from the U.K. declined from £E4,881 to £E2,576 in the respective periods, while the German article increased from £E176 to £E11,793. British wrapping paper fell from £E5,181 to £E2,306 and similar paper of German origin increased from £E1,519 to £E17,018.

Imports of printing paper other than news-print from the United Kingdom showed an increase in value during January-May from £E11,891 to £E15,945 in the first five months of 1921. German imports of the same increased, however, from £E1,580 to no less than £E12,295.

Machine House.

near Oxford, we are told, is a story of one Edwards, who about 1670 planned to erect a mill at Wolvercote, and was encouraged by Fell. In 1718 Hearne the antiquary wrote that "some of the best paper in England is made at Wolvercote Mill." It was bought by the Press in 1870.

The mill stands on a branch of the Thames, on the edge of the quiet village of Wolvercote, and near the ruins of Godstow Nunnery.

"Bible" papers, exceptionally thin, tough, and opaque, with a fine printing surface. Paper of this kind reaches its acme in the famous Oxford India paper, the invention of which made revolutionary changes in the printing of Bibles. A great many Oxford books are now printed in two editions, an ordinary and an India paper. If the saving of space is an important consideration, the convenience of the thinner editions of such

News-Print Prices.

Higher Levels Predicted.

Mr. Phillip T. Dodge, president of the International Paper Co., who is paying another visit to Europe, is of opinion that the price of news-print paper will, undoubtedly, rise above the present quotations of \$75 per ton in the near future. The recent increase in news-print prices as well as others which may come in the next few months are attributable to the abnormal demands made upon the mills manufacturing print-paper and the necessity for providing adequate machinery and equipment to keep abreast of this volume of business.

"Later the price of paper will be lower than present prices," said Mr. Dodge, explaining that this would come about through the further liquidation of manufacturing costs and the securing of cheaper labour, "but ultimately the cost of news-print in America is bound to go up—even above the prices which now exist—and this will continue in direct ratio with the growing scarcity of available pulp wood.

"At the present time every country selling news-print, that is still using wood pulp purchased at the recent higher prices, is losing money at the price of \$3.50. Competition with Scandinavian countries, where wages are one-third lower than they are in America, is killing the production of American manufacturers. In the years to come, European countries and Canada will produce the bulk of the news-print paper which is used in the United States. Our American mills will be operated more profitably as hydro electric plants as there will soon be more profit in water power than in papermaking.

"We've just started the best paper mill in the world in Canada," says Mr. Dodge. "Production is gradually being shifted up there. Labour is cheaper, transportation facilities are better, and fuel can be more readily obtained. Within the next ten days our fourth machine at the new Three Rivers mill will be in operation. This mill, situated at the junction of the St. Maurice and St. Lawrence rivers, with docks on the latter, is readily accessible by water, to a depth of 30 feet. Not only may the finished paper be shipped direct from the mill in this manner, but tank steamers laden with fuel oil may deliver their cargoes at the same point."

Publishers' Prices.

According to information furnished by the Federal Trade Commission, the weighted average price of contract deliveries from United States mills to publishers during June, 1922, f.o.b. mill, in carload lots, for standard "news" in rolls was \$3.574 per 100 pounds. This weighted average is based upon June deliveries of about 60,000 tons on contract involving a total tonnage of approximately 474,000 tons of undelivered paper manufactured in the United States. The weighted average contract price based on deliveries from Canadian mills of about 38,000 tons of standard roll "news" in carload lots f.o.b. mill, in June, 1922, was \$3.492 per 100 pounds. This weighted average is based upon the June deliveries on contracts involving about 184,000 tons of undelivered Canadian paper. The weighted average market price for June, of standard roll "news" in carload lots f.o.b. mill, based upon domestic purchases totalling about 11,000 tons, was \$3.475 per 100 pounds.

News-print Paper Corporation.

Further references to the combine of Swedish, Norwegian and Finnish paper mills with the object of organising sales of news-print in the United States are forthcoming. The organisation will be known as the News-Print Paper Corporation.

As we have already mentioned, the chief of the enterprise is Mr. G. F. Steele, formerly manager of the Canadian Paper Export Co., of Montreal.

The latest news from Stockholm states that all Swedish newspaper mills of importance, with one exception, have joined, as well as all the Norwegian mills.

The export to the United States of America of news-print during 1921 amounted to 50,000 tons from Sweden and 15,000 tons from Norway. Finland's export of paper in the same year amounted to 20,000 tons.

Australian Notes.

Newspapers Down to a Penny—How News-print Prices have Declined—Government Printing Re-organisation—No Successor to Mr. Gullick Appointed—Melbourne Bookseller's Loss.

(From Our Sydney Correspondent.)

It is a sign of the times that the price of certain newspapers is coming down again, and once more we have the penny daily. Both the *Daily Telegraph* and the *Morning Herald* at Sydney announce a reduction to this selling price.

This change is rendered possible by the fall in the price of news-print. The *Herald* points out that the increased price of the newspaper was forced upon the proprietors in May, 1920, when the price of news-print was steadily mounting, which it continued to do until it cost between £80 and £90 per ton in Sydney as against a pre-war price of about £10 13s. 4d. per ton. It has now receded to about £25 10s. per ton, which is still nearly two and a-half times the pre-war price. The announcement adds that other charges involved in the production of a daily newspaper are nearly double those of pre-war times.

In its announcement of price reduction, the *Daily Telegraph* mentions that it was introduced to Sydney on July 1st, 1879, as the first penny morning paper, and the proprietors make the concession of a penny paper without any fear of the financial result.

At a meeting of the Commonwealth Cabinet Mr. Spencer, Senior Inspector in the Public Service, was appointed for a period of 12 months, to re-organise the Government Printing Office. No successor has yet been appointed to fill the vacancy caused by the death of Mr. Gullick, the Government printer. Mr. Brooks, M.L.C., who was asked by the Treasurer to make certain inquiries into the Government Printing Office, has presented his report. It is probable that a departure will be made by the Government in the direction of restricting the competition of the office with outside concerns.

The manager of a big Melbourne book-selling firm is said to have burnt his fingers badly over a Hun volume. He indented a large number of copies of General Ludendorff's book on the war at 10s. each, and advertised them at 20s. a copy. Local bookbuyers calmly disregarded the alleged bargain, with the result that the disgusted importer recently sold practically all he had to a second-hand book-dealer at 1s. a copy.

Paper Mill and Consumer.

Some interesting reflections on "the paper industry from a fireside" have been made by Mr. W. N. Caldwell, a former president of the American Paper and Pulp Association.

It seems to me as I look over the industry, he says, that one of the weakest points in the general structure is the lack of contact between the paper mill and the ultimate consumer. The merchant, of course, should be a mill distributor and not an independent trader, which is a good theory, but only in a few instances works out in practice. I always was in favour of selling paper exclusively to merchants, but I cannot help but feel that there should be a closer co-operation between the manufacturer and the merchant in presenting to the printer or the ultimate consumer a more united effort in serving his interest. With the large liquidation on the part of the mills, I am informed that although the merchants have taken some losses they are not proportionately as much as those which have been sustained by the mills, which is not a "fair shake." Any liquidation should be equally shared in order that the price to the printer and ultimate consumer can be made as low as possible. This is merely an example of what I mean by closer co-operation between a mill and its distributing merchants.

The German Paper Industry.

High Prices of Paper.—A Comparison with Pre-War Rates.—Pulp Quotations Show a Heavy Advance during 1922.—Movements in Values of Chemical Pulps for the Months of May, July and August.—Dear Coal and Pulp Wood.—Imports and Exports of Pulp Wood.—Paper Mill Fire.

PRICES of paper on reels for August show M. 2,754.5 per 100 kg. over pre-war figures. The present quotation is M. 2,775.

PAPER in sheets is quoted at the present time at M. 2,783 per 100 kg. f.o.r. receivers' station, an increase of M. 2,762 compared with pre-war rates.

PULP prices show a recent increase of about 54 per cent.

SINCE the beginning of the year pulp prices have increased 236 per cent.

AS SHOWING movements during the last three months it may be mentioned that the August quotation for unbleached second quality stands at M. 2,550, as compared with M. 1,625 in July and M. 1,300 in May. 1b. quality: August, M. 2,700; July, M. 1,750; May, M. 1,425. 1a quality; August, M. 2,800; July, M. 1,825; May, M. 1,475.

BLEACHING 1a quality shows the following rates: August, M. 2,950; July, M. 1,950; May M. 1,575.

THE August quotation for bleached 1a is M3,550 as compared with M. 2,300 in July, and M. 1,850 in May.

COAL has gone up since the beginning of the year about 280 per cent.

PULP WOOD is another costly item, the increase in price during 1922 amounting to between 400 and 500 per cent.

GERMANY imported 1,891,602 cub. metres of pulp wood in 1912, in 1920 only 215,919 cub. metres, and in the year ended April 30th, 1922, 527,621 cub. metres.

THE exports in 1912 were 74,852 cub. metres, in 1920, 22,033 cub. metres, and in the year ended April 30th, 1922, 1,892 cub. metres.

BOTH imports and exports of pulp wood show a heavy slump since the war.

A DESTRUCTIVE fire at the Papierfabrik Krappitz has suspended production indefinitely. The power station, wood grinding mill and paper machine houses were practically destroyed. The fire was due to a short circuit in the transformer house.

Empire Paper Mills (1922), Ltd.

Widest Papermaking Machine in the U.K. to be installed.

Great Increase in Production.

Plans have been arranged by the enterprising directors of the Empire Paper Mills (1922), Ltd., to greatly increase output.

It is the intention to install one of Walmsley's fast-running machines, which will be capable of turning out finished paper 210 in wide. This machine, when erected, will rank as the largest in this country.

It will be capable of a weekly output of 350 tons, and as it will replace two 90 inch machines, producing about 200 tons, an increase will be secured of about 150 tons.

The two old machines and other paper-making plant will shortly be offered for sale.

No. 125, FLEET STREET, one of the oldest buildings in that thoroughfare, is to be demolished. For many years it was the home of the publishing firm of Horace Marshall and Sons until they removed to Temple House.

Fibre Boards.

A Series of New Inventions.

Quite a crop of British patents have recently been granted to applicants who are anxious to produce cheaper and more serviceable fibre boards.

Mr. Manley Chew, of Ontario, seeks to produce a useful fibre board which will be strong and stiff and not liable to warp nor be affected by dampness or water. Chipped waste is subjected to moisture and heat, or shortly steam, to cook the same, floating the waste and beating it in such floated condition to a fibrous, watery, pulpy mass, the fibres being separated but unbroken and practically shredded. The mass is then agitated to keep it in the proper consistency and allowed to stream over obstructions whereby it is freed from foreign matter, the pulp being then precipitated or projected in a flat, filmy state into the press, where the water is expressed and the fibre board is finally formed. Drying and waterproofing follow. The cooking occupies 10 to 24 hours, depending upon the nature of the chip waste, and a suitable chemical binder helps to solidify and strengthen the shredded mass.

Mr. C. G. Muench seeks to produce a heat insulating material in the form of boards which are composed of a mass of fibres of various sizes, felted together by being pressed through a felting machine when held in free suspension in the liquid. The object is to produce a cheaper material with the insulating qualities of pure cork. For this purpose the material is composed of a felted porous mass of bark scale and including fibres derived from waste bark material. The process consists of mixing the bark material with water, subjecting the material (including its outer scale portions) to a shredding action, whereby it is disintegrated into a mixture of scale material and a plurality of classes of fibres, felting the fibres so as to form a single sheet, which is suitably dried.

An improved fibre board invented by Mr. J. Kershaw Shaw, refers to boards composed of interlaced fibres, more especially of that type which is provided with a facing or outer layer having properties distinct from the main part of the board and which is manufactured by means of wet pulps of different materials passed over and under rollers. The board is composed of different fibres, both the fibres in the layers and the fibres themselves being interlaced; the fibres of an outer layer have different qualities from that of an under layer, and they may also be of a different colour. Further, the outer layers may be waterproof, fireproof, or both, and the desire is to provide a board which will be more efficient in use and less expensive to produce than those hitherto proposed. An ingenious tank device is suggested for the proper relegation of the fibres.

Indian Paper Mill's Losses.

The Calcutta correspondent of the *Morning Post* states that the Titagur Paper Mills, which during the war made immense profits, is obliged to confess to a loss of nearly seven lakhs during the half-year ended March 31st last. The total reversal of favourable conditions in the paper trade in India is the more regrettable because this company had matured a project and built up reserves, by means of which it proposed to make a reality of the often mooted manufacture of paper from Burmah's vast bamboo resources. For the present at least the Titagur company's great scheme is in a condition of suspension.

New Inventions.

Sheet Delivery Mechanism.

An invention patented by Messrs. Linotype and Machinery, Ltd., and F. Spence relates to sheet delivery mechanism for printing ma-

chines of the kind comprising a number of bars supported by a reciprocating carriage which bars during the inward travel of the carriage pass between the delivery tapes and during the outward travel receive a sheet from the tapes, said sheet being swept off the bars on to the delivery board during the next inward travel of the carriage by the action of pivoted fingers lifted to engage the inner edge of the sheet and subsequently lowered out of the way of the carriage during its next outward travel, and consists in the combination of sheet-pusher fingers adapted to swing about an horizontal axis and an oscillating slotted arm for imparting said swinging motion, characterised by the fact that the slot in the oscillating arm is non-radial to the axis about which it oscillates, positive stops acting on the fingers being dispensed with so as to minimise trouble from accidental breaking of the fingers. As shown, the bars 1 are supported by the reciprocating carriage 3 and pass on the inward travel of the latter between the tapes 5 and tape rollers 6. The fingers 8 are secured to a rock-shaft 9 mounted in brackets 10 adjustable along rods 11 at opposite sides of the machine, and are rocked by means of an arm 14 secured to the shaft 9 and formed with a non-radial slot 15 engaged by a stud 16 on one arm 17 of a bell-crank lever. Carried by the other arm 18 of a lever is a swivelling block 19 clamped by a screw 21 to a rod 20 connected to a pivoted lever 22 adapted to be actuated by a roller 24 on the carriage 3 when the latter reaches the limit of its outward travel, whereby the fingers 8 are raised as shown in Fig. 2 in readiness to sweep off the sheet lying on the bars 1 when the carriage travels inward again. Another lever 26, pivoted at 25 and having a projection 27 resting on the arm 17 of the bell-crank, is raised at the same time as the fingers 8 are lifted and takes up a position in the path of the roller 24 so that by the time the sheet has been swept off the bars 1 and on the further inward movement of the carriage 3, the roller 24 engages the lever 26, thereby lowering the fingers 8 into the prone position. A rod 28 is pivoted to the rocking arm 14 and passes through the slotted swivelling pivot 25 of the lever 26, and is encircled by a coil spring acting between the shoulder 30 and the pivot 25 to retain the fingers 8 in their terminal positions. The arrangement of the stud 16 and slot 15 may be reversed, the former being carried on the rocking arm 14 and the latter provided on the arm 17 of the bell-crank.

16 and provided with a tongue 12 which slides within the groove of the other member. Separation of the members is prevented by a groove 18 in the lower surface of each tongue,

Preparing Printing Plates.

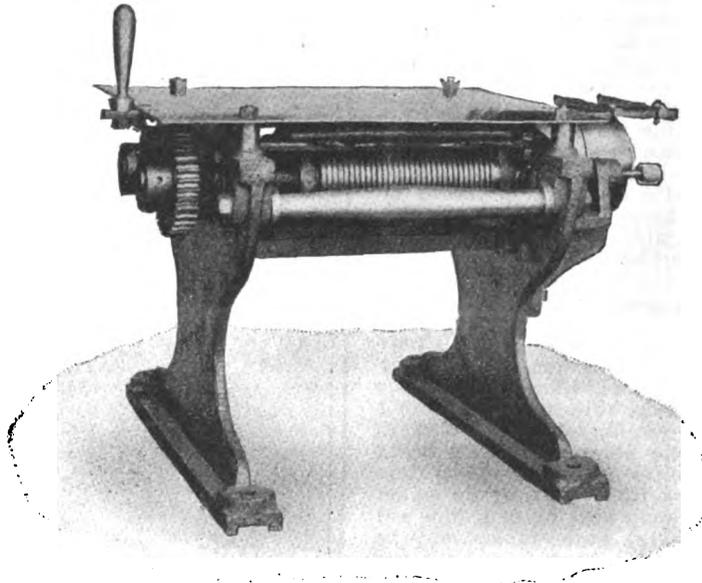

A method of producing simultaneously a number of printing plates similar to an

original a number of impressions equal to the number of plates to be produced, in resist ink upon sheets of transfer paper, transferring the impressions side by side on a large metal plate, etching this plate, and then cutting it up to form the separate printing plates. The transfer paper is preferably unsized Japanese paper treated with gelatine or glycerine and the ink employed consists of printing ink with the addition of wax, glycerine, and indian ink. Before transferring the impressions, the ink is hardened by placing the transfer sheets between sheets impregnated with vinegar.

Waste Paper Cutting Machine.

Among recent devices for utilising paper offcuts and waste is a machine recently placed on the market by the Machinery Manufacturing Co., Edinburgh. It is a strongly constructed machine for cutting into shavings guillotine off-cuts—trade wastes from box makers, printers, bookbinders, and other paper users. There is no limit to the uses of such shavings. They are of great value for packing delicate articles either for export or the home markets.

The power required for the machine is about ½ h.p., and the output is about 200 feet per minute. The makers also manufacture rotary paper shaving machines, which can be utilised for cutting six or eight reels simul-

Waste Paper Cutting Machine.

original plate has been invented by Mr. J. Monberg, and consists in taking from the

taneously into strips of paper suitable for packing.

Printers' Furniture.

Mr. H. H. Hancock has invented a method whereby in extensible furniture of the type comprising two counterpart members, means

is provided for connecting the members inseparably so that they can be extended to substantially the combined length of the members without danger of longitudinal or transverse separation. Each member consists of a body-portion 10, 11 containing a groove

Buchanan's Equivalent Weight Calculator.

A GREAT TIME SAVER!

BY two simple movements of the scales a comparison may be made in an instant between the usual Standard Sizes of Paper on any odd size of any dimensions between 10" and 60", in ¼" variations between 10" and 20" and 1" variations 20" to 60". There is practically no limit to the variety of uses to which the scales may be put.

- Standard Size, 12-in. Boxwood - £2 2 0
- Pocket Size, 8-in., Celluloid faced - 2 2 0
- 15-in. long, Celluloid faced - - 3 3 0

The Pioneers of Offset Printing.

Some Historic Machines and Illustrious Names in an Important Phase of Printing Trade Evolution.

A few questions on the interesting subject of the early history of the offset process are put to us by the editor of a Parisian trade journal devoted to paper and printing. Our French colleague, who is making an exhaustive inquiry into offset history asks: (1) Was Washington Rubel really the inventor of the first offset press? (2) If so, in what year? (3) Who was the maker of the first offset press? (4) What is the name of the first firm who utilised the offset press? (5) Is this press still in existence? (6) Could an engraving or photograph of this press be obtained?

To name any one person as the "inventor" of the offset process as employed to-day in the printing trade would be as unreasonable as to say that Signor Marconi "invented" wireless telegraphy and to leave unmentioned the names of Henry, Hertz, Lodge and others whose researches formed an indispensable part of the foundations of present-day knowledge of the subject. The process of printing upon paper by offset was not so much an invention as a modification or application of previously known methods of printing by way of a rubber blanket.

The root idea of offset printing was mooted at a very early date. In 1846 a patent was obtained by G. W. Jacob, of Hoxton, for a process containing the principle. Jacob did not use rubber to convey the ink, but employed roller composition instead—emphasising, however, the need for elasticity in the roller surface. After charging his types, etc., with ink, colour or varnish, he passed a composition roller over them, then made this roller convey its charge to another composition roller, the latter being used to print from. Jacob's process was described in the *British and Colonial Printer and Stationer* of April 21st, 1910.

Ancestry of Modern Offset.

It is in the realm of tin printing, however, that we find the closest predecessors of modern offset printing. Not only flat-bed offset but also rotary offset were in use for tin printing years before serious attempts were made at printing on paper by the offset process. Power-driven flat-bed offset tin printing machinery dates back well over forty years at any rate. We remember Mr. Frank Heywood (of Messrs. George Mann and Co., Ltd., printers' engineers) referring in a lecture on offset to the fact that his firm, in putting in a new machine about ten years ago for a Reading client, had to remove an old tin-printing machine that had been installed in 1879 and was believed to be the first power-driven offset machine ever made. Rotary offset printing on tin was, of course, a later development. Messrs. George Mann and Co., Ltd., claim the credit for producing the first rotary offset ma-

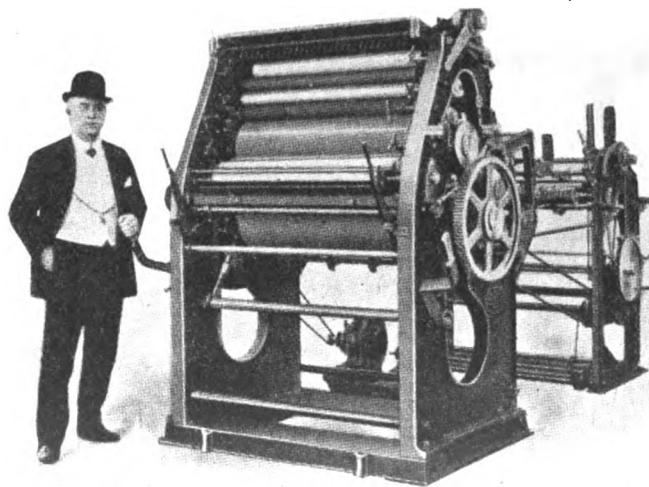

chine. This was their rotary tin-printing machine made first in 1903 and shown in 1904 at the Printing Exhibition in London. This machine aroused much interest at the time and was awarded a medal for its great novelty.

Looking back 20 years, printers of to-day are astonished to realise that although the offset process had already been in use for a couple of decades for printing on tin, no one seems to have seriously tackled the project of printing by this method on paper. That is

ever, goes the credit of doing for offset printing on paper much the same thing as Marconi did for wireless telegraphy, i.e., showing it to be a commercially practicable proposition. Rubel did the work, and suffered the usual disappointments, of the pioneer, and it was largely as the result of his efforts that offset printing came into its own.

The Work of Rubel.

It was in 1904 that Rubel designed his apparatus, and in 1905 his first machine was

Mr. I. W. Rubel's Offset Printing Machine.

the point at which Ira Washington Rubel comes into printing trade history, and he deserves substantial credit for having played a leading part in lifting offset printing into a new field of usefulness, and so fathering its present-day far-reaching applications. Doubtless Rubel was not the first to print on a piece of paper by the offset process. By accident or out of curiosity many tin printers must from time to time have got interesting results on materials other than tin, including paper. A name previously mentioned in our pages in this connection is that of Mr. A. J. Rowley (a member of the Printers' Managers and Overseers' Association), who, on a tin printing machine, in the early nineties, produced what was described as "delightful chromo printing upon paper, cardboard, silk and satin." To Rubel, how-

made, this machine being installed at the Eastern Lithographic Co., New York. It was not satisfactory, however, and the following year Rubel came to England, bringing the machine with him. This, we believe, is the machine shown in the accompanying illustration—which we have reproduced from a half-tone illustration that appeared in *Penrose's Annual*, Vol. 14 (1908-9), page 21. Messrs. Bemrose and Sons, Ltd., took much interest in the new-comer, and a machine similar to that illustrated is still, we understand, on Messrs. Bemrose's premises at Derby. Rubel's first machine was broken up. Whilst in this country Rubel had machinery built by Messrs. Bentley and Jackson, but this also was not a success. Rubel died on September 4th, 1908, without having reaped the reward he deserved for his enterprising efforts.

• TRADE **LINOTYPE** MARK •

HARD FACTS

¶ The Linotype composing machine has thirty-six years of proved service behind it and guaranteed service ahead.

¶ It was the first composing machine to do all that printers required of it. It has continued to be "first," with the result that there are now over 43,000 Linotypes in use.

¶ Every marked improvement in the "All-Slug-Way" has been originated and developed by the makers of the Linotype.

¶ Although other machines are now on the market, Linotype sales are to-day larger than ever.

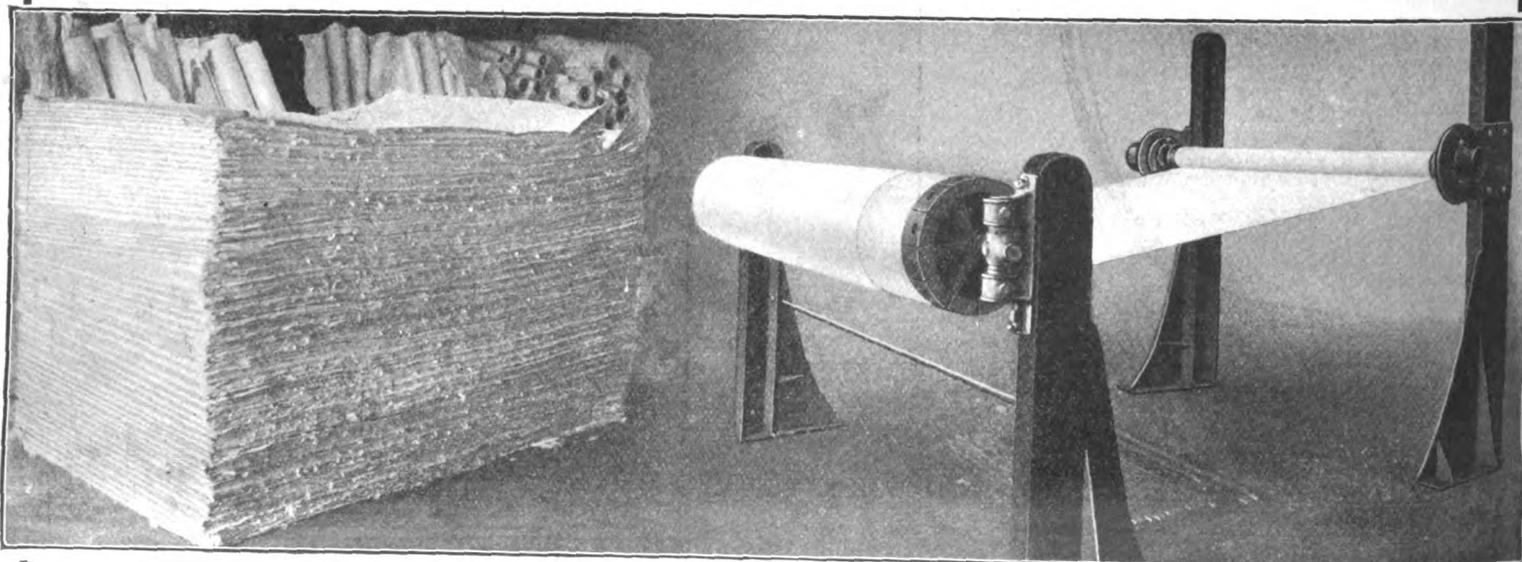

¶ You cannot ignore the significance of these facts.

MATRIX SERVICE. We have in stock over 100,000,000 matrices, made by experts on machines developed and perfected by ourselves, and of a quality far superior to those produced by mere imitators.

Linotype & Machinery Ltd., 9 Kingsway, London

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES :

- 1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.
- 2.—It occupies a space of only six feet on the run, and is quite noiseless.
- 3.—The power required is such a small amount that it can be driven from any existing shafting.

- 4.—Centres of any kind or width can be worked on the machine.
- 5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.
- 6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

MITCHELL BROS., *Engineers,* Myrtle Road Works, Brentwood, ESSEX

We have seen it stated in the German technical Press that Caspar Hermann, a Bavarian lithographer, was at work on the problem of offset printing at the same time as Rubel. Be that as it may, it was not until 1907 that he produced his first machine, which was built at Leipzig by the Maschinenbaugesellschaft Zweibrücken. This was the first German-built offset machine, and was named the "Triumph."

British Prowess in Offset.

It was in the year 1906 that Messrs. George Mann and Co. made their first offset machine for paper printing, and these world-renowned British engineers claim to be the first makers of commercially practical machines for the purpose. The first printing firm to install this model was Messrs. Blades, East and Blades, and the Mann machine they put in in 1906 is still in successful operation, having since been modernised. It was natural that Messrs. Mann, who were at the time leading makers of flat bed, and the only makers of rotary tin printing offset machines, should be keenly interested in the problem which Rubel was attempting to solve. They brought unique capabilities to bear on the task, and not only succeeded, as already mentioned, in producing a satisfactory single-colour machine, but their special experience of multiple colour work, as carried to great lengths in tin printing, led them early to seek to make practicable the process of colour printing on paper by offset machinery. A good example of colour work on a Mann offset machine appeared in *Penrose's Annual* for 1909-10. This shows what good colour printing by offset was done over twelve years ago, initiating a branch of offset practice which has now grown to big dimensions.

A New Model Linotype.

Four Magazines and Two Distributors.

The trade will learn with much interest the details of the very latest Linotype machine, which is to be known as Model 6, and is a much improved machine. We illustrate the new model herewith. Large matrices can be run through the magazines; for example, faces as large as 18-point clearface bold capitals will run in either the centre section or the cap section. An equipment for one magazine could therefore consist of the following: First or lower case section, 14-point clearface bold lower case; centre section, 14-point clearface bold capitals; cap section, 18-point clearface bold capitals. Another important advantage of Model 6 Linotype is the arrangement of the magazines, which can be used in combination in three pairs—1 and 2, 2 and 3, or 3 and 4, thus considerably increasing the versatility of the machine equipment. Further special features are described in detail below.

Operation of the Magazines.

The illustration gives a front view showing the four superimposed magazines, 1, 2, 3, 4. The intermediate pair, 2 and 3, are in register, being located and held in that position by studs 10A fixed in pillars 10, of which there are four, one at each corner. To bring into operative position any pair of magazines, 1 and 2, 2 and 3, or 3 and 4, a lever is pulled to the front with one hand, thus turning pillars 10, which bring the studs 10A out of engagement; then the handle 8 is operated to bring into position the pair of magazines required. The lever is then pushed back, bringing the studs 10A into engagement with the magazine slots.

An indicator points to the names of the founts on a plate attached to each magazine. The escapement mechanism is common to each magazine; therefore the magazines can be changed to any position required, the matrices being selected for their respective magazines by an automatic fount selector mechanism.

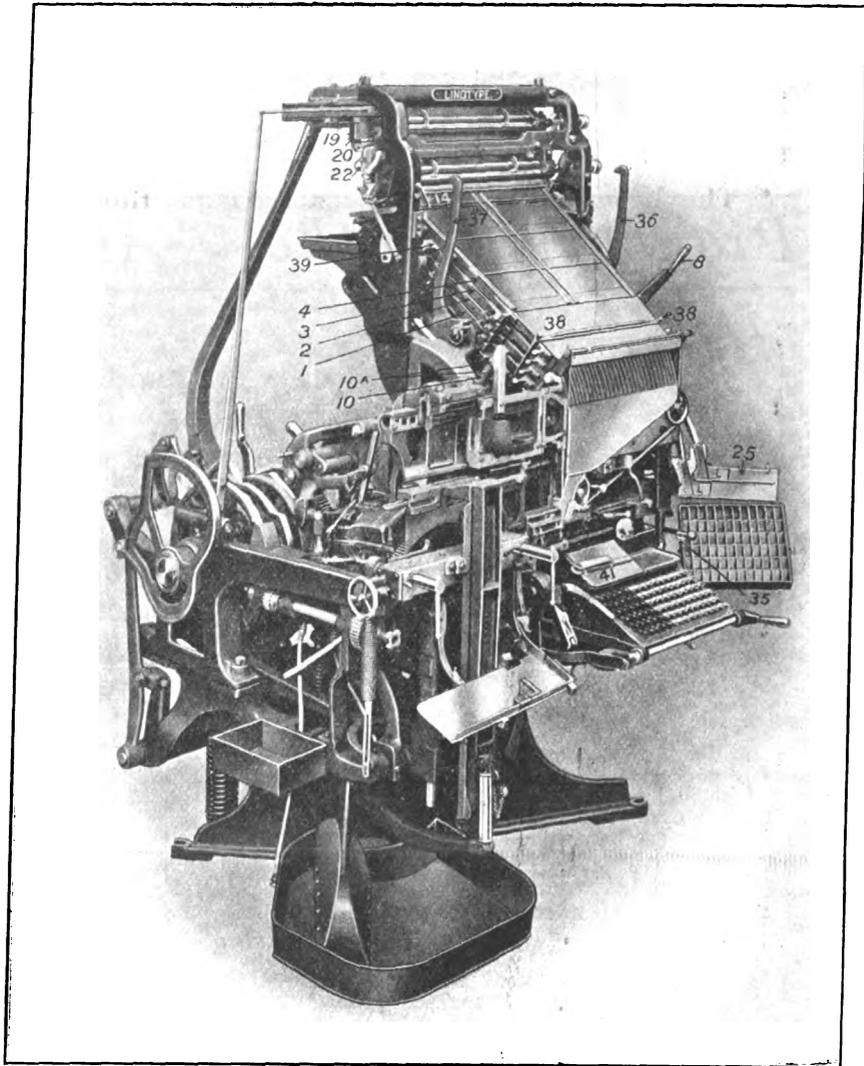

Improved Distributor Action.

The distributors are fitted with the double thread distributor screws and spiral distributor stop clutches, which are more sensitive and act quicker than the earlier device. The upper distributor distributes into the lower magazines, and the lower distributor distributes into the upper magazines. These distributors are very accessible, and when the magazine entrance is swung down the matrices can be seen hanging on the distributor bars. The matrices for all magazines

have a central notch and two selector notches, those for the upper magazine being to the left and those for the lower magazine to the right. Thus if the notches agree with the selector they are allowed to drop down a chute to a separator box, which feeds them on to the lower bar, whilst those not corresponding with the selector are fed along the upper bar.

so that any obstruction will immediately stop the distributor in the usual manner.

The whole of the assembler is arranged to swing open, so as to expose all the key-rods, strikers, striker levers, and star-wheel. In this model only one set of key-rods and strikers is required. The change from one magazine to the other is accomplished by pushing in or withdrawing the lever situated at the right of

A New Linotype—Model 6.

The automatic stops are so arranged that when the upper distributor is stopped, the lower distributor continues working, so that any matrices in the lower distributor may continue to be distributed; but if the lower distributor stops both mechanisms automatically become inoperative.

The distributor box and separator box are so arranged that they stop working when matrices are not passing through. Although the entrance to the lower magazine is necessarily long, the upper side plate and lower plate are channelled like the magazine plates,

the keyboard, within easy reach of the operator whilst seated. This lever aligns the strikers opposite the escapement of the magazine being used. Any magazine may be removed and others substituted.

A DANISH Law, recently made effective provides for the levy of stamp duty on playing cards imported into, or manufactured in, Denmark, at the rate of 1 kr. per pack. This stamp duty is levied in addition to the ordinary Customs duty.

A New Epoch in the Printing World

Pioneers of the "All-Slug-Route"

St. Clements Press, the Home of the Day and Night Printers, where the "Near East" was produced.

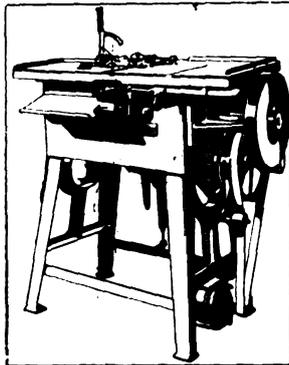

THE day of hand-set type is quickly ending. For the first time in Europe a periodical has been produced entirely by mechanical composition, and to the foresight and initiative of Mr. Geo. Eaton Hart, of St. Clements Press, Ltd., Portugal Street, London, W.C., belongs the credit for this achievement.

Mr. George Eaton Hart, the Managing Director of St. Clements Press, and pioneer of mechanical composition in Europe.

It is no secret that the vogue of hand composition has been attended by numerous drawbacks, particularly in the case of newspaper and periodical printing. The urgent need of Mechanical Composition, in order to check

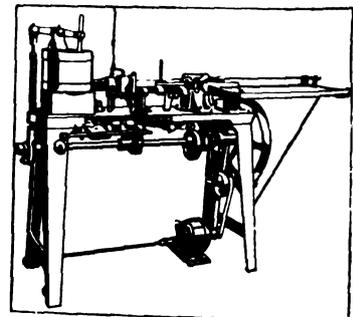

the resulting waste of production time, and wear and tear of foundry type is universally admitted; the directors of St. Clements Press alone have succeeded in making a successful test of mechanical possibilities.

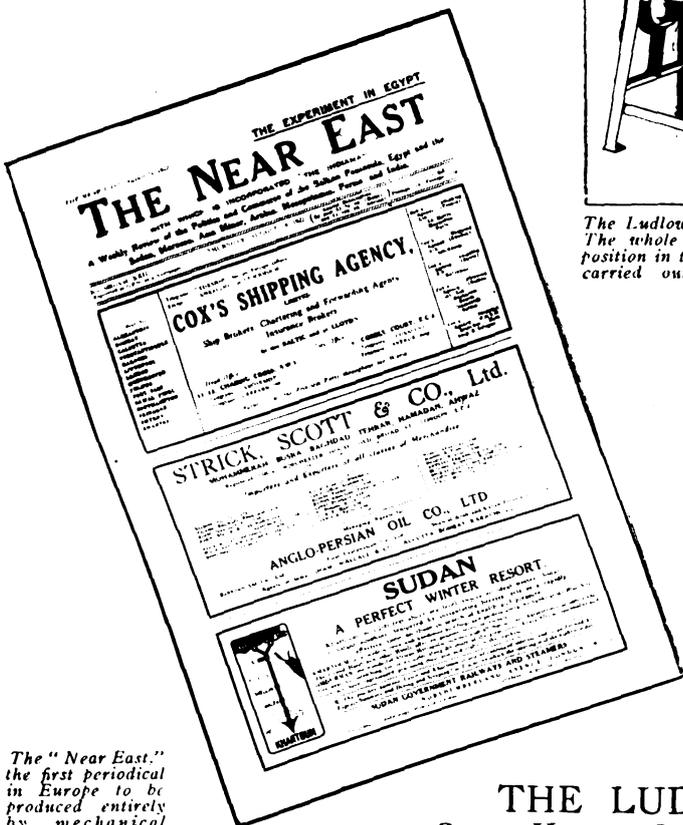

The Ludlow composing machine. The whole of the display composition in the "Near East" was carried out on this machine.

Not the least remarkable thing about the achievement was the speed with which the periodical was turned out. Receiving instructions at 10 o'clock on Saturday morning, the periodical was composed from cover to

cover—entirely by the "all-slug-route"—printed and published by Wednesday morning. Such a performance would have been almost impossible, finely equipped as they are, without the extensive plant of Ludlows, Elrods, Linotypes and Intertypes.

The Elrod. All the borders, rules and spacing materials were cast on this remarkable machine.

The "Near East," the first periodical in Europe to be produced entirely by mechanical composition.

Trade Notes.

THE T.A. BALLOT.—The ballot of the members of the Typographical Association shows a majority of between two and three to one in favour of acceptance of the recommendation of the Executive for a settlement of the recent dispute on the wage reduction terms which were negotiated in London. A circular issued by the Association gives the figures as: In favour, 14,983; against, 5,483.

T.A. AND HOLIDAY PAYMENTS.—Payment of summer holiday money to members of the Typographical Association was suspended during the dispute, but is now being paid where it is due. Employees, however, who were on strike at the time of August Bank Holiday have, of course, no right to payment for that day.

A WEEKLY average of over 1,100 members of the London Society of Compositors is reported to have signed the books throughout August, which is always regarded as the printers' black month. September is rarely any better. The Society does not anticipate even a little improvement until mid-October.

PARTNERSHIPS DISSOLVED.—The following are among the partnerships dissolved announced in the *London Gazette*: A. E. Coutts and H. J. L. Hillary, rulers, binders, and loose-leaf manufacturers, 199, Upper Thames street, London, under the style of Coutts and Hillary; J. Southall and W. F. Crane, under the style of Hildreth and Chambers, at Victoria-street, Wolverhampton, printers, lithographers, bookbinders and stationers; R. H. E. Thomas and F. A. Mackay, printers and stationers, 3, Rumford street, Liverpool, under the style of Thos. Wood and Co.; W. N. C. Barlow and C. St. C. Fowles, advertising and general agents, at High street, Bridgnorth, Salop, under the style of the West Midland Advertising Co.; H. M. Wellmon and V. Swift, music publishers, 1, Denmark-street, Soho, London, under the style of H. M. Wellmon.

The directors of Thomas De La Rue and Co., Ltd., have been reminding debenture stockholders who have the right to participate in the offer of £400,000 8 per cent. convertible mortgage debenture stock at the price of £100 per cent., that the last day for exercising their right is to-day (Thursday), and that in no circumstances can this date be extended.

RAILWAY RATES.—Hull Chamber of Commerce and Shipping has decided to approach the North-Eastern Railway Co. with the view of joint application being made to the railway rates tribunal for the establishment of a local committee to deal with grievances and difficulties arising out of the conveyance, working, and distribution of merchandise.

LABOUR'S PRESS.—At a private session on Tuesday the following resolution was proposed by the General Council of the Trades Union Congress: "That in order to enable the Labour movement to acquire and run its own newspaper, and any other publication considered necessary by the two national committees, the annual affiliation fee be increased from 1d. to 3d. per member; such increased fee to be paid quarterly." The discussion having been closed, the resolution was carried by 4,057,000, against 916,000, with an affiliated membership of 5,127,308. The additional payment represents an annual income of £42,727. The directors of the *Daily Herald* met on Tuesday and appointed Mr. Hamilton Fyfe as editor. The new editor was born in London in 1869 and is of Scottish extraction. He began on *The Times*. Afterwards he became editor of the *Morning Advertiser*, and ultimately was a special correspondent of the *Daily Mail*.

MONOTYPE USERS' ASSOCIATION.—A well-attended meeting of the West of England and South Wales Monotype Users' Association was held on Monday at Bristol. Members were invited to luncheon by the Lanston Monotype Corporation, Mr. W. I. Burch presiding. At the meeting which followed, the secretary's report was presented by Mr. W. J. Lockington, and officers for the ensuing year were elected as follows: President, Mr. J. Corrigan; vice-presidents, Messrs. S. A. Penney, R. J. Webber, A. H. Lockington and C. G. Brendon; secretary and treasurer, Mr. R. Rankine. The executive committee was re-elected. An interesting discussion took place on questions of Monotype costs and output, and regarding Monotype attendants. Mr. A. E. Goodwin was present and stated that the settlement of of the dispute with the T.A. had been ac-

cepted as satisfactory by both employers and employees. He emphasised that, wages being stabilised for a year, master printers should take active steps to stabilise prices also. Hearty thanks were accorded to Mr. Burch for presiding, and several members expressed a desire to see the Monotype Users' Association increase its membership.

PRINTING IMITATION NOTES.—At Old-street Police Court on Monday, Newman Frishlander, of Bethnal-green-road, was summoned for printing twenty-four papers bearing imitations of parts of £1 and 10s. currency notes, and not printing on them his name and address. Mr. Rowe, for the Director of Public Prosecutions, said that on August 3rd paper wallets containing what seemed to be a £1 currency note and a 10s. note were being sold by hawkers in the City. "I am instructed by the Director of Public Prosecution to say," continued Mr. Rowe, "that the broadcasting of imitation currency notes, even though they are incomplete, and for an innocent purpose, leads to fraud. If the unauthorised publication of currency notes or any part of such notes, for the purposes of advertisement, or any other purpose whatever, continues, the more drastic provisions of the Forgery Act will be invoked to stop this highly mischievous practice." Mr. Keeves, who defended, said his client desired him to apologise for the error. It was committed in ignorance. Mr. Clark Hall imposed a fine of 40s. and three guineas costs.

BROUGHT UP ON a similar charge at the Guildhall on Tuesday, Emanuel Simond, printer, of Houndsditch, was fined 48s.—2s. for each of 24 wallets purchased—and £3 3s. costs.

JACOB KLINGER, 36, bookbinder, was sentenced at the Guildhall last week to six months' imprisonment for obtaining £45 by fraud. Mr. Evans, for the Treasury, said he did not propose to proceed further with the original charge against Klinger relating to alleged spurious currency notes. This charge was accordingly dismissed.

ARCHIBALD HUBERT TAMPLIN was charged at the Cardiff Police Court last Thursday with obtaining sums of money totalling £21 17s., belonging to Messrs. Virtue and Co., Ltd., from Frank James Williams by means of forged delivery notes. It was stated by the prosecution that altogether some £60 was involved. Mr. Williams, who resides at Bristol, is the South Wales manager of Messrs. Virtue's, an old-established firm of book publishers, with a branch at St. John's-square, Cardiff. Having heard the evidence of a number of witnesses to the effect that the signatures on the orders purporting to have been given by them were not theirs, the stipendiary magistrate committed prisoner for trial at the Glamorgan Assizes, allowing him bail of £100 and two sureties each of a similar amount.

THE London General Omnibus Co. is supplying the Selbourne Society with private-hire omnibuses for night rambles, starting this week. The production of morning newspapers figures amongst items of interest.

ABOUT 100 employees of the *South Wales Evening Express* staff, Cardiff, attended the annual outing, held in delightful weather, at Abergavenny on Sunday. Mr. Robert J. Webber, general manager of the *Western Mail*, Ltd., presided at the luncheon at the "Greyhound" Hotel.

THE Pressmen were beaten in the annual cricket match between jockeys and racing Pressmen at Lord's on Monday. The proceeds were handed over to St. Dunstan's.

ON Saturday, September 9th, representatives of the banks, hospitals, insurance offices and Stock Exchange will compete in a series of twelve track and field events for a challenge trophy presented by the *Financial Times*. The meeting is being held on Guy's Hospital Sports Ground, Brockley Rise, Honor Oak Park, S.E.

RUBBER LATEX IN PAPER.—An important lecture was delivered on Monday evening by Mr. Frederick Kaye before the members of the Engineers' Club, Coventry-street, W. Big developments were anticipated from the application of rubber latex to papermaking. Cheaper paper was prophesied, as well as far-reaching changes in the manufacture of boards, etc.

The committee of management of the Press Association, Ltd., at their monthly meeting on Tuesday, adopted a resolution expressing their deep regret for the death of Viscount Northcliffe, and offering their most sincere sympathy to Viscountess Northcliffe.

BOOKBINDERS OVERSEERS' MEETING.—There was a large gathering of the Printing, Bookbinding and Kindred Trades' Overseers Association on Tuesday at St. Bride Institute, Bride-lane, E.C.4. It was decided to hold the annual members' "smoker" as usual, which is to take place on Tuesday, October 3rd. For this event Messrs. A. J. Jones (43, Kempton-road, Camberwell, S.E.5), and A. E. Ware (30, Elmfield-avenue, N.8), were appointed stewards, both of whom would be pleased to hear from members or their friends willing to contribute to the programme.

RATS' NEST OF PAPERS.—Over forty orders have been lost by the A.S.C. Manufacturing Co., of Southwark-street, S.E., in a singular way. During alterations in a showroom over 70 letters were found in a disused cupboard, where rats had carefully arranged them in the form of a large nest. The letters, when delivered, fell through a slit to the floor, from which the animals had removed them. They selected only those which had celluloid insets, and had eaten the celluloid.

THE Institute of Journalists is to hold its 37th annual conference, by invitation of the Bristol District, at the Red Lodge, Park-row, Bristol, on Tuesday, Wednesday, Thursday, and Friday, September 12th, 13th, 14th and 15th, 1922. President, Mr. Charles Wells, F.J.I., Bristol.

PHOTOGRAPHERS' EXHIBITION.—Much interest will attach to the 21st Professional Photographers' Exhibition and Congress, which opens at Prince's Galleries, Piccadilly, W., on September 11th. In a special section dealing with Press photography there will be some very costly apparatus on view. "Spot-lighting" photography, a method of emphasising certain points in the photograph, will be one of the many secrets revealed.

MR. JOHN WADHAM PEACOCK, journalist and author, has died at Bath, aged 67.

MR. FREDERIC W. DICKINSON, chief editor and a member of the board of directors of Reuter's Agency, died suddenly at his home, Blackheath, on Saturday, aged 65. For 45 years he had been in the service of Reuter's, and for the last 20 years had held the post of chief editor.

MR. ALFRED C. BURNETT died last week at West Norwood Cottage Hospital of cancer. Mr. Burnett was on the sporting staff of the *Sunday Pictorial* from the start of that journal, and for the past four years had written on boxing, rowing and athletics for the *Daily Mirror*. Fifty-seven years of age, Mr. Burnett joined the staff of the *Sportsman* when sixteen and was associated with that paper for thirty years.

WILLS.—Mr. George Harry Smith, of Rugby-road, Leamington, printer and stationer, £1,407; Mr. Thomas Chapman, of Athlone, proprietor of the *Westmeath Independent* and *Offaly Independent* (personal), £28,470; Sir Maitland Hall Park, LL.D., of Cape Town, editor-in-chief of the *Cape Times* since 1902, formerly chief sub-editor of the *Allahabad Pioneer*, and one of the founders of the Empire Press Union, aged 59, £568.

THE late Mr. William Bennett, of Gloucester and Bristol, printer and stationer, left £9,181.

THE *Sligo Champion* newspaper premises were entered on the night of Wednesday, last week, and an attempt was made to burn them. Linotypes and other machines were destroyed. The offices of the *Champion* were attacked during Mr. Arthur Griffiths' visit to Sligo some months ago.

AUSTRIAN PRINTERS' STRIKE.—The staffs of the big Vienna printing firms have gone on strike for a 90 per cent. increase in wages, and all the Monday morning newspapers of Vienna were unable to appear this week. The newspaper printers in Graz, Linz, and Salzburg proclaimed a sympathetic strike with their Vienna colleagues on Saturday, and those towns are without daily newspapers. It is expected that the strike will spread to the rest of the provincial capitals very shortly.

The "Times" and a Trust.

Suggestion for a National Newspaper.

Mr. J. St. Loe Strachey, writing in the *Spectator*, says that in the summer of 1908 the late Lord Northcliffe several times talked to him on the subject of making arrangements by his will that *The Times* should become a permanent national institution, and asked his advice. He (Mr. Strachey) suggested a trust, and ultimately drew his proposals up in the form of a letter in August, 1908, the text of which he now publishes.

The trustees, he suggested, should hold in trust the proprietary shares carrying the control of the paper. For the trustees he proposed: The Lord Chancellor (or, if for any reason he cannot act, some person of high legal position and standing named by him, as, for example, the Lord Chief Justice or the Master of the Rolls); the Speaker of the House of Commons; the Archbishop of Canterbury; the Vice-Chancellor of the University of Oxford; the Vice-Chancellor of the University of Cambridge; the editor of *The Times* and the manager of *The Times* for the time being.

Editor for Ten Years.

The trustees should, Mr. Strachey argued, appoint an editor and a manager for 10 years. After his appointment the editor should be irremovable except on the ground that he was for physical and mental reasons incapable of fitly conducting the paper. His conduct of the paper, however, would have to be consonant with the general aims and objects laid down by Lord Northcliffe in his will.

In a separate article Mr. Strachey says: "Even if Lord Northcliffe's will, as I expect will be the case, does not make *The Times* the subject of a trust—if, that is, the great paper is to continue as a business concern—there is not the slightest reason why it should not attain the position of a national and judicial newspaper."

German Newspapers' Difficulties.

Last week saw the death of a large number of German newspapers, while many more announce that they are not fated to live much longer.

This disappearance *en masse* of journals of no little provincial importance is probably unparalleled, and is due to the enormous rise which has taken place in the cost of newspaper production. Paper, for instance, is now 400 times dearer than before the war, and the cost of other materials has risen to a somewhat similar extent. Wages have, of course, been enormously increased, and home news services have become almost daily more expensive.

It is reported from Berlin that the *Cuxhavener Tageblatt*, which was established 90 years ago, has been obliged to suspend publication owing to the conditions in the newspaper industry.

The Berlin correspondent of the Exchange Telegraph Co. reports that in July 144 German newspapers and periodicals stopped publication owing to economic difficulties.

The *Tägliche Rundschau*, finding itself in difficulties, was compelled to give notice to its staff. At the last moment the management appealed to Herr Hugo Stinnes, who promised to supply the necessary financial aid to ensure the further existence of the paper.

The Inter-Allied Rhineland High Commission has decided to suspend the *Kölnische Zeitung* for a period of four days, from September 7th to 11th, as a penalty for the publication of certain articles during July and August. A similar suspension order is to be enforced against the *Sozialistische Republik*.

General Rucquoy, commanding the Belgian troops in occupied Germany, has requested the Inter-Allied High Commission to cause the *Deutsche Zeitung* to be definitely forbidden in occupied territory.

"From Printer to President," the story of Warren G. Harding, by Sherman A. Cuneo, a lifelong friend and fellow-editor, is announced for immediate publication by Dorrance and Co., of Walnut-street, Philadelphia.

Alleged Libel by Poster.

Letterpress posters were complained of in the Vacation Court last week, when Mr. Justice Swift heard a motion on behalf of Mr. Joseph Havelock Wilson, M.P., for an injunction to restrain Mr. Charles Pilley (editor of *John Bull*), Odhams Press, Ltd. (the printers and publishers of that journal), the London General Omnibus Co., Ltd., and the London County Council, from further publication of an alleged libel.

Mr. A. Clement Edwards, for Mr. Havelock Wilson, said the first complaint was of posters headed "*John Bull's Weekly*," and containing the words "Havelock Wilson Cringes to Stinnes." The posters appeared on the omnibuses and trams controlled by the London General Omnibus Co. and the London County Council. The other complaint was an alleged libel appearing in *John Bull* on August 19th last. The article was headed "Havelock Wilson Cringing to Stinnes: Impudent Coercion of British Sailors."

Mr. R. R. Formoy, for *John Bull*, intimated that the defence was that the article was fair comment on facts that were true. The paper had no intention of making further reference to Mr. Wilson pending the trial.

Mr. Justice Swift said that, the defendants having given that undertaking, it was not necessary to grant the injunction. Mr. Wilson had said that the matters of which he complained were untrue, and on the other hand the defendants had said they intended to stand by what they had said. That matter would have to be fought out at the trial. The application for an injunction was refused, costs being reserved.

Simplifying Paper Sizes.

U.S. Department of Commerce Acts.

An analysis of the casual collection of 12mos. on the shelves of a large manufacturer of books showed that of 177 books measured there were 101 different sizes—says the *New York Publishers' Weekly*. Not all these variations could have been made in the interest of artistic individuality, and most of them must have been chosen because of lack of information as to the best sizes to suit standard forms of paper. This condition is similar to that which is found in all collections of printed matter, whether magazines, catalogues or material for mail-order purposes.

The U.S.A. Department of Commerce, through its Bureau of Standardisation, has been endeavouring to throw light on this subject, and a special committee has now been appointed to consider the conditions in the paper field covering not only books but circulars, booklets, catalogues, magazines, programmes, etc. The efforts of this Bureau have done a great deal of good in other lines, and their work in the paper field should be cordially welcomed by all users of paper.

A programme that would simplify the number of paper sizes used and give information to users of paper as to how to get all the advantages possible out of the various ways of folding these sizes would be of great benefit to the trade. It would mean to the mill man economical manufacture and a more continuous operation of the paper machinery, thus decreasing the cost of making. It would take great pressure from the wholesaler of paper, decreasing the amount of space needed, decreasing the investment and losses by depreciation and enable him at the same time to give better service. The user of paper would be able to get better prices, better and speedier service and more uniform quality as well as have the advantage of buying in a more open market.

The Bureau of Standardisation has, it should be clearly understood, no power and, in fact, no intention of enforcing its final recommendations. At the same time, its recommendations would be bound to have considerable influence in directing the demands for paper along certain channels, and others would find it to their pecuniary advantage to buy along those lines.

Taking the field of paper use as a whole, excluding for this study news-print, the paper sizes that are to be most particularly studied in their possibilities for general use are 25 x 38, 30½ x 41, 32 x 44, and the double sheet sizes of these.

The National Association of Book Publishers is planning to co-operate with the Government Committee in obtaining data as to book needs and has sent to all members a questionnaire, asking for information as to the sizes most needed. After a study of this end, the publishers will then take steps to study the situation in the binding board and binding cloth fields to see if there can be simplification and saving.

News-Print in Japan.

The publishers of some of Japan's largest newspapers, led by M. Ota, vice-president and active director of the *Tokyo Hochi Shimbun*, have rebelled against the increased price of news-print in the Japanese market and have begun ordering from abroad. Mr. Ota, who succeeded his father in the management of the *Hochi Shimbun*, for many months has been waging war against the paper dealers and he asserts that the prospects for the newspapers winning the contest are good.

Japanese journals use an inferior grade of news-print. The current quotation on the stock which the *Hochi* formerly used is 13 sen, and foreign mills have underbid this price on better paper laid down in Tokyo.

MESSRS. W. HEFFER AND SONS, LTD., publishers, Cambridge, have in the press a volume entitled "The Pilgrim Press. A Bibliographical and Historical Memorial of the Books Printed at Leyden by the Pilgrim Fathers," by Rendel Harris and Stephen K. Jones, with a chapter on the Location of the Pilgrim Press in Leyden by Dr. Plooi, with numerous illustrations.

The Printers' Miniature "Bisley."

A Good Show of Shooting.

Representatives of the printing and allied trades put in some excellent shooting at the Printers' Miniature Bisley, which was held on the well-equipped range of the Ham and Petersham Rifle Club, on Saturday. Last year, at Wimbledon, the fixture attracted sixty-five entries. On Saturday there were eighty-eight. Apart from individual marksmen, fourteen teams represented the clubs which are connected with the Printing and Allied Trades Miniature Rifle League—clubs which bear the names of famous publishing houses and London newspapers, and are able to practise, in most cases, upon ranges erected on the premises of the firms concerned. One team, which included a rifleman who lost a leg in the war, came from as far afield as Watford. The League, which was formed in 1907, ceased its activities during the war, but the progress the membership of its clubs has made during the last three years encourages the hope that the high water mark of 1913 will soon be passed. When the conditions which prevailed on Saturday are considered the shooting was really good.

The Printing Trade Champion.

A keen contest for the championship of the printing trade could not be decided until the leading scorers had shot off a tie. G. W. Downs (W. H. Smith and Son) and G. F. Booth (Carmelite House) tied with 298 out of a possible 300. Downs, who is a well-known figure at the real Bisley, was the victor in the tie shoot. Booth won the grand aggregate, however—the sum of scores in eight competitions—with the good total of 786.

The officials, without whose gratuitous services the meeting could not have achieved its undoubted success, included Mr. J. Pepe (chief range officer), Mr. G. K. Smith (his assistant), Mr. F. J. Tucknott (statistical officer), Mr. A. J. C. Pescud (hon. secretary) and Mr. Arthur Cottrell (assistant hon. secretary).

The trophies and medals will be presented at the Printers' Concert, which is to be held at Anderton's Hotel, Fleet-street, on Tuesday, October 31st.

The Prize List.

Appended are the full results:—

The *Field* Challenge Shield (teams of four. Ten shots, 25 yards).—1, Messrs. John Dickinson's "A" Team, 392; 2, Messrs. W. H. Smith and Son's "A," 390; 3, Amalgamated Press "B," 389; 4, Messrs. W. H. Smith and Son's "B," 388.

"Walter Haddon" Challenge Cup (teams of eight. Ten shots, 25 yards).—1, *Britannia (Bank of England), 776; 2 (silver medals), *Amalgamated Press, 776; 3 (bronze medals), Messrs. John Dickinson, 775. * Upon the "all-in" test Britannia showed 715 points to the 714 of the Amalgamated Press, and was thus declared the winner.

Monotype Tyro Competition (single entry. Ten shots, 25 yards).—1, A. E. Hill, 99; 2, H. L. Cook, 99; 3, S. Wilkins, 98; 4, A. H. Ellis, 98; 5, J. Moffatt, 98; 6, H. Umpleby, 98; 7, H. H. Vincent, 96; 8, A. S. Williams, 96.

News of the World (single entry. Ten shots, 25 yards).—1 (equal), G. F. Booth, 100, and N. C. Headland, 100; 3, A. Dray, 100; 4, G. W. Downs, 100; 5, A. Beck, 99; 6, J. S. Edwards, 99; 7, H. J. Steer, 99; 8, A. Cottrell, 99.

Daily Express (single entry.—Ten shots, 25 yards).—1, G. F. Booth, 100; 2, S. Margetts, 100; 3, G. W. Downs, 100; 4, W. R. George, 99; 5, J. G. Phillips, 99; 6, H. J. Knell, 99; 7, J. Black, 99; 8, J. Gudgin, 99.

Pearson's Weekly (single entry. Ten shots, 25 yards).—1, F. Williams, 100; 2, J. Gudgin, 99; 3, E. W. Bird, 99; 4, H. Wallace, 99; 5, A. W. Hodson, 99; 6, W. Bubb, 99; 7, R. Rose, 99; 8, G. W. Downs, 98.

The "Belgrave" (single entry. Ten shots, 50 yards).—1, W. Beck, 100; 2, H. J. Knell, 98; 3, W. R. George, 98; 4, P. Turner, 97; 5, J. F. Brown, 97; 6, J. Gudgin, 97; 7, J. S. Edwards, 97; 8, J. Black, 97.

The "S.M.R.C." (single entry. Ten shots, 100 yards).—1, G. F. Booth, 99; 2, J. Black, 98; 3, R. Townsend, 98; 4, S. Margetts, 98; 5, S. Wilkins, 97; 6, S. Shinn, 97; 7, P. Hancock, 97; 8, W. Bubb, 97.

The "W. R. Masters" (unlimited entries. Ten shots, 25 yards).—1, W. R. George, 100; 2, F. Jennings, 100; 3, J. Black, 100; 4, H. B. Hobday, 100; 5, J. Gudgin, 100; 6, G. F. Booth, 100; 7, H. Umpleby, 99; S. J. Moffatt, 99.

The "H. F. Parker" (unlimited entries. Ten

The "Newlands" (Single entry. Ten shots, 25 yards; time limit target, 90 sec.).—1, J. S. Edwards, 99; 2, S. Shinn, 99; 3, F. Williams, 99; 4, G. F. Booth, 98; 5, A. Beck, 98; 6, R. Townsend, 98; 7, J. Black, 98; 8, J. Moffatt, 97; extra, J. Gudgin, 97.

"T. G. and J. Jubb" (Unlimited entries. Ten shots, 25 yards; time limit target, 90 sec.).—1, J. Black, 100; 2, H. B. Hobday, 98; 3, E. W. Bird, 98; 4, A. Beck, 98; 5, F. Williams, 97; 6, G. Francis, 97; 7, J. Gudgin, 97; 8, J. G. Phillips, 97.

The *Daily Telegraph* (For ladies only. Single entry. Ten shots, 25 yards.) 1, Miss M. E. A. Davies, 97; 2, Miss C. Casson, 95; 3, Miss Theedam, 95; 4, Miss N. Owens, 95; 5, Miss Andrews, 94; 6, Miss Churchfield, 79; 7, Miss C. M. Bannister, 71; 8, Miss Umpleby, 21.

Championship of Printing Trade (Best score in *News of the World*, *Daily Express*, and *Pearson's Weekly* competitions to count—h.p., 300).—1, *G. W. Downs (100, 100, 98), 298; 2, *G. F. Booth (100, 100, 98), 298; 3, J. Gudgin (98, 99, 99), 296.

* The tie shoot resulted in a win for G. W. Downs.

"John Fry" Challenge Cup (Grand aggregate competition. Best score in *News of the World*, *Daily Express*, *Pearson's Weekly*, the "Belgrave," the "S.M.R.C." the "W. R. Masters," the "H. F. Parker," and the *Graphic* Competition).—1, G. F. Booth (100, 100, 98, 96, 99, 100, 97, 96), 786; 2, J. Black (96, 99, 98, 97, 98, 100, 99, 98), 785; 3, J. Gudgin (98, 99, 99, 97, 96, 100, 98, 97), 784.

TECHNICAL CLASS LECTURER wanted, to instruct a class of Binders' Apprentices; adequate knowledge of the Binding Trade and Allied Subjects; two hours weekly during morning or afternoon.—Box 13987.

Situations Wanted.

MINDER (Two revolution) seeks permanency; experienced in Commercial, Book and Three-Colour Work; disengaged.—Box 13973.

MACHINE MINDER.—Centurettes, Wharfes, etc.—E. C., 32, Hargrave Park, Highgate, N.19. 13974

MONOTYPE (D) KEYBOARD OP. (ex., n.s.) seeks perm.; low wage; clean setting.—Box 13986.

PRINTERS' WAREHOUSE OVERSEER desires berth in Printers or Wholesale Stationers; excellent knowledge of all classes of Paper, Buying, Estimating, etc.—Cribb, 17, Farlton-road, S. W.18. 13984

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Miscellaneous.

AN opportunity occurs to ACQUIRE A SMALL PRINTING PLANT, in running order, within a short distance of Liverpool-street; lease of basement premises, about 2,000 sq. ft., at a low rent, may also be had if desired.—Full particulars from D.E., c/o Dixon and Roe, 17, Walbrook, E. C.4. 13981

COLONIAL NEWSPAPER CUTTINGS, dealing with the Paper, Printing, Stationery and Allied Trades, are wanted by Advertiser.—Communicate, stating terms, to Box 13882.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

NOTTINGHAM.—TO BE LET ON LEASE, early possession, Palatial Modern-built BUSINESS PREMISES, corner Carrington-street, facing fountain (best side the street), all cars stop at door, said to be 50,000 to 150,000 people pass daily; 20,000 feet super floor space, 175 feet frontage; quite near new Port of Nottingham (world's seaports to Nottingham v. Hull direct); opportunity for Grand Stores de Louvre; suit limited company; illustrated map posted.—Cooley, Market-street, Nottingham. 13983

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By James Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E. C.4.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CANADA.

An inquiry has been received from Canada for the names of United Kingdom manufacturers of machines for the manufacture of lace paper. (Reference, Canadian Government Trade Commissioners' Office, 73, Basinghall-street, E.C.2.)

DOMINICAN REPUBLIC.

H.M. Chargé d'Affaires in Santo Domingo reports that a commission agent, stated to be of good commercial standing, and recently established in that city, wishes to secure agencies in stationery, etc., for United Kingdom firms.

BRITISH INDUSTRIES FAIR.—Applications are now being received for space in the British Industries Fair, 1923, organised by the Department of Overseas Trade. The coming Fair, which will be the ninth of the series, will be held from February 19th to March 2nd, and the London Section will again be held at the White City, Shepherd's Bush, London, W.12. It is satisfactory to note that the Department has been able to make a reduction of 6d. per square foot in the charge for exhibiting space, which will accordingly be 3s. per square foot. From the information which the Department has received, it would appear that the cost of the stands erected by the Department on behalf of exhibitors will also show a very considerable reduction. In the circumstances the cost of participation in the coming Fair will prove to be considerably less than in past years.

THURSDAY, SEPTEMBER 7, 1922.

The L.S.C. and Wage-Reduction.

We were able to announce last week that negotiations on the subject of wage-reduction had been resumed between the London Master Printers' Association and the London Society of Compositors, and that, prior to another meeting with the employers, the Society had undertaken to place the whole position before its members individually. We hear that the Society's officials now have this matter well in hand and are calling a special delegate meeting in London for September 21st, when the history of recent negotiations will be explained and certain proposals laid before the members. The Society's leaders realise, we know, the serious loss of work that would ensue in London—affecting not only employers but workpeople also—if the reduction of wages in the country were not balanced by some reduction of the London scale. In view of this, we understand, a proposal is to be made at the forthcoming delegate meeting that the L.S.C. should agree to a reduction of 7s. a week for hand compositors, in two instalments, and a reduction of 5s. a week for machine operators, likewise in two instalments. Should the delegate meeting approve of this proposition, it would then be submitted to a ballot of the L.S.C. membership.

The Cost of Printing.

If provincial printers should find their customers suggesting that the settlement with the Typographical Association for an eventual wage reduction of 12s. 6d. should mean an immediate substantial cut in the price of printing, the answer is, of course, that the total 12s. 6d. off wages does not become effective until May of next year, and that the decrease in costs caused by the first two instalments of the wage reduction can make but little difference to the price of most printing orders. What this difference actually amounts to has been worked out by the Costing Committee of the Federation of Master Printers, who have, in their investigation of

the question, examined the costing accounts of a large number of printing firms in the provinces. The Committee find that the present instalments reduce the manufacturing costs of printing by about 2½ per cent. to 3 per cent. In this connection a point upon which the Committee lay special emphasis, and which it is of vital importance that every printer should understand, is that it is quite impossible to apply to printing jobs a flat rate of cost reduction as deduced from a specific reduction in wages, as the proportion of labour to material varies so widely in different jobs—materials, moreover being subject to market fluctuation in price. The reduction of 2½–3 per cent. being on the manufacturing costs of printing, it follows that only on a job in which the cost of materials is almost negligible could anything like a 3 per cent. saving be realised, whilst on a job in which labour costs were small compared with the cost of materials the saving would be very much less. It is therefore evident that printers must examine the relative amounts of materials and labour in different jobs before agreeing to any reduction in charge in consequence of the altered wages.

Imperfect Paper Supplies.

THERE are many complaints of late regarding inaccurate cutting of paper. We ourselves have been shown consignments of standard lines of paper from leading manufacturers in which the cutting has been out of square in one case and a quarter inch below standard size in the other. These are serious matters to the users of paper, and likely enough to create trouble for the papermaker. In point of quality, also, there are many leading name papers which leave something to be desired when compared with pre-war standards. For a long time after the war there remained war-time material to be worked off, and no doubt the admixture of old material with new was responsible for a rather inferior turn out. It is time now that all low grade stuff was worked off, and there is no reason why present-day quality standards should not rank as 100 per cent. compared with pre-war. The fact remains, however, that a great deal of the high-priced fine paper is not so clean as it used to be before we knew how war could influence the character of paper.

Safety in Work.

THE chief cure for unemployment and unrest, of course, is work; and the best class of work is not that which is promoted to tide over a period of distress, but which arises from the national demand of the community. It is, therefore, good news that a Cabinet Committee, besides taking into consideration the question of relief works, is also directing its attention to the problem of trade expansion, with relation especially to the increase of facilities for employment. The central organisations of various great industries were invited a little while ago to report to the Government on the prospects in those industries, and a good deal of information is now available for the guidance of the committee. The safety of the nation politically as well as its industrial welfare are involved in the task of getting the machinery of mills and factories properly to work. Occupation is the main antidote to vain rumination over imaginary ills. While it is gratifying to know that the authorities are thoughtful for the trading interests, it behoves all who are engaged in business to look after their own affairs, accepting such support in their efforts as Parliament may be able to afford. Self-help is of the first importance, and much can be done by close and careful co-operation by all parties in an industry. Employers and workpeople in the printing trade have done well in this respect in the past, and they are not likely to fail one another now. A determination to make good is all that is required.

VISCOUNT BURNHAM paid a warm tribute to the character and journalistic instincts of the late Lord Northcliffe at the meeting of the Empire Press Union on Thursday last week.

THE meeting passed a resolution deploring the death of Lord Northcliffe, who was its honorary treasurer, and recording sincere and abiding appreciation of his incalculable services to and constant support of the Empire Press Union.

BESIDES being newspaper proprietors and printers, both Lord Northcliffe and Lord Burnham have done much to develop paper manufacture.

It is announced that Sir Campbell Stuart, managing director of *The Times*, has resigned from the management of the *Daily Mail*. He was the only director whom the two newspapers had in common. The reason given for his resignation is that he desires to devote his whole time to his work as managing director of *The Times*.

A PARIS report states that Mr. A. B. Walkley, the dramatic critic of *The Times* and Mr. Laurence Binyon, the author and deputy-keeper in the British Museum in charge of the sub-department of Oriental prints and drawings, have been promoted to the rank of Officers of Public Instruction.

MR. VICTOR MITCHELL, who has been appointed to the editorship of the *Pertshire Advertiser*, was for nine years editor of the *Northern Scot*, Elgin.

MR. J. LANGLEY LEVY, once well known in Liverpool journalism, is returning to South Africa, after nearly seven months of extensive travel. Mr. Langley Levy is editor of the *Johannesburg Sunday Times*.

MR. JOHN OAKLEY, the editor of the *Sheffield Telegraph*, has been appointed a Justice of the Peace for the City of Sheffield.

MR. JOSEPH HIGGIN, who has been appointed to the editorial staff of the *Lancashire Daily Post*, has been presented with a handsome series of books by his confreres on the *Accrington Observer*, on which staff he has served for twelve years.

MR. E. S. JACKSON, of the *Toronto Star*, and formerly of the *Kent Messenger*, who is on a visit to Maidstone, was present at the meeting of the Town Council last week, and the Mayor (Alderman D. T. J. Lyle) extended on behalf of the members, a cordial welcome to him.

THREE generations are represented on the printing staff of the *Carmarthen Journal*, which is believed to constitute a record in the way of a family's continuous service. Mr. Dan Jones, head of the jobbing department, has 50 years' unbroken service. His son, Mr. W. D. Jones, who is foreman of the news department, and who was the first apprentice under the present directorate, has 30 years' unbroken service, and some months ago the name of the latter's son was added to the list of employees.

MISS KNOWLES-FOSTER, the vice-chairwoman of the Society of Women Journalists (of which Viscountess Burnham is this year's president, and in which Countess Bathurst takes an interest) has returned from America. During her visit Miss Knowles Foster was received by President and Mrs. Harding at the White House.

MR. P. H. LEE WARNER, whose connection with the Medici Society was severed last year, will commence publishing in the autumn, under the imprint "Philip Lee Warner at the Chiswick Press," his Trade Department being, for the present, in Took's court.

MR. C. R. SEDDON has been ordered a complete change and rest by his medical adviser, and is at present staying at Harrogate with Mrs. Seddon.

MR. DAN CLEGG (Sun Paper Mill Co., Ltd. Feniscowles), is recuperating at Colwyn Bay after his recent illness.

Mr. Philip T. Dodge.

Visit of a Great American Manufacturer.

The visit to this country of Mr. Philip T. Dodge, president of the International Paper Co., of New York, and the chairman of Linotype and Machinery, Ltd., is an event of importance, although, as a matter of fact, he is a frequent visitor here. On this occasion he is accompanied by Mr. Allen Curtis, vice-president of the International Co., and their object is to study industrial conditions generally in Europe.

Mr. Dodge's linotype concerns have large manufacturing plants in England and Germany, and he himself has perfected over 100 inventions in this machine.

Some idea of the extent of our visitor's standing in the paper industry may be indicated by a few facts. The International Co. own 18 mills apart from pulp and saw mills. If all the wood which the company has on hand were piled in cords, four feet high and four feet wide, and these were stretched in one line, end to end, they would reach from New York to Denver. Over 20,000 tons of sulphur alone are used each year and the four International mills which burn oil consume over a million barrels annually.

Canada's Dazzling Future.

In the course of an interview in London, Mr. Dodge had something to say about the return to normal industrial conditions. America, in his view, is getting back to normal a little faster than we are here—and he supported his contention with facts. He has paper mills in seven States, and he believes that there is a dazzling future for Canada in paper production.

The quantity of paper used during the war was phenomenal, and yet the amount during the first three months of this year in America was 10 per cent. more.

With regard to Mr. Dodge's optimistic views of Canada's position in the paper industry, an interesting note appears in the *Paper Trade Journal* (N.Y.). Although the International American institution financed by American capital, the company, we are told, is gradually edging north—over the Canadian border. "Mr. Dodge is burning his bridges behind him in the United States because he can foresee that within a few years the American paper manufacturer will be unable to compete with Canadian or European manufacturers."

Canadian news-print production is ever gaining upon that of the United States.

Mr. Benjamin Petty.

The death has occurred at Bournemouth, in his 71st year, of Mr. Benjamin Petty, who during the greater part of his working life was closely associated with the printing firms bearing his name at Leeds and Reading. In Leeds he was a member of the firm of Messrs. Petty and Sons, Ltd., which had been founded by his father, Mr. J. W. Petty. In 1897 he left Leeds to become manager of the Reading branch of the establishment. Later, the Reading branch became a separate company, with Mr. Benjamin Petty as principal, and he parted with his Leeds interests in the trade. Mr. Petty retired from active business a few years ago, and the management at Reading passed to his son, Mr. John P. Petty. The principal of the Leeds firm, Mr. Wesley Petty, is a brother of Mr. Benjamin Petty.

Mr. George R. Sims.

Newspaper people everywhere have learned with surprise and regret of the death of Mr. George R. Sims, which occurred in London on Monday. During the week-end Mr. Sims had been receiving many congratulations in respect of his attaining on Saturday the age of 75. Born in London, he has been a journalist from youth, beginning in *Fun* when he was 17. For 45 years he has written his "Dagonet" page in the *Referee* without a break, sending his copy often from distant parts of the world. Although he was suffering last week from the illness which has proved fatal, he contributed his page as usual to last Sunday's issue.

Trade Union Matters.

TRADES UNION CONGRESS.—Speaking on Sunday at Southport at a meeting in connection with the T.U. Congress, Mr. C. W. Bowerman, M.P., recalled the fact that it was over thirty years since the congress visited Southport. Then something like 100 delegates attended, representing a membership of about 1,000,000. To-day they had nearly 800 delegates representing 5,000,000 of organised workers. That was a wonderful achievement, and he hesitated to think what would have happened during the past year had it not been for the powerful trade unions with their funds to help the workers. (A voice: "Revolution!") "We want to avoid that," retorted Mr. Bowerman, "and I will make my point straight away. Practically every adult above a certain age now has the right to cast a vote, but does every workman do his duty to his own class when an opportunity to use it comes along. ("No!") Let him do that and you will avoid all talk of revolution."

THE Trades Union Congress passed an important resolution to the effect that no full time official of the Congress should retain his post after reaching the age of 70. The resolution was carried by a large majority, the figures being 2,552,000 for, and 1,406,000 against. In moving the resolution, on behalf of the Building Trade Workers, Mr. G. Wyber said they were not aiming at any particular individual. They claimed that the trade union movement generally would be better equipped if the older people were to retire and make room for some of the younger men. One of the officials who will be affected by the resolution is Mr. C. W. Bowerman, M.P., who is 71. He has been secretary of the Congress since 1911, and was president in 1901.

A RESOLUTION tabled by the National Union of Journalists, asking the Trade Union Congress to instruct trade union officials to address complaints of misrepresentation to proprietors, and not to working journalists, provided an interesting discussion. Mr. H. M. Richardson, general secretary of the union, moved the resolution, explaining that journalists during industrial disputes were often subjected to unmerited abuse, and threatened with violence for the faults of their newspapers—faults for which the proprietors were responsible. Mr. T. E. Naylor, M.P. (London Society of Compositors), who seconded, said that the resolution affected workmen in other departments of newspaper business. They were no more responsible than the journalists for the opinions of the newspapers, and it was no more reasonable to criticise them than to complain about the Cigar Makers' Union when they found themselves in possession of a bad cigar. The resolution was carried unanimously.

DISOBEDIENT T.A. MEMBERS—A circular has this week been issued to the members of the Typographical Association, signed by Mr. J. D. French (general president) and Mr. H. Skinner (general secretary), on behalf of the Executive Council, instructing branches to report:—(1) The names of all members who worked at a reduced rate of wages instead of carrying out the instruction to cease work on a reduction being enforced; and (2) The names of all members who ceased work and afterwards returned to their employment at reduced wages before the date of the provisional agreement (August 17th). "The agreement," says the circular, "provides that members who accepted work under the terms of the decision of the Industrial Court are not to be expelled, but this does not prevent branches from making other recommendations for dealing with members who acted contrary to the Executive Council's instructions."

THE Middlesborough Branch of the Typographical Association have requested the Executive Council of the Association to give a ruling on the question of a member of that branch who owned printing plant, which he desired to use in his spare time to train his son, now 15 years of age, to be a printer. After consideration of the points involved, the Executive Council have announced that the member cannot be allowed to retain his full membership of the Association whilst in possession of printing plant, and that his son can only be trained by him in accordance with the apprentice rules of the Typographical Association.

A WASPS' nest made of paper has been found in a tree at Frensham, Surrey.

in full on June 30th, 1922, of debentures dated August 9th and December 28th, 1905, and January 8th, 1907, securing £4,629.

The News-Print Corporation.

Mr. G. F. Steele, who is president of the News-Print Paper Corporation, which is organising the sale of Norwegian, Swedish, and Finnish news-print in the United States, has opened offices in New York. The Corporation has an authorised capital of 200,000 dollars.

Associated with Mr. Steele as directors of the new corporation are Messrs. Louis Calder and F. W. Westlake, president and vice-president respectively of the Perkins-Goodwin Co., and Mr. J. J. Nolan, sales representative for several Norwegian news-print mills.

An official statement sets forth the following information: "The prime purpose of this unification of sales, according to Mr. Steele, is to bring about a more complete standardisation of quality and better deliveries for American consumers, and to enable the foreign producers of news-print paper to combine in taking larger contracts than has been possible for the separate mills.

The production of news-print at the present time in Norway and Sweden amounts to a little more than 300,000 tons annually. Participation on the part of Norway and Sweden in the American market has been of recent origin, starting with the year 1919, and has been brought about very largely by the collapse of the Russian market, and the consequent necessity for the manufacturers of Finland to dispose of their surplus production in markets where they were formerly but slight participants. As the news-print paper output of Finland is in the neighbourhood of 110,000 tons annually, and as the return of the Russian market is not expected for a long time to come, it is inevitable that foreign producers must look to the American market for at least an amount equivalent to that lost through the Russian debacle.

"In the year 1921, Norway and Sweden exported news-print paper to the United States to the extent of about 70,000 tons. During the first four months of that year imports amounted to 22,000 tons. For the first four months of this year the imports from these two countries have amounted to 27,000 tons, and it is probable that the amount of paper imported from these two countries this year will be fully as large as it was during the preceding year. The Scandinavian mills are unfortunately in the same unhappy predicament as their Canadian and American competitors, in the respect that they have large inventories of high-priced pulp-wood, so that present prices which they are obtaining in the world's markets are not particularly remunerative. They do enjoy, however, low freight rates to the Atlantic seaboard, and are able to make prompt and satisfactory deliveries.

A Famous Photo Engraving House.

The Direct Photo Engraving Company, Limited.

The story of the Direct Photo Engraving Co., Ltd., is almost the history of photo-engraving in England. The company was founded in 1881, to exploit a process of Dr. Greune, which process was worked by them for many years, but although in some respects

superior to the albumen process, it was ultimately abandoned on account of the extra time and uncertainty which the working entailed. The works were originally in Windmill-street, W., but were removed to

In the Studio.

Farringdon-street in 1883, where they have been ever since, although they crossed the road in 1885.

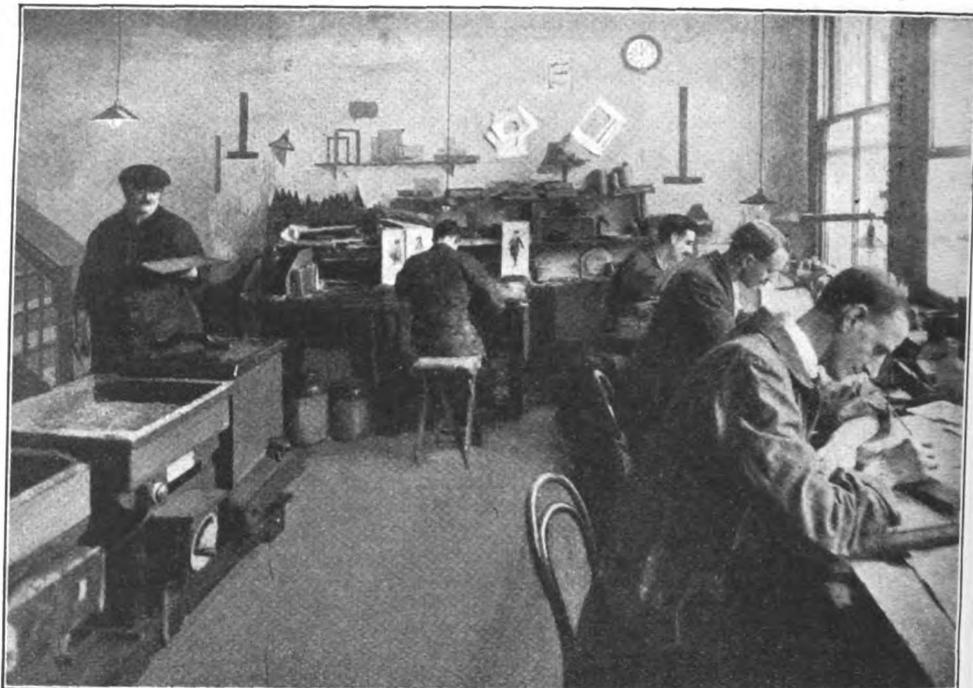

The present managing director, Mr. F. E. S. Perry, joined the company in 1884 as

An Office Interior.

secretary, the directors then being C. P. Johnstone, Colonel Mallison, F. Perry, and Lord Ronald Gower. In the year in which Mr. F. E. S. Perry was appointed managing director, the company opened a branch works

in Milford-lane, where the plates for the *Daily Graphic* were processed. At this period all the illustrations were produced from line drawings, which were drawn chiefly in the *Daily Graphic* studio. The staff of artists included Phil May, A. C. Corbould, F. Townsend, E. Sullivan, Phil Ebbutt and many others, all of whom have made a mark in the artistic world. About this time the company

Etching Room of the Direct Photo Engraving Company, Limited.

opened branch works at Barnsbury Park, chiefly with a view to working the collotype process, also the half-tone process, which was then in its infancy. Both these branches have long since been closed down, the only present address of the company being 38, Farringdon-street, E.C.4, where the works are now concentrated. The present works are well equipped with modern machinery and appliances and are capable of turning out a large quantity of work at the shortest notice.

cliffe and the late Sir George Newnes, Bart. told the managing director of the "Direct" that, as they never intended to make use of illustrations, it was useless for him to press his wares on them. As is now well known, the concerns associated with both these gentlemen do use blocks and to such an extent that they run their own process branches in connection with their printing works. Thus the two journalists mentioned did not show their usual acumen in this instance, as the one

A Corner of the Mounting Room.

The experience of upwards of 30 years is at the service of the customer, and advice is freely given, not only as to how the desired results are to be best obtained, but also as to the most economical method of obtaining them, consistent with the highest quality of workmanship. The firm has acquired a close knowledge of many and varied professions and trades in respect of their requirements in the illustration department.

Amongst the illustrated weeklies to which the company supplied blocks from their very start, and in many cases up to the time that they finally faded away, or lost their identity through amalgamation with other journals, were: *St. Stephen's Review*, the journal in

was obsessed with the success of *Answers* and the other with that of *Tit Bits*, both of which journals did not need illustrations; they had "got there" without, thanks to successful competitions.

Another well-known firm with which the "Direct" did business for some twenty years was the Popular Publishing Co., then running two or three successful fashion journals, only eventually to be snowed under by a larger organisation.

It will be seen by the above that the "Direct" is not a concern of mushroom growth, but an old-established firm with a record and one that has kept well abreast of the times.

U.S. Tariff Bill.

Senate Reductions in Paper Schedule.

After considering it since April 1st, the Senate has passed the Tariff Bill. The tariff now comes before a conference with the House of Representatives, whose Bill almost completely revised the majority of the duties increased.

Certain important new features have been inserted by the Senate. The chief is the granting to the chief executive of broad powers to change rates if, after investigation by the Tariff Commission, he should find that the disproportion between the costs of production here and abroad should warrant such action.

Whether this "tariff of abominations," as one critic describes it, will reach the President for signature before the November elections is more than doubtful.

A big fight ensued over the chemical wood pulp section of the Bill, and finally by a vote of 30 to 22 chemical pulp was replaced on the free list as it passed the House. It is well known that the Finance Committee placed a five per centum duty on chemical pulp. As a matter of fact, the majority of the committee felt that that duty should be left on, but they were overruled by the vote of the Upper House. The question will be left to a conference of the House and the Senate for decision.

The Senate agreed to a duty of 5 per cent. on pulp board in rolls for use in the manufacture of wall-board; to a duty of 25 per cent. on filter stock, composed wholly or in part of wood pulp or vegetable fibre; to a duty of 25 per cent. on indurated fibre ware, papier-mache, etc.

The following rates were agreed to upon tissue papers, India and Bible papers, carbon papers, pottery paper, etc.

Weighing less than 6 pounds to the ream of 480 sheets on a basis of 20 by 30 in., 6 cents a pound and 15 per cent. *ad valorem*.

Weighing between 6 and 10 pounds, 5 cents a pound and 15 per cent. *ad valorem*.

The duty on crepe paper was fixed at 6 cents a pound and 15 per cent. *ad valorem*.

Papers with coated surfaces, not specially

provided for, were given duties of 5 cents a pound and 15 per cent. *ad valorem*. Similar duties were fixed upon embossed papers, cloth-lined papers, and papers covered with metal solutions, weighing less than 15 pounds to the ream on the basis of 20 by 25 inches.

India and Bible papers weighing between 10 and 18 pounds to the ream, 4 cents a pound and 15 per cent. *ad valorem*.

Decorated papers were given rates of 4½ cents a pound, and in addition thereto, if embossed or printed otherwise than lithographically, or covered with metal solutions, gelatin or flock, 15 per cent. *ad valorem*.

Wax-covered papers and imitation parchment papers were given rates of 3 cents a pound and 15 per cent. *ad valorem*.

Paper bags and all other articles composed in chief value of paper, were given rates of 5 cents a pound and 20 per cent. *ad valorem*.

The rates on basic paper for photographic purposes were fixed at 3 cents a pound and 15 per cent. *ad valorem*; and on sensitised papers, 3 cents a pound and 20 per cent. *ad valorem*. The rate on transfer papers was fixed at 65 per cent. *ad valorem*.

It was not necessary for the Senate to take action on Paragraph 1301, which deals with printing paper, because no change was made in this paragraph by the Finance Committee.

In connection with pulp board in rolls, in Paragraph 1302, the Senate took the following clause out of the 10 per cent. *ad valorem* duty and placed a 5 per cent. duty on it, namely: "Pulp board in rolls for use in the manufacture of wall board."

There was a great deal of controversy in the trade regarding the basis of weight in Paragraph 1304, the tissue paper section. It was contended right along that this should remain on an 8 pound basis, but, as already indicated, the committee changed this to a 6 pound basis, and the committee was upheld by the Senate action. In that same paragraph, namely, 1304, the committee made a separate phrase of India and Bible paper, as follows: "India and Bible paper, weighing over 10 pounds and less than 18 pounds to the ream, 4 cents per pound and 15 per cent. *ad valorem*."

The Senate agreed to rates in the paper schedule recommended by the Finance Committee as follows:—

On labels and flaps printed in less than 8 colours, 25 cents a pound;

Cigar bands of the same number of colours and printings, 35 cents a pound;

Labels and flaps printed in more than 8 colours, 35 cents a pound; cigar bands of the same number of colours, 50 cents a pound;

Flaps and labels printed in whole or part in metal lead, 60 cents a pound; cigar bands printed in metal leaf, 65 cents a pound.

Fashion magazines and periodicals printed by lithographic process 8 cents a pound.

All other articles than those specifically provided for, not exceeding eight one-thousandths of an inch in thickness, 25 cents a pound; exceeding eight one-thousandths and not exceeding twenty one-thousandths and less than 25 square inches cutting size, 10 cents a pound; exceeding 35 square inches cutting size, 9½ cents a pound; and in addition, on all articles exceeding 8 and not exceeding twenty one-thousandths of an inch in thickness, if die-cut or embossed, one-half cent a pound; if both die-cut and embossed, one cent a pound; exceeding twenty one-thousandths of an inch, 7½ cents a pound.

The committee amendment subjecting to duties of 3 cents a pound and 15 per cent. *ad valorem* imitation onion-skin paper calendered or uncalendered, weighing seven pounds or over per ream and similar papers, was adopted.

The committee amendments placing additional duties on plain envelopes of 5 per cent., bordered, embossed, printed or decorated envelopes of 10 per cent. and lithographed, 30 per cent., were adopted by the Senate.

New Inventions.

Automatic Sheet-Feed Platen Press.

A platen press with an automatic sheet feed, and with adjustable eccentrics for connecting the platen to its actuating mechanism to permit the pressure to be varied, as invented by Mr. M. Rockstroh, is so constructed that after the printing operation the eccentrics are rotated to an invariable "off" position, so that the return stroke of the platen always terminates at the same place and so ensures accurate registry of the sheets. As shown, a sliding platen 7, which moves on

guides 8, is operated by a crank 4 and connecting rods 5 connecting to eccentrics 14 on a platen shaft 6. A ring 9 fitted with grippers 10, 11, 12 feeds the sheets from a feedboard 13, and the platen 7 is in the normal working of the press, always opened to the position shown in Fig. 2, and remains in this position until after a gripper has seized a sheet. As the platen moves to printing position, the eccentrics 14 are rotated by means of an arm 15 on one of the eccentrics connected by a link 16 to a bell-crank 18 pivoted to the platen and connected to a link 19 pivoted at 20 to the frame of the machine. The link 16 is adjustable in a concentric slot 23 in the lever 18, and the rotation given to the eccentrics 14 and consequently the printing pressure depends on the position of adjustment of link 16. Owing to the curve of the slot 23, the eccentrics 14 are always in the same position when the machine is in the "off" position shown. The invention may be applied to platens having an oscillating or rocking motion, and the machine may be used without the adjustments described for the eccentrics 14, by disengaging the stud 20.

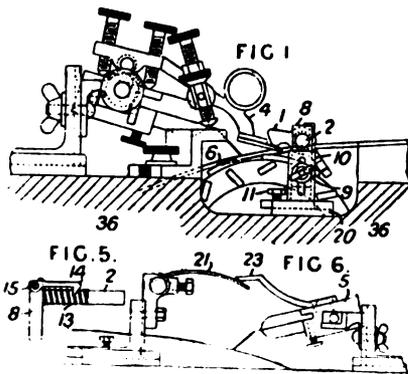

Colour Printing.

In this invention coloured pictures or designs are obtained by printing the various colours by means of formes composed of squares or rectangles set up mechanically as by a machine of the single matrix type-setting kind. A picture, etc., is drawn on paper which is ruled to form squares or rectangles, and on similarly ruled paper the squares, etc., are coloured in accordance with the squares on the original design which contain the particular colours entirely or as components. From these coloured squares the operator sets a series of square or rectangular types separated by the desired spaces, and the complete picture is obtained by taking superimposed impressions in the various colours from these formes. To obtain shading effects the rectangular printing surfaces may be formed with stipples, or be formed with one or more thin vertical lines, or be formed with a marginal line with a centre. In some cases

the operator can set up the formes direct from the original design. Messrs. Johnson, Riddle and Co., Ltd., and F. B. Curson are the patentees.

Ruling Machines.

Mr. W. Hawkes has patented a striker pen ruling machine, which is constructed with a pivoted pen beam 5 which is normally kept raised from the work by an adjustable spring 21 acting on an arm 23 of the beam which is depressed to effect the ruling of the paper by means of an oscillating lever 1 acting on an arm 4 connected to the beam. The lever 1 is mounted in such a manner that it can be adjusted both vertically and horizontally, and it is operated to depress the pens by means of rotary cams 6. The lever 1 is carried by a slide 8 which is secured in the desired vertical position in a bracket 10 by means of a wing nut 9, and the bracket 10 is

adjustable horizontally in a base 20 carried by a side frame 36 of the machine. The lever 1 may be moved axially on its pivot 2 against the action of a spring 13, Fig. 5, and held out of operative position by a catch 14 pivoted at 15 to the slide 8. In a modified form the bracket is pivoted to a horizontally adjustable plate arranged above the upper surface of the right of the side frame 36, and a catch, which normally holds the parts in operative position, may be released to permit the bracket 10 to be turned about its pivot thereby raising the lever 1 out of operative position.

Phototype Printing.

A method to transform a silver image into a tanned gelatine image by hardening the gelatine in the presence of the image by a bichromate is patented by Mr. P. Schrott. The silver image is first treated in a bath, such as copper bromide or chloride or silver ferrocyanide, to obtain a compound metal image which acts as a reducing agent to a bichromate, and the image is then treated in the bichromate bath. A yellow image is formed which is an indication that the tanning is complete. The metal image can be dissolved out by acid leaving a clear tanned gelatine image which can then be coloured by dyes, or a greasy printing colouring matter can be used and the image used as a phototype.

The Miehle

Built with precision for exact printing

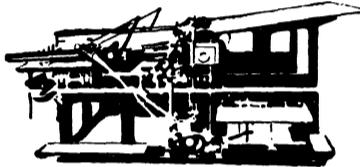

SERVICE

Because it is an all-British machine, built in our Works at Altrincham, Cheshire, we are at all times able (either directly or through our branches and depots) to give not only immediate advice but practical assistance to its users.

This service commences with the installation and is available at all times afterwards.

Although the probability is that your all-British Miehle will never break down (a statement supported by many hundreds of users), accidents occasionally happen, and at such times it is better to be sure of prompt service than to regret the purchase.

You know the quality of the machine — it is the best of its class and its class is the highest

Write direct to the manufacturers of the all-British Miehle for specification and full details.

Sir,

Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from 192..... to..... 192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—

CONDITIONS:

- The Subscription is annual, payable in advance, and may commence at any time.
- All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.
- Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.
- The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.
- In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term.

Terms:

Subscription £2 2s. Od. per annum, entitling the Subscriber to:—

- Ten Status Enquiry Forms and ten Debt Forms free of charge.
- Further Enquiry Forms during currency of Subscription at 2/- each.

Debt
 The "Collection of an unlimited number of Accounts" at the following rates of Commission:—
 5% on amounts recovered up to - £20 1% on amounts over - £100
 2½% on amounts over £20 and up to - £100 5% on amounts recovered in Ireland, Scotland and the Channel Isles.

- Special terms in respect to Foreign Debt collections and enquiries.
- Representation at Meetings of Creditors free of charge.
- Searches of the Registers (unlimited) free of charge.
- Legal Advice by the Solicitors to the Office upon ordinary business matters free.

Special Export Issue 4d.

Export Notes and Comments.

Some Grounds for Optimism.

BRITISH exporters' views at the present time must naturally be tinged more with optimism or with pessimism respectively according to the particular section of foreign trade that is envisaged. A remarkable feature of to-day's conditions is the extraordinarily "patchy" character of the export outlook. Those manufacturers who turn their gaze chiefly to the Continent have certainly much on which to base a pessimistic view of things—though the current use of phrases about a whole continent being on the "brink of the abyss" and so on is doubtless very much overdone. There are signs now that Europe has been near enough to the said "brink" to get a fright, and that a saner spirit is beginning to show itself in international politics and bringing improved business conditions in its train. Certainly the reparations problem, with its immense commercial implications, seems very far from a complete and final settlement. A partial and temporary settlement, however, appears to be an early possibility and this should pave the way to better times. Moreover the state of affairs as regards trade with the Continent is by no means the only factor to be considered. The outlook in many other overseas directions is vastly more cheering and British exporters will do well to refuse to take too much stock of the shady side of the picture but to note that there are brighter vistas to be seen and accordingly go "all out" for every inch of trade expansion which is available.

British Overseas Trade Improving.

THERE are many points of encouragement to be found in the record of six months' British export trade given elsewhere in this issue under the caption "Supplies for the Overseas Printer." Our exports have in most directions been increasing, and the signs are favourable for a continuance of this healthy progress. Data for August are not available at the time of writing, but the official figures for July are distinctly satisfactory. Imports for the first seven months of the year are over £83 millions less than those of last year. Much of this decrease is due to falling prices, quantities still being substantially maintained. On the other hand, our exports are practically equal in value to those of last year, which indicates that a much greater volume of goods is being exported. The sources from which we draw our imports are changed slightly from pre-war years, the Empire having increased its quota from 25 per cent. to 29.3, and other countries declined from 75 per cent. to 70.7. Exports of British manufactured goods, on the other hand, find much the same outlet as in 1913, the changes in percentage being comparatively negligible as regards the Empire and foreign countries.

Methods of Selling British Goods.

THE secretary of the British Chamber of Commerce for Switzerland (Mr. Alexander

Richardson) recently contributed an article to the *Anglo-Swiss Review*, under the heading of "British Goods Wanted in Switzerland," in which he points out that whilst these goods are required, the methods of offering them for sale fail to achieve the desired end. Mr. Richardson states that some of the travellers sent out from the United Kingdom had far better remain at home, "for of all the helpless, hopeless and semi-illiterate representatives touring on the Continent at any time, the British traveller cuts the saddest figure by far." He adds that any British Consul or secretary of a British Chamber of Commerce could cite cases of hundreds of good orders going to competitors, simply because our exporters will insist upon applying English methods and foreign standards to their trade. An old-established firm of Swiss agents of British goods is quoted as saying that no offers should be submitted to Swiss firms in the ante-deluvian British weights and currency, such offers in most cases being thrown into the waste paper basket. Another direction in which British trading abroad is hampered is the extreme slowness with which inquiries are dealt with by English exporters. Although British supply houses may not do much with Switzerland, these objections no doubt obtain in other directions, and attention to more up-to-date methods covering British printing appliances as well as stationery is no doubt desirable.

How Not to do Business.

A RECENT incident in connection with export trade with Canada indicates the lack of thoroughness which too often spoils the chances of the British supplier. A Canadian agent took the trouble to submit to a large firm in the Midlands samples of certain goods required for the local market. His letter remained unanswered for four months. At the end of six months the first consignment of goods was received from England. The goods were satisfactory, but the shippers had failed to make themselves familiar with the requirements of the Canadian customs. No declaration was made as to the country of origin and various other details were at fault. As a result, the advantage of the 22½ per cent. preferential tariff was lost and claims must be submitted to secure a refund of this amount. Further delay was occasioned by prices being quoted f.o.b. London. That case is typical of many, and should serve to drive home once more the necessity that the would-be exporter must study his market in every detail, and should arrange to be kept *au fait* with trading conditions by frequent communication with some one who is on the spot.

Getting Business in Canada.

CONDITIONS in Canada have many points of peculiarity which need to be considered by British firms seeking to commence or to extend Canadian business relations. A Canadian correspondent of the *Times* has some useful suggestions to make to British manu-

facturers in this connection. One of the most obvious advantages, he remarks, which American manufacturers have in the Canadian market is their proximity. This can only be overcome by British houses adopting a policy of keeping well assorted stocks on hand in convenient centres for distribution in Canada, particularly in the west. In Western Canada, in such a business, for instance, as dry goods, it is necessary for department stores to buy several months ahead of requirements. The money thus tied up in stocks for future requirements represents a considerable and permanent addition to overhead costs. Firms in such a position would willingly pay whatever slightly added cost, if any, there might be by reason of freight charges, etc., for British goods, if they were enabled to purchase from branch depots and could avoid tying up their money for months ahead.

What Canadian Buyers Expect.

A SIMILAR policy with regard to samples would be of great value. American firms spend money on a comparatively lavish scale on samples and on advertising matter. They are prepared to quote immediately prices for delivery at any Canadian centre, and can guarantee delivery within a reasonable time. It is true that a number of British firms of long standing, within the last two or three years have been fired with the laudable ambition of building up a Canadian connexion. Some of them have failed because of the ultra-conservatism of their methods. Their preliminary advertising has consisted in some cases of circularising possible customers with sedately-written letters drawing attention to the fact that they have been in their particular line of business for one or more centuries. The letters are sometimes written by hand. This type of advertising does not in the least attract Canadian business men. They are accustomed to typewritten communications, "snappy" advertising matter, and up-to-the-minute f.o.b. quotations. Americans are prepared to quote for immediate delivery. Their goods, in many cases, are of cheaper quality than those offered by British houses, but they are of the kind that are needed here and—they get the business.

Australian Trade Improves.

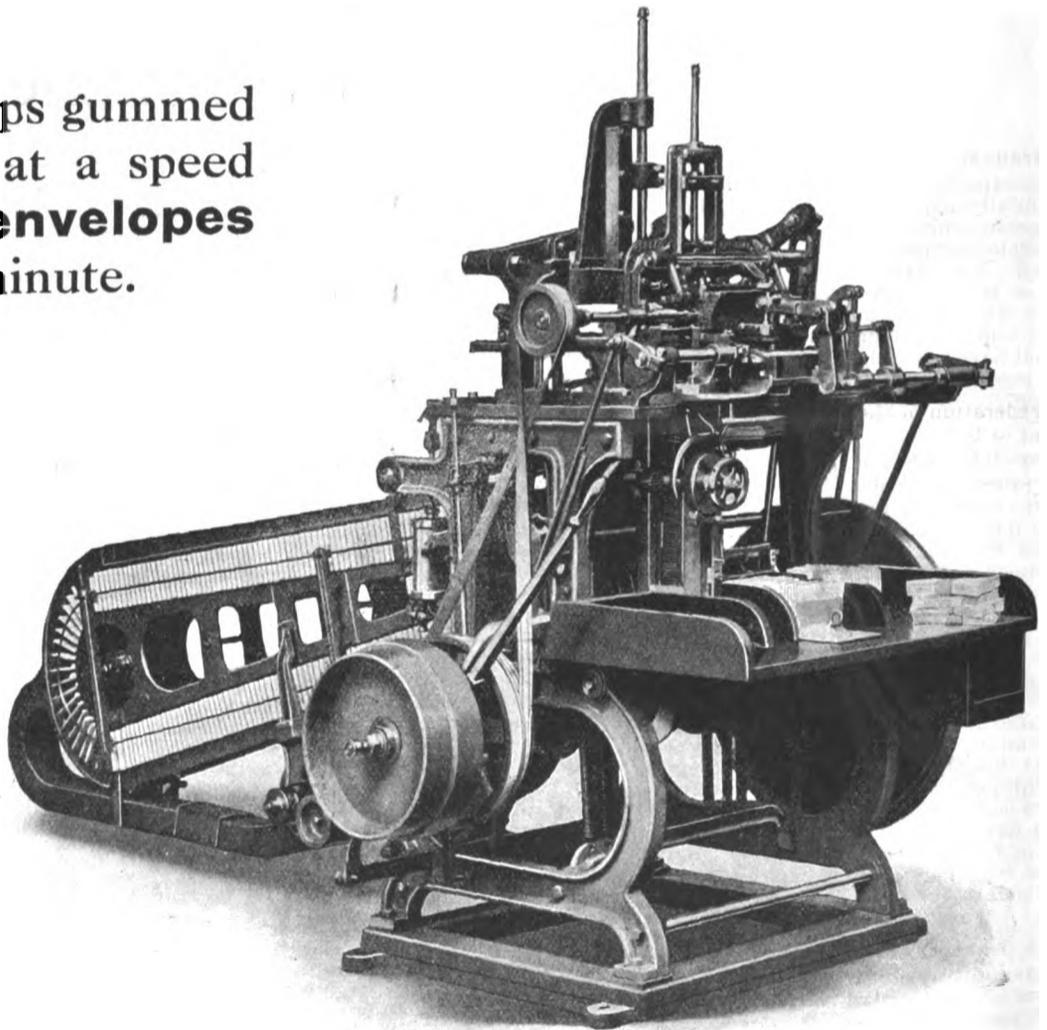

IN Australia we find indications that promise improved business with the Mother Country, and British manufacturers connected with the printing and allied trades should take their chance of strengthening trading connections in this direction. As expected, the economic position of the Commonwealth as regards trade with oversea countries has undergone a great change for the better during the last twelve months. The year 1920-21 ended with imports valued at £163,801,826 and exports £132,158,912, or a debit balance of £31,642,914. In the year ended June 30th last imports were £101,063,661 and exports £127,949,455, or a credit balance of £26,885,794. From a purely mercantile

point of view the position is even better because in the last year gross imports include ships valued at £2,754,925, most, if not all, of which represents the value of three Commonwealth Bay liners.

Australia and New Zealand Reciprocity.

BRITISH firms which have an eye on the Australian and New Zealand market will be interested to learn of the new reciprocal tariff agreement between those two countries, which has been tabled in the Houses of Representatives at Melbourne and Wellington. The treaty accords British preferential duties to either country, so that where preferential duties have been paid on British goods in one country, the goods shall be admitted to the other country without further impost. This arrangement ought to be a further stimulant to the consumption of British printing goods in Australasia.

Printing in Queensland.

THE last copy of the *Bulletin* of the Queensland Master Printers and Allied Trades Association which has reached us mentions the launching of a scheme for the betterment of the trade. Printing, like other industries, has been under a cloud and the master printers were evidently forced to take the situation in hand on their own account. As a result, an agreement has been reached between the Queensland Master Printers' Association and the local branch of the Printing Industry Employees' Union of Australia, by which the Queensland Printing Industry Joint Council has been formed in Brisbane. The objects of the Council are described as being of a far-reaching nature, and practical results are anticipated. The official announcement on the subject mentions that the chief object of the Council is to secure the installation of the Association's Uniform Cost System in every jobbing printery in Brisbane, and then to have the ascertained hourly rates used when estimating. Incidentally there is provided a high tribute to the Federation Cost System. The Employee's Union appointed a chartered accountant to investigate the cost system with a view to satisfying themselves that the system is fair to all concerned. It will be gratifying to the Federation of Master Printers at home, as it was to the Queensland organisation, to learn that the accountant who was appointed had no hesitation in saying, at the conclusion of his investigation, that the cost system of the Master Printers was "absolutely fair to the employees, employers and the public."

Lino Operators Wanted in Queensland.

A RECENT meeting of the Queensland Master Printers and Allied Trades Association was concerned with the shortage of lino operators. In order to make good the deficiency, Mr. Franks, on behalf of the Linotype Co., promised to do his best to secure machines for training operators on certain conditions. It ought not to be a difficult matter if the labour is available to train operators for these machines. The recent strike in the British printing trade showed that very little time was required to train a lino operator, and the profitable character of the employment ought to be eagerly sought after in Queensland.

Better Outlook in South Africa.

A REVIEW of the industrial conditions of South Africa from the printing and stationery point of view appears in the *South African Printer and Stationer*, which declares that the recent improvement in the business and financial situation of the country is unmistakable. No specific reference is made to the printing industry, but the fact that commerce generally is on the mend indicates that there is a better opening for the sale of print and stationery, especially when we remember that South Africa is a developing country. Judging from the excellent get-up of the journal to which we have just referred, the taste in printing is of a high order, and there ought to be a very good scope for supply houses in this country to increase their connections in the Union.

British Interests in South Africa.

REFERENCE has already been made in these columns to the activities of the British Manufacturers Representatives' Association of South Africa. Their activities have now been directed to the agitation which has been proceeding in South Africa for protective duties. In view of the numerous appeals for protective duties to the Board of Trade and Indus-

tries in the Union, the Association has set itself the task of insuring that oversea trade interests were properly represented when evidence was being taken by the Board. As a result, the assurance has been given by the Board that wherever necessary the evidence of importers and others interested in the imported article will be taken before any decision is arrived at. An organisation such as this Manufacturers Representatives' Association can render valuable service to British interests, and the half-year's report, which has lately come to hand, indicates the wide scope of activities already undertaken.

Advertisement Tax in South Africa.

THE printing industry in South Africa is considerably alarmed at a proposal of the Transvaal Provisional Council to levy a 10 per cent. tax on the gross revenue produced by any form of advertisement. Strong opposition is being put forward on behalf of the printing industry, which will suffer a direct hardship if the proposal is put into operation. It is pointed out that printing provides employment for a larger proportion of white workers than any other sphere of commercial activity in the country, and that the proposed tax will prove a severe strain. "One thing is certain," says the *South African Printer and Stationer*, "that the proposed taxation is going to greatly increase unemployment among the printers, and this at a time when the number of unemployed is greater than it has been for a great many years." It is suggested that in the event of legislation being passed in the direction indicated it will involve a reduction of fully 10 per cent. of the numbers employed in the printing trade in the Transvaal. There is no question at all that advertisements are almost entirely issued by means of the printing press, so that the industry is directly interested in the proposed 10 per cent. levy. Master printers in the Transvaal can be relied upon to leave no stone unturned to defeat what is described as an iniquitous proposal.

A Good Market in India.

A BIG field exists in India for the sale of printing machinery and appliances, as indicated by the number and variety of papers which are published in that country. In addition to the daily papers which are published in Calcutta, Madras, Bombay and the larger up-country towns, there are several weeklies, for instance, and monthly and quarterly journals in various parts of the Empire. Most of them are edited by Englishmen, and are printed in English. These facts should help in making the Indian market a good one for British products. The newspaper offices in India are not entirely restricted to the publication of journals, but are open to job printing, and no order is considered too small for handling. Competition among the various printers, moreover, is keen, as instanced by the fact that every half-caste who wishes to lead a peaceful life purchases a second hand or even a third-hand press, with which he enters into competition with the established printers. The native proprietor of a jobbing press is mentioned as another competitor whose scale of charges is even lower than that of a half-caste. Then again, there is the Parsee printer, who, according to Mr. George Cecil in the course of an article in the *American Printer*, turns out excellent work. His prices are naturally higher than those of the Indian, but are lower than those prevailing in the European concerns. Competition is intensified by the existence of stationers who, with a little gas engine or press, print their own letter headings, business cards and so forth, as well as any for which they can obtain orders. In addition to the papers printed in English there is a big crowd of newspapers in the country, all of which mean the use of type, furniture, machinery, paper, etc. Altogether India offers a big scope for the sale of these materials, and careful attention to the market ought to be profitable.

Requirements of Indian Trade.

Though there is an immense field in India for British goods appertaining to the printing and allied trades, the country offers some special difficulties to the exporter. The Government's handling of India's efforts towards the attainment of self-government has not tended to foster a strong preference for British goods. Moreover, to-day more than ever our manufacturers are faced with strong competition from very many quarters including America and Japan, as well as

Germany. One of the difficulties that face the British exporter is the fact that trade is done in India at a surprisingly low margin of profit and if the Indian importer is to be encouraged, every effort must be made to meet him in the matter of price and to give all possible financial accommodation. Touching on this particular point, a writer in the *Manchester Guardian* remarks that the average British manufacturer seems to think it is quite sufficient to offer his usual wholesale terms to induce any firm to take up his agency; in fact, he will often stipulate that the agent must place a trial order; samples are often not sent, or, if sent, are charged for, while even catalogues and other printed matter are often charged for. Prices, if quoted at all, are generally f.o.b. The agent must in addition be able to put up confirmed bank credits or pay cash against documents in London; even to guarantee the payment of drafts drawn on dealers is not sufficient. The idea of contributing in any way towards the expense of pushing the agency, even in the form of a special allowance for advertising, is seldom entertained, while to pay a special agency commission is looked upon as most unreasonable. It is not surprising that under such conditions firms are not very anxious to take up agencies, and prefer to leave themselves free to purchase their goods at the lowest price in the open market. Continental houses seem to be quite glad to secure suitable firms to take their agencies, and offer much more favourable terms. These invariably consist of drawing on dealers direct, and the agent is only responsible to see that the goods are duly taken up, or to act immediately in the interests of the shipper. In other cases the agent is actually responsible for the due payment of the draft, but in such case an extra commission is allowed. American firms offer similar terms, and as they generally believe in advertising, there is often a special allowance for this, while in both cases it is often possible to get extra facilities, either in the form of holding stocks or extended credit, if the agent will agree to hold stocks on his own account.

Continental Efforts for Colonial Trade.

CONTINENTAL countries with depreciated exchanges continue to give evidence of their desire to capture a share of the trade which seems more properly to belong to countries within the British Empire. A Canadian trade journal draws attention to the interesting effort of a Budapest firm to attract printing orders from Canada. The name of the firm is Tolnai Vilaglapia, which, translated, means Tolnai Worldpaper Ltd. It is evidently a large concern and claims to have employed over 600 hands in its printing and binding plants previous to the war. This foreign printing house in its solicitation for work says it is equipped with the most modern and up-to-date equipment, and because of the rate of exchange offers to do printing work for "very small prices." "We request you to give us trial work, and you may send us the amount for it only after receipt of work and if you be quite satisfied," states the letter. The price list, given on the back of the letter, offered to print 1,000 letterheads, 8½ x 11, for \$2.75; envelopes and statements at the same price; 10,000 circulars, 6 x 9, for \$18; 10,000 four-page folders, 6 x 9, for \$40. Catalogues and other classes of printing are solicited in the letters and samples are asked for to guarantee the quality of the work. "Canadian buyers of Hungarian printing," comments our contemporary, "are likely to be few in number, but Canadian printers would have reason to feel less concerned about foreign competition in general with the Marking Goods Act enforced in respect to imported and lithographed matter. The act would provide a measure of protection to which the Canadian printer and lithographer is entitled."

An American Foreign Trade Idea.

THE New Orleans Association of Commerce is circulating in South American markets a list of its members who have made arrangements to refund the round trip fare to foreign merchants who visit them and make purchases among them to a minimum amount of \$5,000. This is a novel form of co-operative export propaganda, calculated to make a good impression on overseas buyers though they may be unable to avail themselves of the offer.

THE value of paper and printings cleared through the Constantinople Customs during the month of April last amounted to £T.193,896.

A HARRIS
ENVELOPE AND CARD PRESS
 WOULD
SAVE YOU MANY POUNDS!

The Harris Blanker is a high-speed Rotary Press with a simple and positive suction feeder for printing envelope blanks in the flat after being die-cut and before being folded. It will handle the complete range of standard envelope blanks; has an automatic suction feeder, packer delivery, and attains a speed of 12,000 per hour.

What Our Manufacturers are Doing.

British Machinery and Other Products that
Merit the Attention of Overseas Buyers.

Miscellaneous Machinery: Edmund Bush and Son, Ltd.

Among the specialities which this well-known Leeds firm is producing, an interesting item is their patent varnishing and gumming machine, for whole sheet or strip work. They claim that this is the most up-to-date machine in the market, and the only machine fitted with automatic pump, cylinder check, etc. Then they have also a patent hot-air drying apparatus, the latest invention for drying varnished or gummed sheets. This is a scientific dryer, and is attracting much interest. Sheets emerge perfectly dry and can be piled in lots up to 500. Messrs. Bush's patent ink mixing machine is fitted with tilting bow, removable blade, reversing gear, etc., and old inks can be restored to working consistency. This machine is a great labour-saver, and it can be had at a very reasonable figure. Among the firm's other products are ink grinding mills, made in two sizes, the most powerful mills in the world, fitted with chilled rolls, heavy bronze bearings, and sight-feed lubrication.

Envelope Machines: David Carlaw and Sons, Ltd.

Now that "Economy" is the cry, and envelope makers are all out for high-speed machines, Messrs. David Carlaw and Sons, Ltd., 31, Finnieston-street, Glasgow, a firm of over 50 years' experience, are building Envelope Gumming and Folding machines to run at any speed the operators can cope with. Every good point that ingenuity can suggest is to be found embodied in the "Leader," and the following improvements are now being appreciated by envelope manufacturers: "Continuous Drying Chain, which gives a much smoother and easier drive than the old type of chain, actuated by a ratchet; Daily Recorders for counting the output of the machine; Disengaging Gear which cuts off the gum supply of both back and front gummers when no paper is passing through the machine, thus keeping the gummers and parts adjacent to gum box clean." The "Leaders" on a good quality of paper can be run at a speed of over 150 per minute, although it takes an exceptionally smart operator to band and box envelopes and keep the machine running continuously at 130 per minute. Messrs. Carlaw's machines are entirely of British manufacture, and only the best material and highest class workmanship is used in the construction of same.

Printing Machinery: Francis J. Connolly, Limited.

Messrs. Francis J. Connolly, Ltd., of 62, Park street, Southwark, who are the agents for Great Britain and the Colonies in the interests of Messrs. Marinoni-Voirin, of Paris, inform us that they have many interesting developments in the lithographic offset machine world. Their first point is that they have no less than eight distinct varieties of this class of machinery. A Single Colour built in eight English sizes; a Two-Colour Two-Blanket machine, which is also a Perfector; a Two-Colour Single Blanket machine in which the colours are super-imposed and transferred to the paper. A particular feature of this machine is that the most exacting register is secured on the blanket and it is particularly suitable for map printing. A Three-Colour machine is well on the way of a novel design; a Two-Colour and Photogravure Combination machine; a Reel or Sheet-Fed Perfecting machine, and their latest ideas are embodied in a Reel-Fed Perfecting machine for newspaper work which will print, perfect, cut, fold, and deliver a 16-page newspaper at a speed never before secured. They have also recently perfected a Suction Operated Feeder of the Pile type and an Automatic Piling Delivery, thus forming with the machine one complete automatic unit. Improvements have been recently effected in the Rotary Tin Plate printing machine and we are advised that automatic feeding will be a feature of this in the near future.

Printing Machinery: Geo. Mann and Co., Ltd.

Messrs. George Mann and Co., Ltd., of Henry street, Gray's inn-road, London, are now extremely busy on orders for two-colour and perfecting rotary offset machines, single colour rotary offset machines and rotary tin-plate printing machines. The latest two-colour machine, fitted with patented front delivery, has now also embodied an automatically lowering delivery table, in order to take the pile of printed sheets, and is receiving excellent support from the trade. The latest "Rapid" rotary tin-plate printing machine is also giving great satisfaction, and a large number of orders is on the books for this machine.

Ruling Machines, etc.: John Shaw and Sons.

This celebrated Honley firm's "New Imperial" rotary perforating machine is made specially for high class commercial work, and gives two kinds of perforations. It is used by the best commercial houses for straight through perforating and also striking. Messrs. Shaw are also now making a four-sider disc ruling machine. This will be called the "Super-Imperial" four sider disc ruling machine, and it is made for feint lining only or feint lining and automatic striking—two, three or four colours on both sides of the sheets both ways at one operation. It can be supplied with either the latest model ream feeder attached or patent pile feeder. The makers recommend the patent pile feeder with duplicate tables, and guarantee this feeder to be the fastest on the market. Messrs. Shaw have also recently added a few good improvements to their striker pen ruling machines, of which there are now over 4,500 in use.

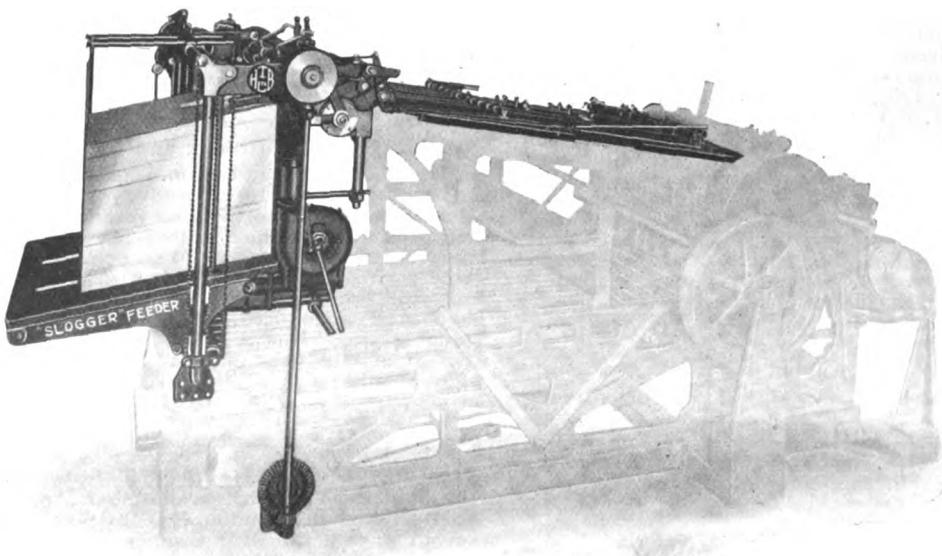

"Slogger" Automatic Sheet Feeder.

The sole manufacturing and selling rights of this machine have been acquired by Messrs. H. T. B. Limited, Blackhorse-lane, London, E.17, who are specialising on the production of the "Slogger." In their new works special plant has been laid down, and by means of

with perfect register. No labourer is required as one loading in morning for a whole day's run is possible, thus ensuring no loss of machine time.

Bookbinding Machinery: Smyth-Horne, Limited.

The various well-known Smyth Book Sewing machines, for sewing the general run of letterpress and stationery books, have been altered and improved, with the object of not only increasing their general efficiency, but also increasing the output. The wonderful popularity of these book sewing and other machines has been amazingly instanced through the enormous number of repeat and new orders the firm has obtained throughout Europe and the Colonies. The Seybold Three-Knife book, magazine and pamphlet trimming machine has met with big success, likewise the new Seybold Paper Cutting machine. The new G. R. S. No. 42 Rapid Jobbing Folder is an American machine which has lately been put on the American market and has met with big success. Sheets are fed to this jobbing folder on the drop roller system, obtaining a speed up 6,000 sheets per hour. The folder is equipped with six pairs of folding rollers, permitting a big variety of folds to be obtained. The range of the machine is from 8½ inches by 11 inches up to 30 inches by 42 inches, and the machine can be easily and quickly changed over for the different size sheets. For the Christensen Automatic Wire Stitching machines Messrs. Smyth-Horne have been appointed the sole European agents from September 1st, and they are therefore now able to offer this wonderful labour-saving machine, of which there is an enormous number running in America and in Great Britain. They also carry in stock duplicate spare parts. The Murray Improved Bundling Press is the invention of the well-known engineer, Mr. Murray, and is famous as a simple and most effective Section Signature and Bundling Press. It is also suitable for the tying-up of magazines, pamphlets, etc. The pressure can be easily applied by a girl, and as the ratio of the gearing is 200 to 1, an enormous pressure can be obtained with very little effort. Juengst Gatherers, Wire Stitchers and Auto-

The "Slogger" Automatic Sheet Feeder.

jigs, fixtures and gauges they are able to manufacture standard parts in quantities. This method of manufacture enables them to give prompt delivery of their 1922 model, which is unequalled for value, at a very attractive price. They make four sizes of feeders, and these take sheets from double crown to quad royal. "Slogger" feeders are running with perfect success attached to two revolutions, Wharfedales, direct offset lithos, intaglio and folding machines. A "Slogger" will feed anything from tissue to cardboard

matic Covering machines are proving themselves very efficient, and good sellers on the European market. Smyth-Horne employ a highly trained staff and also carry a big stock of duplicate parts, threads and tapes, etc., for use on these various machines.

A Type-Case Dust Extractor.

The recent article in our columns regarding the progressive move of the St. Clements Press in adopting mechanical composition, draws attention to another interesting and

somewhat remarkable appliance, introduced by the engineer of this firm—Mr. T. H. Fishburn. The practice of the compositors' art was for a generation accompanied by a serious menace to health by reason of the lead dust emanating from the type-cases. This menace the "Clements Dust Extractor" has entirely removed. The Extractor (illustrated herewith) is a cabinet 3 ft. 6 in. by 4 ft. wide, large enough easily to take a case of type, which is placed upon a flat table resting upon a series of ball bearings of unequal size. The table has a vibrating motion, so that when in action the type is shaken up, whilst immediately above it are a series of holes connected with a powerful air pump operated by a motor at the base of the cabinet, which not only oscillates the case of type, but at the

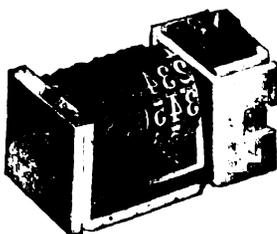

The "Clements Dust Extractor."

same time sends a strong blast of air directly into the shaken case, thus liberating the dust, which by a clever arrangement is at the same moment extracted into a receiver or bag at the foot of the cabinet. The machine is electrically driven by contact with an ordinary lamp switch, and as the cabinet runs on wheels, it can be wheeled to a stack of cases for use, not a particle of dust escaping into the room, the whole time occupied for perfectly cleaning out a case being 15 to 30 seconds. The amount of lead dust which is thus accumulated in the receptacle is really surprising, and in a short time amounts to half-a-hundredweight. An analysis of this dust gives a proportion of lead amounting to 11.6 per cent.—proving the danger to health involved. Many large firms have already adopted the Clements Extractor, notably the *Daily Telegraph*, Messrs. Hazell, Watson and Viney, and many others, and several of H.M. Factory Inspectors have approved of and strongly recommended its use in printing offices as a perfect and economic preventive of lead dust inhalation by the compositor. The efficiency of the machine is only exceeded by the rapidity with which it does its work. Considering the capacity and the effectiveness of the Clements Extractor, the cost of it is reasonable, and will be found a really economical investment if time and reliability are considered.

Numbering Machines: Victory-Kidder Co., Ltd.

The American Numbering Machine Co., of Brooklyn, New York, have established a sales agency in England for local and Continental

Numbering Machine.

business with the entire product now handled by the Victory-Kidder Printing Machine Co., Ltd., Birkenhead, who will maintain a complete stock of machines and parts. American Models Nos. "30" and "31" have been sold in England for many years, but it is not

generally known that skipping wheels may be obtained for these useful numbering machines, skipping any number from 1 to 10. On check work or other forms where there are two or more divisions to a page to be numbered consecutively, skipping wheels are necessary. By removing the consecutive unit wheel, a skipping wheel skipping the desired number may be inserted in its place. If frequent changes of skipping wheels are necessary, a skipping wheel tool outfit may be obtained, so that a machine may be changed over from one thing to another within two or three minutes. All particulars from Victory-Kidder Printing Machine Co., Ltd., Victory Works, Birkenhead, or from their London office, 66, Houndsditch, E.1.

Printing Inks: R. A. Bartlett, Ltd.

Messrs. R. A. Bartlett, Ltd., of 8, Hythe-road, London, N.W., are a new company, but have behind them vast experience in the preparation of printing inks for all markets. They have already sent several shipments abroad, which have given great satisfaction to the purchasers. As yet, we understand, the company have no agents abroad, and will be pleased to receive applications from firms who are in the position to place reliable inks before foreign and colonial printers. Messrs. Bartlett have specialised particularly in concentrated offset inks, rotary photogravure inks, copperplate inks, and letterpress inks for all purposes, and they are also in a specially good position to supply dry colours, holding large stocks. Printers' sundries are also to be had at competitive prices, and they are manufacturing lithographic roller skins of the finest possible quality, sewn in a special manner, which insures lithographers working with rollers that do not require the least attention. Commencing the present month Messrs. R. A. Bartlett, Ltd., become the sole manufacturers and suppliers of the well-known "Drylio" litho inks, which are being used so successfully by some of the leading houses in this country and abroad.

Printing Ink: Empire Printing Ink Co., Ltd.

The Empire Printing Ink Co., Ltd., announce that they have acquired the business of Mason and Mason, Ltd., and incorporated it with their own. The company claims that it is thus placed in an exceptionally favourable position as regards equipment, as the staff of this old-established business, which has had such a long and honourable association with the printing trade of London, the Provinces, and the Empire, including those responsible for the conduct of the technical and chemical departments, as well as its working staff is now combined with their own business, with its possession of a modern plant unequalled for the scientific production of printing inks of every description.

Printing Inks: Lorilleux and Bolton.

Messrs. Lorilleux and Bolton, Ltd., of 31-34, Cursitor-street, London, E.C., have just issued a handsome portfolio showing specimens of their well-known Three Colour Inks. Progressive prints of the individual colours, together with different strengths graduated from solid to most delicate process work have been introduced, and these form a valuable aid to the printer when selecting inks to match block-makers' proofs. This book should be in the hands of every colour printer, and Lorilleux and Bolton, Ltd., will be pleased to send a copy post free on request.

Printing Inks: B. Winstone and Sons, Ltd.

From Messrs. B. Winstone and Sons, Ltd., of 100-1, Shoe-lane, London, E.C., we have received a very interesting series of "Three Colour Progressive Proofs" produced by this firm's well-known printing inks. These proofs, which are neatly grouped in a number of separate pamphlets, will be found very suggestive as showing the results that can be obtained with the inks employed. We understand that these specimens are not special show work, but have been produced under the normal conditions of a well-regulated machine-room, so that the average printer should be able to turn out similar products. The results here shown are excellent, the series making an admirable set of colour prints. Though examples of four-colour printing are not shown, Messrs. Winstone and Sons have given exhaustive investigation to the requirements of this branch of the printer's art and welcome inquiries on the subject from printers everywhere.

Printers' Metals: T. G. and J. Jubb.

In regard to metal furniture, these well-known Leeds manufacturers have had numerous letters congratulating them on their scheme for re-casting old metals into leads, clumps, quotations and furniture. These letters have come spontaneously. One says: "If only printers would adopt this scheme, and replace all their old stuff with material such as we have received, it would save them both temper and money." With regard to stereo metal, a letter reads: "We make stereo plates of all our three-colour work, and when you consider the high quality of the work we are called upon to do, it speaks well of your metal. We find no difficulty in getting 100,000 runs off without replacing the plates." Messrs. Jubb's mono metal is used by most of the provincial mono users in Great Britain. The firm claims never to have lost an order yet for quality, but only on price. They have sent more metal out, of various qualities, from January to June of this year than any corresponding period in their experience.

Catalogues Wanted.

An Anglo-French Bank established in Constantinople, with branches in the interior of Asia Minor, Syria, and Palestine, is anxious to receive catalogues of British manufacturers for the purpose of exhibiting them in their branches in the interior. At the same time, posters would be displayed in prominent places in the interior towns informing the public that these catalogues are open for inspection at the offices of the bank, and, in addition, circular letters will be addressed to prominent local traders. Applications for name and address should be made to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1 (quoting Reference No. 6889/F.E.).

The British Vice-Consul at Mazatlán reports a pronounced revival of business activity in that city. The local Chamber of Commerce has approached the Vice-Consul on the possibility of obtaining from British firms catalogues, price lists, directories, etc., for their reading room. To be of real value in the stimulation of trade, these, of course, should be in Spanish. Any United Kingdom firms desiring to have their catalogues, etc., shown in the reading room of the Chamber should forward them through the British Vice-Consul, Mazatlán, Sinaloa, Mexico.

Stationery Market in Aden.

There is a good market for stationery in Aden, and there are indications that it is steadily increasing. The city of Aden is the chief market, the requirements of the rest of the district being supplied through the Aden merchants. Great Britain, India, Italy, and Austria are the principal sources of supply, but, according to the American Consul at Aden, United States manufacturers have recently entered the market, and are operating mainly through jobbers in England. The value of the imports of stationery into Aden in 1919-20 amounted to £22,768, and in 1920-21 to £22,927, compared with only £3,595 in 1913-14. The figures for the last trade year will probably show a still further increase. It is worthy of note that greater attention is being given to education and that the local government purchase a large part of their stationery requirements locally. There is also a steady demand from the large commercial houses located in Aden, and a limited amount of stationery is required by the general population.

MR. JOHN SIMON PARRY, for many years editor of *Y Llan or Church News*, has died at Lampeter, aged 72. A native of Denbigh, he started his career as compositor at Aberystwyth.

SPECIAL PREPAID ADVERTISEMENTS

The Minimum Charges for Three Lines, with an average of seven words to the line, for Advertisements under the headings given below are as follows (extra lines at proportionate rates):—

PARTNERSHIP DISSOLVED.

J. C. Atkin and S. V. Lambert, paper merchants, at Hebden Bridge, York, under the style of the Calder Paper Co.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

R. Charlton, *John Bull*, Long-acre, London.
A. Bostock, 13, Leopold-terrace, Leeds, journalist.

Mr. T. J. Cobden-Sanderson.

THE trade will have learned with widespread regret of the death, at Hammersmith, last Thursday, of Mr. Thomas James Cobden-Sanderson, founder of the Doves Bindery and the Doves Printing Press, bookbinder and printer. By his passing we lose one more of the links connecting the present day with the rousing times of William Morris, when a new breath of craft-inspiration passed upon British printerdom. Mr. Cobden-Sanderson was son-in-law of Richard Cobden (of Free Trade fame), and was brother-in-law of Mr. Fisher Unwin, the publisher. It was not until he was over 40, that he turned his attention to book-binding and printing, and, knowing nothing of the art, apprenticed himself to De Coverley, a famous bookbinder of the period. In 1900 he took up printing in addition to book-binding and among other works gave to the world his famous edition of the Bible, in five vellum-bound volumes, in 1903-5. An interesting story is told of the destruction of his Dove's Press types—reproductions of choice old English. He took these one night to Hammersmith Bridge, and dropped them into the Thames, rather than let them fall into other hands. He had the true spirit of the craftsman and will be gratefully remembered throughout the world—especially in printing trade circles—wherever that spirit of dignified craftsmanship exists.

Mr. F. W. Johnson.

By the death of Mr. F. W. Johnson, manager of the Roughway Paper Mills, near Tonbridge, on the 1st inst., there passes away a well-known and experienced papermaker. Mr. Johnson, who was a native of Monkwearmouth, Sunderland, where he was born in 1858, entered the Hendon Paper Mills, Sunderland, as a clerk in 1872 and was associated with papermaking all his working life. He joined the Hollingbourne Paper Mills, Kent, in 1884, and a year later went to Turkey Mill, Maidstone, where he remained for over 30 years and ultimately became assistant manager. In 1917 he was appointed manager of the Roughway Paper Mills, Ltd., and held that position until the time of his death.

Apart from papermaking, Mr. Johnson took an active interest in Freemasonry. He was Worshipful Master of the Robinson Lodge (2048) in 1906-7, and in the following year held a similar position in the Robinson Mark Lodge (255). In 1910 he became a Royal Arch Mason. A Liberal Unionist in politics, the deceased gentleman was vice-chairman of the Plaxtol Unionist Association.

He leaves a widow, one son and three daughters, one son having been killed in action in 1917. The funeral took place last week at Shipbourne Church, near Tonbridge, the attendance indicating the great respect in which Mr. Johnson was held.

Paper Needs of Australia.

A new item in Canada's exports of paper to Australia last year was blotting paper. The exports of wrapping paper to the Commonwealth in 1921 were valued at £223,089, as compared with £91,208 in the preceding year. The exports of wall-paper, valued at £37,302, showed an increase of £24,033.

Norway and Sweden have hitherto supplied all the apple-wrapping paper imported to Australia, whose estimated requirements for a normal season amount to 2,500 bales. The size of this paper—thin, tough, white tissue paper—is 20 in. by 30 in., the weight per ream not exceeding 8½ lb.

MR. ALBERT TURNER, who commenced in the paper trade with Messrs. Olive and Partington, Ltd., Manchester, recently resigned his position with Messrs. Albert E. Mallain-dain, Park Royal Paper Mills, London, to join the old-established business of William H. Vickers and Co. (Manchester), Ltd., 27, Mosley-street, Manchester. He has just been appointed sole manager of this concern. The firm, founded in 1870, is widely known in the north. His friends will wish him every success in his new venture.

The Awakening of the Far East.

Recent Printing Trade Developments in the Orient.

Kipling's prophecy that East and West shall never meet is yearly being falsified, and, as usual in all changes in the national life of any country, printing is one of the industries first to give evidence of considerable transformation. Not only are East and West now linked by a large and ever-

show that there has been a substantial recovery in the value of both imports and exports as compared with the corresponding period of 1921. Printing machinery, printed matter and printing paper all figure amongst the goods which Japan imports from Great Britain. The latest detailed figures which have been issued show the expansion of Great Britain's exports to

depends upon the number of characters memorised for writing and reading, and the vast majority of the Chinese are completely illiterate. Printing in this system presents problems of the greatest complexity, as will be realised when it is mentioned that the expert Chinese compositor has to assemble

Chinese Movable Type—1430 A.D.
Said to be First Ever Made.

growing number of business connections, but the strides which have lately been made in the Far East in the adoption of modern Western printing methods indicate that future trade between East and West is going to be something greater than can yet be clearly imagined.

China's Vast Markets.

The immense realm of China is more and more presenting an attractive field to the Western exporter. Conditions in China have, of course, been extremely unsettled of late, but there are now prospects of a more favourable era setting in. Following a period of considerable disturbance, there are signs of settlement throughout China, and this should pave the way for an exploitation of the market by British concerns. Owing to the disturbances which have been evident in the interior, goods at the ports have been held up, but these hindrances are now apparently tending to pass away, and it is presumed that as soon as transport is reasonably safe, there will be renewed activity. In the meantime it is pointed out that European merchant houses of repute have been able to carry on through the recent troublous times, and that they will be able to tide over the awkward period which is now apparently at an end. British supply houses will welcome the re-opening of this important market.

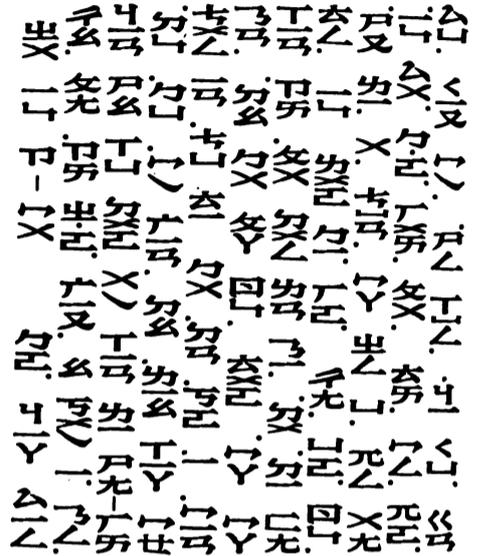

A concerted movement which is being set on foot in commercial circles to promote the education of Chinese students in this country ought to open the way to a larger use of British printing goods in the Celestial Empire. The specific object of the movement is to help the textile relations of this country with China, but it is obvious that the influence must be felt far beyond that particular industry. It is stated, however, that for every Chinese student we have in England there are at least 100 in America, and the result is said to have been very detrimental to English commercial interests in China. It is obvious, of course, that the education of Chinese students in this country will be a means of circulating English ideas in the Far East, and that there will follow a demand for British literature and printing appliances. The development of this movement, therefore, should be watched with interest by industrial leaders at home if it is to act as a counter to the hold which America has already obtained.

Japan's Foreign Trade.

The official statistics of Japan's foreign trade for the first half of the current year

show that there has been a substantial recovery in the value of both imports and exports as compared with the corresponding period of 1921. Printing machinery, printed matter and printing paper all figure amongst the goods which Japan imports from Great Britain. The latest detailed figures which have been issued show the expansion of Great Britain's exports to

"Chu Yin," the New Alphabetical Writing of China. (Monotype Set.)

Phonetic Chinese Set on the Linotype.

Japan in these lines for the years 1918, 1919 and 1920, and are interesting as showing the tendency to growth. In 1918 printing machinery to the value of 4,000 yen was sent from this country to Japan; in 1919 it had grown to the value of 8,000 yen, whilst for 1920 the figure was 9,000 yen. Printed books, periodicals, etc., were in 1918 sent to Japan to the value of 413,000 yen, this figure being increased in 1919 to 545,000 yen, and in 1920 to 660,000 yen. Printing paper from this country also shows a big increase, Japan having taken in 1918 a total of 5,754 piculs, valued at 242,000 yen, whilst in 1919 she imported 5,774 piculs worth 369,000 yen, and in 1920 the figures had grown to no less than 51,923 piculs, at 2,046,000 yen.

movable type from some 40,000 type boxes. Some of the leading dailies of Japan's metropolis are still set up entirely by young ladies who flit here and there between long type cases filled with slugs bearing Chinese ideographs and the "chicken track" characters of Japan's phonetic alphabet. Every line must be set in both Chinese characters and the native "kana," for the uneducated are unable to decipher the former, which is read only by the intelligenzia. At a minimum the characters with which these young ladies with the nimble fingers must be familiar number well over 4,000. That is the principal reason why the adoption of mechanical typesetting was so long delayed. During the last few decades, however,

The Singapore Office of Linotype and Machinery Limited.

The great hindrance to the development of a healthy printing trade in China and Japan has been the language difficulty. Each character in Mandarin, the official language in China, represents a word, and in effect there need be no limit to the number employed. Knowledge therefore largely

both in China and Japan, there has existed a kind of intellectual restlessness, indicating a consciousness of the handicap due to the lack of a system of alphabetical construction of words. In Japan, which uses the Chinese character, two strong societies exist for the purpose of educating the

masses to the need and advantages of an alphabet. The more conservative organisation is called the Kana Society, which is working for the adoption of an alphabet based upon the fundamentals of the older Chinese characters, which read downwards in columns proceeding from right to left. The more progressive society is called the Romaji Society, which advocates the adoption right away of the Roman alphabet. National sentiment always outweighs utility in such matters, and, strong as both of these societies are, it is recognised that prejudice must be overcome gradually rather than by the sharper method of Parliamentary enactment.

In China, where conservatism is more deeply rooted than in Japan, efforts are being made to nationalise a form of alphabet similar to the Kana alphabet of Japan. This Chinese alphabet is called Chu Yin, and consists of 39 characters based upon the "Radicals" or root characters of Mandarin.

This character was first composed mechanically on the Monotype composing machine in 1920. We reproduce a sample of this form of writing, which, in spite of general apathy and considerable opposition, is being taught in schools and colleges under Government patronage, and by the vast missionary organisations controlled by foreigners. The general adoption of this form of alphabetical writing cannot fail to have a wonderful influence upon the future history and development of China. For the composition of foreign newspapers and books, as well as for the new Chinese script referred to, and for typesetting, the Monotype has been introduced and the Chinese have shown an aptitude in mastering its mysteries quite equal to that of our own operators.

The setting of phonetic Chinese, moreover, is now being accomplished on the Linotype machine with the same facility as English or any other Western language. A specimen of this composition is given herewith. Each of the 39 characters represents one sound of the language, the matter being read from top to bottom as in old Chinese. That is to say, the slugs are used vertically not horizontally as in English. Burmese also has for a long time been composed on the Linotype, and this has proved so suc-

cessful that further modifications of this language have been called for, viz., Skaw-Karen and Pwo-Karen, which are now being set on the Linotype.

Messrs. Linotype and Machinery, Limited, inform us that Far Eastern business generally is making good progress. In China, further modern Linotypes have recently been installed in the office of the Presbyterian Mission Press, Shanghai, and at the *China Advertiser*, Tientsin. These machines are, of course, used for setting English publications in this country. In India Government printing offices alone have recently increased their equipments by installing 27 further modern Linotypes. In the Straits Settlements, the Government Press, Singapore, and the *Straits Times*, have just added further up-to-date machines to their present installations. The Government Press, Kuala Lumpur (Federated Malay States) have also added to their installation. The Linotypes referred to above can be used for setting Arabic characters, and, of course, Malay-Arabic, which is used in that territory. Thus a great improvement is being effected in printed matter for the use of natives, which has been of notoriously bad quality in the past. The ever-increasing requirements of printers in this territory have necessitated a new Linotype office and depot, with more extensive accommodation, in Singapore, an illustration of which appears herewith. The building is situated midway between the business centre of the city and the docks, and is on one of the main arteries leading into the business quarter. Besides the Straits Settlements, this office controls Linotype business in the Federated Malay States, Siam, the Dutch East Indies, Borneo, and French Indo-China.

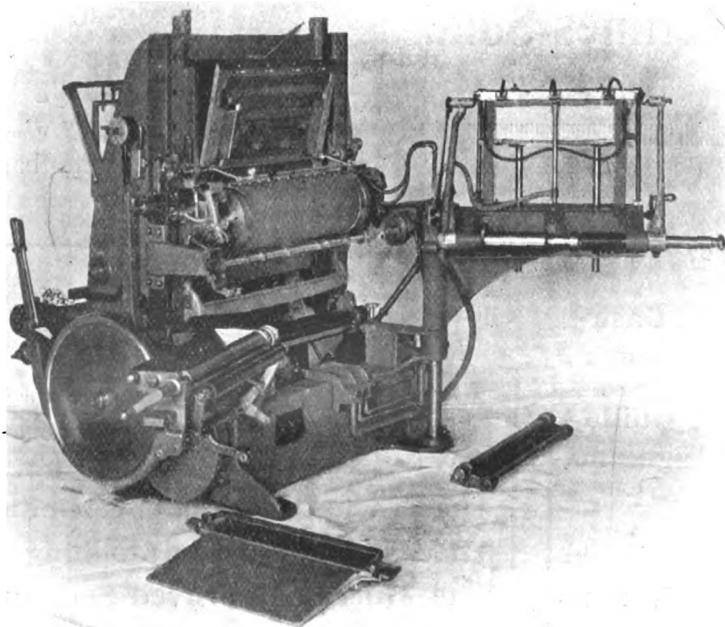

Printers in the Far East have thus shown their appreciation of the latest improvements connected with mechanical composition. Not only are they installing the latest and most up-to-date composing machines, but also such accessories as electric metal pots, individual geared motors, display matrix equipments, and so forth. There is already a market for miscellaneous printers' supplies, and this market is one that promises great expansion.

Palestine a Growing Market.

THE market in Palestine for stationery is steadily increasing due to the fact that the Zionist movement is taking an average of 10,000 educated Jews into the country each year. An American consular report states that cardboard boxes of note paper, white cream, and light blue, 6 by 8 inches, 50 sheets and envelopes to match, sell at 30 piasters. Boxes of larger dimensions are also handled, but the above-mentioned sizes are the ones most frequently asked for. This paper comes almost entirely from England and France. Letter paper in pads from England, France, Holland and Italy, 5 by 8 and 8 by 10 inches, containing from 50 to 100 sheets, with a retail price varying from 8 to 25 piasters, has a large sale. The envelopes preferred by the better class native demand are those with an inner lining of thin coloured paper. These envelopes in packages of one dozen sell for from 3 to 7 piasters according to the quality of the paper. The cheaper grades of paper come from Germany, Australia and Czechoslovakia in letter and note paper sizes with envelopes, and sell at from 6 to 25 piasters. Pads, in standard sizes, sell at from 3 to 7 piasters. One of the most popular writing papers among the poorer class is a small package containing 10 sheets and envelopes which sell at 5 piasters the package. Official stationery supplies for the administration governing in Palestine are purchased locally, dealers of the country submitting tenders. For this purpose most of the local dealers carry a grade of paper to meet the Government's requirements. Cap size first sheets of a good quality of typewriter paper may be had for 85 piasters a ream; second sheets at 65 piasters; letter size first sheet for 50 piasters; and second sheets at 37 piasters the ream. This paper is imported from England.

THERE are six paper factories in Greece, which are principally engaged in making cardboard. Packing paper is also produced on a small scale.

The . . . American Miehle Company's VERTICAL Job Press.

Three quarter view, showing method of inserting forme: showing also pile-table and fountain swung back and forme roller unit removed from Press.

SPECIFICATION.

- Inside Chase Measurement, 13 $\frac{1}{2}$ in. x 19 $\frac{1}{2}$ in.
- Type matter locked in chase, 12 $\frac{1}{2}$ in. x 19 in.
- Largest sheet which can be delivered, 12 $\frac{1}{2}$ in. x 19 in.
- Distribution—2 forme rollers with geared steel vibrator, 2 composition distributors with geared steel vibrator, 10 in. full length ink plate, ductor roller, full length ink fountain.
- Over-all Measurements:
- Width, 4 ft. Length, 5 ft. Height, 4 ft. 6 in.
- Net weight, with motor, approximately 2,600 lbs.
- Speed Range 2,000 to 3,600 per hour.

* * *

THE American Miehle Company's Vertical Press will produce job printing more cheaply than any other press on the market because it will produce printed impressions for a greater portion of its effective time by reason of the enormous reduction in the time required to change from one job to another.

We invite you to call and see the Vertical Press at work.

- N. W. MCKENZIE, 114-115, Holborn, E.C.1. Telephone: Holborn 1805.

PAPER AND PRINTING TRADE PUBLICATIONS.

- "BRITISH AND COLONIAL PRINTER AND STATIONER." Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

The *British and Colonial Printer and Stationer*, founded in 1878, is published every Thursday. It has a large circulation among Printers, Stationers, Box Makers, Envelope Makers, Bookbinders, etc., whose interests are catered for by the publication of the latest improvements in machinery, new processes, labour and time-saving devices, etc. A strong weekly feature is its Commercial Intelligence. The Quarterly Export Issues of the *British and Colonial Printer and Stationer* afford an excellent channel of publicity, seller being introduced to buyer with most successful results. Are you a subscriber? If not, why not? It is a good investment at a low price—13s. for one year (subscription 8s. 8d., plus 4s. 4d. postage). Send a remittance to the publishers, as above, at once.

"THE BOOKBINDER" forms a Monthly Section of the *British and Colonial Printer and Stationer*, and may be obtained for an annual subscription of 3s. 3d., including postage.

"WORLD'S PAPER TRADE REVIEW." Publishers: Stonhill and Gillis, 58, Shoe-lane London, E.C.4.

Anyone interested in the paper market will find a fund of information in the pages of the *World's Paper Trade Review*, established in 1879. Published every Friday, it gives particulars of Papermaking Machinery and Processes, Current Prices of Raw Materials, Market Reports, Interviews with Leading Men associated with the industry, Commercial Intelligence, etc. It surveys the whole field of the paper and allied industries at home and abroad. Become a weekly reader by remitting 32s. 6d. (subscription 26s., plus postage 6s. 6d.), to the publishers. There is no better medium for advertisers, as, to quote one of many testimonials: "We have found your paper at every mill with whom we are doing business, both here and on the Continent."

PLANT AND MACHINERY.

- CARRIER ENGINEERING Co., LTD., 24, Buckingham-gate, S.W.1. Does weather affect your business? Write for particulars to the above.

PLANT AND MACHINERY.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NEW ZEALAND.

The Newspaper Proprietors' Association of New Zealand are open to receive tenders for the supply of 6,000 to 7,000 tons of reel newsprint and 410 tons of flat newsprint.

Tenders will be received by the secretary, the Newspaper Proprietors' Association of New Zealand (Inc.), Wellington (P.O. Box 1,066); cable address "Newsprint, Wellington", up to October 21st, 1922. A copy of the conditions of tender and specifications is available on application to Room 42, Department of Overseas Trade, 35, Old Queen-street, London, S.W.1. (Reference 9,467 E.D.)

BRAZIL.

A British commission agent in Sao Paulo, until recently partner of a well-known British firm of commission agents in that city, now established on his own account, is desirous of securing the agency of a United Kingdom manufacturer of writing paper and stationers' sundries. (Reference No. 242.)

COLUMBIA.

A wholesale and retail merchant in Bogota is desirous of getting into touch with first-class manufacturers of dry colours and wall-paper. (Reference No. 244.)

BRITISH EMPIRE PATENTS.—Between June 12th and 23rd last a conference of representatives of Patent Offices in the Dominions (except Newfoundland), India, and the Colonies and Protectorates, was held at the Patent Office, London, to consider the possibility of instituting a practical system of granting patents which should be valid throughout the British Empire. At present to obtain a patent in all parts of the Empire at least 46 separate applications have to be made. The conference considered many proposals with a view to remedying this unsatisfactory state of affairs, and drew up a provisional scheme. Those interested in patents should obtain the Report of the Conference, with Appendices, published by H.M. Stationery Office, price 1s. net.

Supplies for the Overseas Printer.

Interesting Comparative Figures re British Exports of Paper, Boards, Stationery, and Type for Six Months.

Movements of printers' supplies, including paper and boards represent an important study for the overseas consumer. Below, therefore, we review the export figures for the first half of the year as they appear in the official tables issued by the British Board of Trade. On the whole an increase in exports may be noted, a gratifying fact both for the home producer and the overseas consumer.

Boards.

The exports of boards—comprising mill-boards, strawboards and cardboards—did not show up so prominently during the first six months of the year as they did during the corresponding six months of last year, although against the same period of 1920 an advance has been recorded. The figures for the three respective six-monthly periods are as follows: 1922, 33,639 cwts.; 1921, 50,824 cwts.; 1920, 31,031 cwts. As regards the markets for this class of merchandise a good demand exists in many of our Colonial possessions, which before the war were very big purchasers of these products of British manufacture. Overseas consumers a year or two ago were obliged to look to foreign sources for low quotations, but British firms engaged on board manufacture are now so well qualified to deal with its production that Colonial users should have no reason to look beyond the British Isles for their supplies.

Boxes and Cartons.

The uses to which boxes and cartons are put now-a-days are almost limitless, and the goods themselves are extensively graded as to quality and design. During the first six months of the present year the value of the exports of cartons and boxes (including folding boxes) was £46,340, a figure which compares with £75,263 in the corresponding period of last year and £64,827 in the 1920 period. As regards the quantities dispatched abroad during the six monthly periods, these were as follows: 1922, 8,267 cwts.; 1921, 9,976 cwts.; 1920, 9,412 cwts. There is an ever-increasing demand throughout the world for boxes and cartons, and it is satisfactory to note that British manufacturers are to-day showing enterprise in securing the most modern machinery in order to secure speedy and up-to-date production.

Coated Papers.

The overseas demand for coated papers of British manufacture shows steady improvement during the first half of the year compared with January to June last year. As against the corresponding period two years ago, however, there still remains considerable leeway to be made up. The returns for the six-monthly periods of the three years are: 1922, 34,860 cwts. (of the value of £218,986); 1921, 28,631 cwts. (£236,612); 1920, 77,313 cwts. (£412,681). Exports under the heading of "other sorts" during January to June of the present year have maintained a satisfactory position, as is shown by the following figures: 1922, 13,723 cwts. (value £121,782); 1921, 13,107 cwts. (£170,591); 1920, 14,622 cwts. (£180,732).

Packings and Wrappings.

The large consignment of packings and wrappings sent overseas during the first half of the year, constituted a very satisfactory feature of the returns dealing with the exports of British paper and cardboard. During this period, shipments amounted to 108,164 cwts. (value £133,399), compared with the much smaller quantity figure of 57,968 cwts. (£192,237) last year. In the first six months of 1920, under this head, exports amounted to 214,119 cwts. (£391,401). The statistics of several European countries relating to their exports of packings and wrappings indicate that considerable business is being done, and British manufacturers—providing sufficient enterprise is shown—are qualified alike by their production, efficiency and their careful business methods to secure an even better footing on the overseas market.

Paper Bags.

Although not so satisfactory as the figures for January-June, 1920, the exports of paper

bags for the first half of the present year show an increase in the quantity compared with the corresponding six months of 1921. The quantities and values for the three six-monthly periods are: 1922, 9,285 cwts. (value £33,380); 1921, 8,698 cwts. (£49,207); 1920, 15,197 cwts. (value £59,285).

Playing Cards.

Considerable activity has been shown by British manufacturers of playing cards during recent months. The exports for the half year ending June last amounted to 1,037 cwts., compared with 556 cwt. last year, and 759 cwts. in the corresponding six months of the preceding year. The values of these exports covering the three periods are: £21,155 (1922); £13,494 (1921); and £16,348 (1920). For concerns specialising in this class of merchandise and with up-to-date factories at their disposal, a still greater increase in export business is anticipated.

Printed Books.

There was a slight falling off in the shipments of printed books during the first six months of the year, when exports amounted to 116,481 cwts. These figures indicate a decrease compared with the 143,554 cwts. exported during January-June, 1921, and also with the 134,259 cwts. in the six months of 1920. The value of the exports of printed books was £1,381,722 during January-June, as against £1,742,020 in the corresponding period last year, and £1,643,334 in the six months two years ago. From a glance at the statistics relating to the imports of printed books into various overseas countries, it appears that an increased demand has arisen and there is no reason why the British printer—given conditions of stability at home—should not extend his oversea business.

Printing Papers.

Returns relating to the exports of printing paper for the first half of the year show up very satisfactorily, the quantities and values for the respective periods being as follows:—

	Cwts.	£
January to June, 1922	506,969	986,687
" " 1921	400,965	1,676,800
" " 1920	374,213	1,417,913

With regard to the markets for British printings during the first six months of the year we find that of the 506,969 cwts. exported, a greater proportion went to our Colonies than to foreign countries; the actual amounts being 348,548 cwts. against 158,417 cwts. Australia continues to be the principal market for this class of British manufacture. Other British possessions which have increased their demands are British India, New Zealand and Canada. On the other hand, a falling off in the requirements of British South Africa, the Straits Settlements and Ceylon has to be recorded. Australia has appreciably increased her purchases of printings during the first six months of this year, taking 196,069 cwts. (£301,287), as against 166,261 cwts. (£624,443) in the corresponding period of 1921. The next on the list of overseas possessions taking printings from this country is British India, with 59,035 cwts. (£116,165), an increase compared with the 52,923 cwts. (£229,336) of last year. Augmented supplies have been dispatched to New Zealand, namely, 31,041 cwts. (£53,874), against 24,837 cwts. (£102,672). British South Africa made smaller demands on the British product, her requirements amounting to 27,441 cwts. (£64,391), against 41,068 cwts. (£182,071). Ceylon has also been a smaller buyer, her purchases amounting to 5,196 cwts., against 9,167 cwts. last year. Deliveries to Canada have been more extensive, amounting to 4,817 cwts. during the first half of the year, against 1,554 cwts. last year.

Printing Type.

Exports of British printing type have been on a declining scale. During the first half of the year these amounted to only 98 tons (£31,047), against 182 tons (£65,864) last year and 129 tons (£31,935) in the corresponding six months of 1920.

Stationery Exports.

Envelopes (not including boxed stationery) were shipped abroad in larger quantities during the period under review than in the corres-

ponding six months of last year, although compared with 1920 period the export figures show a considerable decline. The quantity dispatched overseas this year amounted to 16,476 cwts. (£88,156) as contrasted with 12,752 cwts. (£143,140) last year and 24,674 cwts. (£159,910) in the corresponding period of 1920. "Other sorts" were exported during January-June to the extent of 58,309 cwts. (£725,970) as against 69,538 cwts. (£1,008,995) last year and 70,603 cwts. (£883,155) in the 1920 period.

Tissues.

Tissue paper dispatched overseas amounted to 5,950 cwts. (£62,632) during January-June, comparing with 6,559 cwts. (£103,581) in the same period of 1921 and 6,437 cwts. (£78,451) in the six months of 1920.

Writing Paper.

Shipments of writing paper in large sheets were made during January to June on quite a large scale, the figures for the first six months of this and the two previous years being as follows:—

	Cwts.	£
January-June, 1922	68,207	259,236
" " 1921	68,189	464,951
" " 1920	94,690	518,393

Of the total quantity of 68,207 cwts., it is satisfactory to note that 51,652 were dispatched to Colonial possessions and 16,555 cwts. to foreign countries. It is a source of regret, however, that decreases are shown, as compared with last year, in the shipments of writings to every one of our possessions with the exception of Australia and Ceylon. Australia occupies the premier position on the list, her purchases amounting to 25,902 cwts., against 18,515 cwts. last year. The next place is occupied by British India, with 13,077 cwts., against 13,479 cwts. The third position is taken by New Zealand, with 3,958 cwts. against 9,711. The figures for the other British possessions during the six months were as follows: British South Africa, 1922, 2,419 cwts., 1921, 4,636 cwts.; Ceylon, 1922, 1,132 cwts., 1921, 1,053 cwts.; Straits Settlements, 1922, 875 cwts., 1921, 1,896 cwts.; Canada, 1922, 358 cwts., 1921, 672 cwts.

Australian Paper Market.

Opportunities for Suppliers.

The demand for paper in Australia is large and is partly supplied by Australian mills which manufacture printing, writing, blotting and wrapping papers as well as strawboard and boxboard, reports the U.S. Consul at Sydney. Some fruit wrappers are imported from Norway and Sweden, practically none coming from the United States. The United States supplied 103 tons out of a total of 176 tons of blotting paper imported to Australia during the fiscal year ended June 30th, 1920.

During that same period the Commonwealth imported 2,730 tons of wrapping paper (in rolls), Canada supplying 1,098 tons and the United States 774 tons. Writing paper (sheets not less than 16 by 13 in.) was imported to the value of £435,497, and purchases from the United States reached the total of £220,018, the share of the United Kingdom, the next largest source of supply, being reported at £171,805.

Up to the present time only a small quantity of writing, printing and wrapping papers are manufactured locally, and the paper manufacturing industry in Australia, while steadily developing, has not advanced as rapidly as expected, even with the higher rate of duties imposed by successive tariffs. Conditions are favourable for holding the trade the United States has developed and for increasing it in certain lines.

Paper cups are now being manufactured in Australia, chiefly from imported materials. It is rather doubtful whether it will be possible to do much in this line, but as costs of production are high in most local industries it may be found that the selling price of the Australian product is high enough to permit importation.

British Trade Maintained.

AS WE go to press we receive the Board of
Trade figures for August and are gratified to
note that last month's trend of trade is on the
whole very satisfactory. Allowing for drops
in value, our steadily improving export trade
has maintained its healthy tendency. Im-
provement in exports of manufactured goods
is a particularly cheering feature, and goes to
increase the grounds for optimism with which
exporters in the printing and allied trades are
justified in facing the future.

A Hopeful Continental Move.

NOT the least important factor in disturb-
ing British trade has been the isolation of the
huge territories of Russia, which ought to
have so many goods to send to and take from
the merchants of this and other countries.
Some measure of improvement in interna-
tional trade and in the status of exchanges
must inevitably follow the re-establishment
of trading relations with Russia. We there-
fore note as an event of very good augury the
completion of the largest Anglo-Russian busi-
ness deal since the establishment of the
Soviet. We refer, of course, to the agreement
for the restoration of the property in Russia
of the Russo-Asiatic Consolidated, Ltd., which
has been ordered to be drawn up by the
chairman, Mr. Leslie Urquhart, and by M.
Krassin, the Russian trade delegate. This
marks an important step towards recon-
structing Russian industries, as the property
involved includes mines and factories which,
when working again, will give employment
to 45,000 Russians. The general rehabilitation
of industry in Europe is the thing most
needed for the betterment of the world's trade,
and the British printing industry will not be
exempted from the benefits which must attend
every move in this direction.

H.M. Treasury and Government Printing.

EVERYBODY admits the general principle
that economical buying is best achieved by
allowing business firms to compete for the
supply of goods, the buyer being thus enabled
to get into touch with the seller whose
special equipment or other special circum-

stances make possible the acceptance of a
lower price than his competitor. It is on this
principle that taxpayers who fear the cost of
the promised "economies" of Government
printing base their objections, and it would
seem obvious that the tying up of Govern-
ment Departments to place contracts with a
State-supported printing office is dead
against that principle, and is not truly in the
interests of economy—even if we ignore the
further objection that the red tape associated
with Government control must make a State
concern comparatively inefficient. Yet it is
on the plea of "economy," apparently, that
H.M. Treasury—by a circular recently issued
to Parliamentary Returning Officers—seeks to
secure to the Government printing works the
supply of forms for Parliamentary elections.
We should be very much surprised if a
Government establishment can rival, either
in the essential factor of speed of production or
in the matter of cheapness of price, the private
firms who have hitherto satisfactorily supplied
the nomination papers and the like for
Returning Officers. The printing trade as a
whole will doubtless agree with us in
questioning very strongly the character of the
"economy" to which a virtuous Treasury is
seeking to introduce the taxpayer.

Lead Poisoning among Printers.

THE Health Committee of the Joint Indus-
trial Council of the Printing and Allied
Trades recently issued a very useful leaflet on
the subject of lead poisoning among printers, its
cause and prevention. The author is Mr. T. M.
Legge, H.M. Senior Medical Inspector of Fac-
tories, who points out that lead poisoning
among printers can quite definitely be said to
be due to the inhalation or breathing in of
either dust or fume containing lead. Thus in
the last 12 years there have been 230 cases—
98 compositors, 55 stereotypers, 20 linotypers,
14 monotypers, 2 electrotypers and 41 other
persons, mainly employed in the foundry. Of
this total 160 occurred in ordinary letterpress
printing, and 70 in newspaper printing works.
But the most remarkable thing is that no
fewer than 185 factories were involved, which
means that the conditions exposing to risk of
lead poisoning must be pretty much the same
in nearly every printing works in the country.
In regard to the precautions to be taken for
preventing this trouble, Mr. Legge expresses
himself very plainly to both employers and
employed. He writes: "Nowadays, with
either a dust extractor for compositors' cases
in large works or a vacuum cleaner in small,
and with dust-proof plunger cleaners avail-
able there is no excuse for blowing the type
cases out with a bellows, or for wire-brushing
the plunger in the open shop. A worker can
do much to keep fit and so make his system
more resistant to lead absorption than it
otherwise would be. He should pay scrupu-
lous attention to cleanliness of the hands and
teeth. Too much stress cannot be laid on the
part played by bad teeth in lowering the
health. The habits of the workers, intemper-
ance and disregard of the simple rules of
health, as no one will need to be told, influ-
ence liability to lead poisoning."

Standardisation of Paper Sizes.

THE standardisation question is troubling
the Swiss papermakers and users, even as it
does our own. The Standardisation Bureau
of the Swiss Society of Machine Industries has
proposed that a relationship of 1:√2 should
be the first law of sizes, but the papermakers
and users will have none of it. They are quite
in favour of standardisation, but argue that
this should not start from a mathematical
formula, but from the existing sizes. They
believe that the adoption of such a formula
would serve only to add some more to the
already too numerous sizes, and that the aim
must be to eliminate the least practical sizes
from the present list. The papermakers and
users have, therefore, appointed a committee
to formulate their own suggestions.

Printers' Managers and Overseers Association.

The September Meeting.

The Printers' Managers and Overseers (Parent) Association met again on Tuesday of last week, after the interval provided by the holiday month of August. Despite the absence from town of a number of members, a fair attendance was forthcoming, with Mr. S. M. Bateman (president) in the chair. The evening's business having been transacted, those present set themselves to enjoy a sociable time, the Lecture and Entertainments Committee having provided an excellent concert programme.

There were four nominations for membership, and the following gentlemen were duly elected: Mr. T. S. Ashby (Cambridge University Press, Cambridge: Overseer, litho department); Mr. D. J. Cooke (Messrs. De La Rue and Chas. Goodall and Sons, Bunhill-row, London, E.C.: Overseer, litho department); Mr. P. P. Buxton (Messrs. Vacher and Son, Ltd., Great Smith-street, Westminster: Overseer, composing department); and Mr. J. S. Woodhead (Messrs. Alfred Couldrey and Co., Ltd., 141-143, Tooley-street, S.E.1: Overseer, composing and letterpress machine departments).

Overseers and the Strike.

General business being the only other item on the agenda, the chairman referred to the recent wage dispute affecting the Typographical Association. He said the Council of the P.M. and O.A. had had a very anxious time, and had met specially to discuss the matter. Complaints had been received from a few centres with regard to the position of P.M. and O.A. members, but, Mr. Bateman added, the matter had been amicably settled, and they hoped no such trouble would occur again.

The General Secretary drew attention to the visit, on September 30th, to the works of Linotype and Machinery Limited at Broadheath, arranged by the Manchester Centre of the P.M. and O.A. He intimated that, whilst London members—travelling north at their own expense—would be welcomed by the Manchester Centre, it was intended to arrange later a special opportunity in London for members of the parent Centre to inspect L. and M. machines.

It was announced that members would shortly receive particulars of a concert which was being arranged by the pension committee, and which it was hoped to hold at Anderton's Hotel on October 30th. The intention was to raise the amount still required—about £60—to complete P.M. and O.A. Pension No. 3.

Smoking Concert.

The concert items were under the direction of Mr. Eric Clifford, well known to members of the P.M. and O.A., and the programme provided elicited more than the usual meed of approval. A special feature which called forth much appreciation was some remarkably clever make-up made by two of the artistes. Mr. Dudley Barrington, as a white-bearded country yokel of 94, took the audience by surprise, as did also Leslie Terraine transformed into a romantic girl. Miss Elsie Beeley won all hearts with a series of beautiful soprano songs admirably rendered. Mr. Leslie Terraine roused hearty applause by his tenor singing, and similar appreciation was shown to the clever comedy turns of Mr. Stanley Graham, and to varied comedy and elocution items by Mr. Erne Durnell. Mr. Dudley Barrington presented, besides the character study above mentioned, some fine baritone singing and some clever bits of comedy, proving himself a very versatile artiste.

An especially cordial vote of thanks to the artistes was proposed by Mr. Reed and seconded by Mr. Berry, Mr. F. W. Hume being also thanked for his assistance with the evening's arrangements.

After brief responses by Mr. Eric Clifford on behalf of the concert party, and by Mr. Hume, the meeting closed with the singing of the National Anthem.

A VERY enthusiastic letter reaches us from the publication committee of the Typothetae of Baltimore, U.S.A., announcing the publication of "The History of Printing in Colonial Maryland," by Wroth. The De Luxe Edition—125 copies—was sold, the letter tells us, prior to completion, and the Library Edition of 500 copies is now available.

Printing, Bookbinding & Kindred Trades Overseers' Association.

The Position of the Overseer.

The approach of the conclusion of the holiday season was conducive in securing a large gathering at the usual monthly meeting of the Association at St. Bride Institute, Bride-lane, E.C.4, on the 5th inst. The chair was occupied by the president, Mr. A. W. Hunt, who, in combination with the officials and the rank and file gives every evidence of making the Association even more useful to the members in the future than it has been in the past.

The minutes having been disposed of, Mr. A. Cox (secretary) submitted several items of correspondence.

Among these was a letter from Mr. F. C. Peacock, who gave a brief account of the enjoyable day's outing which he and others had had with the aged members of the Vellum Binders' and Machine Rulers' Pension Society, and who also expressed thanks to the Association for its generous contribution towards the expenses entailed. A letter was also received from Mr. Chris. Atkins regretting his inability—through illness—to fulfil an engagement to read a paper to the Association, Mr. Atkins promising to redeem his promise at an early date.

New Members.

The following candidates were submitted for membership: Messrs. C. G. Banks (binding and boxmaking), De La Rue and Co.; T. H. Haslam (warehouse and binding), Bradbury Agnew and Co.; A. Knapp (binding department), Sutherin and Co.

These having been elected, the president extended to the new members in formal but friendly fashion the best wishes of the Association.

The Members' Smoker.

The arrangements for the next meeting in October were then considered. The president reminded those present that for the last 17 or 18 years it had been their custom to hold a members' smoking concert in October in place of their usual monthly meeting. That function, he said, had always been looked upon as a preliminary gathering to mark the winter's work and also to give an opportunity to the members to introduce friends who might become members.

A proposition, moved by Mr. T. Hunt and seconded by Mr. J. Lee, that the members' smoker be held as usual, was agreed to. For this event Messrs. A. J. Jones and A. Ware were appointed stewards, who were also empowered to arrange the venue and also given the task of securing the concert artistes, to be selected from the members and their friends.

The Anomalous Position of the Overseer.

The remainder of the evening was taken up in an informal talk on the present position of the overseer, the letters recently appearing in the *British and Colonial Printer and Stationer* on the subject being read to the meeting and forming the basis for discussion.

The president at the outset commented on the difficulties experienced at the present time by the overseer with his depleted staffs. These times, he thought, were more difficult to deal with than when trade was brisk. There had been statements in the trade press and elsewhere regarding the invidious position of the overseer on questions affecting employers and employees, and their executive thought it advisable that members should have an opportunity of discussing them.

A member remarked on the many trade union rules and regulations that harass them every day in the management of their various departments. If they went to the employers with their difficulties they got no support from them and they often found themselves between the devil and the deep sea. The speaker thought the best policy for them to adopt would be to come to some arrangement with the unions in order to secure smoother working in the workshop and thus obtain greater output.

Another speaker thought the difficulties that cropped up occasionally between the employers and the men were mainly due to the fact that many of the employers did not know their men, in fact they treated them as so many automata. He gave instances of the beneficent effect resulting from interest taken by the employers in the welfare of the worker. This speaker did not favour any approach to

the unions for settlement of their difficulties, but thought the best policy for the overseer to adopt was to impress on the employer the desirability of taking a greater interest in the men.

Another speaker thought that the trade union rules regarding the number of apprentices allowed in the workshop and the regulation that disallowed them to operate a machine until the last year of their time were absurd. How could a lad be expected to learn his trade in five years under those circumstances? He thought they should, in co-operation with the employers, approach the unions to get this matter modified to some extent.

It was necessary—thought another speaker—that the unions should put a certain amount of restriction upon the number of apprentices, because some employers wanted them for cheap labour. In regard to the invidious position in which the overseer often finds himself, it was a fact that immediately he got into closer touch with the men, he just as quickly got shut out of the circle of the employer, and if that happened very often, he did not remain long in his position.

Other speakers mentioned the serious want that existed. The peculiar functions which the overseer often had to exercise in the performance of his duties often made him out of harmony both with the employer and the employee, and the feeling generally expressed was that because of this, his position and peace of mind were frequently made very irksome. Most of the members thought that the best solution was to be found in a closer association with the unions, and not with an employers' association, whilst others were of the opinion that an independent attitude was the best one for the overseer to adopt.

A vote of thanks to the chairman brought the meeting to a close.

Personal.

It is interesting to note that Mr. W. H. Jubb, the one Englishman on the wrecked German liner *Hammonia*, whose heroism has received unstinted praise from survivors, is connected with paper and print. Mr. Jubb had been engaged on behalf of the San Rafael paper mill in Mexico by Messrs. Becker and Co. to take charge of the company's fast-running news machines.

MR. FOSTER G. ROBINSON (E. S. and A. Robinson and Co., Ltd., Bristol) has a big capacity for work. Apart from his own business of printer, wholesale stationer, paper bag maker, etc., he is captain of the Gloucestershire County Cricket Club, and has made some useful scores this season.

Now he has been elected to a seat on the Bristol City Council.

THE City Hall at Cardiff was the scene on Saturday of a reception by the Lord Mayor of Cardiff (Councillor F. Harold Turnbull) and the Lady Mayoress (Miss Turnbull), to the journalists of South Wales and Monmouthshire, and it was arranged for the purpose of doing honour to Mr. T. A. Davies, the Cardiff Exchange representative of the *South Wales News*, on the occasion of his election as president of the National Union of Journalists. A cheque for 60 guineas was handed to Mr. Davies, and intimation was made that a permanent souvenir would be presented later.

ON the occasion of his leaving the *South Wales News* and *South Wales Echo* repertorial staff for an appointment on the London staff of the *Daily Sketch*, Mr. R. G. Sinclair was during the week end presented with a small library of books by his colleagues of the associated newspapers at Cardiff.

MR. E. A. KENNARD, of the literary staff of the *Leamington Spa Courier*, has been presented by his colleagues on that paper with a travelling rug on leaving to take up an appointment on the *Pekin and Tientsin Times*.

MR. H. R. MACDONALD, of the *Evening News*, by defeating Mr. H. Dix, of the *Daily Mail*, in the final of the Associated Newspapers Lawn Tennis Championship, became the holder of the W. J. Evans Cup.

M. JEAN DAMABLY, French poet, journalist, and municipal councillor, is 101 years old, and still actively working.

Trade Notes.

LORD NORTHCLIFFE'S ESTATE.—Viscount Northcliffe left personal estate of the provisional value of £2,000,000. Pending the trial of the action of Viscountess Northcliffe against Henry P. Arnholz and another, concerning the validity of the last will and testament of the deceased, letters of administration pendente lite have been granted to Sir George Augustus Sutton, Bt., of Fleetway House, Farringdon-road, E.C., the person appointed by order on motion dated August 30th, 1922, to administer the personal estate pending the action. It is understood that a complete settlement has been arrived at with regard to Lord Northcliffe's testamentary dispositions. This grant of administration pendente lite will enable Sir George Sutton to carry out the agreed policy of the executors named under both wills.

A RATHER serious fire occurred at the premises of Messrs. Jenner and Co., Ltd., colour printers, Sampson-road, North Birmingham, on Thursday, September 7th. A considerable amount of paper and other materials was destroyed.

A SUMMONS against Odham's Press, alleging contravention of the Companies (Consolidation) Act, 1908, by failing to register members, was discharged at Bow street last Thursday.

FREDERICK MARTIN, art student, who made Treasury notes so skilfully that 59 of them, all of the same number, were cashed and reached the bank, was sentenced to 18 months' imprisonment with hard labour by Mr. Justice Branson at the Old Bailey last week. Wood blocks and other apparatus for making the notes were found at his house.

MANY Leicester tradesmen have been victimised by a gang circulating spurious pound notes. Those stopped have no watermark.

PRINTING SCHOOL PRIZEGIVING.—In connection with the St. Bride Foundation Printing School, a public meeting will be held at Stationers' Hall, Ludgate-hill, on Friday, September 15th, 1922, for the purpose of furthering technical education for those engaged in the printing and kindred trades. The prizes and certificates gained last session will be presented during the evening. The chair will be taken by Mr. W. Howard Hazell, J.P., who will be supported by many representatives of the printing industry.

THE papermaking classes at the L.C.C. School of Photo Engraving, Bolt-court, which re-opens on Monday, October 7th, again proved very successful at the last City and Guilds Examination, with 12 successes—the largest number of any centre. The teacher, Mr. A. A. Whalley, with Dartford and Maidstone, was responsible for 18 firsts (3 in the Final Grade) and 6 seconds.

DIPLOMA IN JOURNALISM.—The pass list issued as the result of the recent examination for the diploma for journalism at London University included the names of 30 students, of whom 14 are women. Next session, which opens in October, there will be included in the syllabus a series of weekly lectures on practical journalism, by prominent journalists. The new syllabus and time table are now available, and can be obtained from the Academic Registrar, University of London, South Kensington, to whom applications for admission and all inquiries should be addressed.

A CONCERT in aid of the funds of the Lloyd Memorial Seaside Home, Deal, is to be held at the Kingsway Hall, Kingsway, W.C., on the 28th inst., commencing at 7.30 p.m. A number of prominent artists from several London theatres and music halls have promised their support, and the arrangements for the entertainment have been placed in the hands of Messrs. Stanley Cross and George Flexmore, of the *Evening News*. Tickets, which may be obtained of Mr. H. F. Parker, secretary, are 1s. 3d. and 2s. 4d. (including tax).

CAUSTON'S ATHLETIC defeated Waterlow and Sons in a Printing and Stationery Trades Cricket Cup tie by 13 runs. This result leaves both clubs with identical records in the competition, both having played eight games, won six and lost two. G. Knight took eight Waterlow wickets for 27, while Woodley claimed eight of Causton's wickets for 30. Causton's made 66 and Waterlow's 53. A match to decide who shall meet Messrs. Millington C.C. (winners of B Division) is to be played on Saturday next.

THE annual athletic sports of the Grafton Athletic and Social Club (Hill, Siffken and Co., Ltd.), were held on Saturday, September 9th, at Devonshire Hill, White Hart Lane, in the presence of a large and enthusiastic gathering of employees and visitors. The weather was fine with a cool breeze, and the various races and competitions were keenly contested by both girls and men, some of the performances reaching quite a high standard. A band was in attendance, and a happy and successful gathering concluded with dancing on the lawn.

A WORLD'S record score was made in miniature rifle shooting at 25 yards, in the Printers' Rifle League (which is a section of the Printing and Allied Trades' Charity Sports Association), by the John Dickinson Rifle Club and their opponents Messrs. W. H. Smith and Sons' Rifle Club, each team scoring a possible 600, thus making a tie shoot with a maximum possible score.

THE *Connoisseur* this year attains its majority.

THE *Daily Herald* reduced its price to 1d. on Monday.

PHOTO EXHIBITION.—The Earl of Carnarvon opened the International Exhibition of Photographs at Prince's Gallery, Piccadilly, on Monday. The British and American sections are the largest. Then in point of number come the Dutch section, the German (the first show of German work in London since 1914), the Scandinavian, the Italian and French and Belgian sections. The exhibition remains open until tomorrow (Friday).

MR. GEORGE SAUNDERS, O.B.E., LL.D., who was for twenty eventful years the Berlin correspondent of *The Times*, and afterwards for five years *The Times* correspondent in Paris, died on Sunday morning at Woking.

THE death occurred at Leeds on Thursday of Mrs. Wesley Petty, the wife of Mr. Wesley Petty, the principal of the Whitehall Printeries, Leeds, and ex-president of the Leeds Master Printers' Association.

THE death has occurred in Australia of Mr. Henry Lawson, the well-known Australian novelist and poet, most of whose books were reprints of his contributions to the *Sydney Bulletin*.

THE late Mr. Alfred Rayney Waller, of Peterhouse, Cambridge, secretary to the Syndics of the Cambridge University Press, left £4,836.

THE late Mr. John Hatton, of Woodbank, Station-road, Brimington, Derby, retired papermaker, left £8,553.

A THIRD report has now been issued by the Departmental Committee on Lighting in factories and workshops originally set up in 1913.

THE British Museum has acquired a new copy of the First Folio edition of Shakespeare's plays, published in 1623.

THE appearance of the first picture paper to be issued in Wales, namely *Welsh Sport Illustrated*, the effort of a group of Cardiff journalists and published from the offices of the *South Wales Journal of Commerce*, was not long allowed to go unchallenged. The *Western Mail* entered the arena last week with *Welsh Pictorial* and *Sporting News*, 16 pages larger in size than its rival and priced at 1d., as against the other paper's 2d.

THE censorship in regard to Irish newspapers was withdrawn on Saturday night, the situation in the country no longer making it necessary.

AN exhibition of rare prints, a collection which, it is said, rivals that of the British Museum in London, was opened last week at Griez, the former capital of Reuss. The prints remained in a corner of the Reuss Library until the revolution of 1918, when the State took over the library, and a professor, examining the contents, discovered the prints.

DESPITE an offer of 50 per cent. more wages, the printers of Vienna have continued on strike and no newspapers were appearing at the beginning of this week.

THE Egyptian Association of Toulouse protests against the suspension of Egypt's nationalist newspapers, "which disappear daily, and against the suppression of all natural liberties, which have completely ceased to exist since the declaration of the pretended independence of Egypt."

A REVIEW of German imports into the United Kingdom for July states that these are still on the decrease. Paper and cardboard are among the smaller decreases to the extent of £6,882.

Trade Union Matters.

L.S.C. WAGES.—The forecast concerning the wage-reduction move of the London Society of Compositors, made in our columns last week, has since been justified by events, all L.S.C. members having received notice of the special delegate meeting to be held on Thursday next, the 21st instant. The circular issued to the members sets forth the general wages position, and then states that the L.S.C. Committee met the employers on the 29th ult., and came to the following understanding with the employers' representatives: (1) Wages.—That the question of some reduction should be considered by the members. (2) Lino. Scale.—No reduction in the rate apart from any general reduction accepted by the members. (3) Night Rate.—No change apart from that brought about by a general reduction. (4) Piecework in Periodical Houses and Lino. Modifications.—A joint sub-committee to be appointed, to agree upon a list of periodical houses and the application of piecework and the linotype modifications as passed by the L.S.C. to houses included in such list. (5) Monotype Piece Scale.—A joint sub-committee to be appointed. (6) Proportion of Apprentices.—Agreement to be signed. (7) A ballot of the members to be taken, and the result communicated within five weeks.

AT the conclusion of the Trade Union Congress at Southport on Saturday it was stated that Mr. C. W. Bowerman, M.P., the secretary of the Congress, was retiring under the new Age Limit Rule, and it was pointed out that there would be a more appropriate occasion to acknowledge the services of Mr. Bowerman.

MR. H. SKINNER, general secretary of the Typographical Association, was re-elected as the printing and paper trades representative on the General Council of the Trades Union Congress.

MR. GEORGE HARRAWAY, president of the Printing, Bookbinding, Machine Ruling and Paper Workers' Union, and Mr. T. G. Newland, the general secretary, after attending the Trades Union Congress at Southport last week, left to attend the International Bookbinders' Conference at Leipzig.

THE L.S.C. staff, in thanking members and friends for the generous support given to the crippled daughter of their late colleague, "Ted" Peacock, state that the total sum realised amounted to £74 15s. 1d.

THE "Natsopa" Memorial Home is becoming quite a popular centre now for chapel outings. During the month of August the *Sheffield Independent*, *Sheffield Telegraph*, and the *London Daily Express* each paid separate visits. During the month of September the following outings were planned: Saturday, the 2nd, Hudson and Kearns, London; Thursday, 7th, *Daily Sketch*, London; Sunday, 24th, the Amalgamated Press, London.

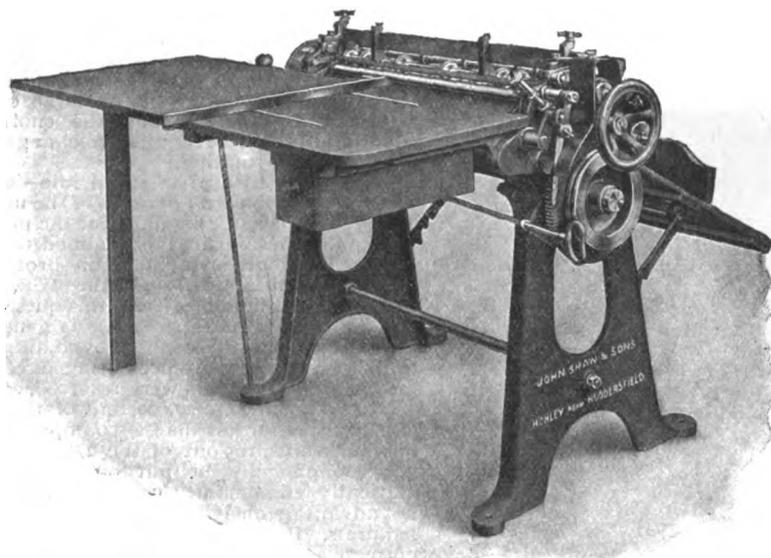

THE Typographical Association, in a notice to members regarding the payment of the levy of 2s. on each ros. earned during the recent strike, say that as the levy was to remain in force "during the period of the dispute," it should have been paid up to the time of the acceptance of the agreement by ballot, that is, up to the week ending August 26th. The payment of the levy, however, was generally discontinued from August 19th, and the Council have now decided that this latter date should mark the close of the levy. It was therefore in force for four weeks.

A FURTHER announcement states that T.A. members who were unemployed at the commencement of the strike shall be allowed an extension of two weeks' unemployment benefit during the current quarter. Honorary members who have returned to the trade and are required to show 16 consecutive weeks' work before being entitled to unemployment benefit will, owing to the period of the strike, be allowed to claim such benefit after 14 weeks' continuous employment if signing the unemployment book on July 24th last.

**THE "NEW IMPERIAL"
 ROTARY PERFORATING MACHINE.**

The Easiest and Simplest Machine to work on the market.

MADE for Straight-through Perforating only and Straight-through and Striking. Will Strike Sheets up to 36 in. long. In five widths, to Perforate Sheets up to 18 in., 24 in., 30 in., 36 in. and 42 in. wide. Two distinct types of Perforating can be done on machine; as used by the best commercial houses. Scoring, Creasing and Cutting or Slitting can be done on machine. Will handle anything from Manifold to thin cardboard, also gummed paper.

Three Speeds can be obtained, with patent "Friction Clutch" drive.

The "Universal" Perforating Machine. A necessity for every up-to-date Printing, Bookbinding and Stationery Office.

American Miehle Company's Vertical Press.

THE SUPER JOBBING PRESS DESCRIBED.

It is over 30 years since the Miehle Printing Press and Manufacturing Co., of Chicago, first brought out the two revolution flat-bed press, which has made their name famous

revolutionary in design whilst remaining simple in operation.

In order to appreciate fully the Vertical, one should consider the work of a jobbing

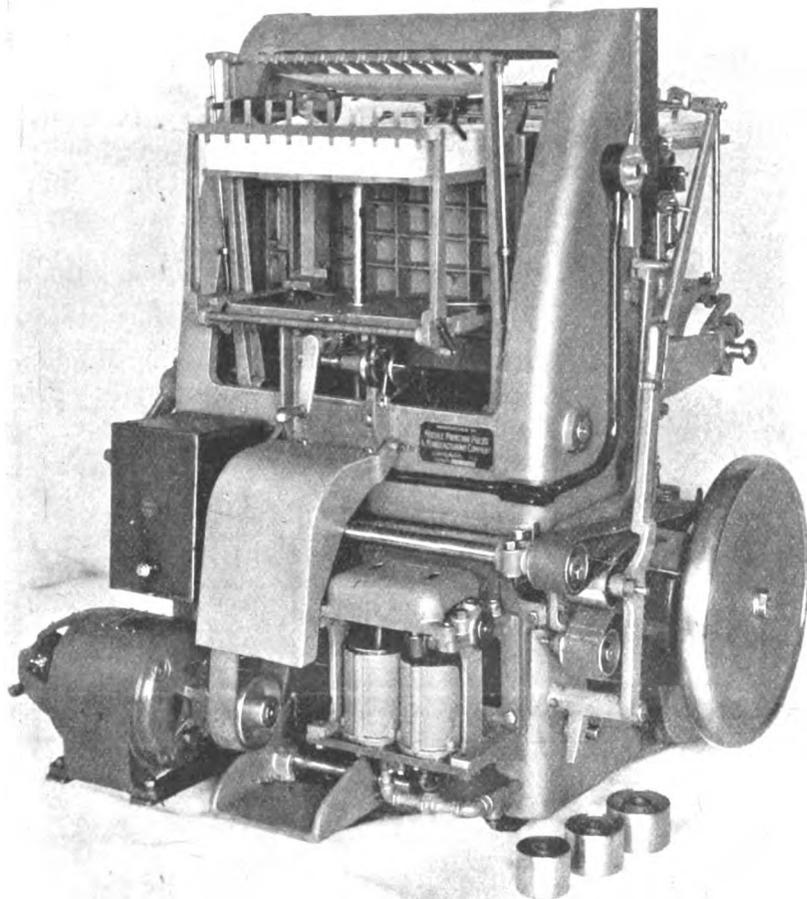

press—qualities of printing—and, whilst there are on the market presses unquestionably suited for particular classes of work, there is no machine which is suitable for all classes of work. The Miehle Co. claims that the Vertical will handle 90 per cent. of all ordinary jobbing work, and further that it will handle this much more economically than any other press, because it will produce printed sheets for a greater percentage of its effective time than any other machine, one of its principal features being the enormous reduction in the time required to change over from one job to another.

No longer need a press stand idle—whilst others are overloaded—because of the unsuitability of the work in hand for the press in question. The Vertical is claimed to be a universal machine capable of producing economically practically all the work coming into a jobbing office—and this question is one of more importance than is generally realised. An analysis of the jobs coming into a fairly large jobbing office during one week showed that 223 orders were received, calling for runs of from 30 to 20,000, and of these 223 jobs 105 were for less than 2,500 impressions—in other words, 105 out of the 223 jobs could not economically be put on to an automatically fed machine; conversely, 118 could not advantageously be turned out on a hand-fed press. If the claims for the Vertical are correct, each and every one of these jobs could have been produced on that machine.

The Vertical is a complete printing unit combining an automatic pile feeder accommodating 4,000 sheets of stock, a printing press, and delivery mechanism delivering the printed sheets on to an automatically lowering table which will take the same quantity of paper as the feed table. We carefully state that it is a printing unit, to indicate that it is not a printing press with feeding and delivery mechanisms attached—each portion forms an integral part of the whole, so that every function operated from one common shaft is accurately synchronised.

To those of our readers who have not already had an opportunity of perusing the admirable booklet describing the construction and functions of the Vertical, the following description will be enlightening and interesting.

As its name indicates, the operation of the press is vertical. That is, the bed moves up and down instead of horizontally. This feature allows the forme to be put in position in precisely the same way that is usual in platen job presses. The cylinder also moves up and down, in contrary motion to the bed. The two units, the bed and the cylinder, practically balance one another, and their

A General View of the Machine.

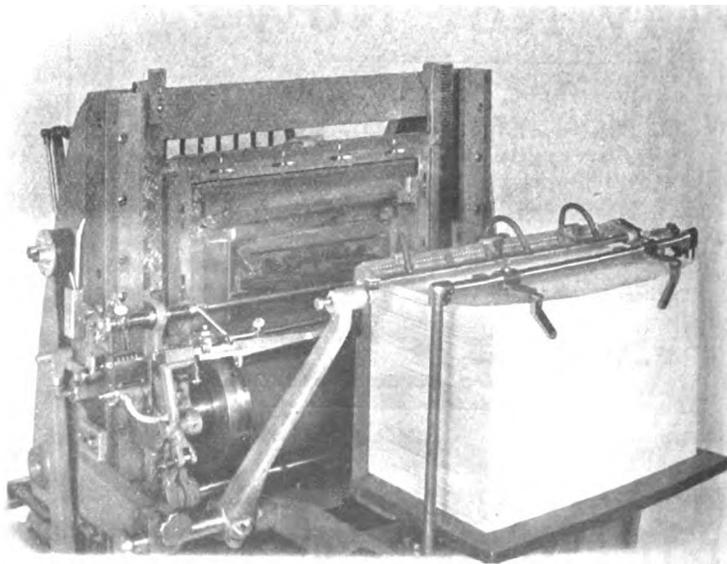

throughout the world, and which has established the standard of two-revolution presses in all places where printing is done; since that time, now long since past, approximately 13,000 two-revolution presses have been turned out of the factory, and they are to be found in practically every civilised country of the globe, an interesting fact being that the first press constructed—press serial No. 1—is to-day doing good work in its home on the Pacific Coast of the United States. In the early days the largest press took a quademy sheet, and as years went on, a demand for larger and ever larger machines was made until at the present time the company's range includes presses which will print an 8 demy sheet in either one or two colours or perfected at one operation, an advance undreamt of at the time the first press was designed.

The printing world is now welcoming the advent of a new generation of the same stock—the American Miehle Co.'s Vertical Job Press—which is being placed on the market, and which can be seen in operation at the showroom of the Miehle Printing Press and Manufacturing Co., Ltd., of Blackfriars House, New Bridge-street, London, E.C.4; we have mentioned the foregoing historical facts because, being the descendant of such a clan—vouched for by manufacturers of such reputation, the Vertical press obviously merits the serious consideration of all people interested in print, and they will undoubtedly wish to examine the press and review the claims put forward for it. We therefore feel that our readers will be as interested as we were to know something about this newcomer in the job press field—a press which we regard, after personal examination, as

printer. He is called upon to handle an immense variety of sizes, an immense variety

of materials, and to produce a great range of quantities and a wide variety of kinds and

contrary motion vertically, results in a saving in power consumption as well as the elimina-

View showing Automatic Pile Feeder.

tion of the greater part of the vibration due to reciprocal motion. The bed and cylinder are full crank driven, which still further minimises the vibration. Reciprocal motion of both bed and cylinder presents another great advantage; each of them travels but half the distance. As a consequence, the actual motion of the press at high speed is comparatively slow.

The press may be described as an improved stop cylinder. All of the well-known advantages of this type have been retained and the disadvantages eliminated. On the printing stroke, the bed is directly connected with the cylinder through a gear and rack, the rack extending the entire length of the bed, thus securing perfect register between the bed and the cylinder without the use of a register rack.

The cylinder revolves on the printing stroke only. The cylinder prints on the up stroke. When tripped it does not revolve. It is equipped with a brush. A striking feature of the press is that the cylinder can be turned to any position for packing or attaching the make-ready, independently of all other parts of the press.

There are five composition rollers, viz: One ductor roller, two distributor rollers, two forme rollers, each two inches in diameter.

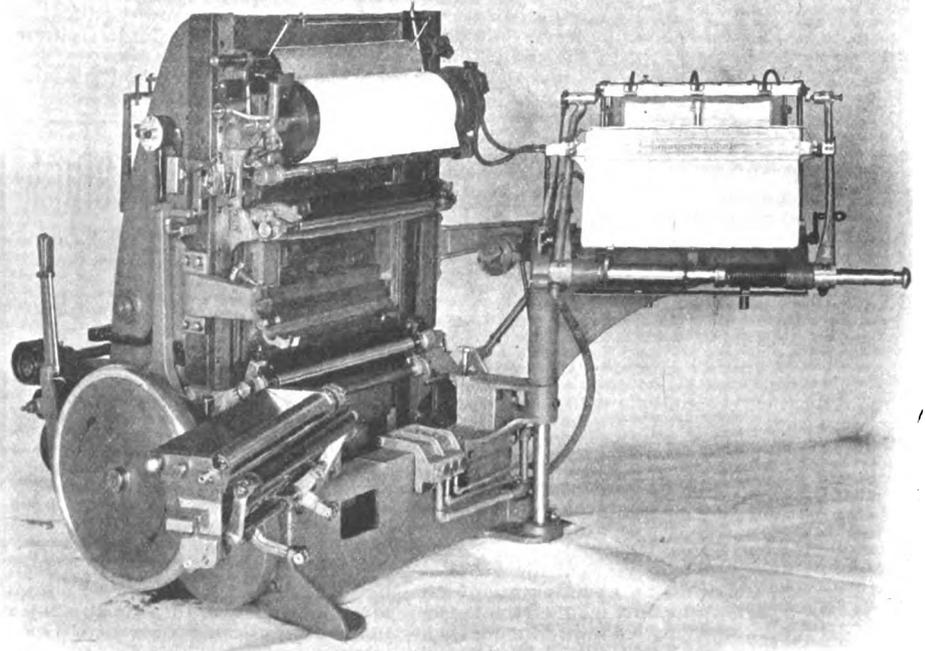

There are two steel vibrators, one each for the forme rollers and distributor rollers. The ink plate is approximately the size of the largest forme.

The press feeds the paper automatically, and will feed every kind of sheet within its range with practically no adjustment. For feeding, it depends entirely on air separation and on suction. The press trips automatically if a sheet fails to get down to the front guides and it stops automatically if, in feeding, sheets pile up on the forwarding or transfer table. The printed sheets are delivered on a table which automatically lowers as the pile of printed sheets increases. This table, like the stock table, will hold twelve inches of stock. The stock is delivered printed side up.

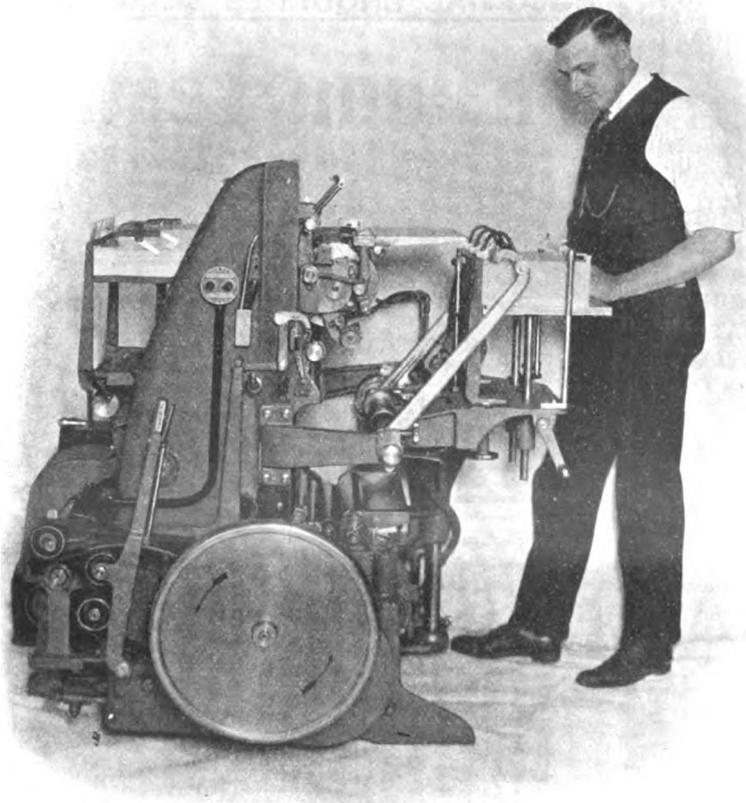

Make-ready of ordinary type jobs is greatly reduced as compared with platen presses owing to the substitution of the cylinder for the platen. A succession of type jobs all requiring the same colour of ink can be printed almost without interruption outside

tissue sheet in the make-ready does its full duty; there is no occasion to substitute an over-copious flow of ink for full colour which should be obtained by means of a firm impression. Its legitimate field takes in every

in the mechanical construction of a press—they want to know what a press will do rather than why it does it, but the constructional plan of the Vertical as noticed at the demonstration greatly impressed us. The

Showing Pile Table and Ink Fountain Swinging Clear.

The Vertical Miehle at Work.

of the time for changing the forme and the setting of the side guide. It is quite possible for two entirely different type jobs, using the same ink, to be printed with an interval of less than five minutes. The Vertical Press is capable nevertheless of high quality printing. Its impressional strength is such that every

forme to high grade half-tone plate work in one or more colours.

The speed of the press is from 2,000 to 3,600 impressions per hour, and we had an opportunity of seeing the press operating in perfect register at the highest speed.

Printers as such are not generally interested

press rests on three points of support like a tripod—so that however uneven the floor, it requires no levelling and no strain is thereby thrown on the framework, which consists of two solid castings firmly bolted together in perfect alignment. As the counterbalanced bed and cylinder reciprocate vertically in a two-piece single-joint framework which by reason of the three-point suspension remains permanently in perfect alignment, strains and stresses of operation are absorbed within the press itself, without causing vibration to be communicated to the building in which the press is operating or to any adjacent equipment.

Though the Vertical has been designed for durability, easy means are provided for taking up any lost motion which may arise through wear, or for ready replacement of any parts which may wear or be accidentally broken; for instance, all the cams are split-cams—they are mounted on one shaft so that in case of accident necessitating a replacement there is no need to dismantle the machine. The principal bearings are bushed, so that in case of wear after long use new bushes can be easily inserted. All parts are made to jigs, so that new parts can be put in with the certainty that they will function correctly when placed in position.

The space required for the Vertical is 4 feet by 5 feet—no more than that for a corresponding size of platen press with an automatic feeder, the compactness of the machine facilitates observation of the work during running.

The electrical equipment, which the company prefer to supply, has been specially designed to fit snugly in the space provided; the motor is bolted on to adjustable slide rails which, being mounted on a shaft at the back, enables the same to operate as a belt tightener avoiding all belt slip when running the press.

The description which we give of this new jobbing press will clearly show to what an extent the everyday problem of the printer with a job department has been given careful study and consideration by the press manufacturer. As a matter of fact, in order to get down to the practical and everyday difficulties of the jobbing printer we understand that before the first Vertical was offered for sale a series of machines were built and put into service for a long period in various printing offices; the presses took all the work as it came in, for preference the most exacting; each job was observed, the presses' performance on each was noted, and the experience gained during the printing of hundreds of jobs was utilised in the final design of the

printing unit as now put on the market, indicating an unusual expenditure of time, energy and money in the development of a press to meet the practical problems of the printer and one which the manufacturers could confidently vouch for.

The press was first publicly shown late last year and its cordial reception confirmed the views of the designers that they were meeting a long-felt want, and encouraged them to equip themselves with the necessary jigs, tools and fixtures to turn out standard presses in large quantities. They, however, underestimated its popularity, with the result that the margin between order date and delivery date is daily getting wider, an encouragement to even greater production which will clearly be necessary when the market in this and other countries is developed as it doubtless will be.

In our opinion, the factors which promote economical production from printing presses are: 1. A wide range of usefulness; 2. Simplicity or ease of handling; and 3. Speed of operation. The first of these factors is of prime importance in a small plant. It is imperative that each machine shall have the greatest possible range—every hour of a machine's time is a significant portion of the total productive capacity. Simplicity or ease of handling is a very important aspect of printing economy: the ideal press is the one in which the time required to change over from one job to another is reduced to a minimum. Then the ideal machine for any printer is one which will develop and maintain high speed on the general run of his work. As regards the three factors above-mentioned, our readers will doubtless, each in view of his own requirements, and after an examination of the press itself, determine how far the Miehle Co. of Chicago have succeeded in producing such an ideal machine. We certainly counsel printers not to miss the first convenient opportunity of having the claims of the press demonstrated to them in London and not to wait to see how the Vertical operates in the plant of their neighbour and competitor.

As mentioned in our article on St. Clement's Press a couple of weeks ago, St. Clement's Press is the first printing office in Europe to be operating a Vertical Press, and it is historically interesting to recall, that the first

two-revolution press from the plant of the Miehle Printing Press and Manufacturing Co. of Chicago, to come into this country, twenty-six years ago, was installed in an old-established publishing house with which Mr. G. Eaton Hart is now intimately associated. The first two-revolution press, the first Vertical—history repeats itself, and we fully anticipate that history will further repeat itself and bring to the Vertical the same measure of success in the field of job printing as has been obtained by its older and dignified relations—the Two-Revolution Single-Cylinder, Two-Colour and Perfecting Presses emanating from the Miehle Printing Press and Manufacturing Company of Chicago.

Favourable View of British Paper INDUSTRY.

Colonel Edgar Smalley, director of Edwin Butterworth and Co., Ltd., has returned to England after spending more than a month on his annual business tour of the United States and Canada.

Prior to his sailing for home, Colonel Smalley stated that he thought the economic situation in the United States was poor, as compared to the situation in England where affairs have been straightened out, because both labour and capital long ago got down to work earnestly for the good of the whole country. The labour question in England was settled long ago and production is far better here than in America. There is more material than ever for export so far as paper-makers' supplies are concerned. The gatherers, packers and all others interested in this branch of industry in England have been working at top speed.

The impression Colonel Smalley gathered during his stay in America was, that business is spasmodic with buyers displaying much hesitancy and a desire to wait for possible developments. The energetic, creative attitude, which Colonel Smalley had witnessed generally on previous trips to America, was lacking.

The Allied Paper Trade Protection SOCIETY.

Important functions are carried out by this Society, which was formerly the Association of Papermakers, Merchants, Agents, Wholesale Stationers and Allied Trades. The object of the Society, which has offices at 26, 27, 28, Kimberley House, 14-17, Holborn Viaduct, London, E.C., and 35, 36, 37, Exchange-chambers, 2, Bixteth-street, Liverpool, is specialised trade protection for the paper and allied industries. It has been registered as a limited company. The general manager of the organisation is Mr. Parkin S. Booth, F.A.A., who for many years past has occupied the position of accountant to the Association of Manufacturing Chemists, Ltd., a trade protection organisation specialising in the wholesale drug, chemical and allied trades.

It was in consequence of having been consulted with regard to the affairs of a paper agent, of whose estate Mr. Booth is now trustee, that he set on foot the Allied Paper Trade Protection Society, and the support he has already received is very encouraging. As showing the utility of such an organisation where insolvency matters are concerned, co-operation in the chemical and allied trades has resulted in estates being carried on and the amount of such estates indebtedness being eventually liquidated. The assistance which such a Society can render in furnishing confidential reports as to the status of likely customers is obvious and the subscription of two guineas per annum entitles the subscriber to a variety of services.

The Society will be governed by a board of directors prominently connected with the paper trade, several of whom have already expressed a willingness to sit on the board.

Messrs. E. A. BRISTOW AND Co., paper-makers' agents, Temple Bar House, London, who represent the well known mills Hollandaise and Gunther, have appointed Mr. B. R. Nicholson, 21, Albany-road, Victoria Park, Manchester, as their Northern representative.

COMPULSORY SALE.

FIRST-CLASS TWO-ROLL NEWSPAPER PRINTING MACHINE WITH MOTOR EQUIPMENT AND COMPLETE STEREO PLANT for Sale by Private Treaty, owing to the recent amalgamation of the two Halifax Newspapers.

THE full Specification of the Plant for disposal is as follows:—

Two - Roll Web Newspaper Perfecting Press, by Victory Co., Liverpool, and Northern Press and Engineering Co., Ltd., South Shields. The machine will take two plates 25 in. in width and will print 2, 4, 6, 8, 12 or 16 page paper; high speed folder, 25½ in. cut off, quarter size fold, counter, 2 sets of rollers, modern late news fudge device, with complete spare set of cog wheels for folder. The dimensions are 27 ft. long, 11 ft. wide, and 8 ft. 6 in. high from floor level, in addition to pit of 2 ft. 6 in.

25 h.p. Motor, partially enclosed, by Electromotors Ltd., 460 volts, 45-5 amp. 600 revs., on iron slide rails, direct current, with starter, double pole switch, automatic release, push bottom stop and cabling in iron casing, together with spare armature and starter.

Casting Box, water cooled with hand tail cutter.

Half-ton Metal Furnace for coal fuel, 17 in. circular pot, balanced hood, 2 double-handled ladles, 2 ladles and skimmer.

Dressing Saddle on iron stand.

Plate Boring Machine for power.

Mangle, fitted hand-power, on iron stand, with double gearing.

Hot Press, with wheel clasp and gas-heated bed, 6 ft. 10 in. by 2 ft. 4 in.

Travelling Surface, 30 in. by 27 in., on cast iron stand with runners.

Matrix Roller, Imposing Surfaces, Formes, and other incidentals.

The whole is in capital order, and prior to amalgamation produced up-to-date evening and weekly newspapers against strong competition. The plant can be seen working at any time by appointment.

A low price will be accepted for a quick sale.

Any further information and specimen papers will be forwarded on application to—

Printers' Technical Education Prize-giving.

Trade Leaders at Stationers' Hall under Auspices of St. Bride
Printing School and Printing Industry Technical Board.

Many prominent representatives of the printing and allied trades were present on the platform at Stationers' Hall on Friday evening, when, before a crowded audience, Mr. W. Howard Hazell, J.P. (chairman St. Bride Foundation Printing School Committee, 1921-22), distributed the prizes and certificates gained last session at St. Bride School and at the examinations conducted by the Printing Industry Technical Board.

Several of those who were expected to be on the platform did not appear, but Mr. Hazell (in the chair) was supported by the Right Hon. C. W. Bowerman, M.P., Mr. T. E. Naylor, M.P. (secretary London Society of Compositors), Mr. Ernest Judd (Master Bookbinders' Association), Mr. George Arkle (Bookbinders' Union), Mr. G. A. Eden (Bookbinders' Managers and Overseers' Association), Mr. G. Maidment (Society of Electrotypers and Stereotypers), Mr. E. W. Whittle (secretary Printers' Managers and Overseers' Association), Mr. Edward Unwin and Mr. H. Hill (Past Masters of the Worshipful Company of Stationers), Mr. A. E. Holmes (Board of Education), Mr. P. Squire (chairman, St. Bride Foundation), Mr. F. Gillett (St. Bride Foundation), Mr. J. R. Riddell (principal, St. Bride Printing School) and others.

Success of St. Bride School.

Mr. Howard Hazell, in his opening address, characterised the gathering as a memorable one, it being the last prize-giving associated with St. Bride School prior to the removal of the school to Stamford-street, where it was hoped still better to instruct the printers of London in subjects pertaining to their industry. Drawing attention to the ever-growing success of St. Bride School Mr. Hazell mentioned that in the session 1921-2 1,506 students were enrolled, over 700 of whom attended in their employers' time, the employers also paying the fees. The examinations arranged by the Stationers' Company and Printing Industry Technical Board had also been well attended, and a satisfactory number of candidates had been successful.

Mr. Hazell proceeded to make a forceful plea on behalf of the advantages conferred by technical education. He held, he said, that it was well for everyone—master printer, manager, overseer or craftsman—to learn something outside the four walls of his office or factory. Technical classes taught the best methods of production; and in these days of specialisation, when an apprentice was apt to be tied to one section of the craft, he was able by attending classes to learn not only the work of his own section but to learn also something of the processes which preceded and which followed his own work. It should be their ambition to be not mere craftsmen but masters of their craft.

They should aim to fit themselves for the position above their own; then promotion would come even without their asking for it. Immense progress had been made in the processes connected with the printing trade. They must move with a trade that was never standing still. There were great fields in the printing trade for able and energetic workers. He cited the examples of Lord Northcliffe, Field-Marshal Sir Wm. Robertson and Mr. Henry Ford as men who had risen to success without special advantages at the start. There were throughout the printing trade men who had risen in the same way. Many of them to whom he was speaking would rise to positions of power and influence. The country needed skilled craftsmen, for capital and business organisation were useless without the skilled worker behind them. He urged his hearers to acquire all the knowledge they could, and thus benefit themselves and benefit the country to which they belonged.

Mr. Naylor on the New School.

Mr. T. E. Naylor started with a word of warning to students as to their possibly feeling disappointed when they entered their new quarters over the water in Stamford-street. They had been accustomed to a certain atmosphere at St. Bride, where they had been situated in the heart of the greatest city of the world, a city in which printing was the premier craft and industry. They were proud of St. Bride and its surroundings, and many of them felt a pang of regret at being about to part company with what they regarded as their Alma Mater in the printing trade. Owing to the very difficult time in which they lived the education authority had not been able to provide for them the kind of building they would wish to have, but had helped them to secure a building that was not originally intended for the purposes of a printing school and was not a new building. He had himself visited the new school and was very keenly disappointed at the reflection that the building allocated to the printing trade of London for the purpose of a central technical school was certainly not worthy of the objects which they were seeking to attain. He had heard that the London County Council, at an expenditure of something between three and four million pounds, had erected for their own purposes a magnificent edifice at the other side of Westminster-bridge, the council chamber being built upon such huge and magnificent lines that the worthy councillors could not hear themselves speak in public debate. (Laughter.) With these facts in mind, to be suddenly brought face to face with that dull, drab building in Stamford-street—which would certainly be a disgrace to a third-rate provincial town—was some-

thing of a blow to those of them who expected better things from the educational authorities of this country. They had accepted the offer of that building, but, so far as he was concerned, he looked upon it as a temporary expedient only, and in the course of a few years—when they hoped trade would have improved, and economy at the expense of education would no longer be necessary—they might again approach the London County Council and insist on being housed in accordance with their objects and traditions. After all, however, this was a secondary consideration. What mattered was not so much the kind of building, but the kind of instruction received. No matter what kind of building they might have at their disposal, if they could secure the right plant, as they had already secured the right instructors—that was what really mattered. Proud of the record of St. Bride, they would carry that record and that reputation across the water to Stamford-street and would make the London School of Printing known throughout the country as one of the finest institutions for the turning out of skilled craftsmen.

Mr. Naylor went on to emphasise the importance of technical education, as already pointed out by the chairman. He stressed particularly the joy which rewarded the man who trained himself to become a master of his craft. There was not one section of the printing trade, he said—not even what used to be called the section of the "printer's labourer," now the "printer's assistant"—which could not claim to be in a position to become craftsmen, even within the limitations of their own work. He urged every student to apply himself diligently to his studies, so that they might make the London School of Printing the premier institution of its kind in this country, if not in the world.

Mr. P. Squire, chairman of St. Bride Foundation, said it was to him personally, and he believed, to his colleagues, the Governors of St. Bride Foundation, a matter of the sincerest regret that this magnificent and representative body of students were going to pursue their studies in another part of London instead of in Bride-lane. He did not regret that they were going to a better place, a larger place, but regretted that St. Bride had not room enough for the accommodation required. He said the governing body of St. Bride was confident that the school would have even greater success in the future than in the past. On their behalf he expressed the heartiest good wishes for the success of the new undertaking, and said that whether or not he or his colleagues should be associated with it, they would always take the keenest possible interest in the students' welfare, and would gladly do anything they could to increase their success.

- Special terms in respect to Foreign Debt collections and enquiries.
- Representation at Meetings of Creditors free of charge.
- Searches of the Registers (unlimited) free of charge.
- Legal Advice by the Solicitors to the Office upon ordinary business matters free.

(Signed)..... (Address).....

Date.....192..... Business.....

Mr. Hazell then proceeded to distribute the prizes and certificates to successful students. The list was a very large one, and the distribution occupied about half an hour.

The ceremony completed, Mr. F. Gillett proposed a hearty vote of thanks to the chairman for his able services in the chair and to the Worshipful Company of Stationers for their hospitality in granting the use of the Hall. On behalf of the Governors of St. Bride he expressed regret at the school's removal, and said the sole reason was that, under the energetic management of Mr. Riddell, the school had outgrown its premises. He hoped the removal to the other side of the water would be temporary only, and that they might later return to the City and perhaps resume their old name.

Mr. C. W. Bowerman seconded the vote of thanks. He said he also regretted the move from Fleet-street. He liked the smell of printers' ink, and what the smell of Stamford-street might be he did not know. (Laughter.) Commenting upon the chairman's big task in handing awards to over 300 students, he remarked that Mr. Unwin had been called upon, in the absence of the present Master of the Worshipful Company of Stationers, to sign 300 and odd documents; thus Mr. Unwin's silence that evening would last longer in their memories than some of the speeches, because so long as their certificates lasted they would see Mr. Unwin's name upon them. In putting the vote of thanks to the meeting, he did so in Parliamentary fashion, asking those in favour to say "Aye." After one preliminary effort, the shout of "Aye" proved very satisfactory. "Noes" being entirely absent, Mr. Bowerman declared "the Ayes have it."

The meeting closed with a brief response from Mr. Hazell, who—as a member of the Livery of the Stationers' Company, as well as chairman of the committee—was able to reply to the vote of thanks, "double-barrelled" though it was.

Printery Instruction in Leeds.

The Leeds Education Department has issued a prospectus giving particulars of the winter course of instruction in connection with the Department of Printing under the Leeds Technical School, the classes in which began on Monday, September 18th.

The subjects covered include typography (practical and theory), lithography (including press and machine work, transferring and offset printing), linotype and monotype, printing machine mechanism, aerograph and finishing, photo-mechanical processes, photography, bookbinding (including forwarding and finishing), machine book sewing, ruling and cost finding. The fees for the various courses range from 7s. 6d. to 15s.

The printing school is adequately equipped for the teaching of all the subjects taken.

Day courses, either full or part time, are arranged in every section of the department. A special course of day classes has been arranged to meet the needs of apprentices, and employers are asked to grant facilities to enable their apprentices to attend these classes.

The Master Printers' Federation and several printing equipment manufacturers have kindly agreed to present prizes for the most efficient student in each section of the school.

Canada's Trade with U.S.A.

A report on the paper industry of Canada states that the Canadian pulp and paper industry is not affected by the "emergency" or any other tariff. Owing to the strong demand for its products from the United States, it is resuming much of its old-time activity. During May, for example, 50 per cent. of Canada's exports to U.S.A. were in the form of wood, pulp and paper. It is understood that American publishing interests, not having received from certain European countries the satisfactory supplies of paper they had expected, have turned again to Canada. Thus it is found that of 78,031 tons of paper imported into the United States in the early spring, 73,119 tons were from Canada; the figures for unbleached sulphate and ground pulp show much the same proportion. Exports of news-print to all countries for the twelve months ending May were 16,050,000 cwts., or 1,346,000 more cwts. than during the preceding period.

Australian Notes.

Edwards Dunlop Report—Price of Paper—A Chinese Newspaper—Wages and Hours—Government Printing Bill—Queensland Government Printer—Advertising the Craft—Three-Colour Reproduction—Exhibition of Lithographs—Printer's Fire—Trading with Canada.

(From Our Sydney Correspondent.)

IMPROVED business for the year ended April 30th last is shown in the report of Messrs. Edwards, Dunlop and Co., Ltd. At £61,338 the profits earned were only £9 odd higher than those revealed by the 1921 accounts. The carry forward was greater, however, and the sum available for appropriation, £77,826, was £589 larger. Allocations to shareholders are on last year's bases. The preference dividend is 5 per cent., and the ordinary equals 10 per cent., accounting for £4,325 and £40,423 respectively, of which all but £10,106, representing 6d. per ordinary share, has already been paid. The transfer of £16,000 to the reserve account raises the total of that fund to £140,000.

THE board reports that during the year the cost of paper fell continuously, and the company's prices from stock now average about 45 per cent. less than at this time in 1921. Many mills, it is stated, are suggesting that higher prices will rule in the near future, but the board's comment is that any downwards tendency at the moment is slight. A considerable proportion of Australian requirements for news-print is at present coming from Great Britain. This has been brought about chiefly by the preferential tariff, and the company is doing a large share of the business. The turnover is stated to be very much larger than at any other period, excepting the "boom" months of 1920.

AN interesting new company that has been registered is the *Chinese Times, Ltd.*, which has a capital of £3,000. Its objects are: To publish a newspaper or newspapers in Sydney and at other places in New South Wales, and to acquire by purchase and carry on the business of newspaper proprietors, printers, publishers, typefounders, booksellers, stationers and advertising agents, etc. The subscribers are: Yee Wing, Samuel Wong; Dy. Narme, Chas. Chang Way Bun, Lee Chut, W. Shee Ping.

THE state of affairs as regards wages in the printing trade is similar to that in the Mother Country, the question of wage-reduction being to the fore. A mass meeting at Sydney of the Amalgamated Printing Trades Employees' Union expressed resentment at the refusal of the master printers to meet them in conference to reconsider the wage-reduction effected by the last award. It also pledged members to resist any reductions of wages or alteration of hours. The question of a general cessation of work was raised, but acting on urgent advice of the executive, it was decided to refrain from any precipitate action at the present juncture.

THE employees of the Government Printing Office have been notified of the intention of the Government to reintroduce Saturday work, and to reduce their wages by 3s. a week. Protesting against this, the secretary of the Amalgamated Printing Trades Union, stated: "Practically every printing house outside the Government closes its works on Saturdays—and is likely to continue to do so—in view of the fact that both the quantity and quality of the employees' products have improved very considerably since the closing commenced."

MR. A. J. CUMMING received many congratulations on his reinstatement as Queensland Government Printer on July 17th. It will be remembered that Mr. Cumming was relieved of his post consequent upon protests he had made concerning official interference with his management of the Government printing works. Prior to his reinstatement, the following statement was issued by the Premier, Mr. Theodore: "Mr. Cumming has written to me expressing his regret about the circumstances which led to the termination of his services as Government Printer. After considering his explanation of the episode,

the Government has decided to reinstate Mr. Cumming."

THE New South Wales Master Printers and Connected Trades Association is advertising the occupational advantages offered by the printing and bookbinding trades. "They are healthy and interesting occupations," says the Association's newspaper appeal. "Under the best possible conditions, your boys can be engaged in learning the most interesting of all trades, and at the same time earn good wages and avoid the possibility of unemployment as unskilled workers in the future. There are vacancies for apprentices in the following trades: Hand composing, linotype operating, bookbinding, letterpress printing, lithographic printing, paper ruling, and stereotyping and electrotyping."

MR. A. V. WILKINSON, of Campsie, claims to have made a big advance in the adaptation of the three colour process to photographic reproduction, having perfected a process which will not only reproduce the natural colours of any object, but will also bring the cost of the completed print far below the present figure. It is necessary to have three negatives, but it is stated that the formulæ which Mr. Wilkinson uses enable him to strip the thin film—much thinner than that on an ordinary photographic plate—from each of the three prints, and transfer it on to a paper support, so that except for the natural colours the finished photograph looks just like an ordinary one. The three stained prints are superimposed, in perfect register, the magnifying glass failing to reveal any overlapping even in a detailed subject. From the time Mr. Wilkinson starts to make his three coloured prints until the photograph is finished he takes half an hour. This expedition is due to the formulæ and methods of stripping the prints.

AT Sydney recently an interesting exhibition of lithographs by Miss Thea Proctor and a group of London lithographers was opened by Dame Margaret Davidson. There was a large attendance of art enthusiasts. "I believe this is the first exhibition of lithographs we have had in Sydney," said Dame Margaret Davidson. "About fifteen years ago a club was formed in London by the inventor of the method of lithography used by the group of artists who had produced the pictures shown at this exhibition, and the annual exhibition of that club was considered one of the best in London."

SOME thousands of pounds' worth of damage was caused by a fire which occurred on the premises of Walker, May and Co., general printers and publishers, of Melbourne. The conflagration was confined to the top floor of the substantial stone factory in M'Killop-street, where the bookbinding branch of the firm's operations were carried on; but considerable damage was done by water on the floors below, where the composing and machinery departments are situated. Energetic work by the Metropolitan Fire Brigade prevented a huge conflagration and saved much valuable property. The bookbinding machinery on the top floor was greatly damaged, and it is doubtful whether it can be again used. The stock and plant were insured for £18,000 in eleven companies.

ARRANGEMENTS have been made between the Commonwealth Government and the Canadian Government for the preparation of schedules of items upon which each country desires reciprocal trading benefits from the other. The Minister of Customs stated that in Australia the preparation of the schedule had been referred to the Tariff Board, which would inquire among the trading and manufacturing community forthwith to ascertain the directions in which concessions would be advantageous. The Minister stated that he was awaiting certain information from New Zealand before introducing the resolutions for the reciprocal treaty. The Government was also giving consideration to a comprehensive scheme of raw materials preference within the Empire.

A MEMORIAL exhibition of the illustrative work of Frank Walter Taylor and Joseph Clement Coll is being held under the auspices of the American Institute of Graphic Arts, the Society of Illustrators, and the Art Directors Club at 65, East Fifty-sixth-street, New York City, from September 6th to September 30th, 1922.

Trade Notes.

COST of living on September 1st is stated by the Ministry of Labour *Gazette* to have been about 79 per cent. above July, 1914, compared with 81 per cent. on August 1st.

A COUNCIL meeting of the Federation of Master Printers has been called for October 10th and will be an important one. Several legislative measures affecting the printing industry may make further progress in the next session of Parliament, and the policy to be adopted by the Federation will be discussed.

PLANS are being made for increasing the membership of the Federation of Master Printers, and the various Alliances are now discussing proposals to that end.

L.M.P.A. AND PENSIONS.—In sending out to London master printers the customary annual appeal in connection with the Festival of the Printers' Pension Corporation—at which H.R.H. The Duke of York is to preside this year—Colonel J. R. Truscott (president) reminds L.M.P.A. members that the Council decided recently to ordain the various efforts of the Association and its members on behalf of this great institution, and resolved that any contribution sent in response to his appeal will be allocated, if desired, to a fund for establishing a London Master Printers' Association pension, or pensions.

HOLIDAY PAY.—Questions have been asked as to the rate at which holiday payment should be made. We understand that a decision has been reached by the Hours and Holidays Committee that the rate payable is to be the rate obtaining at the time the holiday is taken. This was the rule observed when wages were on the up grade and it is only reasonable to adhere to the same rule now that the movement is in the other direction.

PRINTERY FIRE.—Premises in Park-street, Southwark, S.E., occupied by Messrs. J. Parry and Co., Ltd., printers and stationers, were severely damaged by fire on Tuesday night. The cause of the outbreak is unknown, and the damage has not yet been estimated, though it will probably amount to some thousands of pounds.

The well-known firm of Messrs. Lewis Smith and Son, wholesale stationers and printers, Aberdeen, has just completed its centenary. The firm's employees, on the invitation of Mr. Smith, celebrated the event by an enjoyable trip to Ballater on Saturday.

ROCHDALE PRINTING TRADES GUILD.—The silver cup presented by Messrs. Ormerod Bros., printers, etc., Rochdale, for competition in the Guild Bowling League, has been won by the Combined Team (selected from the smaller offices). The silver shield presented by the local Master Printers' Association in connection with the cricket league has also been won by the Combined Cricket Team.

"THE PEOPLE."—It is understood that negotiations are in progress for the sale of the *People*, the well-known weekly newspaper, to a syndicate, and that the transfer will probably be completed at the end of the present month. It is understood that Colonel Grant Morden, M.P., is largely interested in the acquisition of the paper. Sir William Madge, the present proprietor of the *People*, has had a long career in journalism. He came to London from Plymouth with Sir John Le Sage, the veteran editor of the *Daily Telegraph*, and having had a long illness early in the present year, he feels that the time has come for him to retire.

PREMIER'S MEMOIRS.—The *New York Times* announces that in conjunction with the *Chicago Tribune* it has obtained the newspaper rights for America of Mr. Lloyd George's Memoirs. The Premier will be paid practically a pound a word for every word he writes, and the total amount realised will be in excess of the £90,000 which, according to rumour, the book was to bring in, says *The Times*.

BOOK FAKING.—A well-known American collector recently acquired what he took to be a book published by Aldus in the year 1498. He paid £200 for it, and believed that it was an original Aldus because the publisher's press-mark—a dolphin coiled round an anchor—appeared upon it. When the book was shown to an expert it proved to be, beyond a shadow of a doubt, a modern antique—that is to say, it was simply a copy of the original work printed by an ingenious book "faker." So clever was the imitation

that only an expert could tell it from the original and rare book.

EVENING CLASS FEES.—Of considerable importance to the thousands of students who are enrolled for the evening classes in technical and other subjects which begin at the end of this month at the London County Council polytechnics and technical institutes is the question of fees. The L.C.C. has decided to recover the cost of the education of students residing out of London, and where the local education authority declines to pay the out-county fee the student himself will be required to pay the full cost before being allowed to join. Special arrangements have been made with the Middlesex Education Committee whereby students residing in their area are admitted to specified institutes on the same terms as London students. Similar arrangements, with modifications, have also been made with Kent and West Ham.

DAY CLASSES FOR PRINTING APPRENTICES.—The scheme of having day continuation classes for apprentices, advocated by the Education Act for Scotland, is in force in Edinburgh in the printing and kindred trades. The classes are held in the College of Art and the Heriot-Watt College, and the students are now being enrolled at the latter institution. Practical work absorbs the greater portion of the time, followed in importance by art classes. English and arithmetic are also represented. In addition to the general classes attended by all, there are special classes for those engaged in special branches of the trade. Compositors have separate classes for English; machinemen for printing machinery, the chemistry of paper, and mechanical drawing; lithographers for litho, machinery, chemistry of paper, and inks; stereotypers for physics and electricity, and so on.

A REMAND for medical inquiry was ordered at Tottenham last week in the case of Henry John Dineen, a printer, who was summoned for assaulting his wife.

JAMES PAGE and Harry Fuller were at the South-Western Police-court on Monday remanded till September 23rd on a charge of having in their possession materials for the making of forged Treasury notes. Page was further charged with uttering a forged £1 note.

SENTENCE of 14 days' imprisonment was passed at Edinburgh City Police Court last week on a warehouseman named Frederick Fraser, 109, Broughton-road, who admitted the theft from an Edinburgh firm of manufacturing stationers of a variety of stationery items to the value of £9 19s. Fraser, who was 35, had been in the employment of the firm for 16 years.

In the Vacation Court last week Mr. Justice Romer heard a motion in a case in which the Ridgway Publishing Co., an American corporation, asked for an injunction restraining Messrs. Hutchinson and Co., Paternoster-row, the well-known publishers, from publishing a magazine described as *Hutchinson's Adventure Story Magazine*, the Ridgway Publishing Co., of America, having started, in 1910, a publication known as "Adventure." It was eventually agreed that the motion should stand over until the second motion day of next sittings, defendants undertaking to keep an account of the sales of their October number of the publication complained of, and not to advertise the November number with the headings in the form complained of until after the hearing of the motion.

A VERDICT of suicide while of unsound mind was returned at the inquest last week on a Bilston (Staffordshire) printer's traveller, James William Martin, 64, widower, who died from gas poisoning.

"SUICIDE while of unsound mind" was the verdict at the inquest at Paddington last week on Robert James Paterson, 34, London editor of the *Christian Science Monitor*. The widow said that her husband sat up late on the evening in question, and was still at work when she went to bed. When found dead, her husband had a green suede belt, which he used when playing tennis, round his neck. It was tied loosely, and she removed it. The Deputy Coroner said it was clear that Paterson's mind had given way under stress of overwork.

WILLS.—Mr. William Roger, of Otago, New Zealand, retired journalist, printer and publisher, for over 30 years one of the proprietors of the *Wigan Examiner* (estate in the United Kingdom), £4,697; Mr. John Richards

Kelly, of Worplesdon, lately a director of Kelly's Directories, Ltd., for over 30 years connected with that firm (died July 20th, aged 78), £6,583; Mr. Robert Stockwell, of Waver-tree-road, Streatham, S.W., publisher and printer (died August 9th), £8,154.

THE new issue of the Inveresk Paper Co. (1922), Ltd., was heavily over-subscribed, and applicants were only able to receive a small proportion of the debentures, which are already at 4 points premium.

LIBRARIANS from every sort of library in Great Britain and Ireland, to the number of three hundred, are meeting at Cardiff this week for the 45th annual Conference of the Library Association.

INTERNATIONAL CONGRESS.—Arrangements for the great Jubilee Exhibition and Fair to be held next year from May 8th to September 30th at Gothenburg, Sweden, are being made in good style—to judge by an attractive illustrated booklet which reaches us. The booklet gives much information about the famous city, which is about to celebrate the 300th anniversary of its foundation, and numerous interesting views are included. Of special interest to the printing trade is the fact that in connection with the Exhibition (as we have previously announced) an International Congress of Master Printers takes place at Gothenburg on June 4th to 6th. The booklet is sent us by Mr. A. E. Goodwin on behalf of the Federation of Master Printers, which is interested in the Congress and is to appoint four official representatives from this country. All master printers will be welcomed.

In October, 1922, an exhibition of newspapers of the world will be held in Prague.

GERMAN NEWSPAPERS STOP.—One hundred and forty-four German newspapers have ceased publication since the beginning of July, owing to want of money, high costs, and other difficulties. A few newspapers which have published two editions daily will in future issue only one. In Glogau seven dailies have amalgamated, and will publish one joint newspaper.

THE official organ of the German newspaper publishers announces that 12 more newspapers will cease publication this month owing to their inability to meet the increased prices of materials.

A REMARKABLE outcome of the German newspaper crisis is the news that one provincial newspaper will henceforth be typed and duplicated instead of being printed. The *Vorwärts*, commenting on this, says the time does not seem far distant when, as in the Middle Ages, news will be conveyed from town to town on handwritten sheets.

THE *Tagliche Rundschau* (Berlin) is to amalgamate with the *Deutsche Allgemeine Zeitung*.

AUSTRIAN PRINTERS' STRIKE.—The strike in the printing industry which prevented the appearance of Austrian newspapers for ten days, ended on Thursday. In the course of the struggle the proposal to hold up the bank note press was rejected on the ground that such a measure would hinder payment of wages, since paper money would cease to be available. The settlement reached, though the employers made concessions, is regarded as unfavourable to the strikers, and acceptance of the employers' conditions led to severe criticism by several workers' delegates.

A TEHRAN message states that the recent political strike of printers has been settled and all the newspapers have re-appeared.

TRADE WITH AUSTRALIA.—British manufacturers will learn with interest that Messrs. T. Litherland and Co., of 44, Grenfell street, Adelaide, South Australia, who are suppliers, valuers, etc., to the printing and allied trades, are inviting British makers of machinery and other supplies to utilise their agency services in approaching the Australian market.

AMERICA is in the throes of an agitation for a censorship of books, and a book will shortly be published here to which well-known writers on both sides of the Atlantic have contributed. Its title will be "Non-censorship."

Technical Education for Printers.

Renewal of Activity in London.

Large numbers of the evening institutes of the London County Council will in a few days be in full swing, and attractive as well as practical programmes are being issued, and no matter in what trade or commercial business young persons may be employed, the means of supplementing their education and securing a special training, either technically or commercially, may through these classes be found, oftentimes in the locality in which they reside.

In the printing industry there has been a remarkable development during the past year by the removal of the technical school, hitherto successfully carried on at St. Bride's Institute, Fleet-street, to large and commodious premises in Stamford-street, Blackfriars-road, under the control of the L.C.C. with an influential advisory committee of representatives of employers, workmen, journalists and educational experts, Lord Riddell being chairman. In addition to this important centre there are also similar technical institutes at Camberwell, and at the School of Arts and Crafts in Southampton-row.

Closely allied to the technical centres, and having a most important bearing upon the successful training of the young student of printing, the L.C.C. have established junior institutes around London for the specific purpose of providing for the young lads coming from the elementary school to the trade, just that amount of higher secondary education which is absolutely essential to boys who leave school at the early age of 14, and by which they could the better assimilate the technical and scientific problems underlying their craft, making it possible for them to obtain the highest qualifications of technology, and by that means rise to positions of influence and responsibility in the printing world.

The forerunner of these special institutes is the Wild-street School, Drury-lane, where for several years splendid work has been carried on by supplying during the daytime of eight hours per week a course of instruction, specially prepared for boys coming to the printing trade. The curriculum consists of English (grammar and composition), history, geography, technical drawing, technical calculations, and gymnastics. The general aims are the appreciation of good literature, development of the powers of literary expressions both orally and written, the technique of English being treated with special attention to the printing trade. Closely associated with these subjects is history and geography, whilst citizenship and national movements, social, industrial and political, are as far as possible illustrated by reference to local history. In calculations, the scheme covers the ground from casting off copy to estimating. Technical drawing includes layouts of every description, principles of display, ornaments, etc. Special lectures have been periodically given, notably a lecture by one of the masters, Mr. Jay (who is a practical printer) on "The Printing and Kindred Trades." Other lectures, illustrated by lantern views, one of these being given by the Rev. J. Ough, M.A. Lecture tours were also made to the British Museum and other places with a distinct application to the printing trade. Similar visits were also made to the Printing Exhibition last year. Reference to the class work done by the students at their examinations, and particularly to the specimens of lay out and artistic drawing, show the successes attained, and the admirable and practical training given to these junior students. It is worthy of note, as an indication of the attractiveness of these classes, that 24 of the young students voluntarily attended a special elementary printing course after working hours.

The School is under the control of Captain L. N. Coombs, B.Sc., who is assisted by Mr. D. Powell, M.A., LL.B., Mr. Jay, and for Gymnastics by Mr. Bambridge. Full information may be obtained at the School in Drury-lane, or at the L.C.C. offices.

MESSRS. USHER-WALKER, LTD., of 33, Bouverie-street, E.C.4, cover a very large range of business activity. They are the publishers of a little monthly journal, the *Printers' Engineer*, as well as being manufacturers and dealers in a big variety of printers' supplies.

Be cheerful. Gravity drags downward.

Trade Union Matters.

LONDON WAGES.—The London Society of Compositors, it will be remembered has called a special delegate meeting for this evening (Thursday), when the question of wage reduction will be placed before the members, and a proposal will be made that the L.S.C. should agree to a reduction of 7s. a week for hand compositors, in two instalments, and a reduction of 5s. a week for machine operators, likewise in two instalments. Should the delegate meeting approve of this proposition, it will then be submitted to a ballot of the L.S.C. membership. Conferences are being arranged between the London Master Printers' Association and the following London unions: National Union of Operative Printers and Assistants, National Union of Printing, Bookbinding, Machine Ruling and Paper Workers (London Male Section), Printing Machine Managers' Trade Society, Association of Correctors of the Press, Amalgamated Association of Pressmen, Amalgamated Typefounders' Trade Society, and the Platen Printing Machine Minders' Society. These conferences are to take place on Monday and Tuesday next.

ELECTROTYPERS AND STEREOTYPERS' WAGES.—A wage conference is also being arranged for an early date between the Federation of Master Printers and the Newspaper Society on the one hand and the National Society of Electrotypers and Stereotypers on the other. This will, of course, be a national matter, the conference having to settle the rate of wages payable to the Society's members by members of the Federation of Master Printers and the Newspaper Society throughout the United Kingdom.

LONDON OVERTIME.—The secretary of the London Society of Compositors reports that the number of hours overtime worked in the general printing trade in London during July reached 63,265, and in the news offices 15,650, a total of 78,915 hours. Short time worked in the general printing offices during that period amounted to 1,017 hours. The number of men who reported working overtime was 5,473 in the general trade and 1,232 in the news offices.

LEEDS PRINTING TRADE.—The quarterly report of the Leeds Typographical Society says that the state of trade in Leeds has varied little, the number of men signing the books ranging from 120 to 68. The expenditure on unemployment benefit shows a slight decrease as compared with the previous quarter. The major portion of the report deals with the recent strike. "The Leeds members," says the report, "are to be congratulated on their general attitude displayed throughout the trouble."

T. A. LEVY.—The executive committee of the Typographical Association intimate that there will be a quarterly levy of 1s. per full working member until further notice.

CHEMNITZER PAPIERFABRIK ZU EINSIEDEL, near Chemnitz, on the occasion of the admission of its shares for quotation on the Dresden Stock Exchange, reports that its order book is filled for months ahead, and that a good result may be expected for the business year just closed (12 per cent. last year).

Institute of Journalists.

Important Developments.

The Institute of Journalists, at its conference at Bristol last week, decided to form an economic section, composed of fellows, members, and junior members, not being newspaper proprietors, directors, or managing editors, or those in any capacity able to exercise the powers of an employer on questions of remuneration, hours, and working conditions of journalists.

The executive was authorised to issue a statement regarding the recent negotiations for the formation of one organisation for journalists and also to take a ballot of members if and when a resumption of negotiations with the National Union of Journalists has reached a stage that will raise in concrete form a basis upon which one organisation can be formed.

An invitation to Harrogate next year was accepted.

The following resolution was carried unanimously:—"That in the opinion of the Conference, when a journalist is given information under a promise that he will not reveal the source no circumstances whatever short of the consent of the person who gave the information justifies him publishing it at any subsequent period."

The resolution arose out of an incident during the Versailles Conference, when 70 journalists in an interview undertook not to reveal the source of information. It was stated that 69 adhered to the promise, but after three years one divulged.

Trade in Printing Type.

EXPORTS.—British printing type dispatched to overseas markets during the first eight months of the present months 110 tons, which was of the value of £38,173. This figure compares with 214 tons (£80,232) during the same period last year and 168 tons (£46,672) in the corresponding eight months of 1920.

IMPORTS.—The receipts of printing type at British ports during January to August amounted to 29 tons (£9,591). The amount imported in the corresponding period last year was only 22 tons (£10,517) and in the preceding year (eight months) these imports stood at 20 tons (£7,366).

The little monthly blotter card sent us by the Direct Photo Engraving Co., Ltd., gives evidence of the firm's ability to produce attractive two-colour effects.

MESSRS. SAMUEL JONES AND CO., LTD., are introducing another novelty in the way of printed gummed tape. It bears the inscription "The Season's Greeting" and is decorated with a holly design of an attractive character. This novelty should find great favour during the Christmas season and nothing could be more appropriate for sealing up Christmas parcels.

MANY American paper mills have withdrawn prices and others are closing down because of the coal shortage.

Mr. George Claridge.

Many will have learned with regret of the death, at Lonavla, Bombay Presidency, in his 84th year, of Mr. George Claridge, the *doyen* of British printing and journalism in India. Born at Peckham Rye on September 17th, 1838, he went out to the *Times of India* as printer in 1863. Leaving the service of that newspaper some ten years later, he established the *English Mail* and the Caxton Printing Works in Bombay. The newspaper was issued as soon as possible after the arrival of each English mail steamer, and consisted almost entirely of "stereo" matter sent out from London and of extracts from the English newspapers brought by the mail.

Mr. W. C. Goodfellow.

THE death occurred suddenly on Thursday at Llandrindod Wells, where he had gone for a holiday, of Mr. William Cumming Goodfellow, of Cardiff, who for the past thirty years had been chief machinist for the *South Wales News*. Mr. Goodfellow, who was 56 years of age, started life as a printer at Hawick, and afterwards served for some time at Glasgow and Edinburgh.

Situations Vacant.

LONDON COUNTY COUNCIL.

REQUIRED, at the LONDON SCHOOL OF PRINTING AND KINDRED TRADES, Stamford-street, S.E.1, a WHOLE-TIME TEACHER OF GENERAL KNOWLEDGE (CRAFT and SCHOLASTIC) with a knowledge of the operations in the various branches of the printing and kindred trades and actual experience in the printing industry, together with ability to instruct apprentices in the various classes concerning the operations of their work. Applicants should also be qualified to teach English subjects, and especially must show that they are well read in English History and Literature and can teach Calculations. Salaries scale, £300—£15—£425 a year. Commencing salary according to experience and qualifications as set out in the Burnham Scale.

Preference given to candidates who have served or attempted to serve with H.M. Forces. Apply, Education Officer (T.1A), The County Hall, Westminster Bridge, S.E.1 (Stamped addressed foolscap envelope necessary) for form of particulars to be returned by 25th September, 1922. Canvassing disqualifies.

JAMES BIRD,
 Clerk of the London County Council.
 14001

FIRST-CLASS PHOTOGRAVURE ETCHER wanted, for Cylinder and Flat Work of the best quality.—Full particulars to Box 13985.

GENTLEMEN, calling on Printers and Stationers required by old-established Waste Paper Firm to influence Waste Paper Contracts with their customers; town or country.—Apply, Box 13992.

LETTERPRESS PRINTING OVERSEER wanted immediately to undertake the complete supervision of the considerable Letterpress Printing Department doing a general commercial business and specialising in the highest class of work. Applicants should have a complete knowledge of the trade, be able to estimate and to conduct the department on up-to-date and economical lines.—Apply, in writing, giving particulars as to qualifications, experience and salary required, to Chorley and Pickersgill, Ltd., The Electric Press, Cookridge-street, Leeds. 13988

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

TECHNICAL CLASS LECTURER wanted, to instruct a class of Binders' Apprentices; adequate knowledge of the Binding Trade and Allied Subjects; two hours weekly during morning or afternoon.—Box 13987.

Situations Wanted.

BUYER, desires change; intimate knowledge Paper Market; five years Buying experience all classes Paper, Wrappings, Printings, Boards, etc.; used to controlling staff; excellent references; Edinburgh and Glasgow district preferred.—Box 14002

LONDON TRAVELLER, experienced, well introduced, Print and Manufacturing Stationery, desires post with firm of good standing.—Box 13991.

MONOTYPE (D) KEYBOARD OP. (ex., n.s.) seeks perm.; low wage; clean setting.—Box 13986.

PRINTERS' WAREHOUSE OVERSEER desires berth in Printers or Wholesale Stationers; excellent knowledge of all classes of Paper, Buying, Estimating, etc.—Cribb, 17, Farlton-road, S.W.18. 13984

WORKS or GENERAL OVERSEER (disengaged); all-round knowledge; reliable; estimating and costs.—79, Topsham-road, S.W.17. 13990

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Machinery for Sale.

BREHMER and other WIRE STITCHERS, various models, including 4's, 4A's and Double-headed; guaranteed.—Box 13995.

BREHMER BOOK SEWING MACHINE, for Letterpress work, distance between stitches, also length of stitches—adjustable according to size of Books; machine to take any size of Books up to 14-in. long and 9½-in. wide; machine for Power.—Box 13996.

DOUBLE-HEADED WIRE STAPLING MACHINE, for Wooden Boxes, from 2-in. to 12-in. in height; fitted with Two Heads; adjustable from 2½-in. up to 8½-in. apart; Adjustable Iron Table; for Power or Treadle; latest construction; absolutely new.—Box 13997.

NO. 4 BREHMER WIRE STITCHING MACHINE; Power only; will stitch ½-in.—Box 13998.

SMYTH-HORNE No. 3 BOOK SEWER for sale; can be seen working any time.—Box 13994.

SMYTH-HORNE, LTD.,
 1-3, Baldwin's-place,
 Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Patents, etc.

An Income for an Idea.

IF you have a Patent to protect or sell throughout the world, a new commercial project to present, we, as old-established practical agents with a world-wide organisation behind us, will advise you, market your patent universally and ensure you an adequate reward for your industry and energy.—INTER, OMNIUM (ENGLAND), LTD., 25, Victoria-street-S.W.1. 13989

Miscellaneous.

COLONIAL NEWSPAPER CUTTINGS, dealing with the Paper, Printing, Stationery and Allied Trades, are wanted by Advertiser.—Communicate, stating terms, to Box 13882.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

 Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, SEPTEMBER 21, 1922.

Printing Trade Stabilisation.

WITH the important question of wages nearing complete settlement in the printing industry, the outlook is bright for a period of more stable conditions, and consequently firmer and more confident trade. The few unions which have not yet agreed to revision of wage rates are arranging to meet the employers in the matter, and it is to be hoped that quick and reasonable settlements may be reached in all cases and the way thus opened to a steady recovery of business throughout the industry. The set-back caused by the recent stoppage is seen to have been a serious matter, and the best efforts of every member of the trade should be exerted to regain the ground lost. One cannot but feel that our trade organisation is far from perfect in view of the fact that such a stoppage was allowed to occur and to inflict so much injury upon the whole industry, and to so little purpose. Cannot the Joint Industrial Council extend its good offices in some way, so as to prevent the repetition of such a disaster in future? We hear there is some likelihood of a proposition being put forward at the next meeting of the J.I.C.—on October 11th—with a view to giving the Council greater powers in the direction of preventing strikes or lock-outs. If a satisfactory modification of the J.I.C. constitution could be agreed upon, this would surely be to the great advantage of all parties concerned.

Printers' Paper-Handling.

THE cost of handling paper is estimated by the Master Printers' Federation to be in the region of 20 per cent. on cost. That is to say, if a ream of paper costing 30s. is given out for an order, it must be subject to another 6s. in charging out before profit is added; and assuming the latter to be in the region of 10 per cent. clear, the customer will ultimately pay £2 for the ream, apart from whatever the printing of it may cost. A watering at the mouth of many paper merchants comes readily to the imagination. Therein lies the danger of a bold press statement, once again proving the necessity of a full knowledge of facts

before any judgment is made. In the first place the 20 per cent. factor is an average or approximation of the expense entailed in buying, storing and handling paper for printing purposes. It is right for some printers and wrong for others, because everything depends upon the value of consumption of paper in comparison with labour. If business is slack, there are practically the same expenses to be recovered on a low total consumption as there would be for double the turnover. As against the paper merchant, the printer's paper stock must carry little less expense for a £5,000 consumption than the former would incur on £50,000. It is not merely a case of handling paper, rather it is a question of selling paper with printing on it, and it is in selling the combination that expense accrues. If an order of £50 is made up of £30 worth of labour and £20 of paper, there is obviously a big slice of administrative or overhead cost to be recovered on the £20 part of the order.

* * *

Paper Imports—Big Increases All Round.

IMPORTS of paper and cardboard into the United Kingdom last month reached the substantial total of 1,133,168 cwts., an increase over the corresponding month of last year of 436,865 cwts., or 62.7 per cent., and an advance on August, 1920, of 87,699 cwts., or 7.1 per cent. Arrivals of printings and writings in large sheets, comprising by far the largest item on the list, amounted to 420,262 cwts., or 122,520 cwts. more than in August last year. Under this heading Canada is responsible for 83,560 cwts. Last year, under the old classification, the entry is blank, but 3,934 cwts. appeared the year before. Noteworthy increases are shown in the cases of Sweden, whose contribution (88,433 cwts.) is greater than in August last year by 31,774 cwts.; Norway (62,010 cwts.), with an increase of 26,995 cwts.; and Germany (6,049 cwts.), where the advance is 2,165 cwts. Packings and wrappings also were received in larger quantities last month, the 261,792 cwts. being an excess over the previous August of 77,053 cwts. Sweden easily takes first place among the countries of supply with 112,742 cwts., against the much lower figure of 72,799 cwts. in the corresponding month last year. Considerably increased quantities were also received from the following countries: Norway, 63,709 cwts. against 44,900 cwts.; Germany, 21,006 cwts. against 14,417 cwts.; Canada, 15,987 cwts. against only 302 cwts. Supplies from Finland show a falling off, the 19,645 cwts. comparing with 30,099 cwts. twelve months ago. Strawboard imports during the month were heavier, 333,241 cwts., marking increases of 288,784 cwts. over last year and of 149,223 cwts. on the corresponding month of 1920. The total (c.i.f.) value of the imports for the month, amounting to £1,193,843, is £67,526 (or 7.9 per cent.) higher than last year, but a decrease of £2,318,852 (66 per cent.) against the corresponding month of 1920. The total quantity of paper received during the first eight months of the year reach the figure of 6,747,209 cwts., an advance of 2,801,886 cwts. (7.1 per cent.) compared with the similar period last year, but a falling off to the extent of 2,851,580 cwts. (29.7 per cent.) on the 1920 period. The total valued during January–August (£7,663,113) represents declines of £210,546 (2.6 per cent.) compared with last year, and of £13,545,683 (63.8 per cent.) against the corresponding period two years ago.

* * *

Paper Exports Show a Big Increase.

THE figures relating to the exports of British paper and cardboard indicate that the paper-making industry, if not altogether in a prosperous condition at home, is at any rate on the right road so far as overseas trading is concerned. Last month consignments sent abroad stood at the satisfactory figure of 219,654 cwts. Not only does this quantity represent an excess of 60,040 cwts. over the average for the first seven months of the year,

but it is an advance of no less than 134,697 cwts., or 158.5 per cent. on the corresponding month of last year. Even when the same month of the boom year of 1920 is considered, an increase is shown of 22,141, or 11.2 per cent. The most noteworthy increase is in printings, the August total of 136,018 cwts. (representing 61.9 per cent. of the total), marking an increase of 95,157 cwts. over the corresponding month last year. Of this British paper, 98,868 cwts. were sent to colonial possessions, and 37,150 cwts. to foreign countries. Australia is again prominent in the list, her share amounting to no less than 56,147 cwts., nearly four times the 14,457 cwts. of last year. Another satisfactory feature is the further improvement shown in the markets of all the other British Colonies, especially British India, which alone took 17,810 cwts., against 8,163 cwts. in August, 1921. Amongst foreign countries, France similarly increased her demands from 307 cwts. to 8,509 cwts. Exports of packings and wrappings (30,313 cwts., or 13.8 per cent. of the total) showed the appreciable increase of 20,033 cwts. over August last year, and exceeded the 1920 figure by close upon 10,000 cwts. Writing paper in large sheets, which is an important item of British manufacture, was exported last month to the extent of 14,210 cwts. (6.4 per cent. of the total), an increase on the previous year of 5,986 cwts. Here again Australia occupies the premier position, her orders amounting to 5,765 cwts., an increase of 3,490 cwts. While decreased quantities are notified in the demands of British India and the Straits Settlements, increased supplies were sent to British South Africa, Ceylon, New Zealand and Canada. The total quantity of paper and cardboard sent overseas during the first eight months represented 1,315,952 cwts., an advance compared with the corresponding period of last year of 383,772 (41.1 per cent.) and a decline of 61,869 (4.4 per cent.) against the 1920 period. The (f.o.b.) value of the eight months' exports (£4,076,557) is a decrease of £1,523,105 (27.1 per cent.) compared with last year and of £2,806,940 (40.7 per cent.) against the corresponding period of 1920.

Caxton Convalescent Home.

Arrangements are well in hand for the fifth annual afternoon concert, on behalf of the building fund of the above institution, at the Central Hall, Westminster, S.W., on Saturday, October 21st. As usual, a fine musical and instrumental programme of music and song will be provided. Tickets can be obtained of the hon. secretaries, Messrs. G. F. Chapman and W. F. France, at the office, 3, Cursitor-street, E.C.4.

The annual meeting of the South London Caxton Musical Society was held on September 16th, when the balance-sheet and report of last season's work was presented. A sum of £150 has been paid to the Caxton Home, towards the reduction of the building debt, and a substantial amount set aside for the provision of new entrance gates at the institution. Designs and estimates for these were submitted, and those of Messrs. Strange and Sons, of Tunbridge Wells, were accepted. The 1922-23 season opens on Saturday, October 14th, at the London and Brighton Hotel, Queen's-road, Peckham, when old and new friends will be welcomed.

ENCOURAGING EFFICIENT WORKERS.—Suggestion schemes in factories were discussed by Mr. Gerald B. Lloyd, of Morland and Impey, Ltd., Birmingham, before the third annual lecture conference at Balliol College, Oxford, organised by the Industrial Welfare Society, on Saturday. Large numbers of firms offer prizes to their employees who make suggestions which conduce to the increased efficiency of the business. The range of subjects, said Mr. Lloyd, should be wide and successful suggesters amply rewarded, even for trifling ideas. Decisions with reasons should be given speedily and with full publicity, but the names of the unsuccessful should not be divulged.

Personal.

THE King of Italy has bought at Venice International Art Exhibition "Above the Furnaces," a lithograph by Mr. Joseph Pennell.

THE Duke of York, who is president of the Industrial Welfare Society, sent a message to the Society's annual conference which opened at Oxford on Friday, stating: "It is surely a hopeful sign that we in this country are giving heed to those many vital matters which are concerned with the human rather than the mechanical side of industry."

LADY HULTON has kindly consented to occupy the chair at the 28th annual dinner organised by the Readers' Pensions Committee in aid of pensions for printers' readers and their widows, to be held in the Venetian Chamber of the Holborn Restaurant, on Saturday, October 21st.

LORD BEAVERBROOK having arrived in Greece from Constantinople, cabled from Athens to the *Sunday Express* a sensational description of the Greek rout, and the scenes in the Greek capital.

LORD MORRIS has invited Mr. R. A. Austen-Leigh (president of the Federation of Master Printers) to serve on the committee of the British Empire Exhibition, to be held at Wembley Park in 1924. Mr. Austen-Leigh's assistance in connection with the printing exhibits will be especially useful.

GENERAL W. WRIGHT BEMROSE and other prominent printers are also being invited to serve on the same committee.

MR. J. C. COPPOCK (vice-president of the Federation of Master Printers) and Mr. A. E. Goodwin (secretary) expect to attend the quarterly meeting for combined business and recreation which the Lancashire and Cheshire Alliance of the Federation has arranged for October 5-7. Representatives of the Newspaper Society are also being invited.

DR. VON SIMONS, who was for a time German Foreign Minister, has joined the staff of *La Nacion*.

MR. T. E. NAYLOR, M.P., occupied the chair at a special and largely attended conference of the London Labour Party, held on Saturday at St. George's Hall, Tottenham-court-road, to consider questions arising out of the forthcoming borough council elections. Mr. Naylor had drastic remarks to make regarding London's housing and unemployment problems.

LIEUT.-COLONEL A. H. MOODY, who has accepted an invitation to act as Mayor of Stourbridge for a second term, is the editor of the *Worcestershire and Staffordshire County Express*.

MR. J. H. THOMAS, M.P., has allocated the £2,000 awarded him as damages in the libel action against the *Communist* to the following charities: £1,200 to Derby institutions, £350 to the Newport (Mon.) Hospital, £200 each to the Orphan Fund of the Railwaymen's Union and the Russian Famine Fund, and £50 to the Industrial Orthopaedic Society.

MR. J. S. SUNDERLAND has been appointed instructor of electrotyping and stereotyping at the new Central London School of Printing. In his new capacity Mr. Sunderland undertakes his duties with the warm approval of all sections of that particular branch of the industry, where his ability as a craftsman is fully recognised.

FOUR members of the mechanical staff of *The Times*, with a combined record of service extending to nearly 200 years, have recently retired from active work. They are Mr. L. E. Masson, composing-room overseer, 48 years' service; Mr. J. Wilkinson, foundry overseer, 50 years' service; Mr. George Herbert, compositor, 51 years' service; and Mr. Arthur Dobinson, press-room, 41 years' service.

MR. CHARLES HARRIS, of the *Loughborough Echo*, has been presented by journalists in

Loughborough with a pipe and tobacco pouch on the occasion of his marriage.

MR. WILLIAM ALLAN MCWHIRTER, editor of the *Sunday Pictorial*, was, at Glasgow last week, married to Miss Margaret Williamson, youngest daughter of Mr. and Mrs. Williamson, Eastbank, Giffnock, Glasgow.

MR. LIONEL SAVORY, the president, will take the chair at the autumn dinner of the Stationers' Social Society, which will be held at the Holborn Restaurant on Friday, November 3rd.

It has also been arranged to have a social evening, and this will take place at the Stationers' Hall on Friday, November 24th.

MR. B. RUST, who has a wide experience of the paper trade, has been appointed manager of the G. S. Svensen Paper Co., Ltd., 14, New Bridge-street, London, E.C.4.

The Salon of Photography.

The art of photography has of recent years become so interwoven with that of printing that it is necessary that those connected with the latter profession should keep abreast of the proceedings of the former. Book illustration, poster work, and other items are largely indebted to photography, and the present-day advertiser uses it in making his appeals to the public more attractive. With such a close and increasing connection between the two arts, it is to be expected that such an exhibition of photographs as has been gathered together at the galleries of the Royal Society of Painters in Water Colours, 5A, Pall Mall, East, should attract the notice of the printing trade, and we can assure our readers who desire to know how photography is advancing and to see the most recent attempts at pictorialism by the masters of the craft, that a visit to this show will be of the greatest interest.

The aim of the London Salon of Photography is to exhibit only that class of work in pictorial photography in which there is distinct evidence of personal artistic feeling and execution, and a glance round the walls of the gallery shows how well the selection of subjects has been carried out. A noticeable feature is the absence of "freak" work, there being very few examples of that class hung, the majority of the pictures being good examples of serious work. The contributors to the salon hail from many countries, and besides British work there are pictures from Australia, Canada, California, New York, Buffalo, Paris, Amsterdam, and other parts. Mr. F. J. Mortimer, without examples of whose work no exhibition would be complete, has several fine pictures, most of them, as usual, being maritime subjects, such as "The Scilly Boat," a fine clear-cut study of a steamer's bows. His "Storm Clearing Off," and "In the Wake of the Boat," are also good. Another well-known worker, Mr. Ward Muir, shows good work, his "Cannon-street Station," is from a unique point of view and is very effective, as is also his "Swiss Town in Winter." Mr. N. P. Moerdyke has several good landscapes and his "Veteran of the Snows," is most striking in its composition. A French worker, L. Misonne, is noticeable for his good composition and technique, his "Approach of Winter" and "Morning Mists" are very pleasing studies. There is a considerable sprinkling of nude studies on the walls, most of them being unexceptionable in pose, but a few are of rather a daring character. A very few exhibitors have shown a striving after the bizarre and outre, among the subjects that may be classed thus are "The Conqueror," a photograph of the shadow of an equestrian statue, "The Two Masks," "Fantasy on Pierrot," and "Fruit." It may possibly be claimed that these subjects are treated in an original manner, they may be, but they certainly are not pleasing to the average eye.

The Exhibition remains open daily until October 7th, from 10 a.m. to 6 p.m.

A NOTABLE point about the American Vertical Miehle, a point of vast importance in the field of jobbing printing, is the fact that the number of copies per minute turned out exceeds what can be done by the Gammeter and other manifold machines, which have lately been to the fore in competition with the printer.

The Bookbinder.

Messrs. Bailey Brothers' Highbury Bindery.

The bookbinding establishment of Messrs. Bailey Brothers, Ltd., Ronalds-road, Highbury, stands as a memorial to the industry and enterprise of a London bookbinding apprentice, whose death, at a ripe old age only about 18 months ago, deprived the trade of one of its outstanding figures. It was in 1861, before he was out of his time, that the late Mr. Frank E. Bailey contrived, though working 64 hours a week as an apprentice, to find time to undertake bookbinding work on his own account, commencing in the humblest fashion in his home. He was not long out of his apprenticeship before he opened a little place of his own in Barbican, whence, after a stay of only six months, increasing business took him to larger premises in Seven Sisters-road, and later to still larger ones in Holloway-road. Whilst at Holloway-road he commenced the building of a yet bigger factory in Upper-street, but before this was completed his business had outgrown the capacity of the new works, and he accordingly decided upon building the present imposing factory at Ronald's road, off Holloway-road. These premises are known as Clarendon-buildings, the name being due to the firm's association with the Clarendon Press, of Oxford University, an important proportion of whose binding work for Bibles and other high-class publications is entrusted to the Highbury bindery.

It is interesting to note that in the course of its development the firm has absorbed the businesses of a number of other houses, including the Flexible Binding Co., Ltd., T. Edmunds, Thos. Yardley, G. and J. Brodie and Case and Carter, Ltd.

The Firm's Personnel.

To refer briefly to the firm's present personnel: Mr. A. M. Bailey, brother of the founder of the firm, was associated with the latter's earliest enterprises as a youth and has during recent years occupied the position of secretary. The present partners in the firm are Mr. F. E. Bailey's two sons, Messrs. F. D. and J. A. Bailey. The works manager is Mr. H. L. Dames, one of the firm's own apprentices. A notable point, by the way, about Messrs. Bailey's staff is the fact that practically all the workers have been with the firm all their lives. Mr. Harry Roberts, the 77-year-old foreman, who is another prominent figure in the establishment, worked as a youth with the founder of the firm; and the other journeymen, almost without exception, have served their apprenticeship with Bailey Brothers. Mr. Roberts has of late years been relieved of a considerable amount of foreman's responsibility by one of his own apprentices, Mr. W. Low.

Works and Equipment.

The present factory is a very substantial building, having been well designed under Mr. F. E. Bailey's personal supervision, and planned specifically for use as a bindery. It contains four extensive floors, and provides plenty of reserve space to allow for future expansion of business. Its situation is very convenient, the site being close upon an important arterial road.

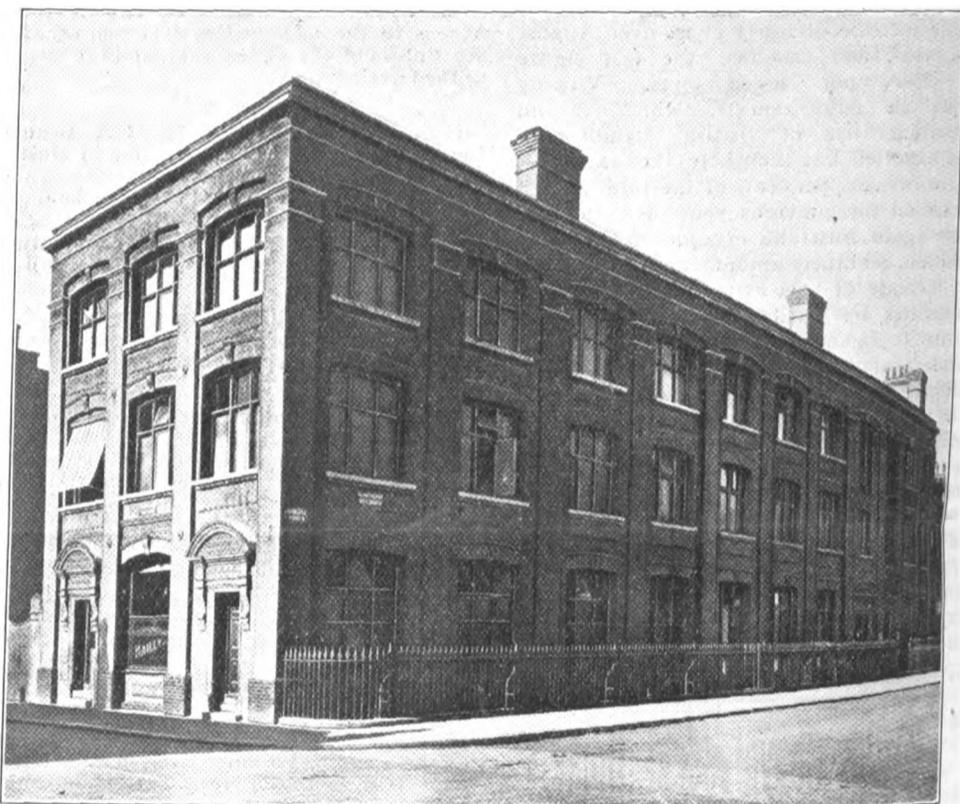

The top floor, which is especially airy and well lighted, accommodates chiefly the female workers, the principal operations performed being folding by hand and stitching by means of a battery of the well-known Smyth-Horne sewing machines.

On the floor next below one finds the greater part of the machinery, which is suitably bedded upon a concrete floor, strengthened with iron girders. The machinery is electric motor driven, and comprises a comprehensive assortment of efficient apparatus. Amongst these one notices the Smyth-Horne "Dayton" guillotine, several knocking down machines by J. Greig and Sons, of Edinburgh

(for pressing the stitched books preparatory to covering), Smyth case-making machines, Crawley rounding and backing machines, hydraulic presses for the final nipping, the Smyth cloth-cutter with guillotine (enabling

department exclusively from its own apprentices.

One cannot walk through Messrs. Bailey's factory without finding some very handsome examples of binding, there being always to

Clarendon Buildings: Bookbinding Works of Messrs. Bailey Bros., Ltd.

the roll of cloth to be cut into rectangular pieces at one operation), and the cardboard cutting machines.

Passing down to the next floor which is a little above street level, the main feature observed is the big array of blocking presses, some hand operated and some power driven. The "Beatrice" blocker is well to the fore, together with machines of other makes. Close by are stored the large numbers of brass plates for blocking, many of them very elaborate, as required for multi-colour picture covers.

Book-Edge Gilding.

One of the most interesting departments of all is found on the lowest floor—the well-lighted basement, which is not wholly below street level. This is the book-edge gilding department, a department not found in many binderies, and one that embodies a maximum of hand craftsmanship. Here, gripped tightly in a number of gilding presses are many books in the process of having the gold leaf applied to their edges, the whole of which work is done by hand. The operations comprised in this process have caused the tears and sighs of many a tender apprentice, finding his hands cut and blistered by the unaccustomed use of scraper and other tools, and his shoulder bruised through contact with the end of the burnisher. The craftsman, however, becomes hardened to these difficulties, and learns to take a pleasure in the craft, which demands a great deal of skill and dexterity. Beautiful work in all classes of book-edge gilding is done by Messrs. Bailey Brothers, and the firm takes pride in the fact that it was one of the first to introduce a book-edge gilding department, and was the first to man its gilding

he seen beautiful leather-lined yapps, providing delightful flexibility, as well as handsome bevel-boarded morocco volumes. Bindings of a very wide range, however, are undertaken, and besides specialising in devotional books—Bibles, prayer-books and the like—Messrs. Bailey Brothers do a great deal in the way of prize books for boys and girls, and other more ordinary publishers' work.

Mr. F. E. Bailey, who was active in the business right up to a week before his death, was keenly interested in the welfare of the binding trade. He was chairman of the Bookbinders' Section of the London Chamber of Commerce, and prominent in all movements for trade betterment. His sons, too, are interested in trade organisation, being members both of the Master Bookbinders' Association and of the Bookbinding Section of the London Chamber of Commerce. Mr. J. A. Bailey is also a member of the Worshipful Company of Stationers and of the City Livery Club.

PRINTED BOOKS.—The quantity of printed books exported overseas during January to August amounted to 171,487 cwts. (of the value of £1,991,807). This figure compares with 184,309 cwts. (£2,285,509) last year and 187,465 cwts. (£2,349,608) in the corresponding eight months of 1920.

THE late Mr. Andrew Meikle, of Wolverhampton, for many years editor of the *Wolverhampton Express and Star*, formerly on the staff of the *Bolton Chronicle*, subsequently editor of the *Somerset County Herald* and later of the *Warrington Examiner*, left £857.

Bookbinding Notes and News.

The State of Trade.

Trade may have improved slightly within the last few weeks, but the effect upon unemployment figures is hardly appreciable. Until very different conditions prevail there can be neither an elimination of idle time nor a return of normal profit. Large orders are exceedingly scarce, and there is a scramble for them when they appear. The anomalous conditions created by the lack of consistency in binding trade unionism are partly responsible for the price-cutting orgies which are a feature of current quoting. So long as girls are prohibited from performing certain simple operations in one town whilst in some adjacent centre they are not only allowed to participate, but actually to carry common work right through, there is no hope for escape from cut-throat competition. The man-labour shop is simply compelled to shut its eyes to actual cost facts when quoting against the female labour contingent. If the work is secured, then the men get their full union money for their labour, and the management make a loss.

Trade Union Anomalies.

There is a strong and reasonable argument for some consistent policy in regard to bookbinding operations, and with it should be coupled up the subject of the time docket. Costs and returns may more immediately and directly concern managements and proprietors, but they are such fundamental factors in the welfare and progress of any industry that any shirking of the issues connected with them cannot fail to react injuriously on both sides. The president and secretary of the Binders' Union have within the last few days gone over to the Continent to participate in an International Bookbinders' Conference. They will have an opportunity of comparing conditions, and they will, of course, find that at least one or two countries over the North Sea are running the bookbinding industry on more progressive lines than we have attained as yet. Added knowledge may give increased strength to their opinions and arguments when they return. From what we know of these two leaders of the men's union, we

believe them to be thoroughly enlightened as to the need of a more scientific, consistent and progressive policy for the sound and full development of the industry. Not all masters are equally alive to the facts of the situation, and unfortunately the majority of the rank and file care little about anything other than full work and full pay. The two outstanding problems for settlement are the questions of female labour in bookbinding and the national recognition of the costing time docket. Cannot they be amicably discussed and arranged for settlement by a mixed committee representative of all the interests concerned? A satisfactory solution of these two problems would go a long way toward removing unprofitable prices and some of the obstacles which divert orders from their natural destination. It would make the industry safer and sounder for the men employed in it.

Bookbinding Materials.

The market for bookbinding materials is in a more or less settled condition. There is now none of the constant fluctuation which made buying a hazard some months ago. The fact is welcome, if only for the reason that a depreciating stock often turns the balance between profit and loss. Even with a smaller turnover it is possible to get a balance-sheet on the right side, granted constant values in the stock-in-hand totals. It cannot be claimed that prices have now reached rockbottom, but it may be taken that they are stabilised for the winter period. Eventually they must fall lower to keep in line with the general level. Rail rates are down, coal is down and wages are on the decline. Power and rates must follow suit inevitably, and thus it will come in turn that bookbinding materials will take to lower rungs in the price ladder.

The Leather Market.

Leathers remain where they were, and for the bargain hunter there are still the special offers of cheap parcels. Running roughly over the scale, pastegrains are quoted 6½d. per sq. ft., stout glazed skivers 4½d., thin glazed skivers 4d., thin red basils 7d., stout red basils 9d., other colours 9d. to 10d., roller

basils 7d., rough basils 7d. to 9d., grained basils 9d. to 11d., rough sheep 8d., rough sheep fleashes 7d., rough moroccos 10d., rough calf 1s. 6d. and 1s. 2d. for first and seconds, fair calfs 1s. 9d. and 1s. 6d. respectively. Pigskins vary according to size and quality, but good firsts average 1s. 9d., seconds 1s. 6d., and a lower grade is obtainable at 1s. 3d. Velvet calf, grained velvet calf, and plain calf are listed at 2s. 3d. Anglos run from 1s. 6d. to 1s. 9d. per ft., H.G. goats 2s. 1d.

Other Covering Materials.

Bookcloths, buckrams and fabrics generally stand firm at the figures which have operated for the last month or two. A London house is just about to issue a new series of lined bookcloths at competitive prices. We have seen and tried the product, and can safely predict for it a successful run on the market.

Gold Leaf.

Gold leaf is being quoted from Belgium 44s. per 1,000 for 3¼ x 3¼ ins., 50s. for 3⅝ x 3⅝ ins., and 54s. for 4 x 3½ ins. English agents require a little extra, and that little is worth the saving in trouble. To-day's figures are 50s. per 1,000 for 3¼ x 3¼ ins. and 63s. for 4 x 3½ ins.

Strawboards.

Strawboards are firm, and not likely to ease this winter. Sales are reported to be good, although quantities are small. Some agents are quoting as low as £8 per ton f.o.r. up to 1½ lb. boards, but the general level is nearer £9 to £10.

Glues.

Pale Scotch glue stands at 47s. 6d. per cwt., dark quality at 45s. 6d., lower grade at 43s. 6d. and broken glue at 41s. Pure hide glue is quoted 60s., and fine square unstamped bone glue at 45s.

Loose-Leaf Books.

Thong loose-leaf ledgers were a strong feature at the Manchester Business Efficiency Exhibition. It appears as though experience is justifying the thong as the principle par excellence.

INTERNATIONAL Bookbinding Conference.

Mr. Harraway's Impressions.

As previously mentioned in our pages, the British representatives at the International Conference of Bookbinders held at Leipzig from Monday to Friday last were Mr. George Harraway and Mr. T. G. Newland, president and secretary respectively of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers. Mr. Newland, as stated last week, was present at the Trades' Union Congress at Southport and proceeded to Germany immediately afterwards. Mr. Harraway, however, was not at the Trades' Union Congress, he having to go earlier to Leipzig in order to be present at the meeting of the International Executive.

Interviewed by a representative of the *British and Colonial Printer and Stationer* Mr. Harraway stated that 15 countries were represented at the Conference, there being 35 delegates in all. The object of the Conference was the levelling up of conditions in the bookbinding industries throughout the European countries and the taking of any joint action that might be practicable for the benefit of the workpeople employed. Mr. Harraway expressed the opinion that the International Conference had already proved of great utility, its previous activities having been successful in abolishing home work throughout the Continent, also in establishing uniformity of hours, there being now no country in Europe whose bindery workers work more than 48 hours a week. Mr. Harraway regards the Conference as having been a very satisfactory one, the spirit of co-operation displayed being quite equal to what has been manifested at previous meetings.

Problem of the Woman Worker.

The Conference discussed several differences in labour conditions obtaining in various

countries. One of the most important was the question of woman labour, women being employed in some countries on work which they would not be allowed to touch in England. This matter was discussed at considerable length, and a resolution was finally passed that the fullest details regarding the operations performed by women and the rates of remuneration in the various countries be supplied to the International Secretary, who was instructed to submit the information to the next meeting of the Executive, so that a resolution making for uniformity of practice be presented to the next Conference.

Asked whether he had found that binderies on the Continent were ahead of the British trade in the matter of accurate time recording on operations performed, Mr. Harraway replied that he had not. Visiting one of the largest bookbinding establishments in Germany, that of the Leipzig Bookbinding Co., employing about 1,400 hands, he raised this question, but was informed that beyond the workpeople ringing in and ringing out on entering and leaving the factory, there was no check upon their time. Mr. Harraway found, however, that the proportion of the overseers was greater than in this country, though he found no trace of undue pressure being applied to the workpeople.

German Workers' Status.

With regard to the status of bindery workers in Germany, Mr. Harraway found that the depreciated currency is not fully compensated for by increased wages, so that the workers are not so well off as before the war. There is, however, no unemployment; many firms are so full up with work that no further orders can be accepted. This lack of unemployment is, of course, a factor which makes the general position of the workpeople compare better with conditions over here than might at first sight be apparent. An interesting fact with regard to Germany's busy factories was that Mr. Harraway did not find any bookbinding orders being executed for this country, though work was being done for practically all other countries of Europe. He was assured that English orders in the bookbinding line were

practically unknown in Germany.

The British delegates were very favourably impressed by the excellent provisions made by German bindery firms for the health, exercise and convenience of their workers. Welfare arrangements were found to be generally extremely satisfactory. The goodwill shown by their German trade union colleagues was another very happy feature, the British delegates being met with friendly and appreciative fellowship, which is a good augury for useful co-operation in the future.

Oilcloth for Bindery Tables.

It is always a problem in the bindery as to the best method of keeping the tops of the work-tables perfectly clean. In many plants it is the custom to cover the tops of the tables with heavy-weight manila wrapping paper, and in other shops sheets of cardboard are utilised for this same purpose, but both the paper and cardboard soon become soiled and torn, making it necessary to have it renewed frequently.

Tackling this problem in the *American Printer*, Mr. Robert F. Salade writes that in one bindery, at least, this problem has been solved by the simple process of having the tops of all the work-tables covered with white oilcloth, the same old-fashioned kind with which grandmother used to cover the kitchen table. In the bindery referred to the highest grades of book work, *de luxe* catalogues, art booklets, etc., are being produced—work that often involves expensive hand-made papers which are easily soiled—and the oilcloth-covered tables make it possible to handle this variety of product to the best advantage.

Every day the tops of the tables are washed with soap and water to remove traces of dust and dirt left by the work of the previous day. The white oilcloth is smoothly attached to the surface of wooden work tables by means of brass-headed upholstery tacks inserted in the edges of the tables.

DIVIDENDS AND REPORTS.

WINTERBOTTOM BOOK CLOTH.—Directors of this Manchester company of book cloth manufacturers, bleachers, dyers, etc., announce interim dividend of 5s. per share, free of tax, on ordinary shares, against 4s. per share a year ago.

MILLAR AND LANG.—Report of Millar and Lang for year ended March 1st, 1922, states that accounts show an adverse result, due to exceptional difficulties, such as the general slump in trade, the coal strike and increased postages. The last-named seriously affected the turnover in post cards. An improvement is announced in the present year's sales of post cards consequent upon the reduction in postages. The accounts show loss for year of £5,100, and, after deducting balance brought in, £2,724, there is an adverse balance of £2,376.

RAFAEL TUCK AND SONS.—Report for the year ended April 30th, 1922, states that the trading, after providing for bad and doubtful debts, depreciation, income tax and all expenses, has resulted in a profit of £48,163, from which has to be deducted for directors' and management remuneration £6,027, leaving £42,136, plus £5,137 brought in. Directors recommend a final dividend on ordinary shares at 12 per cent. per annum, making 10 per cent. for year, transferring to special dividend reserve fund £2,795, and carrying forward £5,727. Reserve accounts will then stand as follows:—Capital reserve £8,845, special dividend reserve £54,322, and general reserve £35,042. The above report was adopted at the 21st annual ordinary general meeting of Raphael Tuck and Sons, Ltd., held on Tuesday. Sir Adolph Tuck, Bart., the chairman of the company, presided, and said it was certain that the standing of the company had never been higher, nor the number of its regular customers greater. Given but more normal conditions of trade, its net earning power was bound to be considerably augmented. He emphasised the need that the Postmaster-General should allow messages on picture postcards to consist of any five words instead of words only of courtesy or of a conventional character. He described at length the firm's big Postage Prize Competition, of which particulars have already been given in our pages.

NEW COMPANIES.

DAVIES AND ROYLE, LTD.—Capital £50,000 in £1 shares (40,000 6 per cent. cumulative preference and 10,000 ordinary); to adopt an agreement with T. E. Royle and W. A. Dewsnap, and to carry on the business of paper agents, makers and dealers, stationers, prin-

ters, lithographers, publishers, booksellers, etc. Private company. First directors: T. E. Royle, W. A. Dewsnap and J. Mutimer. Registered office: 7, Old Swan-lane, E.C.

A. QUICK AND CO., LTD.—Capital £2,500 in £1 shares; to acquire the business of letterpress and general printers, publishers, etc., carried on at Jackson-road, Clacton-on-Sea, Essex, as "A. Quick and Co.," including their copyright interests in the Times series of East Essex newspapers. Private company. First directors: A. Quick, Alice M. Quick and P. G. Turner. Registered office: Times Office, Jackson-road, Clacton-on-Sea.

W. LOOKER, LTD.—Capital £1,000 in £1 shares; to acquire the business of a stationer, printer, bookseller, diesinker, engraver and dealer in fancy goods, carried on by W. Looker at 8, Bridge-street, Bath. Private company. First directors: A. Wright, E. W. Lawrence and A. W. Pike. Registered office: 8, Bridge-street, Bath.

W. B. GOULD, LTD.—Capital £2,000 in 1,999 7 per cent. cumulative preference shares of £1 each and 20 ordinary shares of 1s. each; to acquire the business of a retail stationer, bookseller, newsagent, printer and circulating library carried on by W. B. Gould at 298, Brockley-road, Brockley, S.E., as "W. B. Gould" and "Gould's Library." Private company. First directors: W. B. Gould, Clara E. Gould and F. A. Bell. Registered office: 298, Brockley-road, Brockley, S.E.

DUFF STEWART AND CO., LTD.—Capital £500 in £1 shares; to acquire the business of Duff Stewart and Co. carried on by J. A. Brown at 51, High-street, Bloomsbury, W.C., and to carry on the business of music publishers, sellers, printers and importers, musicians' and printers' agents, etc. Private company. First directors: L. J. G. Marsh and J. A. Brown. Registered office: 51, High-street, Bloomsbury, W.C.2.

FARRAND AND CO., LTD.—Capital £2,000 in £1 shares; advertising agents, designers of pictorial and display advertisements, and sketches and drawings for insertion in trade and other papers, etc. Private company. Subscribers: H. M. Farrand and H. L. Wigley. First directors: H. M. Farrand, A. Metcalfe and J. Levy. Registered office: 27, King-street, Manchester.

G. ALDER AND CO., LTD.—Capital £1,000 in £1 shares; to take over the business of a paper agent and general merchant carried on by G. Alder at 60, St. John-street, Clerkenwell, E.C., as "G. Alder and Co." Private company. First directors: G. Alder and B. A. A. Thomas. Registered office: 60, St. John-street, Clerkenwell, E.C.

H. N. APPLEBY, LTD.—Capital £5,000, in £1 shares; general publicity specialists and designers, bill posters and advertising contractors, etc. Private company. Subscribers: M. G. May and R. Keedwell. Subscribers appoint first directors. Registered office: 43, Penarth-road, Cardiff.

MOORGATE STUDIO, LTD.—Capital £100, in £1 shares; advertising contractors and agents, designers of advertisements, manufacturers of and dealers in and agents for the sale of advertisement novelties of all kinds, etc. Private company. Subscribers: S. Coyne and Mrs. L. Coyne. First directors: Julius Frenkal, A. J. Cooper, Mrs. L. Coyne and S. Coyne. Registered office: 16, London-wall, E.C.2.

PRESS CAPS, LTD.—Capital £65,000, in £1 shares; to adopt an agreement with A. A. D. Lang, and to carry on the business of manufacturers of and wholesale and retail dealers in boxes and containers of all kinds, and covers therefor, manufacturers of and dealers in metal plate and articles made therefrom, box and case makers, metal plate printers and embossers, label and carton makers, etc. First directors: S. Machin, F. S. E. Drury, M. Wormser, H. N. Turner and A. A. D. Lang. Registered office: 20, Eastcheap, E.C.3.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

MACRAU, LTD. (printers, etc., London).—Particulars filed of £2,500 debentures authorised August 23rd, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; the whole amount being now issued.

THOS. BRAKELL, LTD. (printers, stationers etc.).—Mortgage dated August 22nd, 1922, to secure £7,000, charged on 56 and 58, Stanley-street, Liverpool. Holders: E. A. Brakell, 58, Stanley-street, Liverpool, and others.

CO-OPERATIVE PRINTING SUPPLY, LTD. (London).—Particulars filed of £1,500 debentures authorised September 5th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; the whole amount being now issued.

F. H. CASTLE AND CO., LTD. (printers, publishers, stationers, etc., Thame, Oxon).—Mortgage debenture dated August 19th, 1922, to secure £600, charged on the company's undertaking and property, including uncalled capital. Holder: J. E. Filleul, Narkunda, Pontac, Jersey, Channel Islands.

ALDINE PUBLISHING CO., LTD.—Satisfaction to the extent of £1,000 on August 30th, 1922, of second debentures dated March 27th, 1907, securing £10,000. (£1,000 remains outstanding).

CAXTON PUBLISHING CO., LTD.—Satisfaction to the extent of £800 on August 1st, 1922, of debentures dated May 3rd, 1910, securing £40,000.

IRISH PAPER MILLS CO., LTD. (office, London).—Satisfaction to the extent of £1,800 on August 21st, 1922, of debentures dated May 25th, 1921, securing £150,000.

A. TURNBULL AND CO., LTD. (dealers in fancy goods, stationery, etc., Newcastle-on-Tyne).—Debenture dated August 24th, 1922, to secure £100, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: B. Gill, 26, Northumberland-street, Newcastle-on-Tyne.

NORTHAMPTON PRESS, LTD.—Mortgage debenture dated August 23rd, 1922, to secure £700; charged on the company's undertaking and property, present and future, including uncalled capital. Holder: A. Page, 30, Clephane-road, Canonbury, N.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

G. T. Todd and H. Todd, printers, stationers and newsagents, 46, Strand-street, and 47, King-street, Whitehaven, Cumberland, under the style of G. and H. Todd.

W. J. Clark, W. E. Thrupp, and H. Sheppick, printers, at Haslemere, Sutton Court-road, Sutton, Surrey, under the style of Clark and Thrupp.

C. O. Tipton, H. Tipton, and A. Tipton, box manufacturers, at Hounds Gate, Nottingham, under the style of H. Tipton and Sons.

BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

Marshall Mackay Co., The, 61, Berners-street, London, advertising specialists.

Dickins, L. E., residing in apartments at Belmont, Lichfield-road, Four Oaks, Warwick, and carrying on business at 40, Bennett's-hill, Birmingham, under the style of The Industrial Publicity Bureau, printer and publisher.

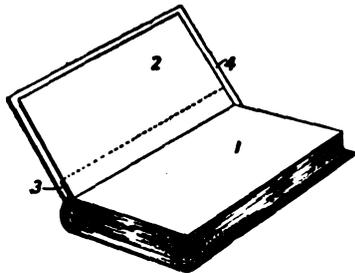

Williams, W., the Arcade, Ammanford, Carmarthenshire, stationer.

Mellor, T., 142, Osmaston-road, Derby, compositor.

New Inventions.

Binding Books.

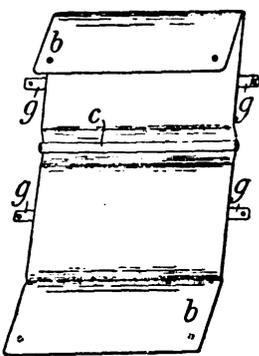

Mr. H. Taylor has patented an invention that relates to binding books by applying adhesive and one or more binding or lining strips to the back edges of the leaves, or folded sections sewn or stitched together, and then attaching the cover to the strips by adhesive, the separate strips are replaced by a single composite strip, one part of which is impregnated with adhesive; after cementing the impregnated side of this composite strip to the back edges of the leaves and folding its overhanging edges down on to the end

papers of the book, adhesive is applied to the end papers and to the overhanging edges of the strip, and the cover is pressed thereon. In the form shown, the composite strip 3 comprises gauze or similar material impregnated with glue or other adhesive and covered with thin paper, the gauze side of the strip 3 being attached to the back edges of the leaves 1, and its overhanging edges being secured between the end papers 2 and cover 4.

Loose Covers for Books.

A loose cover for protecting the binding of a book, as patented by Mr. R. Leighton, is provided with a central fastening member which is detachable at one or both ends, so that it can be passed down the hollow of the book between the shelf back of the case and

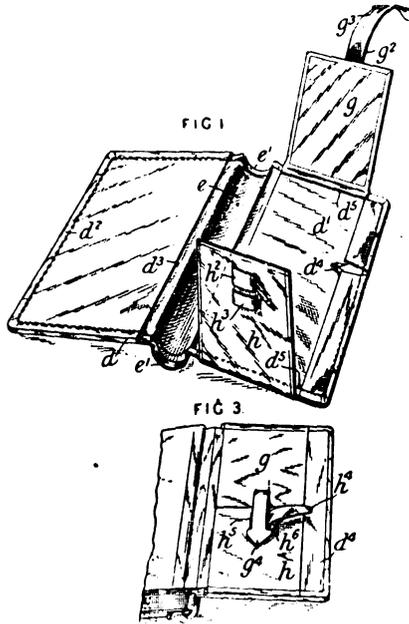

the back of the sections. The fastening member *c* consists of a strip of stiff cardboard, spring metal covered with binding cloth, etc., and has, preferably at both ends, flexible extensions which are secured to the back of the cover by press buttons, etc. Where the fastening members must be positioned between the pages of the book, two or more members of tape or ribbon may be used. The cover may have extensions *b*, which are folded over the book covers and secured by tabs *g* and press buttons, etc.

Detachable Book Covers.

A detachable cover for books consists of two boards *d*, *d*¹ connected by a perfectly rigid hinge piece *e*, and surrounded by marginal ledges *d*², *e*¹, *d*³, the board *d* being provided with a deep pocket *d*³ adapted to house one side of the book cover, whilst the other board *d*¹ is provided with a shallow pocket *d*⁴ and two hinged flaps *g*, *h* adapted to house and secure the other side of the book cover. When the cover has been inserted in the pockets, the flaps *g*, *h* are folded together and secured by the strap *g* and a loop or loops *h*², *h*³. In the modification shown in Fig. 3, the

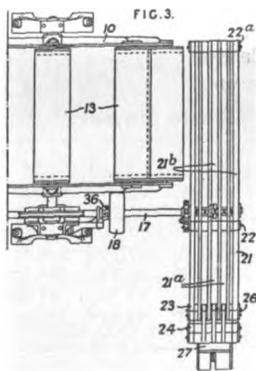

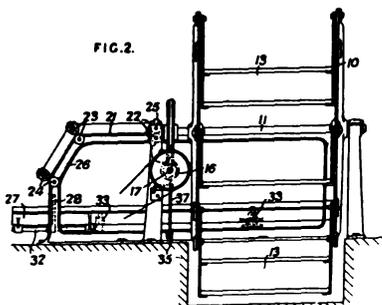

pocket *d*⁴ is replaced by a third flap *d*⁴, which is folded over the cover beneath the flaps *g*, *h*, which in this case are secured by the straps *g*⁴, *h*⁴, the latter strap being passed over the former and tucked into the slit *h*⁵. The straps

*g*², Fig. 1, and *h*⁴, Fig. 3, are provided with tabs *g*³, *h*³, respectively, to facilitate their disengagement. The invention is patented by Messrs. R. H. Bond, E. M. Bond, H. M. Bond and F. M. Bond (trading as Shaw and Sons) and F. E. T. Fox.

Sheet Gathering and Collating.

Mr. G. W. Young has patented an invention that relates to sheet gathering and collating apparatus comprising a revoluble wheel on which are suspended sheet carriers, a conveyer and a receiving hopper or trough are arranged

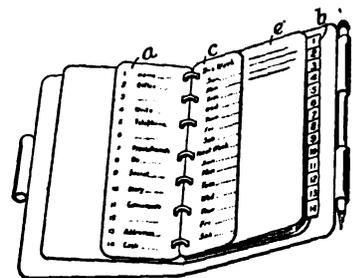

at each side of the wheel. Sheet carriers 13 are shown suspended on a wheel 10 consisting of side plates secured to a shaft 11, which is driven by a worm 16 on a shaft 17. At each side of the wheel are arranged a conveyer 21 and a V-trough 27, the sheets being taken from the carriers and placed on the conveyers by the operator, and delivered by the con-

veyers to the hoppers. The conveyers each consist of two endless bands 21^a, 21^b, which are inclined downwards at the delivery end 26, the lower band 21^b passing over rollers 22^a, 22, 23, 24, and the upper band 21^a, running in contact with the lower band and passing over rollers 22, 23, 24. The conveyers are provided with disappearing stops for straightening the sheets. The trough 27 is provided with a pusher 28 for pushing the sheets beyond one or more spring fingers and disappearing stops. The pusher consists of a plate which can slide on a rod 32, and is connected to a cam-operated lever. The hopper is carried by brackets 33, adjustable by means of screws. A clutch 36 in the driving pulley 18 is connected by a lever 37 and a link 35 to a pedal. Fingers for turning the sheets into the vertical position are arranged below the ends 26 of the conveyers. The carriers are adjustable in width, and are divided by partitions which may be adjustable by screws. The rollers 22 are geared to the shaft 17, and the top rollers 22, 23, 24 are mounted in floating bearings 25. The sheets are stacked on platforms arranged at each side of the wheel.

Diaries and Reference Books.

Mr. D. S. Evans has patented a note book, diary, reference book, etc., which is provided with an index slip or sheet *a* of less width than the pages, and having near its left hand margin a vertical column of numbers corres-

ponding with numbered index tabs *b* on the pages, and with a second narrow slip or sheet *c* marked with the days of the week to serve as a memorandum sheet. An additional page *e* may be provided on which references to the index numbers can be entered. The slips *a*, *c* and the additional page *e* may be of washable material such as celluloid or slate.

Drawings on Lithographic Stones.

Mr. A. Burkart has invented a process for preparing drawings or other designs on lithographic stones, which consists in drawing the design on transparent paper and from a negative obtained therefrom producing a positive on a gelatine film which is then imbedded and an imprint obtained therefrom upon a suitable sheet from which the imprint is transferred by pressure on to the stone. In one manner of carrying out the process, the design is obtained on the gelatine in the known way by means of an unfixed blue print obtained from the original drawing. A celluloid or other preferably transparent sheet is used to transfer the ink from the film to the stone which is finished off in the usual way.

LETTER-STAMPING MACHINE.—A machine which will save private firms the trouble of affixing postage stamps to their letters was put into operation for the first time in England at the offices of the Prudential Assurance Co. in London. This machine stamps upon the letters an impression which takes the place of a postage stamp. It can be worked only under license from the Postmaster-General, whose rights are very fully guarded by the very nature of the machine. The apparatus is known as the "Gitney-Bowes Postage Meter Machine," and is manufactured and marketed by the Postage Meters and Machines Co., of 37 and 38, Mitre-street, E.C. 3.

Empire Trade.

Economic Conditions Make it Essential.

Strong arguments are being put forward in favour of Empire trade, and economic conditions are emphasising the need of such an outlet for British industry. The Association of British Chambers of Commerce at their last meeting gave the question some consideration, and passed a resolution emphasising the view that the continued development of the resources of the Empire by every possible means is absolutely essential to its prosperity and safety. The need for an Imperial Conference to concert further measures to meet the vital necessities of the present situation was also urged.

The importance of such a conference would be immense, for it would, either directly or indirectly, have an influence upon the marketing of British goods.

Germany and the World's Markets.

Merchants and manufacturers in this country are likely to find themselves faced with severe competition from their old rival Germany, who, besides claiming a footing in our overseas dominions, is very advantageously placed in regard to Russia. This aspect of the question is touched upon by a French gentleman who holds an important financial post in the occupied portions of Germany. In a letter to the *Daily Telegraph* he describes how Germany is re-equipping herself industrially. "A little longer," he says, "and England will find herself confronted with a rival capable of supplying the markets of the world."

The French gentleman adds: "Germany will pay her working class with the depreciated mark, while England pays hers in pounds sterling. Naturally, the Germans can produce at a lower price. Placed at the very

gates of Russia, Germany has a client there in need of everything, capable of absorbing the formidable amount of her production. England and France, who had hoped to send their wares to the immense Russian market, will find themselves up against a rival who defies all competition. Germany, scarcely taxed at all, enjoying her depreciated mark, will continue to produce illimitably while English and French manufacturers succumb beneath the burden of intolerable taxation."

The writer goes on to urge the necessity of hampering German industry. This is not a line of argument which appeals to the British instinct. Rather should we win our way by the excellence of our wares and the efficiency of our methods. And we have as a good start the vast resources of the Colonies to cater for.

Imperial Treasury Bills.

In this connection an excellent suggestion is made by Mr. J. F. Darling in *The Times* (Trade Supplement) for simplifying the financial arrangements. According to published current quotations, the Australian banks in London are sellers of demand drafts on Australia and New Zealand at par, and buyers of three months bills on these countries at 96. This is equivalent to 16 per cent. per annum. In Australia or New Zealand they are sellers of demand drafts on London at 100 $\frac{1}{2}$, and buyers of three months bills on London at 97 $\frac{1}{2}$, which is equal to 12 per cent. per annum. For South Africa the differences work out at 13 $\frac{1}{2}$ and 12 per cent. per annum respectively. So far as Egypt is concerned, however, the exchange, which since the early days of the war has been fixed at 97 $\frac{1}{2}$, does not require to enter into the calculation, and the writer understands that Egyptian bills are negotiated on a purely interest basis, which at present is 5 per cent. per annum.

Accordingly, Mr. Darling suggests the issue of Imperial Treasury bills, in which each country in the Empire could have a share, as a basis for the currencies of the Empire, and as even more suited for this purpose than a purely British Treasury bill. There could

then be no such anomaly as 16 per cent. or 12 per cent. in one part of the Empire and 5 per cent. in another. The finance of trade, not only between the Mother Country and the Dominions, but between any one country and any other country in the Empire, would then be on a common basis, and the rate would tend to approximate to the competitive rate for Imperial Treasury bills, for on that it would be based.

Some easing and stabilising of the financial transactions would help to encourage trading with the Old Country, with the added advantages of reliability in regard to goods and service.

It would not require exceptional incentives to promote inter-imperial trading where it can be undertaken. Support is already assured from Australia and Canada. According to the *Toronto Mail and Empire* the time is ripe for British encouragement of Empire trade.

Australian Paper Preference.

Consumers of news-print in Australia are taking exception to the way the preference of £3 per ton which British news-print enjoyed is working out. For a time, at all events, Canadian and Norwegian paper, which had to bear the import duty of £3, was obtained at a cheaper landed rate than the duty free British article. Later some modification in the price of the United Kingdom goods was made; but even then, it is complained, not even half the advantage of the £3 preference was received by the consumer. It is suggested that the lower cost of British news-print is due to easier freight rates, which formerly placed goods from the Mother Country at a distinct disadvantage.

To encourage Imperial trading, however, careful attention must be paid to the requirements of customers in regard to the characteristics of paper as well as in the matter of price. It is well known that our Canadian friends are anxious to retain or to recover their place in the Australian market, and the same applies to Scandinavian paper interests. Competition, therefore, even with the preference granted to British "news," is likely to be keen. However, local representatives of United Kingdom houses and the principals at home may be relied upon to do all that is possible to suit the needs of paper users in the Commonwealth.

PITMAN'S SHORTHAND SUCCESSSES.—News has recently reached this country of the brilliant triumph of Pitman writers in open championship contests held under the auspices of the National Shorthand Reporters' Association at New London, Connecticut, in America. Mr. Nathan Behrin, the world's fastest shorthand writer, qualified in the 200, 240, and 280 words a minute tests, each of five minutes' duration, with the remarkable average of 99 $\frac{1}{2}$ per cent. accuracy, and was awarded the association's shorthand championship trophy.

"CATALOG" appears to be the latest Americanese for "small catalogue." The word is used by a Boston bookseller of his price-list.

Paper and Print Legibility.

In the note on the legibility of printed matter which Mr. L. A. Legros prepared for the Government Committee on Type Faces, there appear the following three references to the part which paper plays in the matter:—

The Quality of the Paper.

The quality of the paper, if hard and highly surfaced, tends to increase such defects as those mentioned due to the variation in the height of the type, and it therefore has an influence on the selection of the most suitable type faces for legibility.

The quality of the paper, the class of backing used; and the pressure to which the printing surface is subjected are closely related to each other.

Printing on the early rag papers of soft texture caused an impression of appreciable depth. The inking of the surface by hand with the mushroom-shaped balls of the period caused the inclined boundaries of the type face also to be inked, with the result that the actual inked area of the paper was appreciably greater than that which would have been obtained from a smoke print on hard-surfaced paper; it was, in fact, more nearly a parallel to the outline of the letter, the thickness of the strokes or lines being increased on the sides and in the counters. The punch cutter allowed for this effect, with the result that the old style faces of the eighteenth century appear very light when printed under the present conditions on surfaced paper, whereas the modern faces in which little or no allowance is made for the spreading of the ink appear heavier.

The Colour of the Paper.

The colour of the paper is of great importance in obtaining the necessary contrast between ink and paper. Generally, the other requirements are that the paper shall not be so rough as to obtain a ragged impression of the type, and it should not be so smooth as to reflect a definite beam of light. For ordinary printing in black ink the paper should be white or only very slightly coloured; for covers and advertisements the light green shade selected for the *Westminster Gazette* by the late Sir George Newnes, after much consultation, is generally found most restful for the eyes; the same colour is used commonly for green rooms of theatres and for the Post Office sorting vans on trains.

The Light Reflecting Capacity of the Paper.

Highly surfaced papers of the varieties known as "art" paper and "semi-art" paper, reflect light to a very great extent, and thereby diminish the contrast between the black and white of the usual printed surface. The use of these papers is usually necessary where process blocks have to be printed, but these do not enter largely into Government printing, and when they are used for such purposes as Museum catalogues, technical publications, or otherwise, it is preferable, in the interest of legibility, that the use of such paper should be limited to that necessary for the illustrations, and that these should be interleaved or placed at the end of the publication.

Where coloured paper is used for covers and for distinguishing classes of papers or forms, blue, green or yellow should be used, while violet, orange, red and brown should be avoided altogether or only used in very light shades.

German News-print Prices.

Newspaper Difficulties.

According to the Munich correspondent of *The Times*, price of paper (news-print) is to be increased this month from 28 to 84 marks a kilogramme (from about $\frac{1}{4}$ d. to $1\frac{1}{4}$ d. the lb.)

The Bavarian Newspapers Association have addressed an energetic protest to the Paper Syndicate pointing out that if this price is insisted upon it will be almost impossible for many daily papers to continue publication, and must in any case necessitate a very great curtailment in the supply of news to the public of Bavaria.

The price of the majority of daily papers was raised on the first of the month from 2 marks 50 pfennige (1-10d.) to 5 marks (1-5d.), and even at this price it is only by subsidies from the Government or from different political associations that a very large pro-

portion of the Munich papers are enabled to keep going.

Messages from Berlin indicate the serious position in which German newspapers find themselves.

At a meeting of the Reichsrat on Thursday, September 7th, to consider measures to assist the Press, the Westphalian representative, Herr Lensing, said that the German Press had been overtaken by a catastrophe. Numerous newspapers had ceased to exist, he declared, and the time would very soon come when all the newspapers in Germany, with very few exceptions, would disappear unless the Government took drastic measures. Herr Lensing pointed out the enormous increase in the price of printing paper, and said that although the paper manufacturers were reported to be rolling in money the Association of Printing Paper Manufacturers had raised the price of paper per kilogramme from 27 to 84 marks.

The Minister of Economies, Herr Schmidt, said he could not hold out much hope that the introduction of maximum prices for paper would seriously alleviate the present deplorable situation of the Press. No measures, he said, would be of serious avail unless the price of wood became more moderate. One difficulty, he pointed out, was that the Federal States were financially interested in the prices of timber. He suggested that the Federal Governments should be approached on the matter.

Protesting against the prohibitive cost of news-print in September, the *Buchdrucker Woche* (Berlin) announces that the price is 85 marks the kilogramme. It is pointed out that this means no less than 1.27½ M. on a sheet of 43 by 63 cm. weighing 15 grammes. Is it any wonder, asks the writer, that even old and respected newspapers throw up the sponge? He adds that of course the paper-makers do not suffer, as they are able, on account of the depreciated exchange, to obtain even higher prices for export.

AN Advertisement is always working.

Improved Paper Cutting Machine.

It is well known that the ordinary form of cutter which depends for accuracy upon mechanical arrangements does not always give the exact and invariable length of sheet which might be expected and which is certainly desired. The Aktiengesellschaft fur Cartonagen-Industrie of Dresden has taken out a German patent for an electrically operated device. From the front edge of the sheet to be cut, it completes the circuit which puts the cross cut knife in motion. This machine is said to reduce the variations to the vanishing point, and the machine is much simpler than the mechanically operated one.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!*
 The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E. P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

PRICE TWOPENCE.

A Great Photo-Engraving Conference.

Many Vital Points Dealt with at Annual Convention
of the American Photo-Engravers' Association.

The labour situation in the photo-engraving industry, price-cutting, the cost of blocks, co-operative advertising, the rivalry offered by the offset and rotary gravure processes—these and many other interesting subjects were dealt with at the recent 26th annual convention of the American Photo-Engravers' Association, held at Grand Rapids, Michigan. The convention was a big affair, some four hundred or so representatives of photo-engraving firms, travelling anything from 100 to 3,000 miles from all parts of the U.S.A. to the north-east state amongst the lakes, and spending July 20th, 21st, and 22nd in profitable conference. The Association represents about two-thirds of the commercial photo-engraving establishments in the United States, which number in all about 600, not reckoning about 100 photo-engraving newspaper plants; it is calculated, moreover, that 85 per cent. of the United States' total output of blocks comes from members of the Association. The value of this total output is reckoned at \$40,000,000 (say £9,000,000) per year, about half of which sum is paid in wages.

The Labour Situation.

Speaking of wages reminds one of the difficult labour situation which exists at present in America, the problems presented being similar in kind to those of this country, but in some respects more difficult. One speaker at the conference referred to the industrial situation as being "loaded with dynamite." We gather that the relations between employers and trade unions are much less satisfactory than in this country, the aggressiveness of the unions having forced stoppages upon the industry, one result being a big impetus to the "open shop" movement. Since the beginning of this year 48 photo-engraving houses which formerly employed union members have become non-union or open-shop establishments, there being now 146 photo-engraving houses without the union label, which is a very serious matter for the union.

The principles for which the employers' association stands are concisely stated in recommendations on the subject which were formally adopted by the conference. These recommendations were:—

"Sound economics, which are at the base of all social, community and individual existence, contemplate and require that each individual human unit shall recognise and accept the fundamental truth that fair dealing is the basis of all social life.

"Limitation of Effort.—Such fair dealing requires that each individual shall not consciously permit either himself or others for him to limit the amount of work he may

perform in a given time consistent with the preservation of his health and efficiency; that only thus can the individual make that contribution to social success from which he has a right to expect fair treatment from others.

"Apprentices.—Fair dealing requires that the individual shall not limit or in any way handicap the opportunity or desire of others to become proficient in any line of trade or endeavor in the shortest possible time, nor permit others to do so.

"Improved Processes.—Fair dealing requires that the individual shall not oppose progress in mechanics or methods whereby the work may more readily be performed or the conditions of life be made better.

"Right to Work.—Fair dealing contemplates that the individual shall always, in whatever relation of life he is found, unalterably stand for the right of himself and others to employ or be employed or deal with or refuse to deal with others, regardless of membership or non-membership in any organisation of any kind whatever.

"Strikes.—Fair dealing further requires that the individual shall never by force, violence or intimidation attempt to force a particular view-point or course of action on others, lest he become the victim of such unsocial procedure."

Problem of Price-Cutting.

Largely as a result of the unsatisfactory industrial relations which have existed, there have sprung up recently a large number of co-operative photo engraving plants established by journeymen. Of these concerns, it is reported, some have adhered to sound business principles, and become a success and credit to themselves and the craft. Others, again, have taken advantage of their union position, drawing a wage directly dependent upon the earnings—observing neither union hours, rules nor regulations. These advantages in production have been converted into price considerations in securing business. The older standard, strictly-union shops have found it difficult, if not impossible, to meet this form of competition. One speaker at the Grand Rapids conference said he had known of an instance where a co-operative shop had run along for a considerable period, and only one man in its organisation received a salary, and he was an artist at twenty five dollars a week. Yet, this concern was soliciting business at a reduced rate from the largest agencies in the city. It is easy to see that such concerns are a menace to the trade, and rightly arouse the anxious attention of the employers' organisation.

The radical cure for unfair prices is, of course, the dissemination of accurate know-

ledge of costing, and the American photo-engravers made good use of their conference to impress this matter upon their members. The Association claims that its Standard Cost System is one of its greatest achievements. It claims that, as the culmination of efforts extending over a period of twenty-five years, it has, through its own initiative and at its own expense, created a uniform system of cost-finding that meets not only with the approval and requirements of costs accounting and good business practice, but with the Governmental approval, as well. The conference unanimously adopted a recommendation that the Standard Cost System created by the American Photo-Engravers' Association be adopted as the Standard Cost-Finding System of the American Photo-Engravers' Association, and that every member make a careful study of the report of the Cost Committee, and that all install the Standard Cost System as quickly as possible. Another recommendation was likewise unanimously adopted instructing the incoming executive committee to take such action as will lead to the employment of cost accountants to assist local organisations in the installation of the Standard Cost System.

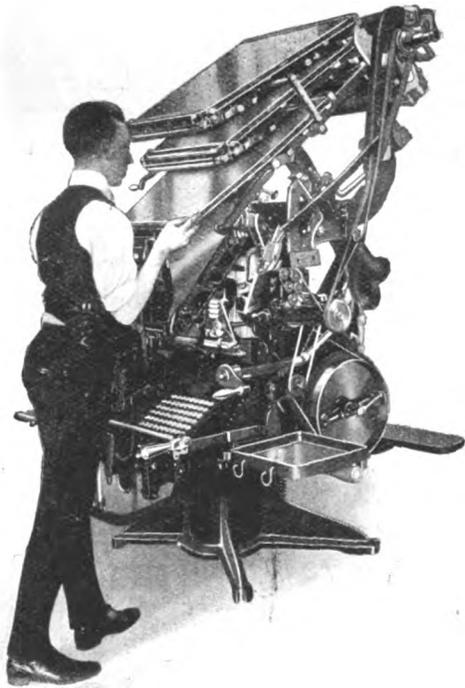

Cost of Photo-Engraving.

The costing committee submitted to the conference a mass of interesting cost data based upon members' returns covering the first four months of this year. These data, though not regarded as sufficiently comprehensive to be conclusive, are put forward as indicating the general trend of costs. It is interesting to note that the average cost of zinc etchings this year is calculated as showing an increase of 19 per cent. upon the cost for 1921, an increase of 72.4 per cent. on that for 1918, and an increase of 126 per cent. on that for 1912. The average cost of square half-tones for 1922 is indicated as showing an increase of 61.1 per cent. on the cost for 1918, and 112.5 per cent. on that of 1912. In vignette half-tones the average 1922 cost shows an increase of 3.8 per cent. on that for 1921 and of 71 per cent. on that for 1918.

Co-operative Advertising.

American Photo Engravers have evidently no doubt as to the value of co-operative advertising on behalf of the industry as a whole. The association's publicity committee has already been active in efforts to give the industry favourable representation not only to buyers of blocks but to the interested public as well. The committee has advertised widely in printing trade journals and other mediums. Lectures have been prepared and distributed for use in various parts of the country. Booklets have been issued, and

Sir,

Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from 192..... to 192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—

CONDITIONS:

The Subscription is annual, payable in advance, and may commence at any time.
 All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.
 Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.
 The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.
 In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term.

Terms:

Subscription £2 2s. 0d. per annum, entitling the Subscriber to:—

Ten Status Enquiry Forms and ten Debt Forms free of charge.
 Further Enquiry Forms during currency of Subscription at 2/- each.

The "Collection of an unlimited number of Accounts at the following rates of Commission:—
 Debt
 5% on amounts recovered up to - £20 1% on amounts over - £100
 2½% on amounts over £20 and up to - £10 5% on amounts recovered in Ireland, Scotland and the Channel Isles.

Business.....

various other means employed to let customers and others know what the photo-engravers are doing and what they think on a number of important matters.

At the Grand Rapids convention a big and keenly interested meeting of members discussed the question of extending this co-operative advertising work, and the meeting, with only four dissentients, passed a resolution putting on record that the members present pledged their respective firms in support of the collective advertising campaign, to the extent of one-sixth of one per cent. of their sales during the year 1921, the secretary calling the roll and recording each vote. A further resolution instructed the publicity committee to place the advertising campaign and financial plan before all photo-engravers not present, giving each an opportunity to pledge his support within ninety days. Failing to receive the necessary pledges for \$30,000 from all sources, the plan to be abandoned and all released from their obligations.

Slogan for the Trade.

In furtherance of co-operative advertising, the association has been running a widely advertised slogan competition, with a view to deciding upon a brief catch-phrase which would have publicity value for the industry and which could be embodied in members' advertising matter. It is stated that 15,375 slogans were submitted from all parts of America, Canada, England and other countries. Results were announced at the Grand Rapids convention. The first prize of \$200 was won by a Toledo competitor with the slogan "Your Story in Picture Leaves Nothing Unsaid"; this sentence will accordingly become very familiar to readers of American photo-engraving publicity matter. The second prize, \$100, went to a Philadelphia competitor for the phrase "No Ad. Complete Without a Picture." A Chicago competitor gained the third prize of \$50 with "Advertise in the Photo-Engraving Way." There were 15 other prizes of \$10 each.

Appropos of the subject of publicity, it is interesting to note that the Association's monthly official journal, the *Photo-Engravers' Bulletin*, which is a substantial and well-produced magazine, is an important financial asset to the Association. In eleven years' existence it has brought in to the Association \$23,406, last year's net profit being \$6,259. The Grand Rapids convention is reported in a special issue of the *Bulletin*, to which we are indebted in the compilation of this article.

A New Half-Tone Process.

The leaders of the American Photo-Engravers' Association are keenly alive to the importance of developments in the various processes and apparatus employed in photo-engraving. The Association's aim is to keep members informed of new ideas and discoveries, and to endeavour to make these the property of the whole craft rather than leave them to private exploitation. The Grand Rapids convention included a large and successful display of photo-engraving machinery, equipment and supplies.

Of very special interest was a new process of half-tone photography shown by Messrs. Knudsen and Watts. This invention promises to substitute paper negatives for the wet plates now generally used, which, when combined with a new and special screen made for the purpose, reduces the operation of half-

tone photography to a purely mechanical one, the tone gradations being obtained through the screen automatically, and not due to stop manipulations and screen distance, as is now the case. Some very excellent results were shown.

It was announced at the convention that the new process requires the use of new screens and different plate holders than those now in use. The negatives are made on paper instead of glass, the photographic plates being brought into contact with the screen. The screen itself contains various elements of light and shade, and the exposure, consequently, is purely mechanical, lasting anywhere from thirty seconds to a minute. The resultant half-tone negative contains all the gradations of tone, the films are stripped from the paper, are printed and etched in the usual way, except that the half tone negative thus made contains far more detail than those made by the present method, which in turn calls for less time in the etching and finishing. When the plates are etched to proper depth, they are practically completed. If it is wished to produce high-light plates, a different screen, based on the same principle, is used, which eliminates the high-light dots entirely.

It was stated that the Association's representatives had seen some very excellent examples of this kind of work, and had been assured by some members who had seen the plates made, that they were produced at the expense of a minimum amount of time—very much less in all cases than if the same effects were obtained by the present-day methods. The process is adaptable to combination line and half-tone plates, just as the present process is. This invention looks like a very good proposition, and the inventors have agreed with an investigating committee to put their materials into ten different plants, to be selected by the Association, to allow these ten plants to experiment with the process for thirty days. At the expiration of thirty days, the committee is to confer with them on the subject in detail. If their claims are upheld by actual practice, the American Photo-Engravers' Association will have an opportunity to make a contract with the inventors, by which the new process will be available only to members of the American Photo-Engravers' Association. The process itself will probably be put on the market on a royalty basis, although it is too early as yet to make any definite statements in that direction.

Offset and Rotary Photogravure.

Amongst the many other matters discussed at the convention, much interest was aroused on the question of the position of photo-engraving in respect of offset printing and rotary photogravure. A speaker (A. J. Newton, F.R.P.S.) who very ably introduced the subject, suggested that photo-engravers ought not to fear either offset or rotary gravure, but should thoroughly understand them and know wherein they have advantages; but particularly know where their disadvantages lie as compared with photo engraving, and be prepared to maintain the superiority of relief engraving wherever it is superior. The best quality half-tone, he thought, is not excelled by any process except in certain cases. For certain jobs either offset or gravure are superior in quality. For example, in the reproduction of pictures, or other subjects requiring the appearance of richness, photo-

gravure may be superior to half-tone. Also, the brown ink used, without any gloss, seems to appeal to the public. It might be worth the half-tone engraver's while to experiment a little more with richer inks and matt paper. In regard to speed, the speaker thought that for small editions and special jobs it is doubtful if either offset or photogravure can touch half-tone, but when it comes to large editions and fair-sized jobs, both offset and photogravure may be able to surpass half-tone in delivery time. As regards price competition he regarded it as probable that in making the actual printing surface there would not be very much difference in cost unless in large sizes, when both offset and gravure would have the advantage over engraving.

Thin Opaque Printings.

Judging from references in the *Paper Trade Review*, there exists an expanding market for a thin opaque printing, or imitation bible paper. It is necessary, however, that cost should bear, relatively, a favourable comparison with heavier grades.

Among firms holding a prominent place in the production of imitation bible papers may be mentioned the Royal Dutch Paper Mill, popularly known in the trade as "Hollandaise," established in the year 1850. This grade of paper has received close and careful study.

As is well known, there are distinctive characteristics in India paper, and these qualities, particularly that soft velvety feel, are to be found in the Hollandaise imitation bible printing. Consequently the product is in high favour for many publications such as directories, bibles, catalogues, booklets, etc., containing illustrations and heavy letterpress, where production costs are of vital consideration.

We have had submitted to us samples of the "Hollandaise" pure sulphite paper, the weight, D.C., 500s., being 17 lbs. (40 grams); also a slightly better quality, of a weight of 12½ lbs. (30 grams), D.C., 500s. The papers are the outcome of continual improvement to attain that perfection required by consumers for specific purposes, and they should also stimulate publicity campaigns made possible by the lower postal rates. It is of interest to mention that in regard to the 17 lbs. quality previously mentioned a publication of 1,000 pp. would not exceed a thickness of three-quarters to one inch.

When the mill of La Société Royale Hollandaise was first started it contained two machines. The equipment to-day, embracing seven machines, is thoroughly up-to-date, and the mill is considered one of the finest in country. The "Hollandaise" specialities find an excellent market in the United Kingdom through the agency of Messrs. E. A. Bristow and Co., Temple Bar House, 23-28, Fleet-street, London, E.C.4. An extensive export trade is also done with the United States and other countries.

DEALING with the prices of paper in Hungary *La Papeterie* says: Paper prices in Hungarian crowns per kilo. are as follows: Glazed printing, 92; tissue paper, 200; brown packing paper, 51; half wood pulp paper, 135.

Trade Notes.

THE rumour that Sir William Berry and Mr. Gomer Berry had acquired Odhams Press, Ltd., the publishers of *John Bull* and other papers, is authoritatively stated to be entirely without foundation.

ASSOCIATED NEWSPAPER SHARES.—The late Viscount Northcliffe, who held the majority of the deferred shares in the Associated Newspapers, Ltd., was thereby the principal proprietor of the *Daily Mail*, *Evening News*, *Weekly Dispatch* and *Overseas Mail*. These have now come under the control of his brother, Viscount Rothermere. The transaction was carried out on Tuesday by Sir George Sutton, the administrator of the estate, the shares being acquired by Lord Rothermere's two companies, the *Daily Mirror Newspapers, Ltd.*, and the *Sunday Pictorial Newspapers (1920), Ltd.*

L.M.P.A. PENSIONS.—We understand that a gratifying response has already been received as a result of Colonel Truscott's appeal to London master printers on behalf of the Printers' Pension and Almshouses Corporation. Those master printers who have yet to send in their response should do so without delay, so as to give sufficient time for preparation of the lists included in the report to be submitted at the annual festival dinner.

PRINTERS' DANCE.—We have seen some attractively-printed circulars which are being issued to call attention to the "Dance of the Merry Master Printers of East and North-East London," which is to be held at Stratford Town Hall on Thursday, October 19th, from 7.30 till 11.30. Tickets are 2s. 6d. each, and the hon. secretary is Mr. T. D. Hawkins, 30, Plashet-lane, East Ham, E.6. All expenses are being covered by the local Master Printers' Association, so that the whole of the ticket money goes to the Printers' Pension and Almshouses Corporation.

THE annual meeting of the London District Committee of the Joint Industrial Council has been arranged for Tuesday next, and the joint secretaries will have a very interesting report to present regarding activities accomplished.

BANK NOTE THEFT.—The theft of 350 50-franc Swiss bank notes from the premises of Messrs. Waterlow and Sons, of Great Winchester-street last week, came to light through some of the notes having been put into circulation. It is believed that the notes were stolen in April last year, before the series was completed, as the most elaborate precautions are taken by Messrs. Waterlow and Sons to guard the finished notes and the plates, the keys of the strong-rooms being in the charge of a director of the firm. Sir William Waterlow travelled last week to Switzerland with the manager of the department in order to discuss the matter with the Swiss bank.

PRINTERS' GALA.—The Printing and Allied Trades are holding their annual gala at Shoreditch Baths on Saturday, September 30th, at 6.30 p.m. The programme will include a ladies' and gents' open handicap, a 33 yards (trade) team handicap, the championship of the printing trades, and a special event by the blinded soldiers and sailors of St. Dunstan's. There will be a diving display and a water polo match.

ON receipt of information that burglars had entered a printing establishment on the outskirts of Hull, a police inspector, with five constables, immediately cycled to the place, and on their arrival three men suddenly rushed out of a door. Two of them escaped over a wall, but the third was tackled and there was a desperate struggle. The man, suffering from the effects of a blow with a truncheon, was taken to the infirmary, where he is now under arrest.

THE *Times* (Trade Supplement) publishes letters from the Association of British Chambers of Commerce, the Federation of British Industries, the Glasgow Chamber of Commerce, and the Birmingham Chamber of Commerce, stressing the desirability of Great Britain's entering the Pan-American Union. The potential benefits to be derived from membership of this Union were apparent at the time the Postal Conference was held in Madrid.

THE directors of the Fulham Football Club have sent a donation of ten guineas to the Newspaper Press Fund.

ONE case of lead poisoning was reported in the printing industry during August.

THERE were two fatal accidents in the paper, printing, etc., group of trades during August.

NORTHAMPTON POLYTECHNIC INSTITUTE, Clerkenwell, has issued as a substantial illustrated volume its "Announcements" for the session 1922-23. The classes for the day courses commence on Monday, October 2nd, and those for the evening courses on Monday, September 25th. Enrolments for the latter commenced on Monday, the 18th inst. The Institute specialises in engineering and optical subjects, but of special interest to printers are the evening classes in electrotyping and stereotyping.

HERIOT-WATT COLLEGE CLASSES.—Next week the Heriot-Watt College, Edinburgh, opens its doors for the enrolment of students for the winter. The evening classes open on the first Monday of October. Printing and allied trades are among the numerous subjects in which courses of study have been arranged. The day classes of the college resume in October and provide full time courses in many subjects, including the printing and allied trades.

ST. BRIDE INSTITUTE.—The Governors of the St. Bride Foundation Institute, Bride-lane, E.C., announce that three courses of University Extension Lectures will be held during the coming session which begins on October 3rd. The courses of lectures on English Social and Industrial History, and on civilisations of the Ancient World, though complete in themselves, form the first year's work for the University of London diplomas in Economics and Social Science and in History respectively. The third course is "The Story of British Music." The physical training classes will begin on October 3rd, when the gymnasium, which has been re-equipped, will be opened.

ANGLO-AMERICAN PRESS CONFERENCE.—At the invitation of the Associated Business Papers, Incorporated, of America, delegates from the Weekly Newspaper Proprietors' Association and the British Association of Trade and Technical Journals (London) will attend an international newspaper conference in New York on October 11th, 12th and 13th. A strong wish has been expressed by the commercial Press of the United States for a closer understanding with the trade and technical Press of this country, with a view to promoting good commercial relations between the two countries, and it is hoped that the conference will result in the adoption of some definite proposals in this direction.

HENRY JOHN DINEEN (48), printer, of Winchester-road, was fined £2 at Tottenham Police Court last week for assaulting his wife.

MR. HENRY SYMONS, B.A., found shot on Friday in a room in the British Museum, was Assistant Keeper of Printed Books.

The death is announced at Darwen of Miss Martha Riley, sister-in-law of Mr. John Eli Jenson, J.P. When in 1871 her brother, Mr. J. J. Riley, started his Darwen printing business she took charge of the stationery side of it.

WILLS.—Mr. Arthur Herbert Marshall, of Plaxtol, Kent, and of Paternoster-row, E.C., publisher, chairman of Marshall Bros., Ltd. (died August 15th, aged 71), £18,435; Mr. Robert John Parker, of Bury St. Edmunds, printer (died July 19th, aged 68), £5,364.

THE late Mr. Henry Serime Hill, Plymouth, for 36 years with the editorial staff of the *Western Morning News*, left £1,988.

SIR GEORGE WALTER PROTHERO (73), editor of the *Quarterly Review*, left £18,324. His armchair and books he left to the editor of the *Quarterly Review*.

FREDERICK MASON, newspaper hawker, Nuneaton, left £1,457.

MR. GEORGE R. SIMS, the famous journalist, who died recently, was reputed to have left from £40,000 to £50,000, but, according to the *Evening News*, this estimate is likely to be found sadly wrong. It is believed that, apart from his house in Regent's Park, and a considerable assurance policy, he left but little. The house, however, contains a remarkable crime museum, which should be of some value.

MESSRS. JARROLD, LTD., have published at 3s. 6d. net a useful manual entitled "Copyright Condensed and Explained," by Lewis C. Russell,

THE members of the *Sunday Times* staff last Sunday spent their annual outing at the Isle of Wight. Mr. T. E. Naylor, M.P., J.P., who accompanied the party, made a speech of welcome.

THE *Ilford Argus*, a weekly Labour journal, completes its first year this week.

THE Technical Executive of the Paper-makers' Association have approved a list of modern books to be purchased to form the foundation of the modern side of the Association's library. The idea is not merely to possess books on papermaking technology but to embrace scientific subjects which would be useful to students, covering such subjects as physics, chemistry, and so on.

THE problem of labour turnover is dealt with in the current issue of *Industrial Welfare*. It is well known that continual changes in personnel are a tremendous drain on the resources of industry and add many millions of pounds to the cost of manufactured articles every year. Employment departments are rapidly making their appearance in the larger firms and already their influence has been felt in reduced labour turnover.

"EUROPEAN COMMERCIAL."—The first issue of the *European Commercial*, a trade paper in English, duly appeared in Vienna on Saturday last, and contains 100 columns of commercial information gathered from all the leading European countries. The *European Commercial*, for which Sir Ernest Benn is responsible, is an appeal to the business community of the world, and indicates to them the opportunities which exist in Europe, as well as their responsibility in connection with them.

THE American Bible Society announces that for the first time in ten years they are able to produce a booklet containing the Gospel of St. John for one cent. During the war and after it cost 300 per cent. more to bring it out. This edition of St. John is already off the presses, and other gospels will be prepared in the same style in various languages, bound in heavy brown paper and containing 64 pages.

THE Press Bill was passed in the Indian Council of State at Simla on Tuesday without a division.

THE Legislative Assembly at Simla on Saturday, threw out an important Government measure, when it rejected by 45 votes to 41 the Bill providing for the further continuance of the protection afforded to the Indian Princes against seditious statements in the Press which they have enjoyed since 1910 under the Minto Act and of which they were recently deprived by the repeal of the measure.

THE Perth (Western Australia) newspaper strike has come to an end, the printers having recognised the authority of the Arbitration Court.

ALL the Polish newspapers appeared on Saturday, the printers having returned to work.

THE Stationery and Printing Company to be run on up-to-date lines by the Shanghai Commercial Press under the supervision of the Shantung authorities, has now opened in Tsinan.

BERLIN newspapers state that as a result of the assistance afforded by the provincial printing works, it will be possible to put eight milliard marks in daily circulation from the beginning of next month.

AUSTRIAN newspapers' difficulties are illustrated by the fact that the daily *Deutsches Volksblatt*, a paper partly Pan German, partly Christian Socialist, cannot continue its appearance owing to financial difficulties. Other breakdowns are foreshadowed.

UNDER the auspices of various journalist clubs in Czecho-Slovakia an international newspaper exhibition will be held in Prague from December 12th to 18th this year. The exhibition has the support of the Czecho-Slovak Government and the leading Czecho-Slovak newspaper proprietors and editors. Its object is to develop mutual interests between the press of Czecho-Slovakia and that of foreign countries.

L.S.C. and Wage-Reduction.

Delegate Meeting Rejects Cuts.

We understand that the special delegate meeting of the London Society of Compositors held at the Memorial Hall, Farringdon-street, on Thursday last resulted in a rejection of the committee's report on the wages question. It will be remembered that the report reviewed the general wages position and proceeded to propose reductions of 7s per week in two instalments and 5s. per week in two instalments for hand compositors and machine operators respectively. The meeting, we understand, "turned down" these proposals.

The Society is now taking a ballot of all its members on the proposed wage-reductions of 7s. and 5s. The result is expected to be known by Tuesday or Wednesday of next week.

Disparity between London and Provinces.

The committee in their report put the seriousness of the position plainly before the membership. The report stated: "The committee desire to impress upon the members the importance of the argument relating to the loss of work to London, so many of our members being already affected by the general slump in industry, and the difficulty of such members ever finding situations if the predisposing causes to unemployment are still further encouraged by this 'subsidising' of provincial competition. The situations of members in work also become less secure for the same reason." It was also pointed out: "The effect of a 7s. reduction would leave the hand compositor with a wage 125 per cent. above the pre-war rate, and the 5s. reduction would leave the machine operator with a wage 111 per cent. above. By comparison with Grade 6 towns, the difference would still be £1 5s. 6d.; and compared with Manchester and Liverpool, the difference would be 10s. 6d."

Finally, in putting the decision into the hands of the delegates, the committee remarked: "The main question, after consideration by the delegate meeting, will be submitted to a ballot of the membership. The committee have come to the conclusion that if the Society is to ignore the changed conditions consequent upon the decision of the Typographical Association accepting a reduction of 12s. 6d., then the members must themselves take the responsibility of whatever may follow. If our members are to submit to a lock-out, in face of a possible compromise, then the responsibility must rest with the members, who are their own masters."

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

FRANCE.

A French agent established at Paris desires to undertake the exclusive representation of United Kingdom manufacturers of good class writing paper and envelopes (boxed). Reference No. 269.)

NETHERLANDS.

An agent in Amsterdam desires to secure the representation of United Kingdom manufacturers of paper. Correspondence in English. (Reference No. 273.)

SWITZERLAND.

A Swiss firm, established in Basle, desire to secure the representation of United Kingdom firms for emery, glass and flint paper. (Reference No. 285.)

AUSTRALIA.

A British firm in Amsterdam, with head offices in Australia, are desirous of being placed in touch with a good and reliable United Kingdom firm manufacturing blotting paper, with a view to exporting same to Australia. (Reference No. 247.)

THE Ministry of Labour *Gazette* for September, reporting on employment, wages, etc., in August, state that as the result of orders made under the Trade Boards Acts, reductions were made in the minimum rates fixed for workpeople in the following trades: Paper bag and paper box manufacture.

Trade Union Matters.

LONDON UNIONS AND WAGES.—Conferences took place on Monday and Tuesday between the London Master Printers' Association and the London unions which have not yet agreed to wage-reductions, namely, the National Union of Operative Printers and Assistants, National Union of Printing, Bookbinding, Machine Ruling and Paper Workers (London Male Section), Printing Machine Managers' Trade Society, Association of Correctors of the Press, Amalgamated Association of Pressmen, Amalgamated Typefounders' Trade Society, and the Platen Printing Machine Minders' Society. We understand that ballots are being arranged by these unions, as a result of which it is hoped that the question of wage-reductions may be amicably agreed. A reduction is proposed of 7s. per week, the first instalment of which would be due early in October.

"NATSOPA" FOOTBALL.—Mr. Parker has accepted the challenge of the Glasgow branch of the National Society of Operative Printers and Assistants Sports Club to play London sports club at association football. It has been suggested that the match be played at the Memorial Home in aid of the funds of that institution.

THE latest addition to the list of trade union journals is the *Commercial Traveller*, the official organ of the National Union of Commercial Travellers. The publishing offices are Rugby-chambers, Chapel-street, London, W.C.1.

Printing Crafts Guild.

The winter session of the Printing Crafts Guild was opened with a concert, which was held in the Municipal College of Technology, Manchester, on Saturday last, when Mr. John Taylor, president, occupied the chair, and was supported by Major Charles W. Gamble, O.B.E., director of photography and printing at the college. The Sylvan Quintette, consisting of Madame Muriel A. Bradburn (soprano), Mr. Walter H. Taylor (tenor), Mr. R. Morden Lowe (bass-baritone), Mr. Owen Grant (humorous and dramatic entertainer), and Miss Dora Neville (songs at the piano and accompanist), supplied excellent musical and humorous items during the evening.

Previous to the concert the printing and photographic departments were open to members and friends for demonstration purposes.

Miss Ada Lodge and Mr. W. M. Menzies are to be congratulated on the success of the evening's entertainments, the several hundred persons present showing their entire appreciation. WEE MAC.

Papermakers' Technical Section.

An Attractive Programme.

Arrangements are now well in hand for the autumn general conference of the Technical Section of the Papermakers' Association. The dates are Wednesday, October 25th and Thursday, October 26th. A meeting of the Technical Section executive will be held on the Wednesday afternoon, followed in the evening by a film exhibition of papermaking in Sweden, kindly lent by Mr. G. Helstrom (Boving and Co.). Thursday will be devoted to papers and discussions, the readers of papers being, Mr. Frederick Kaye (on rubber latex paper) and Mr. F. O. L. Chorlton. Captain W. E. Nuttall, the chairman of the Section, will preside over the conference, which promises to be of a highly interesting and useful character.

A letter to hand from the editor of the *Pulp and Paper Magazine of Canada* shows with what interest the progress of the Technical Section is being watched abroad. "It is particularly gratifying to note in your columns," he writes, "reports of the constant growth of the Technical Section. I am sure that this organisation will prove to be of the greatest value in the development and improvement in method in the British paper industry."

GETTING even isn't half as profitable as getting ahead.

Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

Monthly Meetings Resumed.

This comparatively small but influential Association resumed its ordinary monthly meetings on Tuesday of last week at St. Bride Institute, Bride-lane, E.C.4. One of the objects of the organisation is to provide opportunities for mutual entertainment and relaxation, and after an interval of two months during which the members had not met together, these amenities were freely indulged in.

Mr. A. Chadwell, the president, was unable through business engagements to occupy the chair, this position being assigned by the unanimous vote of the meeting to Mr. J. Parker.

Mr. W. Bullett (Messrs. W. H. Walbrook and Co., Ltd.), secretary, read the minutes of the previous meeting held in June, which were confirmed.

Mr. Parker said fortunately his task in the chair was made simple by the fact that they had very little to engage their attention that evening. The only important item he had to bring before the meeting was the question of the annual dinner, and with regard to that it was a matter for the members to decide whether they would hold this function as in past years.

On the proposition of Mr. G. W. C. Sharvell, jun., seconded by Mr. A. E. Wood, it was unanimously agreed that the annual dinner be held as usual.

For this event Messrs. W. Crosby, W. M. Forsyth, J. Mason and A. E. Wood were elected stewards.

Mr. W. Longley, treasurer, invited to explain to the meeting the financial position of the Association, said, on going through the accounts he had come to the conclusion that it would not be a wise policy at the present time for the Association's funds to be used to meet the expenses of the dinner, as had been the practice on former occasions.

Messrs. H. Filkins and J. S. Sunderland and others expressed agreement with Mr. Longley.

Mr. G. W. Sharvell, sen., proposed that a charge of half-a-guinea be made to every member and visitor to the annual dinner, which was arranged to take place on a Saturday in November.

This was seconded by Mr. A. Wood, and agreed to.

Mr. Bullett inquired if any of those present had a vacancy for an apprentice for the son of one of their members. The member making the inquiry was willing to take any other member's son in his own foundry.

Mr. Bullett said since they last met the Association had lost through death one of their esteemed members, Mr. W. C. Mills.

Mr. W. Longley moved that a vote of condolence be sent to Mrs. Mills expressing the Association's sympathy.

Mr. W. Bishop spoke in appreciative terms of the late Mr. Mills.

Mr. Sharvell, sen., said he did not know if it was generally known amongst the members that their friend, Mr. J. S. Sunderland, had been appointed instructor in electrotyping and stereotyping at the new Central London School of Printing. With all due respect to other authorities in their particular branch of the craft, he felt that there was no one more fitted to occupy that post than Mr. Sunderland, and he was certain that every pupil who came under his guidance would benefit greatly.

The announcement of Mr. Sunderland's appointment was received with acclamation.

In acknowledging thanks, Mr. Sunderland emphasised the duty laid upon every member of the Association to encourage their apprentices to attend the new school, and asked them to impress upon the lads the importance of technical training. The principal of the school, Mr. J. R. Riddell, was not a hard taskmaster, but he was anxious to see results, and he (Mr. Sunderland) was sure these would come if the members showed their willingness to co-operate with the school staff in giving every facility in their shops to enable the lads to attend the classes.

A vote of thanks to the chairman closed the proceedings.

PAPER bags, generally of the flour bag size, are used by anglers on the towing path of the lower reaches of the Thames for the purpose of shielding their candle lights.

"Winkler" Electric Heating.

Type-Setting Machines and Stereo Metal Pots.

We are living in the age of electricity. The last decade is characterised by great achievements in this sphere. Particular consideration has been given to those processes in which the peculiar characteristics of electricity lead to an improvement in working methods from the point of view of labour saving and the quality of the product, and where the direct cost of electricity is relatively unimportant in comparison with the facilities it offers.

Specially interesting amongst the applications of electricity to the printing trade are those in connection with casting machines and stereo metal pots. We are informed that more than a thousand Winkler electric heating devices for type-setting machines have been supplied up to now, which number is surely the best proof of their utility.

Many of the arguments used to-day against electric heating are similar to those raised against electric light, electric traction, and electric power in factories. Advantages that should not be overlooked are saving of labour, saving of metal, hygienic conditions of work and improved product. The Winkler electric heating works entirely automatically. Not only the temperature regulation of the metal, but also the switching on and off of the current at set times, is done automatically, thus entirely eliminating the human element or personal factor. This means that the productive capacity of the compositor or stereotypist is increased, because on the one hand he need no longer worry himself with the heating, and on the other hand, he is no longer affected by the poisonous fumes of combustion and of excessive volatilisation of the tin and antimony.

Saving of Metal and Labour.

The temperature of the metal is automatically regulated. When the metal has once reached the desired degree of heat, the current is automatically switched off, and as soon as the temperature drops to a predetermined point, which may be about 10 degrees below the maximum, the current is automatically switched on again. By this automatic temperature regulation overheating or burning of the metal is obviated. The formation of dross and the volatilisation of the expensive tin and antimony is therefore reduced to a minimum, so that a considerable saving of metal is effected, with the added advantage of insuring at all times a solid, perfect fount.

Hygienic Conditions of Work.

It is a well-known fact that even with the best gas heating there is always a nasty smell, which sometimes gets so bad as to render working in the composing room vexatious and very injurious to health. This is caused by the fumes of combustion, the excessive volatilisation of the different constituents of the type or stereo metal (particularly tin and antimony) and the absorption of oxygen from the air by the open gas jet. These drawbacks are overcome by the Winkler electric heating because: 1, There are no fumes of combustion; 2, the volatilisation of the tin and antimony is reduced to a minimum, the temperature of the metal being automatically regulated; 3, no oxygen is absorbed from the air by the heat agent, so that a normal, healthy atmosphere is maintained.

Expenditure for the Winkler electric heating, like other efforts directed to securing the health and contentment of a valuable staff, is not loss to be put on the wrong side of a balance sheet, but a working capital by which the practical efficiency of the employees is increased.

Some Electrical Data.

As the heating element or elements used for melting the metal are arranged inside the pot itself, the heat generated is utilised to the best advantage, and without any loss by radiation. The Winkler electric heating for type-setting machines consumes on an average about one unit per hour. If the cost of the current is not excessive this consumption of current compares favourably with the cost of gas heating, particularly in those cases where supply can be taken at night when rates are the lowest.

Special care has been paid to the manufacture of the heating elements, many of which have now been in use for over three years. In contradistinction to other heating systems, where as many as six elements are used, this system only needs: (1) For linotype and

intertype machines—One element inside the pot for heating the metal, and one element outside the pot for heating the mouth-piece. (2) For monotype machines—Two elements inside the pot.

Metal Pot.

Whereas with the monotype machine the original pot can be used, Winkler heating apparatus for the linotype machine comprises a new pot of somewhat larger capacity, which is claimed to be of advantage to store sufficient heat. The new pot is interchangeable with the standard pot.

Rochdale Printing & Kindred Trades RECREATION GUILD.

On Saturday, September 21st the above Guild held their annual meeting. A financial gain of £10 8s. 10d. was reported on the year's working.

The trophies will be presented on October 14th, when a concert and whist drive will be held.

Arrangements for the winter session include social functions and proposed visits to various printing, papermaking and engineering works in the vicinity of Manchester and district, and the formation of a billiard league.

The officers for the coming year are: President, Mr. H. J. Haddock (president of the local M.P.A.); treasurer, Mr. A. C. Harte (Ormerod Bros.); secretary, Mr. W. A. Ashworth (Bookbinders' Union). The committee is selected from the shop secretaries of the various unions.

TENDERS WANTED.

THE BERMONDSEY BOROUGH COUNCIL invite Tenders for printing a catalogue of books in the Central Library. The specification may be seen and other information obtained upon application to the Chief Librarian, Central Library, Spa Road, S.E. Sealed tenders endorsed "Tender for Printing Library Catalogue" must reach the undersigned not later than first post on 3rd October, 1922.

THURSDAY, SEPTEMBER 28, 1922.

London Wage-Reductions.

It is gratifying to note that satisfactory progress is being made towards the peaceable settlement of the problem of wage-reduction in London. In view of what has happened in the country, the very moderate proposals that are being put to the London unions would seem to deserve unhesitating acceptance not only because of the imperative need for a pacific settlement of the matter, but also because these proposals cannot be rejected without dangerously aggravating the already unsatisfactory state of affairs in regard to country competition for London work. As to the London Society of Compositors, it seems to us most unfortunate that the recent delegate meeting should have rejected the proposals earnestly recommended by the Society's leaders. How clearly those leaders recognise the necessity for the reductions suggested is manifest, first, from the wording of the committee's report on the subject, and, secondly, from the fact that the executive, in face of the attitude of the delegate meeting, have appealed to the common sense of the rank and file by taking a ballot of the Society's membership on the same proposals. The members should weigh the matter very carefully before casting their vote, which, it is advisable from every point of view, should be in favour of the terms put forward.

Postal Rates Chaos.

It is high time that the Postmaster-General found means to modify the impracticable postal regulations attaching to the rates for picture postcards and for printed matter. The historic distinction between five words of a conventional character and five words not of a conventional character has proved to be a prolific source of confusion to postmasters everywhere, of annoyance to senders and receivers of picture postcards and of hilarity amongst critics of the Post Office. That the regulations concerning printed matter are of a somewhat similar kind is suggested by a move taken this week at Sheffield. The Sheffield Chamber of Commerce have complained of the frequency with which packages through the post, particularly

halfpenny communications, are being surcharged. In many cases the reason for the surcharge was obscure. The Sheffield Postmaster, in promising to take the matter up, states that the printed paper rate is so complicated and difficult that it is generally thought that only two people in the whole postal service understand it.

German Catalogues.

OFFERS to print catalogues in Germany continue to arrive in this country. In earlier issues we have referred to the subject, pointing out that this sort of competition is a danger to both printers and papermakers in this country; in fact, the injury goes further, for it affects all who in any way handle the products of these allied industries. In the circular before us a comparison is made between the wages paid in Germany and in England. It is pointed out that the "dearest" German workmen, the machine operators, received in April 800 marks weekly. At the present rate of exchange (6,000 to 7,000 to the £), the figures work out at somewhere near 2s. a week, and it is with this that the British workman has to compete for his employment. Whether or not consumers of paper and print are accepting the apparently tempting offers from Germany, the mere fact of the existence of such propaganda has a serious effect upon the industries on this side. According to the particular circular referred to, however, orders for school books, novels, catalogues, and other forms of print have been received from foreign countries to the extent of over four million copies.

Paper Freights Handicap.

SHIPPING freights have long been a subject of grievance to the British producer, who has seen himself at a disadvantage compared with his continental rival. The position is strikingly set out in a report which has been prepared by the British Chamber of Commerce in the Argentine Republic, a report which illustrates one of the many handicaps placed upon the development of British industry. Among the articles which are particularly seriously affected are paper and pulp. Thus, we are told, a short time ago it was possible to ship paper from England to Buenos Aires via Rotterdam very much more cheaply than by the direct route, and the obvious comment is added that freight is a very important item on paper. The report goes on to say: "Paper quotations are also required c.i.f. Buenos Aires by all buyers in Argentina. When working up c.i.f. prices from the selling price a Buenos Aires firm found that it was fully covered by adding under $\frac{1}{4}$ th of a penny per lb. on goods shipped from German or Continental ports. Upon goods shipped from British ports it was obliged to add just over $\frac{3}{4}$ d. per lb.—four times as much. On a paper worth, say, 3d. to 4d. per lb this difference of over $\frac{3}{4}$ ths of a penny per lb., is a very considerable percentage, and absolutely kills trade. The latest quotation mentioned for freights on paper in bales to South America from Antwerp, Rotterdam, or Hamburg was 15s. per ton, weight or measure. From British port via Antwerp it was 32s. 6d. per ton, weight or measurement. On a consignment of gummed paper to Brazil the freight worked out at £40 via Hamburg. If shipped direct from London it would have been about £120." It is to be hoped that those who are responsible for the higher freights will have the inner meaning of this report forced upon their attention, and that some action will follow which will help the commerce of this country.

Price of News-Print.

IN the general stiffening of the paper market, news-print is a prominent feature. No price change has been made lately in this country, and the decline ceased at 2 $\frac{3}{4}$ d. a lb. This, of course, is a big difference from the 6 $\frac{1}{2}$ d. which was reached in 1920. During last year

Send for Specimens and Prices.

the decline was fairly steady, but this year there has been a long breathing space at 2½d. The rising tendency has resulted in something definite in America, where the International price for September has been advanced \$5 a ton. Higher prices are looked for next year, and the upward movement of the news-print figure has had the effect of stiffening prices all along the line. Emphasis was laid upon the gravity of the present situation in the news-print paper market by the board of directors and the paper committee of the American Newspaper Publishers' Association at their recent joint meeting in New York. It was the unanimous sentiment that unless consumption is immediately reduced by curtailing the size of newspapers, publishers must expect to face a harder market, with materially increased prices. An immediate decrease in consumption of 10 per cent. was urged and various recommendations to this end have been sent forward.

Latex Paper.

IF Professor Kaye's idea for the use of rubber latex in the manufacture of paper proves to be a practical proposition, it will create a new epoch in the history of papermaking. In the paper which he read recently before the Institution of the Rubber Industry, he envisaged a wide field for the uses of latex paper. Papermakers and technologists from paper mills attended in considerable numbers, and they made a useful contribution to the discussion. They do not, of course, accept all that is argued on behalf of latex. Perhaps prejudice comes in because of the nuisance which rubber particles in old rags have caused in the past. As Professor Kaye pointed out, however, these particles were not the pure rubber which he has in mind. Indeed, on Monday night, he exhibited samples of latex paper which appeared to substantiate his claims. It is, however, rather early to determine the question he submits. One thing is certain, papermakers are deeply interested in the idea, and they are experimenting with it quite seriously, not only in this country, but throughout the world. A direction in which the use of latex may be developed with special advantage is in the manufacture of wrapping papers and boards for containers; and if success is achieved here, there will be scarcely any limit to the uses which will be found for the latex products. For insulating purposes also, there are prospects.

Inter-Empire Trade.

THE value of Inter-Empire trade is evidently appreciated in New Zealand. On a recent occasion when Mr. W. F. Massey, the Prime Minister, was entertained by the members of the New Zealand Association of British Manufacturers and Agents, it was stated that for the year ended March last New Zealand had imported £17,794,895 of goods from the United Kingdom. During the same period imports of foreign goods were valued at £8,087,599, which was described by Mr. G. H. Scott, the chairman of the Association, as too high a proportion of foreign purchases. The Government of New Zealand has set an example in the direction of encouraging Inter-Empire trade by purchasing in the United Kingdom plant and machinery representing very large sums of money. Mr. Massey, while saying he would like to see New Zealand manufacturing more of its own raw materials, pointed out that there was a vast number of commodities which could not be manufactured in the Dominion and in all probability would not be manufactured there during the next hundred years. In such a case the next best thing was to purchase them from the people who bought the commodities they produced; that was, from the British people. These sentiments, which are general throughout Australasia, ought to encourage the sale of British paper goods in Oceania.

Personal.

THE Prime Minister is president of a committee which has been formed to promote a national testimonial to "Eifionydd," a well-known Welsh litterateur, who has for 40 years been editor of the *Geninen* (the *Leek*), a quarterly magazine published entirely in Welsh.

LORD BURNHAM has promised to visit Newcastle-on-Tyne on December 12th, when he will attend a public dinner organised on behalf of the Orphan Fund of the Institute of Journalists. On the following day he will address the business group of the Newcastle City Council.

LORD BEAVERBROOK has arrived in town from the Near East.

SIR CHARLES HIGHAM, the well-known advertising specialist, who is M.P. for South Islington, has informed his local association that, owing to pressure on his time, he will not stand for Parliament at the next General Election.

SIR EVAN SPICER and his daughter, Miss Muriel Spicer, are leaving for a tour in India in the first week of October. They hope to visit some of the centres of the London Missionary Society's work.

MANY years ago Sir Evan Spicer did good service to the London Missionary Society by his visit to Madagascar shortly after the island passed under French rule.

MR. MAX PEMBERTON, who was among Viscount Northcliffe's oldest friends, is engaged upon a volume, which Messrs. Hodder and Stoughton will issue immediately, under the title, "Lord Northcliffe—A Memoir."

MR. W. HOWARD HAZELL has consented to open a costing campaign for London printers on Tuesday evening, November 14th. The arrangements are being made by the West and North-West District Association, and London master printers should keep the evening free.

AT the conclusion of the autumn meeting of the Scottish Newspaper Proprietors' Association, held in Aberdeen, the members paid a visit to the Donside Paper Mills as the guests of Sir Frederick Becker and the directors of the Donside Paper Co.

SIR FREDERICK and the officials of the company received the party, who were escorted over the mills, where immense quantities of pulp from Canada and elsewhere were examined.

AN inspection was also made of the older part of the mill, and interest was taken in the various processes of preparing the pulp and its ultimate conversion into paper. The visitors were also shown the latest machinery installed at the mill, running at a speed of 600 feet per minute.

MR. G. F. WILBRAHAM (C. F. Roworth) was on Monday night installed W.M. of the Saint Bride Lodge at the Cafe Monaco, the Installing Master being Mr. G. R. Riviers, who carried out his duties in an efficient manner.

MR. W. J. STARKIE (Porritts and Spencer) is the new S.W. and Mr. E. S. Lendrum, who of course is a past master in Masonry, is J.D.

MR. G. H. ROBERTS proposed the toast of the "Visitors," to which the Rev. Dr. Rose-dale responded.

MR. A. W. FOSTER, secretary of the Papermakers' Association, accompanied Mr. A. V. Hunt (Dixon and Roe) as his visitor.

MR. A. C. A. STEVEN, a member of the directorate of the *Berwick Journal* and *Northumberland News* and son of Major Alexander Steven, editor of these papers, has been married to Miss M. C. Christmas. The staffs of the papers were given a motor trip in honour of the occasion.

YARMOUTH'S Mayor-Elect, Councillor E. J. Middleton, was a newsboy before he opened his first shop when 17, and to day he has a dozen establishments connected with his business as a newsagent, stationer and fancy goods dealer.

THE wedding has taken place, at York, of Mr. Ernest Hewitson, for many years advertising manager of the *Yorkshire Herald*, and Miss Murdell, also of the staff of that journal. Several handsome gifts were made by the staff of the paper.

MR. WILLIAM B. CONSTANTINE, who for 15 years has been associated with his uncle, Mr. R. A. Constantine, wholesale stationer of Accrington, has been married to Miss Elsie Higson, of Helmschore, Lancs.

MR. W. H. JUBB, hero of the "Hammonia," duly sailed from Southampton to take up his position at the San Rafael Paper Mills, Mexico.

BEFORE his departure he was inundated with letters of congratulation upon his heroic action on the German steamship, and he received tempting offers to describe his experiences on the stage of a music hall.

AMONG the letters of congratulation was one from a former secretary of the Papermakers' Union, who sent a golden sovereign, and expressed his pride at "belonging to a nation of which you have proved yourself to be such a true and gallant example."

MR. F. C. OVERTON, of Castle, Gottheit and Overton, New York, and one of the best known men in the paper industry of America, has been making an extended trip to Europe.

Government Contracts.

Contracts were placed with the following firms during August:—

Stationery Office.

- CLOTH, TRACING.—Winterbottom Book Cloth Co., Ltd., Manchester.
- PERFECTING PRESSES.—Miehle Printing Press and Mfg. Co., Ltd., London, E.C.
- PRINTING PRESS (MIEHLE).—Lithotype and Machinery Limited, London, W.C.
- PRINTING, RULING, BINDING, ETC.—Group 15 (1922)—Scotland—*Edinburgh Gazette*, 40,000 Books, Med. 40.—Morrison and Gibb, Ltd., Edinburgh.
- Group 220 (1922)—Copperplate Printing, Schedule B.—Smith and Young, London, E.C.
- Group 220 (1922)—Copperplate Printing, Schedule C.—Warrington and Co., London, W.C.
- 10,000 Books, S.O. Book 136; 600 Books, C. and E., No. 84; 1,200 Diaries, No. 4, 1923; 40,000 Ships Blue Book C, No. 233; 600 Books, C. and E., No. 126; 3,906,000 Class A. Health Insurance Cards; 1,920,500 Class E. Health Insurance Cards; 1,000 each of 27 Collotype Plates.—Waterlow and Sons, Ltd., London, E.C.
- Binding 1,000 copies "Principal Events of the War."—J. Adams, London, E.C.
- Binding 700 copies "Berne List"; Binding 7,000 copies "Manual of Field Works, 1921."—Webb, Son and Co., Ltd., London, E.C.
- 5,600 Diaries, "S.5," 1923; 6,050 Diaries, "S.2," 1923; 1,300 Diaries, "S.1," 1923.—J. Rissen, Ltd., London, E.C.
- 7,500 Diaries, 1923; 1,000,000 Forms, P. 576.—W. P. Griffith and Sons, Ltd., London, E.C.
- 15,000 Books, S.O. 129.—Wm. Collins, Son and Co., Ltd., London, E.C.
- 4,000 Books, Ex. 244-142.—Tee and Whiten and J. Mead, Ltd., London, S.E.
- 2,315,000 Class A. Health Insurance Cards.—Howard and Jons, Ltd., London, E.C.
- 4,575,000 Class A. Health Insurance Cards; 2,367,000 Class E. Health Insurance Cards.—John Heywood, Ltd., Manchester.
- 200,000 Registry Jackets.—Metcalfe and Cooper, Ltd., London, E.C.
- 15,000 Pads "C" Telegram Forms; 5,000 Books, R.F. 72.—H.M.S.O. Press, Harrow.
- 18,000 Show Cards.—Roberts and Leete, Ltd., London, S.E.
- Inland Revenue Forms, No. 9.—Pearce and Gardner, Ltd., Chorlton-cum-Hardy.

PAPER, pulp and cellulose mills in Finland have plenty of orders for the near future, reports the Finnish Central Chamber of Commerce.

DIVIDENDS AND REPORTS.

INTERNATIONAL LINOTYPE announces interim dividend of 2½ per cent. for half-year to September 30th.

AIRD AND COGHILL.—Profits of this Glasgow printing firm for year ended June 30th, after providing for all working expenses, including renewals, repairs to plant and property, bad debts, managing directors' remuneration, directors' fees, income tax, interest and depreciation, was £6,707, plus £1,375 brought in, making £8,082. Directors recommend placing to property reserve £2,500, to reserve for equalisation of dividend on preference shares £1,000. Dividend on ordinary shares for year at 7½ per cent., less tax, payable October 1st, carrying forward £2,975.

BRITISH GLUES AND CHEMICALS.—Net loss for the year, after providing £31,274 for depreciation, and making provision for reduction of stocks to market values, £64,177; no dividends on preference or ordinary shares; credit balance forward, subject to taxation, £64,696. No settlement has been arrived at yet with regard to the company's liability for taxation.

SPANISH RIVER PULP AND PAPER MILLS.—Net surplus of Spanish River Pulp and Paper Mills, including Lake Superior Paper Co., for year ending June 30th, after providing for depreciation \$475,975 and interest on funded debts and other loans \$959,645, was \$1,934,917. Deducting appropriation for contingencies and Government taxes, \$150,000, there remained \$1,784,917, making, with balance of consolidated profit and loss account brought in \$4,134,713. Dividends at 7 per cent. per annum on preferred and common stocks, proportion of dividend paid to bondholders, and bond sinking fund reserve absorbed \$1,687,821, leaving carried forward \$2,446,892.

NEW COMPANIES.

STANDARD PRINTING CO., LTD.—Capital £5,000, in £1 shares (2,000 preference); to acquire the business of printers, publishers and manufacturing stationers, now carried on by A. J. Carpenter, A. C. Egerton, F. B. Gaydon, and C. E. Goddard as the Standard Printing Co., at South Croydon, Surrey. Private company. First directors: A. J. Carpenter, A. C. Egerton and F. B. Gaydon.

NATIONAL TRADE MONOTYPERS, LTD.—Capital £2,500, in £1 shares; to adopt an agreement with J. W. Lawson, and to carry on the business of printers, stationers, mechanical typesetters, lithographers, typefounders, stereotypers, electrotypers, photographic printers, etc. Private company. First directors: W. Tomlin and J. W. Lawson. Regis-

tered office: 8-10, Wyre-street, Ardwick, Manchester.

GRAYS PUBLISHING CO., LTD.—Capital £12,000, in £1 shares (6,000 preference); to take over the business of printers, publishers, photographers, producers and vendors of picture post cards, guide books and letter cards, carried on at 13, Gray's-Inn-road, W.C., as "Grays Publishing Co." Private company. Subscribers: Mrs. A. M. Barley and Pindo Ajelli. Subscribers to appoint directors.

PILLING AND SONS, LTD.—Capital £500, in £1 shares; newspaper proprietors and publishers, printers, stationers, advertising agents, etc. Private company. First directors: R. Pilling, A. Pilling, T. Pilling and R. Ramsbottom. Registered office: 9, Newmarket-lane, Manchester.

BRENTWOOD GAZETTE PRINTING CO., LTD.—Capital £2,800, in £1 shares (1,400 preference and 1,400 ordinary); to acquire the business and assets of the *Brentwood Gazette and Mid-Essex Recorder*, and to carry on the business of newspaper proprietors, printers, publishers, etc. Private company. First directors: G. S. Dunn, H. Cowper and A. J. Berry. Registered office: 14, St. Thomas-road, Brentwood.

THE NEW LEADER, LTD.—Capital of £500, in £1 shares; newspaper proprietors, printers and publishers, advertisers, advertising agents and contractors, etc. Private company. Subscribers: Clifford Allen and F. Johnson. First directors: Clifford Allen (chairman), R. C. Wallhead, H. N. Brailsford, E. E. Hunter, Morgan Jones, Fredk. W. Jowett, J. Ramsay MacDonald and Neil Maclean, M.P.

KENT PUBLICITY CO., LTD.—Capital £1,000, in £1 shares; to acquire the business of a printer and publisher carried on by H. S. Crooke at Canterbury, Kent, and to carry on the same and the business of electrotypers, photographic printers and lithographers, advertising agents, etc. Private company. First directors: H. S. Crooke and Captain W. E. Cox.

FOOTBALL PUBLICATIONS, LTD.—Capital £2,000, in £1 shares; newspaper proprietors, etc. Private company. First directors: T. C. Bench and W. T. Corney. Registered office: 110, Strand, W.C.

E. E. PECKHAM, LTD.—Capital £1,000, in £1 shares; to take over the business of the Imperial Music Publishing Co. carried on by Emily E. Peckham, at 31, Newman-street, W.1. Private company. Subscribers: Emily E. Peckham and F. J. Day. Registered office: 31, Newman-street, W.1.

LOXIT LOOSE-LEAF CO. (1922), LTD.—Capital £500, in £1 shares; to acquire the business of a printer, stationer, account book-maker, engraver and publisher, now or lately carried on as "The Loxit Loose-Leaf Co." at Birmingham and elsewhere, etc. Private company. Subscribers: H. C. Chambers and P. J. Wall. First directors: J. B. Upton and J. G. S. Browett.

VARSITY PUBLICITY CO., LTD.—Capital £5,000, in 5,000 ordinary shares of 10s. each and 2,500 preference shares of £1 each; general publicity agents and advertising contractors, etc., and to adopt two agreements; the parties to which are not named. Private company. Subscribers: C. B. Meeks, V. L. Vernon and J. R. Craig. Subscribers appoint directors. Registered office: 68, Coleman-street, E.C.2.

WILLIAMS AND GRAY, LTD.—Capital £2,000, in £1 shares; to acquire the business carried on at 37, Hockley Hill, Birmingham, as "Williams and Gray," and to carry on the business of manufacturers of small metal goods for the jewel case and fancy leather and motor trades, celluloid paper-mâché, cardboard, etc. Private company. First directors: A. W. Williams and C. W. Gray. Registered office: 37, Hockley Hill, Birmingham.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

HOGG AND KNIGHT, LTD. (printers, etc., London).—(a) Satisfaction to the extent of £250, on August 22nd, 1922, of debentures dated January 28th, 1921, securing £350; and (b) Particulars filed of £500 debentures, authorised by resolutions of August 15th and 22nd, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; the whole amount being now issued.

MACRAU, LTD. (printers, etc., London).—Satisfaction in full on August 23rd, 1922, of debentures dated April 29th 1920, securing £1,000.

DRAKE'S PRESS, LTD. (London).—Particulars filed of £2,500 debentures authorised September 9th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; the whole amount being now issued.

TERMINUS EMPORIUM, LTD. (dealers in stationery, fancy goods, etc., Eastbourne).—Debenture dated September 7th, 1922, to secure £1,200, charged on company's undertaking and property, present and future. Holder: E. W. Thornton, 16, Southfields-road, Eastbourne.

LION TYPEWRITER SUPPLIES CO., LTD. (London).—Satisfaction in full on August 28th, 1922, of debenture dated June 13th, 1921, securing £3,000.

E. W. SAVORY, LTD. (fine art publishers, etc.) Two mortgages (1) on the Lithographic Printing Works, Park-row Studios, and at Park-row, Bristol (subject to prior mortgage for £6,000) and (2) on 2-5, Medical-avenue, and 6-9, Old Park, Bristol, both dated August 28th, 1922, to secure all moneys due or to become due from the company to the London Joint City and Midland Bank.

ELLAM'S DUPLICATOR CO., LTD.—Satisfaction to the extent of £4,200 on August 28th, 1922, of debentures dated October 16th, 1919, securing £15,750.

GEO. J. POORE AND CO., LTD. (stationers, etc., Liverpool, London and Belfast).—Issue on September 8th, 1922, of £200 debentures, part of a series already registered.

SCHOOLS AND SERVICES SUPPLIES, LTD.—Particulars filed of £10,000 debentures authorised August 4th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

BANKRUPTCIES, etc.

Re CLEMENT JOHN LIVERMORE, printer (trading as "Livermore and Keetch" and as "The Conway Press"), 44-6, Hampstead-road, N.W.—The public examination of this debtor was held at the London Bankruptcy Court last week before Mr. Registrar Stiebel, the accounts showing total liabilities £4,205 (unsecured, £2,349), and net assets valued at £1,105 after deducting £178 for payment of the preferential claims. Replying to Mr. Vyvyan, official receiver, the debtor stated that for several years prior to 1900 he was engaged in the printing trade. He then joined another person in partnership and they commenced trading as printers under the style of "Livermore and Keetch," at 7a, George-street, Euston-road. After about two years' trading the partnership was dissolved, witness assuming the whole of the liabilities and assets. In 1913 he removed to more convenient premises at 44-6, Hampstead-road, and installed additional machinery; in consequence of the war his business was seriously affected, and in order to obtain further capital he registered "Livermore and Keetch, Ltd."

with a nominal capital of £4,000, divided into 500 6 per cent. cumulative preference shares and 3,500 ordinary shares £1 each; the company only acquired the assets, with the exception of the book debts, and as consideration witness was allotted 1,150 ordinary shares as fully paid, and appointed managing director. A receiver for the debenture holders was appointed on May 31st, 1916, whereupon witness became manager at a weekly salary. In 1918 another person purchased the plant, machinery and materials from the receiver under a hire-purchase agreement; he and witness then entered into partnership and carried on the business together until April, 1919, when the partnership was dissolved. Witness then entered into a fresh hire-purchase agreement with the receiver of "Livermore and Keetch, Ltd.," to acquire the plant, machinery and materials for the sum of £800, payable by instalments of £10 per month, and he thereafter continued the business alone until the failure. In April, 1921, he adopted the additional trading name of "The Conway Press." He attributed his insolvency to lack of capital, bad debts, over-purchase of plant and heavy overhead charges. The examination was adjourned till November 3rd, pending the trial of an action in the High Courts.

LINOTYPE EXHIBITION.—Messrs. Linotype and Machinery, Ltd., inform us that they will, by the courtesy of the City of Leeds Technical School Authorities, Department of Printing, open a temporary showroom on their premises at 86 Woodhouse-lane, Leeds, on October 2nd. The showroom will remain open for two weeks. The exhibits will include two of the modern Linotypes with all recent improvements, a Centurette Press, and an automatic metal furnace. All printers in Leeds and district are specially invited to see these exhibits. This will also be a good opportunity for printers in other towns in Yorkshire to familiarise themselves with modern printing plant. Further particulars with regard to this exhibition can be obtained from Linotype and Machinery Ltd., 9, Kingsway, London, and also from their Manchester office at 4, Cannon-street.

SOME build up to a standard; others down to a price.

"Get Down to Business."

Mr. E. J. P. Benn on the European Ruddle.

Mr. E. J. P. Benn, of Messrs. Benn Brothers, Ltd., writes to the Press to plead for saner thinking upon the subject of the European trading position.

"I am one of those," he writes, "who hold that the politicians are doing enormous damage to Europe by their failure to settle the questions of indemnities and reparations, and their continual discussions of these matters. The countries of Europe are perforce divided into debtors and creditors, and all are busy explaining to the world their poverty, bankruptcy and need, the former in order to prove their inability to pay, and the latter for the purpose of demonstrating the necessity of pressing their debts. The result is, in my judgment, a totally false impression of the real European economic situation.

"The business genius of centuries has built up a Europe overflowing with wealth and offering happiness and comfort to all, if only the normal processes of exchange are allowed to function naturally. There is little wrong with Europe except its politics and its politicians. The reconstruction of Europe will be accomplished by business men and by no others, and the sooner this fact is realised the sooner will reconstruction commence.

"I have taken such steps as are open to me to demonstrate the soundness of this position and venture to give my own experience as an encouragement to others. My firm has just published in Vienna—of all places—the first issue of an English commercial weekly journal. This simple effort to deal with purely business matters in the very centre of political disaster, has met with universal support. The merchants of eight separate countries are represented in its advertisement pages, and subscriptions have been received from nearly every country in the world.

"I find everywhere the same determination to have done with conferences and get down to business. My effort is a comparatively small one, but it may suggest opportunities."

Mr. William Munday.

By the death last week of Mr. William Munday, an old and trusted employee of *The Times* passes away. Mr. Munday joined the staff of *The Times* in 1855 at the age of 19 years. Two years afterwards he was appointed librarian, and subsequently was in charge of *The Times* messengers at the Houses of Parliament. In 1904 he was transferred to Printing House-square, and he retired on a pension four years later, having completed fifty-three years' continuous service. Mr. Munday's brother Henry, who recently died, was also in the service of *The Times* for over fifty years.

Mr. John Jenkinson, J.P.

MR. JOHN JENKINSON, J.P., of Whitehaven, who died last week aged 65 years, had been connected with the *Whitehaven News* for about 52 years. He commenced as compositor, and for some time prior to his death had been acting as editor of the *Whitehaven News* and of its companion paper, the *West Cumberland News*. He was chairman of the Whitehaven Board of Guardians, and one of the best known and most respected magistrates in West Cumberland.

Mr. William Black.

THE death took place on Monday of Mr. William Black, of Chapel, Kirkcaldy, a director of the firm of Michael Nairn and Co. (Ltd.), Kirkcaldy. Mr. Black, who was a native of Udney, Aberdeenshire, early became associated with William Collins, Sons, and Co., publishers, rising to the position of secretary, and ultimately being made a director of the company. In 1892 he married Miss Catherine Nairn, eldest daughter of the late Sir Michael Nairn, and in 1893 went to Kirkcaldy, being made a director of the firm when it was incorporated as a limited company.

The Paper Trade Protection Association

BRANCH OF
THE BRITISH MERCANTILE AGENCY, LIMITED.
ESTABLISHED 1855.

FOR THE PROTECTION OF THE PAPER, PRINTING, STATIONERY & ALLIED TRADES.

Directors:
ALBERT WILLMOTT.
A. GRANVILLE WHITE.

The Recognised Trade Protection Office for the Paper & Allied Trades.

This Association now carries out the work done by The British Mercantile Agency, Ltd, for more than 65 years past, in the interests of firms engaged in the above Trades, with a view to the prevention of bad debts, minimising the loss when they occur and recovering the debts due to Members.

Status Enquiries.—By reason of the vast amount of information on its Registers, the network of agencies and correspondents throughout the United Kingdom and abroad and the close co-operation between its Members, the reports of this Association are recognised to be the most reliable and up-to-date obtainable.

Collection of Accounts.—Long experience and up-to-date organisation is the reason for the wide success and ever-growing work of this department.

Liquidations.—A special Liquidation Department under the control of qualified Accountants attends to all insolvencies where Members are interested.

Terms.—Minimum Subscription, £1 1s. per annum, entitling the Subscriber to the following privileges:—

Reference Department.—Ten Status Enquiries (any number of extra enquiries at 2s. each); Continuous Reports; and Searches of the Registers at nominal charge.

Recovery Department.—The collection of an unlimited number of accounts at the following rates of commission: Sums under £1 at 10 per cent. on amount recovered; over £1, and not exceeding £10, at 5 per cent. on amount recovered; over £10, and not exceeding £50, at 5 per cent. on first £10 and 2½ per cent. on balance. Amounts over £50 specially arranged for.

Foreign Department.—Special terms for Enquiries and Debt Collection upon request.

Liquidation Department.—Full use of this Department without charge, including attendance at Meetings of Creditors, etc., as detailed in the full prospectus.

Solicitors.—Legal Advice by the Association's Solicitors upon general business matters.

A copy of the full prospectus containing details of other facilities and form of Membership will be sent on application.

Employment in the Allied Trades.

August Shows a Less Satisfactory State of Affairs.

Judging from the official statistics employment was not so good in the paper, printing and allied trades during August as in July. This hiatus in the improvement which had taken place must be attributable both to the seasonable conditions and to the effect of the printers' strike.

Thus we find in the report of the Ministry of Labour, as published in the *Labour Gazette*, the statement in regard to the paper trade that employment generally was moderate and showed a slight decline as compared with July. In the printing trades employment was generally slack, and was affected by the dispute involving members of the Typographical Association which lasted until August 17th. A slight improvement was reported among lithographic printers in London and at certain provincial centres, but much short time was still reported in this branch. Employment in the bookbinding trade continued bad, with much short time, and at a few provincial centres a slight decline was reported.

The employment chart, however, indicates that with regard to unemployment generally, the decline continued through the month of August, although not so steeply as it had done between April and July. It is interesting to note that the curve of unemployment this year followed very much the same lines as the mean curve of 1912 to 1921, though the fluctuations have been sharper in the case of the present year. Everything points to an improvement in industry generally during the remaining months of the year, and in the case of the paper, printing, etc., trades, the improvement should be particularly noticeable now that the slack season has passed and the wages question is definitely settled so far as the provinces are concerned and may be expected to be amicably arranged in the case of London.

Unemployment Figures.

On the whole, the figures relating to unemployment in August are not so satisfactory, although according to particulars furnished by the trades unions there is a decrease in unemployment when compared with a month and twelve months ago. The membership of the unions reporting at the end of August, 1922, was put at 93,917, of whom 6,077 were unemployed at the end of August last, a percentage of 6.5. The decline in unemployment compared with a month earlier was 0.3 per cent. and compared with a year before 2.2 per cent. Perhaps the more correct position was visualised from the table printed in the Ministry of Labour *Gazette*, where we have details concerning the constituent trades, the figures being obtainable through the operations of the Unemployment Insurance Acts.

Papermaking and Staining.

In papermaking and staining, we have an estimated number of insured workpeople of 59,380, of whom 41,320 were males and 18,060 females. The number of unemployment books remaining lodged at August 21st was 4,561, the majority, namely 3,368, being males. The total percentage unemployed was 7.7, an increase as compared with July 24th of 0.2. Short time workers claiming unemployment benefit at August 21st were 648 (476 males). The total percentage of 1.1 represents a decrease as compared with July 24th of 0.1.

Manufactured Stationery.

Insured workpeople in the manufactured stationery industry are estimated at 68,810, made up of 21,070 males and 47,740 females. Unemployment accounted for a total of 4,375, or 6.4 per cent.—1,714 males and 2,661 females. There was a percentage increase compared with July 24th of 0.2. Systematic short time claimed 241 persons, comprising 59 males and 182 females. The percentage of 0.4 represents an increase of 0.1.

Printing, Publishing and Bookbinding.

Under this heading we find the largest individual number of workpeople engaged in the allied trades, namely 213,620, of whom 137,850 are males and 75,770 females. The number of unemployment books remaining lodged at August 21st was 13,843, of which 10,078 represented males. The percentage unemployed, 6.5, showed an increase of 0.2 as compared with July 24th. On systematic short time there were 391, of whom 211 were females, the percentage of 0.2 marking a decrease of 0.2 compared with July 24th.

A Mammoth Paper Volume.

Mr. H. A. Maddox has presented to the Papermakers' Association for inclusion in their library what he describes as an "exhibition volume" of paper samples. It is a huge tome of super-royal size, 27½ in. by 20½ in., and was published in 1855 by Mr. T. H. Saunders under the title of "Illustrations of British Paper Manufacture." This remarkable book, which was printed by Messrs. Waterlow and Sons, was evidently intended for presentation by Mr. T. H. Saunders and sets forth the manufactures at Dartford, Darenth and Sunbridge Mills, in the county of Kent, and at Beech and Rye mills, High Wycombe. The two mills at Darenth and Rye, together with one at Hawley (near Dartford) are still in the hands of Messrs. T. H. Saunders and Co., but the others have passed to other owners. As a frontispiece to the volume there is a fine colour print of the Phoenix Paper Mills, Dartford, which are now, we understand, used for the manufacture of chemicals. The contents of the volume are divided into three classes, namely, Class A, papers made by hand; Class B, papers made by machine; Class C, special papers. The letterpress, in French and English, comprises a description of papermaking in its various aspects, and there are numerous fine illustrations. The samples of paper themselves are worthy of attention and the beautiful watermarks cover a very wide range. It is not quite clear why such a large and elaborate book of specimens should be issued. Apparently it is thought that it might have been published in connection with the Great Exhibition in Hyde Park, but as this took place four years before the published date of the volume, this assumption can hardly be correct. Efforts, however, are being made to obtain some idea of the history of the volume, the inclusion of which in the Papermakers' Library is very welcome, as it will be an object of interest and instruction to papermakers.

AN Advertisement is always working.

THE NATIONAL Association of Wholesale Stationers AND PAPER MERCHANTS.

Questions Before the Industry.

The thirty-second meeting of the National Council took place at the Council Chamber of the Association on Thursday, September 14th, Mr. F. M. Carson (the president) being in the chair. Meetings of the National Writings and Printings Section (Mr. J. W. Cooke, vice-chairman being in the chair) and of the National Wrapping Paper Section (Mr. J. Harmer Dalton, the chairman, presiding) were also held on the same day.

It was reported that a meeting of the co-ordinating committee, set up to consider the question of ton weight rates, was being held at the end of the month, and that a further communication would be sent to the shipping companies in time for their next rates committee meeting on October 5th.

The question of the shipping rates charged for the shipment of paper from Hamburg to various towns in the Midland and North of England, via Hull or Goole, was under consideration, attention being drawn to the fact that these rates are very unfavourable ones. It was agreed that the matter should be taken up with the companies in question.

It was reported by various members that a circular letter had been received by them with reference to the recent institution of an Allied Trades Protection Society. The general secretary reported that for many years an enquiry register and debt collecting department had been in operation in the south, which had proved most beneficial to those members who participated in it. The president and other members pointed out the immense advantages which they have been obtaining from the scheme, and details were given of the large amounts which had been placed in the hands of the Association for collection and of the efficient and successful manner in which the department had been carried on.

The replies to the legal queries concerning matters arising out of the conditions of sale of the Scandinavian Convention were considered and these are now being further examined in detail with a view to a final report being submitted.

The present position as regards wages prevailing in the allied trades was fully communicated to the meeting.

It was reported that the final match for the National Cup had taken place on Monday, September 11th, over the Stand Golf Course, between Mr. A. Dykes Spicer and Mr. F. Timperlake, and that the latter had been successful in winning the match at the 35th hole. The cup will therefore pass into the possession of the Northern District for the current year. The attention of members was called to the Fancy Leather Goods Exhibition to be held at the Victoria and Albert Museum in 1923.

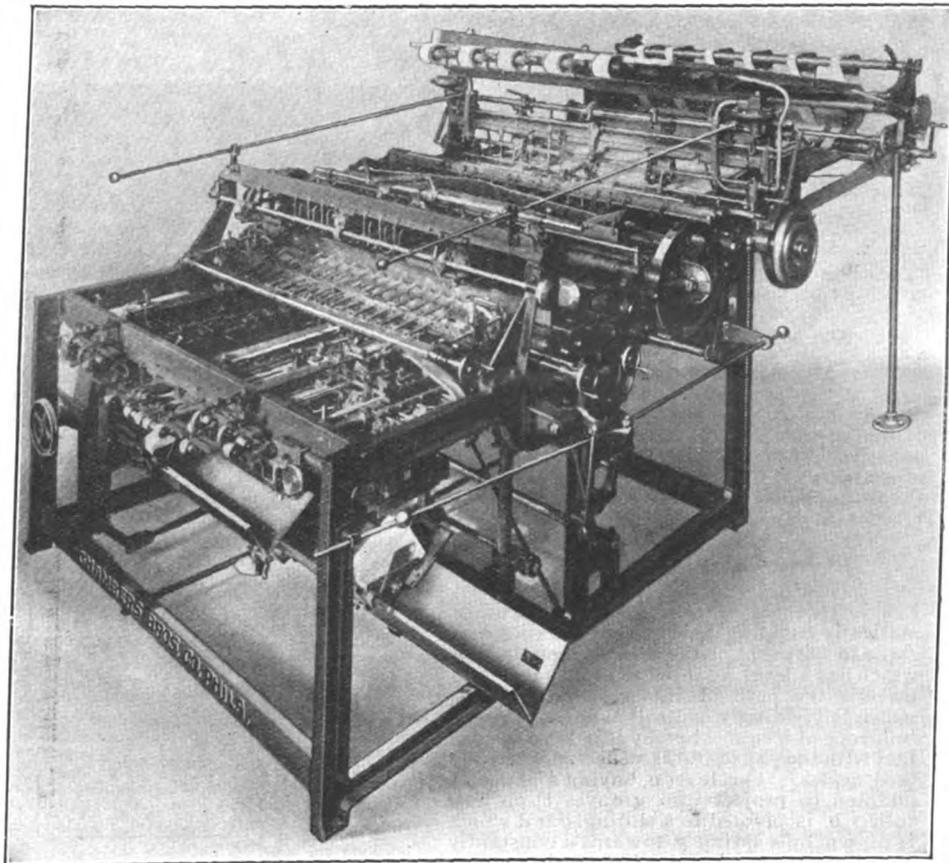

The present state of the negotiations between the Association and the various sections of mills was considered at length.

Reference was made to the recent articles which had appeared in the trade press on the subject of Standardisation, it having already been suggested last year that the matter should be discussed at a joint meeting with the Federation of Master Printers, from whom the next step was now awaited.

Attention was drawn to certain regulations which had been issued by the railway companies concerning goods sent by passenger train at owners' risk, the matter being referred to the next meeting of the co-ordinating committee already set up by this and the kindred associations for consideration and report.

The next national meetings will be held on Thursday, October 12th, 1922.

Mr. N. E. WAINWRIGHT, of Blackfriars House, New Bridge-street, London, is representative of the Howard Smith Paper Mills of Montreal, some samples of whose productions he sends us. Their Royal Record is a rag paper which both looks and is a good line for letterheads. A fine selection of bond papers—Genoa Bond, Loyalist Bond, Progress Bond and Victory Bond—is offered at attractive prices. Progress Blotting is also featured in various colours and weights. We note that Victory Bond paper is being marketed also by Messrs. Samuel Jones and Co., Ltd., who have prepared attractively-printed samples.

New Inventions.

Self-Feeding and Delivering Platen.

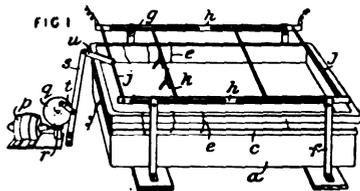

In an invention patented by G. Bornchein and Banbzer-Industriewerke Akt. Ges., a platen press is fitted with a laying-on and delivering device in the form of a reciprocating suction or gripping device which moves over the platen 2 as it is swung to and from the bed. As the platen 2 is moved from printing position by a pitman 4, and is guided by a fixed pin 5 and slot 6, a block 18 which carries the gripping device is carried by slides 17 moving in guides on the platen, and the printed sheet is delivered by rollers 34 and bands arranged above the feed table into a

receiving table 35. The grippers 18 which are normally closed by a spring 20 are opened by the action of a spring 26 fixed in a recess in the platen, on an arm 22 on a cam shaft 21 which acts directly on the grippers 19. The grippers remain open as the platen moves to the laying-on table 33, and after a sheet is supplied by the operator, a pivoted hook 27 is caused by eccentric-operated connecting-rod 30 to act on an arm on shaft 21, and cause the grippers to close. As the platen returns to printing position the slides 17 are moved to the bottom of the platen 2 and retain this position until after the printing operation. The slides 17 are operated by links 16 connected to levers 7 which are oscillated by a connecting-rod 12, and a wheel 13 which is carried by the platen and gears with a pivoted rack 14 mounted on the frame of the machine. The connection between the rod 12 and lever 7 can be adjusted by a bolt 10 secured in a slotted plate 9, and by this means sheets of various lengths can be dealt with.

Etching Printing Plates.

This invention by the Weeks' Photo-Engraving Co. relates to apparatus for electro-

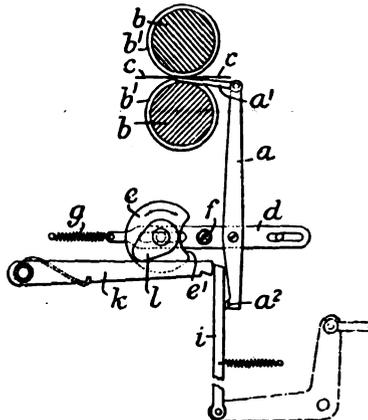

lytic etching. The plate *n*, forming the anode is suspended horizontally from a frame made of conducting material and comprising slotted

bars *h* connected by rods *j* and adjustably carrying rods *k* from which plate supports *m* connected by bars *o* are suspended. The frame is supported on rollers *g* carried by supports *f* and is reciprocated by a motor *p* through a worm *r*, wheel *q*, and links *t*, *s* and *u*, the latter of non-conducting material. A silver cathode plate *d* rests on the bottom of a tank *a* and is connected by leads *e* to an encircling negative bus bar *c*. The cathode plate *d* is larger than the plate *n* so that the portion of the cathode in active relation with the plate *n* is constantly changing.

Envelope-Making Machinery.

Messrs. Millington and Sons, Ltd., and Mr. F. May are the patentees of a device for automatically stopping an envelope-making machine in the event of the feed of paper failing which has a lever, adapted to project into and traverse the path of the paper or blanks, which is yieldingly controlled and under the influence of a cam, whereby it is kept in contact with the paper, but is deflected when the feed ceases. The lever *a*, having a finger *a'*, adapted to project into grooves *b'* on feed rollers *b*, is pivoted to a sliding bar *d* which is drawn by a spring *g* towards a constantly rotating cam *e*. A roller *f* on the bar makes contact with the periphery of the cam, part of which *e'* is indented. The lower end *a²* of

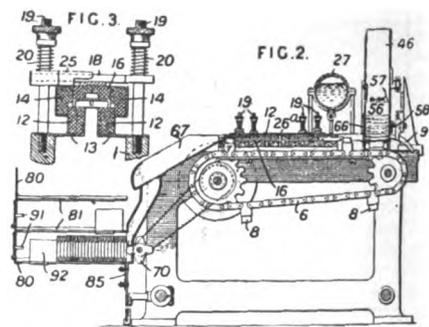

the lever engages a spring-controlled arm *i*, which controls a device for stopping the machine. A second cam *l*, secured to the cam *e*, oscillates a spring-controlled latch lever *k*. In operation the feed is so timed that a blank *c* passes between the rollers *b* when the indentation *e'* in the cam *e* is opposite the roller *f*. If a blank is not in position, the finger *a'* can rise in the grooves *b'* into the path of the blank and the bar *d* can be moved inwards by the spring *g*. The lever will then move the arm *i* into engagement with the latch *k*, and it will move downwards, thus stopping the machine. The device can be used in conjunction with the machine described in Specification 9244/15.

Cleaning Type-Bar Matrices

In this invention a machine for cleaning type-bar matrices or other articles comprises a laterally movable magazine 46 containing several stacks of matrices, etc., which are fed one by one between felt cleaning pads 12, 14, 16, Fig. 3, by pusher-blocks 8 on an endless chain 6. The blocks 8 are spring-supported and are depressed by a fixed guide 9 so as to engage only one matrix. A spring-pressed stop 66 holds back the over-lying matrices. The lower felts are carried by supports 13, Fig. 3, from the frame 1, and the side and top felts 14, 16 are carried by yokes 18, 25 which slide on rods 19 and are pressed downwards by springs 20. The felts are in two sections separated by a space 26^a, the right-hand section being partially saturated with a cleaning liquid and the left-hand section being dry. Cleaning liquid is supplied from a reservoir 27 under the control of a valve which is oscillated at intervals by a cam. When a stack of matrices is exhausted, a

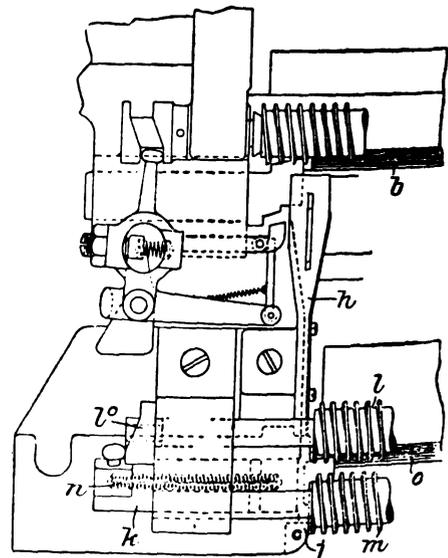

spring latch 57 carried by a weight 56 passes through an aperture in the magazine and is engaged by a reciprocating member 58 by which the magazine is moved laterally to bring the next stack of matrices into position. The cleaned matrices pass down a shoot 67 by which they are inverted so as to fall on their feet, and are pushed by a star wheel 70 into a delivery receptacle 80 having shelves 81. Sliding weights 92 support the matrices on the shelves. When a shelf is full, the weight 92 strikes a pin 91 and withdraws a stop from a supporting arm so that the receptacle falls until the next shelf is in

receiving position. A stationary door 85 closes the filled shelves. The method is patented by Messrs. J. J. Burke and A. L. Adams.

Distributing Apparatus.

Distributing apparatus for machines having two or more magazines in which the matrices are first divided into two groups is patented by Messrs. P. W. Druitt and W. R. Gilpin. The matrices of one group being delivered direct to their distributor, and those of the other group falling down a vertical shoot for delivery to the other distributor. The matrices of the second group, which fail to engage the distributor *b*, fall down a shoot *h* in front of an horizontal plunger *k*, which is reciprocated

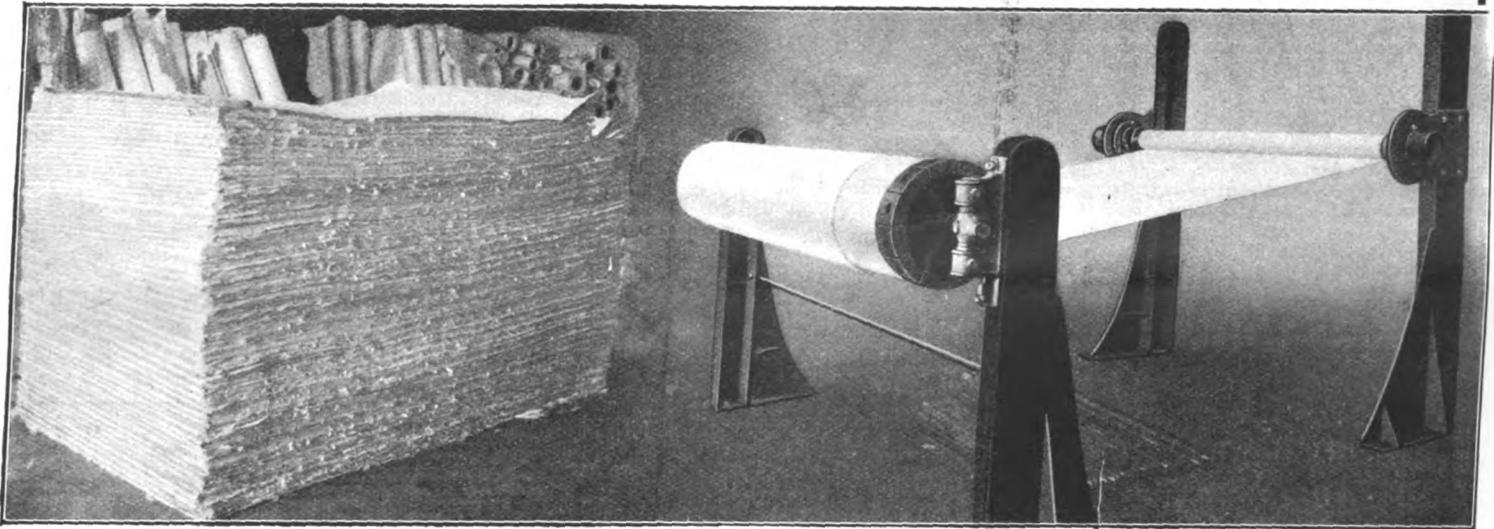

in timed relation with the rotation of the distributor screws, and advances the matrices into engagement with the screws *l*, *m* of the second distributor *o*. The falling matrices are arrested by a platform *j* of wood, etc., to diminish rebound, or may fall on to the end of the plunger before its retraction, and then on to the platform. The plunger is retracted by a cam *l^o* on one of the distributor screws, and is advanced by a spring *n*.

PAPER prices in Austria have risen in a remarkable fashion since June. For example, packing paper, 900 crowns per kilo., and glazed printing paper, 1,800 crowns per kilo. Foreign orders are quite numerous.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES :

- | | |
|---|--|
| <p>1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.</p> <p>2.—It occupies a space of only six feet on the run, and is quite noiseless.</p> <p>3.—The power required is such a small amount that it can be driven from any existing shafting.</p> | <p>4.—Centres of any kind or width can be worked on the machine.</p> <p>5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.</p> <p>6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.</p> |

Stationers' Social Society.

The Bowling Section.

The fascinating game of bowls has created considerable enthusiasm in the ranks of the bowling section of the Stationers' Social Society. Fortunately, in the London paper trade there are gentlemen whose names are well-known in the bowling world, and their keen interest and stimulating influence has greatly conduced to the success of the season. Members have had the privilege of the use of the greens of the Malden Club, the Muswell Hill Club, and the Streatham Constitutional Club, through the kindness of Mr. Arthur Woollacott, J.P., Mr. W. S. Muir and Mr. M. Relph respectively. The meeting on the green of the Streatham Constitutional Club took place on Thursday afternoon the 14th inst., and was a most enjoyable event, the weather holding good until the finish of the game.

A Close Contest.

With bowlers of such repute as Mr. Woollacott, Mr. Harry Ling, Mr. Tom Hastings, Mr. W. Penman, Mr. W. S. Muir, Mr. M. Relph and Mr. R. S. Mason occupying the rinks a keen game is inevitable, and when it is stated that Mr. J. H. Senior, who won the Woollacott challenge cup in 1921, Mr. H. J. Burholt, the winner this year, and Mr. E. M. Fells, the runner up, were also among the players, additional zest was given to the meeting.

Messrs. M. Relph (skip), H. J. Burholt, A. Woollacott and T. C. Dryer met Messrs. R. S. Mason (skip), E. M. Fells, H. Ling and H. Haxton. During the 21 ends some excellent bowling was witnessed, the result being 17 points against 16 points, Mr. Relph's side being the winners by one point.

No less keen and exciting was the play on the adjoining rink. The sides were: Messrs. T. Hastings (skip), John Price and W. Penman against Messrs. W. S. Muir (skip), P. S. Porteous and J. H. Senior. The result was also very close, Mr. Hastings' side scoring 18 points against Mr. Muir's 17 points.

Mr. M. Relph Entertains.

During the afternoon tea was served in the ground pavilion, and following the completion of the game the visitors sat down to a cold collation, on the kind invitation of Mr. M. Relph, who in addition to being a strong supporter of the Stationers' Social Society's bowls section, is captain of the bowling club of the Streatham Constitutional Club.

Mr. Relph (chairman) extended a hearty welcome to the visitors. He regarded with pleasure the interest that had been infused

into the bowling section of the Stationers' Social Society, and he thought each year they would grow stronger and stronger. The time might come when they would be able to throw out a challenge to fellow stationers in the north. The advantage of their occasional meetings was the fostering of good fellowship.

Mr. W. S. Muir expressed the thanks of those present to Mr. Relph for the privilege of playing on the green and also for the kind way he had entertained them that evening. He agreed with their chairman that a game of bowls promoted good fellowship, and he hoped next year more games would be arranged. The weather during the past year had not been altogether favourable, but there was one advantage, the greens had benefited after the drought a year ago.

South v. North.

The question of arranging a bowling match with northern members of the paper trade was warmly endorsed by Mr. Hastings and Mr. Fells. Mr. Woollacott said they had to consider the differences in crown and flat greens, and the possibility of some of their crack bowlers coming to grief. Mr. Porteous hinted that such a match might be considered by the bowling committee. A suggestion was also made by Mr. Fells that a captain should be appointed next season.

Mr. Tom Dryer referred to the great pleasure afforded in attending the various meetings during the past season, which not only promoted good fellowship, but stimulated the desire to become good bowlers.

Mr. W. Penman hoped next year to arrange a game on the ground of the Belmont Bowling Club, of which he is president.

Mr. Relph referred in appreciative terms to the publicity given in the trade press to meetings of the bowling section. Mr. Fredk. Gillis (*World's Paper Trade Review*) thanked Mr. Relph for his kind remarks.

The toast of "The Chairman" was received with the greatest enthusiasm, and Mr. Relph, in reply, said he would always be pleased to help forward the bowling section of the Stationers' Social Society.

Processes of Engraving and Etching.

By ARTHUR M. HIND, O.B.E., M.A.

(Slade Professor of Fine Art in the University of Oxford).

In treating the subject of the processes of engraving and etching, I am chiefly concerned with the technical character of the various processes in the discrimination of their several characteristics and limitations and peculiar fitness for certain kinds of work. I will omit various processes, such as mezzotint, aquatint, and other tone processes, dealing only with woodcut and wood engraving, line engraving and etching.

Nature and Use of Woodcuts.

With an ordinary woodcut the part which is cut away is merely the negative portion of the design; the surface of the block is inked in the printing, so that it is the lines and spaces left by the cutter in relief that are the black or positive parts of the design. The wood used is either the plank of a soft tree, such as apple, pear, sycamore, or beech, or a section of box wood. For work on the plank, which was usual until the 18th century, a knife was used, so that woodcut is the correct term for most earlier work. For work on the harder box wood, which may have been introduced by Papillon, though perhaps only in the plank, the graver or burin is the tool (or other tools similarly pressed before the hand, e.g., tint tools, scorpers and gouges).

The press used for printing woodcuts is practically the same as that used for type, so that a woodcut is in its very constitution perfectly fitted for printing in conjunction with type, and on that account the most suitable form of engraving for book illustration.

I have spoken of the cutting of the ordinary *black line* woodcut as being the removal of the negative parts of the design. In another style of woodcut, the *white line* woodcut, the part cut away gives the positive of the design as white line on black.

Earliest Woodblock Printing.

The earliest prints from woodblocks which can be dated with certainty are Japanese, of 764 A.D., but it is probable that the art was known earlier in China. In Europe—and my lectures are limited to European work—wood blocks were used during the Middle Ages for impressing patterns on textiles, the pattern or block cutters being called the *Formschneider*. Paper only came into common use in Europe at the end of the 14th century, and it is about that time that the earliest European prints on paper from wood blocks can be dated. During the 15th century woodcut was largely used for the popular picture of saints and other scriptural subjects disseminated by the monasteries, and for playing cards, which were introduced in Germany at the end of the

14th century, though no packs can be dated much before 1450.

The "Block Books" (*i.e.*, books in which the page, picture as well as type, is entirely cut on the wood) have generally been regarded as the forerunners of printing from movable type, but none of them can be dated with any certainty before 1460, *i.e.*, at least a decade later than the introduction of type printing. But even a single leaf woodcut with text cut on the same block possesses all the essential elements of the block book, and of these some certainly date before the earliest printed books, so that in principle at least the block book is the forerunner.

In Albrecht Dürer (1471-1528) woodcut reaches its highest development. We speak of Dürer as wood cutter, but, in all probability, Dürer was only the designer of his woodcuts, and this may have been the case with the majority of early so-called woodcutters. But with black line woodcut I do not regard it as so essential that the artist should do his own cutting, so long as he designs with a clear view of the style most fitted for the process. Second only in interest to Dürer as a designer for woodcut is Hans Holbein, the younger (1497-1543). Holbein's cutter, Hans Lützelburger, is among the few craftsmen of the period whose fame has remained alongside that of the designer.

Requirements of Book Illustration.

Book illustration is undoubtedly the fittest sphere for woodcut and wood engraving. Apart from the method of printing being the same for woodcut and type, a practical convenience of great value, the strength of a woodcut impression seems to be a better artistic balance to type than the more forcible prints obtained from an intaglio plate.

The Italian publishers of the late fifteenth and early sixteenth century fully realised this, and no more beautiful illustrated books have ever appeared than those of Venice at this period. The most attractive of all is, perhaps, the *Hyperotomachia Poliphili* (printed by Aldus, Venice, 1499). But it remained for Thomas Bewick, at the end of the eighteenth and in the early nineteenth century, to develop the white line to its fullest capabilities. And comparison of Bewick's work with Papillon's is generally much in favour of the former: partly, perhaps, due to the added clearness and delicacy in engraving achieved by his use of boxwood cut across the grain.

Bewick's more famous contemporary, Wm. Blake, did little woodcut, but one series of little cuts illustrating Thornton's *Pastorals* (Virgil), 1820, are among the most perfect achievements in the whole history of the art,

A considerable part of Blake's own illustrated books are printed from relief blocks in the manner of woodcut, but they are on metal, and for the most part etched in relief, not cut or engraved.

Very different in style from these are the wood engravings of the illustrators of the "Sixties." The manner of these illustrators, of whom Millais, Rossetti and Sandys were the leading figures, was essentially that of pen draughtsmen without very definite thought of style suited to the character of wood. In spite of the charm of much of the work done, I doubt the propriety of this style of work on wood. Modern photographic processes have largely ousted its use, and most present-day wood engravers are probably right in their return to the use of a simpler method, continuing the traditions of the sixteenth century, or such later masters as William Blake. The return to Venice and her ideals, though treated in a thoroughly individual spirit, is illustrated in the woodcuts of the Kelmscott Press, in which Morris and Burne-Jones were the chief designers, and Hooper the best known engraver, while an even closer reflection of Venice is seen in the beautiful woodcuts of Charles Ricketts in the Vale Press. Easily first among the private presses still issuing books with woodcuts in England is Lucien Pissarro's "Eragny" Press, which started on the basis of the Vale fount, and has produced many books of great beauty.

Among the younger generation of artists there are a considerable number doing excellent woodcuts and a Society of Wood Engravers has recently been formed. With such material at their hand, it is to be regretted that publishers do not have more frequent recourse to this most perfect form of illustration. Process reproduction may give more freedom to the designer, but this freedom from convention generally leads to a license, by which the works produced bear no artistic relation to the page of type, and to the consequent degradation of the art of book illustration.

Printing from Intaglio Plates.

In line engraving, the line which prints black is a furrow in the plate, cut, or engraved by the graver or burin. The printing requires a different press from woodcut or type, the copper-plate press, in which the bed passes between double rollers to give the much greater pressure required. The lines of the plate are first filled with printer's ink, and the surface cleaned (so that the parts between the lines shall remain brilliant and white). The plate is then laid on the bed of the press, and, in conjunction with damped paper, placed on it and protected by blankets,

Sir,

Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from
.....192.....to.....192..... and so on from year to year, until notice of dis-
continuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions :-

CONDITIONS :

The Subscription is annual, payable in advance, and may commence at any time.
All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.
Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.
The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.
In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms :

Subscription £2 2s. 0d. per annum, entitling the Subscriber to:-

Ten Status Enquiry Forms and ten Debt Forms free of charge.
Further Enquiry Forms during currency of Subscription at 2/- each.

The "Collection of an unlimited number of Accounts" at the following rates of Commission :-
5% on amounts recovered up to £20
2 1/2% on amounts over £20 and up to £100
1% on amounts over £100
5% on amounts recovered in Ireland, Scotland and the Channel Isles.

Special terms in respect to Foreign Debt collections and enquiries.
Representation at Meetings of Creditors free of charge.
Searches of the Registers (unlimited) free of charge.
Legal Advice by the Solicitors to the Office upon ordinary business matters free.

is pulled through the press. The damp paper is pressed into the lines sufficiently to drag out the ink, which thus stands out on the impression in a relief corresponding to the depth of the engraved furrow. It is this relief in the line (felt by the finger passed over an impression) which gives the distinctive quality to the line of an engraving or etching, which the flat line obtained by the pen can only imitate superficially. It imparts a strength of tone quite impossible in pen work, and in the regular conventions of line engraving an unequalled brilliance of texture as well.

In its origins line engraving was a development of the goldsmith's craft; for engraving apart from printing, is one of the oldest forms of decoration on metal. A special class of goldsmith's work chiefly practised at Florence and Bologna in the latter half of the 15th century, that of *Niello*, in which the engraved lines on small silver (or gold) plates were filled with a black substance (niello) to show up the design, comes very near in style to line engraving in our sense. Vasari goes so far as to say that line-engraving was a development from niello, Maso Finiguerra, the Florentine goldsmith (1426-1464), finding in the course of his work that an impression on paper could be taken, and be of value in itself. It is doubtful whether any of the Florentine nielli are as early as certain of the most primitive Italian engravings, and in any case the earliest German engravings are probably a generation earlier than Finiguerra's first work, so that the tradition that Finiguerra was the inventor of engraving falls to the ground.

Albrecht Dürer, the son of a goldsmith, fills the central position in the art of original line engraving, as he did in woodcut. In the perfect conviction with which every line is laid on the plate, in a convention of extreme beauty and fitness in his treatment of the medium and in the imaginative force of his inventions, Dürer has never been surpassed by any other line engraver.

The use of steel plates in place of copper, introduced about 1820, but soon superseded by steel facing of the copper by electrolysis, made it possible for much larger editions to be printed from the plates, a matter of considerable value in the use of the art in book illustrations.

Line Engravings in Books.

Occasional experiments of illustrated books with line engravings are found in the 15th century (e.g., Pendino's *Dante*, Florence, 1481), but the necessity for two printings, apart from the artistic instinct that woodcut was more suited from its style, probably prevented its frequent use. But in spite of this difficulty, it became the predominant medium for book illustration in the 17th and 18th centuries, when the tendency may have been to slight woodcut as an inferior art. This may have arisen from the fact that the wood cutters in the earlier periods belonged to the same guilds as the carpenters, probably something less in the scale than the goldsmiths and line engravers. And a side light on the status of the line engraver is provided by an edict of Louis XIV., obtained by the efforts of Nanteuil, raising engraving to the position of one of the Liberal Arts.

The most attractive school of line engraving in book illustrations is that of France in the latter part of the 18th century. No more accomplished work in miniature portrait engraving has ever been done than by Etienne Ficquet.

Comparatively little original work has been done in line engraving during the 19th century, and William Blake's *Book of Job* (1825) is pre-eminent in its isolation, fit to take its place as a work of the highest imagination, done in the best conventions of the craft, beside the work of Dürer.

At the present time, the photo mechanical processes have largely ousted engraving from the field of reproduction, and the medium is used little except for heraldic work. In many respects these more exact reproductions may have helped towards a wider knowledge of the history of painting, but with all its exactness there are occasions when the artist's vision is able to render in monochrome the values of a painter's colours with much truer effect than the camera. And beyond this, the quality and texture of his reproduction is generally immeasurably more interesting than the best of the photographic processes.

For heraldic work line engraving is not likely to be superseded, though woodcut is always a good second in original book-plate design. Mr. J. F. Baddeley and the late Mr. G. W. Eve and Charles Sherborne are notable names in this field.

With its qualities, so distinctive in the

dignified conventions proper to its style, and in the peculiar force of the clear cut line printed from an intaglio plate, I feel convinced that the day of line engraving in the broader fields of composition, whether for original or reproductive work, is not past.

Etching.

By etching, as by line engraving, we get prints taken from intaglio plates, but in the present case the furrow in the plate is bitten by acid, not cut with the graver. The popular confusion of etching with pen drawing is still too common, etching being, of course, by derivation eating, i.e., biting with the acid. I have already emphasised the qualities of relief of the line printed from an intaglio plate, from which pen drawing differs so essentially in quality.

To help in the description of the process, I refer to the plate showing etchers at work from the 1758 edition of Bosse's *Traicté des manières de graver*. On one side an assistant is seen covering the plate with the etching ground, bringing a little silk bag of the substance in contact with the plate, which is being heated on a stove; the melted wax is then laid evenly over the surface of the plate by repeated taps with the dabber. In the centre this grounded plate is seen suspended from the ceiling, and another figure is passing lighted tapers beneath it to blacken the ground. Then at a table on the left the artist is seated drawing through the ground with the etching needle. In the background two other assistants are represented biting the plate in a bath of acid, the edges and back of the plate having first been protected by varnish.

The other process which inevitably enters into any discussion of etching, as it is so used in conjunction with etching, though in its principle it is more allied to engraving, is *dry-point*. Here the furrow is obtained by means of a strong steel point, somewhat of the shape of a pencil, drawn through the surface in the same way as the draughtsman uses a pencil. The resultant furrow is not so deep as that obtained by the graver, and the curl of metal which the dry-point throws out at the side is generally left, and not scraped away as in line engraving. For the aim of the line engraver is clearness of line, and this curl of metal would hold ink, which adds a deep cloudy effect at the edge of the line called the burr, one of the characteristic qualities of dry-point. This burr is very delicate and comparatively few impressions (fifty or not much more) wear it away, so that late impressions of dry-points are mere ghosts of the rich earlier effect. On the other hand, the clear furrow of line engraving or etching, particularly in plates with broad open line, will outlast many hundreds of impressions (on the copper—apart from the added life steel facing would give) without any rapid deteriorations, as long as care is used in the printing.

The origin of etching may be traced back to the armourer's craft, in whose workshops the process of etching decoration on iron was certainly known at the beginning of the fifteenth century and probably at a much earlier period. Daniel Hopper, an armourer, who worked in Augsburg between 1493 and 1536, was probably printing etchings from iron plates as early as 1500, but there are no dated etchings before 1513. Dry-point goes back somewhat earlier than etching, the interesting plates of the anonymous Master of the Hausbuch, of which Amsterdam has the best collection, belonging to the latter half of the fifteenth century.

Etching was used to a considerable extent during the sixteenth century, though it never came into its own until the succeeding century.

Perhaps the greatest danger to recent etching has been its popularity; the public

has preferred a bad etching to a good wood-cut or lithograph, leaving these other arts a safer though less prosperous field. It is perhaps on that account that some of the best etchers are those who have exhibited least. But there is every reason to be proud of the achievement of the present day in etching.

Paper Box and Bag Wages.

The Ministry of Labour *Gazette* reports the following changes in the wages of the paper boxmaking trade of Great Britain, which took effect from August 1st under an agreement whereby wages fluctuate in correspondence with the Ministry of Labour index number of retail prices, etc.:

Males: Die makers, forme setters, cutters (including shears and guillotine), machine minders and head stock-keepers 18 years and over, decrease in the minimum time rates fixed, under the Trade Boards Acts, of from 1s. to 2s. 6d. per week; piecework basis time rate of 1s. 3^d. per hour, previously fixed, cancelled. Minimum rates after change range from 3s. 6d. at 18 to 19 years to 7s. 6d. at 23 years and over.

Other workers (except learners), decrease of 1s. 6d. per week in the minimum time rates fixed, under the Trade Boards Acts (5s. to 5s. 6d.), and decrease of 1s. per week in piecework basis time rate.

Learners, decrease in the minimum time rates fixed, under the Trade Board Acts, of from 6d. to 2s. per week. Minimum rates after change range from 13s. 6d. at under 15 years to 46s. at 20 to 21 years.

Females: Other than learners, decrease of 1s. per week in the minimum time (33s. to 32s.) and piecework basis time rates fixed under the Trade Boards Acts; learners, new scale of minimum weekly rates fixed under the Trade Boards Acts, resulting in decreases of 6d. or 1s. per week.

The change in the wages for the paper bag making trade of Great Britain, taking effect from the same date and under a similar agreement, are as follows:

Males: Machine tackers, decreases in the minimum time rates fixed, under the Trade Boards Acts, of from 2s. to 4s. 6d. per week for those 18 years and over; and minimum rates fixed for those 16 to 17 and 17 to 18 years, of 24s. and 28s. 6d. respectively. Minimum rates after change range from 24s. at 16 to 17 years, to 72s. at 23 years and over.

Paperbagcutters, decreases in the minimum time rates fixed, under the Trade Boards Acts, of from 1s. 6d. to 3s. per week. Minimum rates after change range from 3s. 6d. at 18 to 19 years, to 65s. at 23 years and over.

Hydraulic pressers, slitters, stock-keepers, packers and despatchers 21 years and over, decreases in the minimum time rates fixed, under the Trade Boards Acts, of 2s. 6d. or 3s. per week. Minimum rates after change: 1st year, 57s. 6d., increasing to 62s. after three years' experience.

Other workers (except learners), decrease of 3s. per week (61s. to 58s.) in the minimum time rate fixed under the Trade Boards Acts.

Learners, decrease in the minimum time rates fixed, under the Trade Boards Acts, of from 6d. to 2s. 6d. per week. Minimum rates after change, from 15s. 6d. at under 15 years to 50s. 6d. at 20 to 21 years.

Females: Other than learners, decrease of 1s. per week in the minimum time rate (33s. to 32s.) fixed, under the Trade Boards Acts; and decrease of 1s. 6d. per week in the piecework basis time rate; learners, new scales of minimum time rates fixed under the Trade Boards Acts, resulting in decreases of 1s. or 1s. 6d. per week for some workers.

Trade Notes.

MASTER PRINTERS AND COSTING.—A meeting of a committee of district officials of the London Master Printers' Association was called for yesterday (Wednesday) to discuss arrangements for a costing campaign throughout London. Mr. Alfred Langley was to preside and Mr. W. Howard Hazell and Mr. A. Williamson to speak.

THE North London Master Printers' Association commences its winter session on Tuesday next, October 10th, at the Central Library Hall, 89, Holloway-road, at 7 p.m. sharp. Mr. John D. Wise, president of the South-West London Association, is to give a paper on "How a Small Printer Benefits by the Use of the Federation Costing System," and Mr. Williamson, the costing secretary to the Federation, has promised to attend if in London.

PAPER WHOLESALESMEN AND PRINTERS' CUSTOMERS.—We understand that further objections have been made in the matter of wholesale paper merchants supplying paper to printers' customers instead of to the printers. It is expected that a conference will shortly be held between the Wholesale Stationers' Association and the London Master Printers' Association with a view to reaching an understanding on the matter.

PRINTING RACING TIPS.—At Blackburn, on Wednesday of last week, Ellis Wynn Morris, 156, Cranborn-place, Witton, was summoned for unlawfully publishing and displaying certain printed papers known as Dunlops Gems Racing Tips, not having on them the name and address of the printer. Arthur Barton, newsagent, Darwen-street, was also summoned for unlawfully publishing or displaying, or assisting in publishing or displaying, certain of these papers on these dates. Defendants pleaded ignorance of the need for imprint, but Morris was fined 20s. in each of the three cases, and Barton 10s. in each case. Each defendant was also ordered to pay £1 1s. advocate's fee and 15s. special costs.

BOOKBINDERS' GRIEVANCE.—The Books Committee of the Edinburgh Public Libraries received last week a deputation from the National Printing and Bookbinding Union, who contended the binding of all books for the Edinburgh libraries should be executed in the city. At the present time a certain portion of the work is done outside Edinburgh. At the General Committee meeting that followed, Mr. William Cowan stated that the matter would be referred back to the Books Committee, that a special sub-committee might be appointed to co-operate with the bookbinding trade, in order to decide what fresh arrangement it would be possible to make.

AMATEUR BOOKBINDERS.—In the South Down villages of East Dean and Friston, near Eastbourne, many of the people are trying their hands at bookbinding. Church hymn books have been renovated, and the Rev. A. A. Evans hopes that someone will be able to repair fitly the ancient Bible in Friston Church, which has several leaves torn and some corners of leaves missing. This old Oxford Press Bible has been in use in Friston Church for over 200 years.

PRINTING IN LEICESTER.—The weekly trade report of the Leicester Chamber of Commerce states that during the past few weeks the printing trade generally has improved. While competition has become keener, there seems to be a much more hopeful outlook, although in some districts short time is still being worked. Locally, owing to the slump in the boot trade some depression is being felt, particularly in the letterpress, but this will doubtless improve when the two staple industries pick up. Most of the local firms are working full time, and the lithographic trade is busy.

LONDON SCHOOL OF PRINTING.—The new London School of Printing at Stamford-street has now started its first winter session. Though the school's activities are somewhat hampered by the fact that the decorators are still about, a good start has been made, some 1,500 or so students having been enrolled.

L.C.C. CENTRAL SCHOOL.—This year, as previously, a very useful "School of Book Production" is included amongst the training facilities provided by the L.C.C. Central School of Arts and Crafts, Southampton-row, London, W.C.1. The subjects taught cover

a wide field, and the school's object is twofold: First, to preserve and encourage skill and appreciation of fine bookwork and the closely allied arts of engraving and lithography; second, to strive for the artistic enhancement of the many commercial uses of these crafts which continually arise.

A CONSIDERABLE number of ex-service men have been trained for library work at the School of Librarianship at University College, London, said Sir Gregory Foster, the Provost of the college, in an address there on Monday.

NEWSPAPERS AND "CONTEMPT."—Mr. Edward Bell, speaking at the Law Society's Conference at Leeds last week, described the present law of contempt as penalising newspapers. He submitted that the quasi-criminal jurisdiction now exercisable against newspapers should be materially modified to prevent the frequently unwarranted invocation by certain hypersensitive complainants. Providing that comment be impartial, unmalicious, and non-partisan, reference to pending causes should be allowed.

THE Post Office has completed arrangements for advertising in post offices. A contract with an advertising firm confers the right to display until December 31st, 1925, announcements on the interior walls of between 1,400 and 1,500 public offices of post office buildings.

REUBEN BIGLAND has published his account of the famous Bottomley case. "What has the fight cost me?" he asks. "It cost me over £2,000 in cash, won by hard toil as a printer in Birmingham. It cost me the risk of penal servitude."

NEW premises have been secured by the Society of Women Journalists at Sentinel House, Southampton-row, W.C.

A NEW quarterly review entitled the *Criterion*, devoted to "literature, the arts and general ideas," will be published by Mr. R. Cobden-Sanderson on October 15th.

THE first number of the *New Leader*, formerly the *Labour Leader*, is due to appear to-morrow, the 6th.

COMMENCING with the first week in October, the *Era* will be published on Thursday instead of on Wednesday.

PRESSMEN AT GOLF.—Teams representing Pressmen of Yorkshire and Lancashire met at golf on the Hopwood Course at Manchester on Thursday last. The Yorkshire side, which included Mr. A. E. Grime, the editor of the *Yorkshire Evening Post*, and Mr. D. C. Levy, of the *Sheffield Telegraph*, lost on the singles by 5 games to nine.

THE death occurred on Friday of Mr. Jonathan H. H. Barnard, associated for 34 years with Messrs. Longmans.

THE death has taken place at Sittingbourne of Mr. Philip Taylor, who was an employee of Messrs. Ed. Lloyd, Ltd., for 58 years prior to 1916. On the occasion of the Duke of York's visit to the Sittingbourne Paper Mills in July, 1921, he was presented with a gold watch on behalf of the firm in recognition of his length of service. The deceased gentleman died as a result of a severe fall in his house, Glenmore, Park-road, Sittingbourne.

THE death is announced in Montreal of Mr. Alexander L. MacLaurin, vice president and general manager of the St. Maurice Paper Co., Ltd. He was a prominent figure in the lumber, pulp and paper trades.

LATEST WILLS.—Mr. Robert Eadon Leader, of Whetstone, Middlesex, and formerly of Moorgate, Sheffield, at one time editor of the *Sheffield Independent*, and a member of the family who founded and owned the paper, at one time chairman of the committee of management of the Press Association, who died on April 18th, left £68,582, with net personalty £35,293. Mr. Frank Gladding Willmott, of Stamford hill, Stoke Newington, managing director of Messrs. Willmott and Sons, Ltd., printers and stationers, left £1,008.

THE late Mr. Horace E. Hooper, of New York, U.S.A., publisher, proprietor of the *Encyclopædia Britannica* (estate in United Kingdom), left £10,678.

THE late Major James Baldwin, J.P., late Worcester Yeomanry, of Groveley, Northfleet, Worcester, and of James Baldwin and Sons, Ltd., who died on August 8th, has left estate of the value of £54,413, with net personalty £18,501. He gives £100 each to Fredk. Jones, chief clerk, and Samuel Hayes, works manager, at James Baldwin and Sons, Ltd., and left some charitable bequests,

MESSRS. FREDERIC W. GOUDY and Joseph Pennell have been chosen to head a new school conducted by the Art Students' League of New York, with headquarters in the Fine Arts Building, New York City. The school will fill the useful roll of instructing art students in the various methods of practical art reproduction by etching, lithography, fine hand-coloured printing, etc.

THE American Antiquarian Society has just printed in its "Proceedings" William McCulloch's "Additional Memoranda" to Isaiah Thomas's "History of Printing," 1810.

IN 1909, 6,615,046 workers in America produced goods of the value of £4,134,421,000, while the output in 1907 of 6,019,746 British workers represented a value of £1,617,340,000.

THE Bureau of Foreign and Domestic Commerce has notified the American Paper and Pulp Association of a proposal of France to increase the protective tariff on foreign paper. The French paper manufacturers are asking the Minister of Commerce for increased protection, urging a coefficient of 3 for the coarser grades of news-print and book paper, which now pay the basic rates.

PULP and news-print mills will be in operation in northern Alberta within the next decade, it is prophesied.

THE death is announced at Millinocket, Me., of Mr. Charles E. Pope, founder of the Japanese Tissue Mills, and the inventor of many devices for improving the production of paper.

STATISTICS furnished by the Hungarian Statistical Office show that paper and paper ware were among the principal imports during the period January-June of this year, the quantity being 231,816 quintals, of the value of 1,969 million kr.

THE Russian Government is endeavouring to encourage the production of paper in the country, but it will be some time before the industry regains its pre-war position.

THE need of straw is reducing activity in the strawboard industry of Holland.

MESSRS. CHAS. PAGE AND CO., LTD., of 47-51, King William-street, E.C.4, have lately taken over the sole sales agency to Astroms Fabrikker Osakeyhtio, Abo, Finland, who make printing inks.

MESSRS. JOHN DICKINSON AND CO., LTD., are issuing a varied selection of standard papers which are always in stock. They include printings, imitation arts, lustre art, antique wove, cream laid, tinted papers, blottings, and mould-made papers, all of which can be delivered immediately on receipt of order. The prices command attention.

Developments in Photo-Litho.

Assistance for the Printer.

Progressive printers who are introducing photo-litho, machine intaglio and other modern processes into their works are showing much appreciation of the expert assistance that is offered them by a new department which has been added to the business of Messrs. Pictorial Machinery, Ltd., of 7, Farringdon-road, London, E.C.1. The aim of the new department is to provide expert information and advice upon the many questions that arise in the adoption of the newest developments in process work, and the company's staff of demonstrators and instructors now includes the following:—Mr. Frederic T. Corkett, F.R.P.S., who is an authority upon photographic appliances for the graphic arts, deals particularly with the "Lithotex" process and "Step-and-Repeat" machine, also with matters relating to fine art machine intaglio printing and fast newspaper intaglio printing; Mr. J. H. Benton demonstrates the Douthitt Diaphragm Control, and advises on photographic lenses for photo-mechanical work; Mr. J. Flaherty is a specialist in cameras

cards is printed at a single impression per colour. With the positive control which the Step-and-Repeat machine gives, it is possible to get exactly the same exposure-time in the case of each exposure of the 56 that have to be made in repeating the photograph over the surface of each plate. The samples of these cards which we have seen were printed in six colours and gold—i.e., seven printings in all, involving the use of a series of seven progressive plates. In view of the fact that these plates have each to contain 56 repetitions exactly similar in every respect, and that the register of the 56 repetitions has to be perfect in all seven plates, it is not surprising that the United States Playing Card Co. did a lot of searching and experimenting before finding an entirely satisfactory process. It speaks volumes for the "Lithotex" process that the company is now using a Step-and-Repeat machine for the making of its multi-negatives. These cards, we are assured, have their picture-backs printed at the rate of a regular 2,500 sheets per hour by the offset process, the Harris feeder being employed. The company prints some sixty million packs per annum.

The "Pictograph" Cameras.

Amongst the classes of apparatus in which Messrs. Pictorial Machinery, Ltd., are special-

make a feature in their business of giving service to users as well as supplying plant. They have a staff of expert craftsmen who can render great assistance in the development of the new processes, particularly in photo-litho and machine intaglio and the new newspaper development in photo litho.

This service has been very much appreciated by visitors, especially printers from our colonies and overseas dominions, who are thus provided with formulæ of real utility and helped along paths of work which are none too easy.

Stationers' Company School.

Close Touch with Printing Trade.

A report of a very satisfactory character with regard to the Stationers' Company School was given on Tuesday at the annual prize distribution which took place in Stationers' Hall. The building was crowded with the boys and their parents, who gathered under the chairmanship of Dr. H. B. Brackenbury, chairman of the governing body. Accompanying him on the platform were Lord Riddell, Mr. Herbert Fitch (Master of the Company), and the members of the governing body of the school.

Major Huck, the headmaster of the school, in the course of his report, stated that the number of pupils had risen from 400 in 1919 to 540 at the present time. This was the utmost number that could be accommodated. Incidentally Major Huck mentioned that during the last two or three years it had been difficult to find employment for really well-educated boys on leaving school, and, in addition to doing the work of a schoolmaster, he had to do that of a Labour Exchange. In order to help boys at the school the Stationers' Company had decided to open a register at Stationers' Hall, on which would be entered the names of boys who wished to enter the administrative or mechanical sides of any of the various crafts comprised in the Company. The register would be available to members of the company requiring boys in business.

The prizes having been distributed by the Master of the Company,

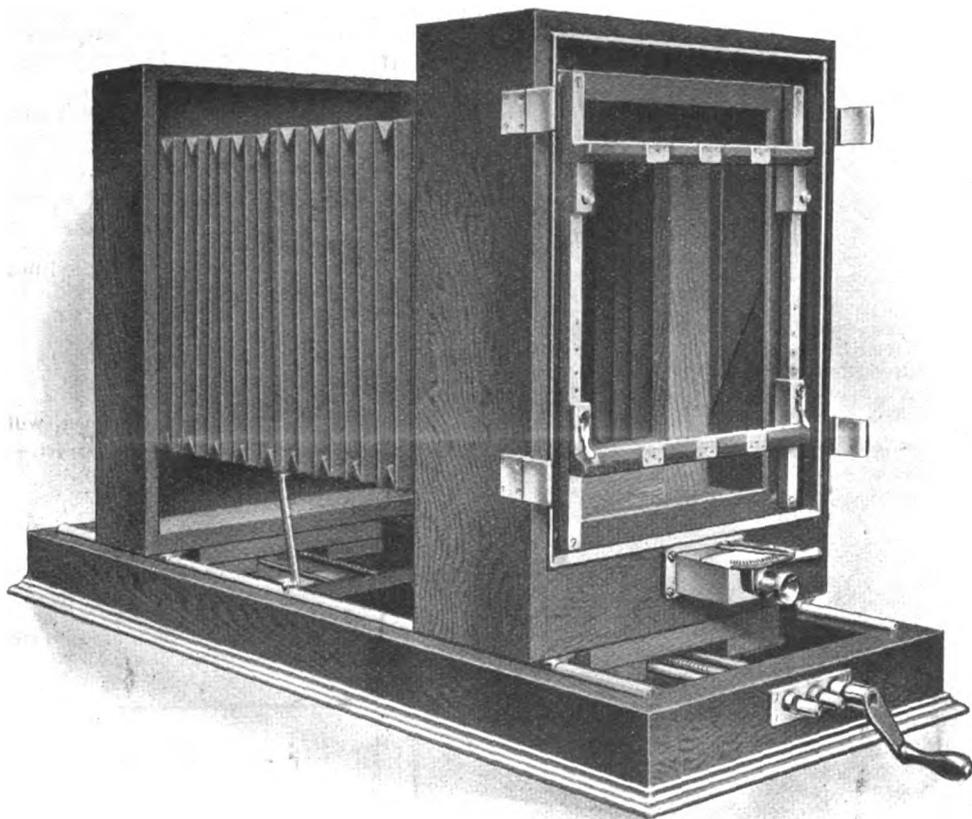

Lord Riddell, in the course of a short address, mentioned that he was president of a great printing school which had just been established in Stamford-street, Blackfriars. It was founded by the London County Council in conjunction with the printing trade, and it was going to be, perhaps, the finest printing school in the world. One of the uses of the register to which Major Huck had referred would be to pass on boys through this new school to the printing trade. The Stationers' Company's School was going to keep in close touch with the great trade out of which it had sprung. The printing trade offered a very good career for an educated boy with energy. It combined three different things—craftsmanship, commerce, and the artistic side. A great printer was a man of vision and not a mere setter of type, and the object of the new school was to turn out printers of the very best type.

Craft Lectures at Stationers' Hall.

The first of the series of Craft Lectures arranged by the Stationers' Company and Printing Industry Technical Board is to be held at 6.30 p.m. on Friday, October 13th, when the Right Hon. the Lord Riddell will give an address entitled "The Printing Business as a Career." Lord Riddell will speak on the importance of the printing industry; the commercial developments of printing; the printer as an artist; suggestions to the young craftsman on reading, thinking, concentration, observation and application.

The chair will be taken by the Master of the Worshipful Company of Stationers, Mr. Herbert Fitch, and all who are interested in craft training whether or not they are engaged in the printing industry, are invited to attend. Tickets of admission can be obtained (free of charge) on application to Stationers' Hall or from the secretaries of the various trade organisations.

TWO-THIRDS of the imports of paper bags and stationery entering Fiji come from Australia.

A Notable Process Camera: "Pictograph No. 1."

and special apparatus; and Mr. Felix Choice deals with the "Pictograph" continuous tone photo-litho process, with printing down for photo-litho and with rotary and flat-bed machine intaglio.

Remarkable Playing Card Printing.

The striking successes of the "Lithotex" process and the "Step-and-Repeat" machine are now well known. Some magnificent photo-litho work is being done by Messrs. Blades, East and Blades and other printers in this country who have installed Lithotex plant. We doubt, however, if we have yet seen anything in this line quite so striking as the delightful series of picture-backed playing cards produced by the United States Playing Card Co., of Cincinnati. The very exacting demands of playing card manufacture are obvious. In order that a pack may be absolutely uniform, and thus give no assistance to the card sharper, the board used must be absolutely uniform in thickness and quality, the cutting must be done with precision to within one-hundredth part of an inch, and, above all, the picture which is repeated on the backs of the whole pack must be multiplied without the slightest variation in respect of register, tone, or other characteristic. The Step-and-Repeat machine has triumphantly demonstrated its unique capabilities in the production of the multi-negatives for making the plates from which a complete pack of

printing, an important one is that of cameras for process work. The firm is now producing, in its own factory, some really noteworthy apparatus. The endeavour to apply in the case of process cameras some of the principles that have resulted in the well-known precision of the Step-and-Repeat machine, has had some interesting results. Such precision in a process camera is a most desirable feature—though this is perhaps not sufficiently realised in the trade: it makes reproduction work as nearly as possible mechanical, and saves a lot of skilled labour, particularly by eliminating correction of plates. We illustrate herewith the Pictorial Machinery Co's "Pictograph" Process Camera No. 1. The great feature claimed for these cameras is that the construction is such that the screen is maintained at absolute parallelism, no matter what the distance from the plate. Other notable characteristics are that the dark slide drops easily into position upon metal bearing surfaces that hold it firmly and truly in perfect register with the focussing glass, obviating inaccuracies due to working loose; a magnifying screen distance indicator is fitted, and greatly simplifies exact adjustment; moreover, special smoothness of motion is secured throughout, as all movements are on double runners.

A point specially emphasised by Messrs. Pictorial Machinery, Ltd., is that they always

Printers' Medical Aid Association.

Fourteenth Annual Meeting.

The fourteenth annual meeting of the Printers' Medical Aid and Sanatoria Association was held at the offices of the London Society of Compositors, St. Bride-street, London, E.C., on Friday, September 29th, 1922, the Right Hon. C. W. Bowerman, M.P., J.P., presiding.

The secretary, Mr. Arthur O'Connor, presented the committee's report, which again showed considerable progress both from a financial aspect as well as from the point of view of usefulness.

The total income for the year was £8,186 3s. 5½d., an increase over that of the preceding year of £615 11s. 7½d. The income was as follows: Subscriptions and donations, £7,682 9s. 11½d.; part payments by patients, £316 13s. 11d., made up as follows—surgical appliances, £235 19s. 8d.; convalescent homes, etc., £72; and spectacles, £8 14s. 3d.; interest upon investments, £37 3s. 7d.; matinee concert, £118 6s. 6d.; and by the sale of "Gadgets," £31 9s. 6d. On the expenditure side—paid to hospitals and similar institutions, £1,377 18s. 6d.; for appliances, £1,725 10s. 7d.; for convalescent homes and sanatoria, £1,333 11s. 8d.; for spectacles, £2,275 4s.; and for the upkeep of first aid boxes, £73 18s. 7d. The management expenses totalled £1,249 9s. 11½d., a figure which does not reach one-sixth of a penny. The cash in hand at the end of the year was £2,897 4s. 6½d., an increase over the previous period of £150.

Letters to the number of 13,897 was the year's issue, and shows a weekly issue of 275—a record of which the members are justly proud, and this brought the total issue since the inception of the Association to 86,325. Letters for surgical appliances numbered 3,000; convalescent homes, 326; sanatoria, 42; spectacles, 300; and special hospitals, 2,277. The success of the massage treatment was also referred to, and the usefulness of the Association's first aid equipments, which now number 212, was amply demonstrated by the information that some 7,000 cases of accident were attended to by the first aid box custodians. The Northcliffe flower show and the various printing trade unions, as well as the several auxiliaries, were especially thanked for their continued help, and Mr. Bob Leathart was also thanked for his "Gadgets," not only for their financial assistance, but also for the genuine humour contained therein. The information that a new "Gadget" was in the course of preparation was greeted with cheers.

The proposal of the committee to appoint an assistant secretary was well discussed, and ultimately Mr. Catford moved, and Mr. Welch seconded, that the recommendation be adopted, and this having been agreed to, Mr. J. E. Simcocks explained the committee's view, and the fact that after looking around for a suitable individual their choice had fallen upon Mr. W. S. Lintern, who had decided to stand. The selection was supported by Mr. W. Vandy, Mr. C. Gordon, Mr. B. H. Stafford and others, and Mr. Lintern, having been unanimously elected, suitably thanked the members.

The Chairman referred to the usefulness of the first aid equipments, and the advantage they conferred upon firms wherein they were installed, and expressed the possibility of their making some monetary recognition of such useful work, and this was supported by Mr. A. D. Maskell, Mr. E. W. Griffin, and Mr. A. Reeves, the secretary being instructed to send out a circular letter to employers of houses where such equipments are installed.

The following elections were then declared: Mr. Arthur O'Connor, secretary; Mr. Geo. A. Isaacs, J.P., treasurer.

The committee were as follows: C. Blich, Machine Managers; H. E. Burgess, L.S.C.; E. J. Flowerday, Machine Managers; J. Furst, Bookbinders and Machine Rulers; E. W. Griffin, L.S.C.; Miss A. Hook (Women's Section) Paper Workers' Union; W. Keen, Paper Workers' Union; Mrs. Lawrence (Women's Section) Paper Workers' Union; J. Mead, N.S.O.P. & A.; W. F. Moore, P.M. & O.A.; C. H. Oliver, Amalgamated Lithos; Geo. H. Peters, N.S.O.P. & A.; S. W. Perry, L.S.C.; Geo. T. Richards, A.C.P.; W. J. Salmon, Paper Workers' Union (Wholesale Newsagents' Branch); J. E. Simcocks, A.C.P.; W. L. Terry, Ambulance Section; W. Vandy, L.S.C.; E. J. Wickens, A.C.P.

The secretary was instructed to communicate with the Stereotypers' Society regarding adequate representation upon the committee.

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe Lane, London, E.C.4 for which a fee of 6d. is charged to cover postage of replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill. Fleet. London.
 Telephone: 8407 City.

Situations Vacant.

FIRST-CLASS PHOTOGRAVURE ETCHER wanted, for Cylinder and Flat Work of the best quality.—Full particulars to Box 13985.

GENTLEMEN, calling on Printers and Stationers required by old-established Waste Paper Firm to influence Waste Paper Contracts with their customers; town or country.—Apply, Box 13992.

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

Situations Wanted.

BUYER, desires change; intimate knowledge Paper Market; five years Buying experience all classes Paper, Wrappings, Printings, Boards, etc.; used to controlling staff; excellent references; Edinburgh and Glasgow district preferred.—Box 14002

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Machinery for Sale.

BREHMER and other WIRE STITCHERS, various models, including 4's, 4A's and Double-headed; guaranteed.—Box 13995.

The business of the 14th annual meeting having concluded, the 53rd quarterly report was then taken, and showed that the progress of the Association was still maintained, and that the receipts for the quarter were £1,973 4s., an increase of £88 upon the corresponding quarter of last year. The letters issued also showed an increase, the quarter's total being 4,305. At the end of the quarter the funds of the Association stood at £2,517 14s. 4d., and were made up as follows: Funding Loan, £400; War Loan, £94 9s. 4½d.; Consols, £290 8s. 6d.; Co-operative Wholesale Bank, £641 7s. 6d.; deposit account, £428 1s. 5d.; current account, £660; in secretary's hands, £3 7s. 7d.

The report referred to a circular letter that had been sent out to hospitals where, in addition to letters that patients may have, charges are also made, the circular letter desiring to remove such an anomaly.

Mr. W. Vandy then moved a hearty vote of thanks to Mr. Bowerman for presiding, and for his expressions of appreciation of the committee's work. Mr. Bowerman, in reply, stated that the report spoke volumes, and that it was always a pleasure for him to attend the P.M.A. meetings, more especially in view of the prevalent idea amongst some organised workers that he was too old for work. (Loud laughter.)

The meeting then terminated.

TENDERS WANTED.

Metropolitan Borough of St. Pancras.

To Printers, Bookbinders and Stationers.

THE Council invite tenders for the supply of Printing, Bookbinding and Stationery, for a period of 15 months, commencing 1st January, 1923. Forms of tender, which contain all the necessary information, can be obtained on application to the undersigned. Samples may be inspected at the Town Hall on any week day from the 16th to 27th October, 1922. Tenders are to be delivered to me, not later than 12 o'clock noon, on Thursday, 9th November, 1922, in envelopes endorsed "Tender for Printing, etc."

C. H. F. BARRETT,
 Town Clerk.

Town Hall,
 Pancras Road, N.W.1. 16414

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

Monks and Printing.

No craft retains so many traces of its Catholic ancestry as does that of the printer, says the *Catholic Times*. The monks were the early printers, as they were the copyists and illustrators before the invention of movable type and zincography. And, although the modern printer does not invariably order his life after the manner of the monastics, he still employs in his calling a number of words which he derived from his ancestors in the craft. "Long primer" was the size and style of type employed by the monks in setting up the Office of Prime, and "brevier" was that used in the printing of the breviary. The "Father of the Chapel" is a term which, to this day, designates the doyen of the printing shop.

Africa, Canada, etc.

THURSDAY, OCTOBER 5, 1922.

London and Wage Reduction.

It is regrettable to learn that whilst the
disturbing question of wages has been settled in
the country, London is still left with the
wages controversy in a critical condition.
The rejection by members of the London
Society of Compositors of their committee's
very forcibly expressed recommendation of
acceptance of wage reductions—coupled with
the refusal of the Machine Managers' Society
to take a ballot on the subject—is a distinct
set-back to the hopes that were entertained of
a speedy entry upon more settled conditions
in the London trade. We understand that
the Labour Committee of the London Master
Printers' Association is, as we go to press,
giving the position its very earnest con-
sideration.

The Halfpenny Post.

PUBLIC dissatisfaction continues in regard
the working of the regulation that provides
that postal matter for dispatch at halfpenny
rate must be posted before 3.30 p.m. in Lon-
don, or in the provinces, not later than such
hour as is fixed by the local post office, if
delivery is to be made by the first post on the
following morning. A strong protest on the
matter is made to the Press by a Southamp-
ton trader, Mr. Allan Cooper, who says that
it is time that the traders of the country were
made fully aware that their communications
for transmission through the post at the half-
penny rate are being kept back by the postal
authorities, with the result that they are de-
livered at their destination 24 hours late.
Moreover, the recipient is mystified by the
time of posting being omitted upon the dating
stamp by the postal authorities. Mr. Cooper
cites one instance where it took 44 hours for
a business order to get from Southampton to
London and another where it took 48 hours for
a business advice to get from Southampton
to a town in Somerset. The Post Office case
in respect of such complaints is that the
cheaper postage is designed to encourage
early posting, and that where this is imprac-
ticable the simple way out of the difficulty is
to use a threehalfpenny stamp. This is poor
satisfaction, however, to those who realise the
uncertainty and annoyance often resulting

from the present regulation, and who look to
the Post Office to pay due regard to the
great assistance this department has in its
power to render to the country's commerce.

Paper Prices.

No FURTHER reductions in paper prices have
come to our notice just lately, although we
had been, and are still, waiting to hear of a
slight drop in the price of certain high grade
tub-sized grades of writing. One represen-
tative has it that in face of certain adverse
balance sheets, reductions are unwarranted;
but against this can be set the argument of
solid fact, that this is precisely the process
that has been in vogue for two years. The
cost of living is about 75 per cent. over the
figures of 1914, and the common man has an
unfortunate, but not unnatural, habit of
applying the percentage comparatively. Of
course, it is not fair or reasonable; but the
fact remains that these index figures do cast
their influence around. There are some papers
below the figure and many above it. All the
time the tendency is down, and will continue
to be down, unless another war comes along.
It can also be claimed now that for each suc-
cessive drop in price there has really followed
a slight increase of consumption. We believe
that the makers of T.S. ledger papers will
stand to gain increased custom when they
can see their way clear to drop their prices
near to the ratio of the index figure.

The Shop Assistants Bill.

ALL printers and stationers will be
well advised to keep a close watch on the
progress of the Shop Assistants Bill, which
will come up before the House again during
the next session. A considerable amount of
opposition has fortunately been generated
against the measures which prohibit or cur-
tail the hours of clerks and assistants within
certain limits. If our information is correct,
it would be necessary to limit the hours of
work to between 9 o'clock and 5 o'clock pro-
vided the Act is carried as it stands on the
paper. In face of a passive attitude, there is
nothing to show that the Act would not go
through in its entirety, despite the hopeless
lack of business sense which characterises it.
All the more reason, therefore, that its pro-
visions should be studied, not only by repre-
sentative organisations, but by individuals
whose interests it would affect.

The United States Tariff.

DEALERS in paper are considerably exer-
cised over the new United States tariff which
is now in force. There is considerable uncer-
tainty at present as to how the new rates will
affect paper. The effort to protect the home
industry would naturally tend to check
importations, and it is those who are engaged
in supplying America with paper who are
anxious to know to what extent the new
tariff will influence imports, both from the
point of view of quantity and price. It has
been assumed in some paper circles on this
side that the paper duties are not much
different from what they were before, which
is probably true in view of the fact that the
Canadians, who would naturally be chiefly
interested, and would have done most of the
squealing, have been perfectly quiescent since
the decision was come to to place pulp and
standard news on the free list. On the general
subject of the tariff, a good deal of criticism
has been offered and the impression prevails
that the measure will not last very long.
Important financial interests in the States are
said to be apprehensive as to the working of
the tariff. In the first place, there is bound to
be a general raising of prices of American
goods, while the barrier to importation will
render the payment of our indebtedness to
America more difficult. It is asserted, there-
fore, that the experiment is one which is
likely to defeat the object for which it was
tried, besides being contrary to the economic
experience of the world.

London Compositors' Wages.

Reduction Proposal Rejected.

As we go to press we learn that the ballot taken by the London Society of Compositors on the committee's proposal of wages reductions of 5s. and 7s. in respect of machine and hand compositors respectively has resulted in rejection of the proposal. Moreover, a further inquiry on the same ballot paper as to the agreeing of any compromise on the wages question has also been answered in the negative. The majorities on both points were, we understand, substantial, but not large.

With regard to the Printing Machine Managers' Trade Society, it is understood that agreement has not been reached between the Society and the London Master Printers' Association on points other than wages, and in view of this the Society has refused to take a ballot on the question of wage reduction.

Joint Industrial Council.

London District Committee.

The annual meeting of the London District Committee of the Joint Industrial Council was held on Tuesday, when the reports of the joint secretaries (Messrs. W. Whyte and E. Buckton) and of the treasurer and various sub-committees were presented and adopted. Prominent in the discussion was the subject of welfare amenities, and the general opinion seemed to be that the national J.I.C. was effectively dealing with this matter, also that in view of the large extent to which house Committees had been established in London the need for the introduction of works committees was less evident.

Mr. E. Unwin was elected chairman of the committee, with Mr. F. A. Davies (retiring chairman) as vice-chairman.

Personal.

VISCOUNT BURNHAM is taking a keen personal interest in the Hospitals of London Combined Appeal.

His Lordship will again preside at the fourth International Labour Conference at Geneva on October 18th.

At a wardmote of the inhabitants of Cripplegate Without on Tuesday, both the Alderman and the Deputy Alderman were too ill to preside, and the Lord Mayor had to fill the breach. He had the pleasure of declaring his son, Mr. J. W. Baddeley, and another gentleman, Mr. J. D. Mounsey, elected to fill vacancies on the Corporation of London.

MEMBERS of the Press of Manchester were the guests at dinner on Saturday of the Lord Mayor and Lady Mayoress, who had invited some representative public men to meet them.

The toast of "The Press," proposed by the Lord Mayor, was responded to by Mr. E. T. Scott and Mr. J. Cuming Walters. Mr. A. Paterson proposed "The City of Manchester," and the Lady Mayoress replied.

MR. F. E. HAMER, of Messrs. Benn Brothers, Ltd., is attending the international newspaper conference in New York on October 11th, 12th, 13th as the representative of the *European Commercial* (Vienna). He will be the bearer of messages of greeting to the commercial Press of America from Lord Riddell, Lord Burnham, Sir Ernest Benn (chairman of Benn Brothers, Ltd.), and other representative British publishers.

LADY BENN (wife of Sir Ernest Benn) is now in America, and in a message just received she speaks very warmly of her reception in the States as associated with a well-known British publishing house, and of the eagerness of American publishers to welcome their British guests next month.

MR. JOHN GEDDES (of H. W. Caslon and Co., Ltd.), was accorded a very hearty reception when on Tuesday evening he addressed the Printers' Managers and Overseers (Parent) Association on "Some Printing Developments."

MR. W. K. MACKAY, formerly of the staff of Messrs. E. Hulton and Co., Manchester, and now general manager of Messrs. Heywood and Co., the well-known Manchester publishing firm, has been invited to join the directorate of the latter concern.

MR. S. H. M. KILLIK, one of the new Sheriffs of the City of London and chairman of Messrs. Cropper and Co., was admitted to office with his colleagues at the Guildhall last week.

Lord Mayor Starts Printing Machine

Sir John Baddeley Visits "Mirror."

The Lord Mayor of London, Sir John J. Baddeley, and the Lady Mayoress paid an interesting visit to the offices of the *Daily Mirror* on Wednesday of last week. His Lordship was, on this occasion, photographed in the act of starting up a printing machine, as seen in the accompanying illustration. The Lord Mayor and Lady Mayoress made a tour of the premises and showed great interest in the present-day methods of producing a great picture paper.

"DAILY MIRROR" PHOTO.

Sir J. J. and Lady Baddeley in "Mirror" Office.

A CORRESPONDENT writes:—"The secretary of the Printers' Medical Aid Society, Mr. Arthur O'Connor, has had his faith sorely tried with regard to human nature generally, and recently expressed himself as 'properly fed' with the various brands of 'ear biters' and 'twisters' with which Fleet-street abounds, but he had not a word to say for himself when a member recently stopped him and requested his acceptance of a pair of pearl and silver sleeve links as a slight appreciation of innumerable kindnesses. Up to the time of writing the P. M. A. secretary has not yet fully recovered his power of speech."

MRS. CECIL CHESTERTON, assistant editor of the *New Witness*, and sister-in-law of Mr. G. K. Chesterton, is lying ill in St. Bartholomew's Hospital, after an operation for appendicitis.

AN interesting event in the history of the Sittingbourne Paper Mills is the completion by Mr. Frank Lloyd, chairman and governing director of Edward Lloyd, Ltd., of fifty years in the firm. The half-century was reached on Thursday, September 21st, when telegrams of hearty congratulations from the officials and employees of the Sittingbourne Paper Mills were sent to Mr. Lloyd.

MR. RUTHERFORD JOHNSTON, the son of the late Mr. J. W. Johnston, has become a partner in the firm of Johnston, Horsburgh and Co., 20-21, Queenhithe, London, E.C.

MR. RUTHERFORD JOHNSTON has had paper-making experience both in this country and on the Continent and has been acting as inside manager for the firm for the last two years.

MR. M. H. J. MISTARY, import and export merchant, Bombay, is on a visit to the United Kingdom negotiating with papermakers and exporters for their representation in India. Mr. Mistary has had over twenty-two years experience of the Indian paper market.

In writing, later, an expression of his pleasure at the visit, the Lord Mayor stated:—

"It is impossible to say what particular department impressed us most, for everything was so wonderful. I have had considerable experience in printing and process work, but I had no idea that photographs could be reproduced, and newspapers printed, with such rapidity. My visit to the *Daily Mirror* was a revelation to us, and I shall never forget the things I saw."

Readers' Pensions Dinner.

The 28th annual dinner in aid of the pension fund of the Readers' Pensions Committee (St. Bride Institute, Bride-lane, E.C.4), will be held on Saturday, October 21st, in the Venetian Chamber of the Holborn Restaurant. Lady Hulton has consented to take the chair. Reception is at 6.30 p.m. for dinner at 7. Last year, as a result mainly of the efforts of Sir Wm. Berry, two pensions were established. It is hoped that, with the help of those who appreciate the work of the printer's reader, this record may be maintained in the future, as, notwithstanding the progress already made, the committee are quite unable to keep pace with all the calls for assistance made upon them. The 15th pension which will be established this year is to be named the James Feldwick Pension, in recognition of the work of Mr. Feldwick, first as member of the executive committee, then as hon. secretary, and later as chairman.

THE "FIELD."—With its issue of last week the *Field* celebrated its 70th birthday, and many felicitations on this interesting anniversary have been received by Sir Theodore A. Cook, the editor. Amongst those sending congratulatory messages were the King and Queen.

DIVIDENDS AND REPORTS.

R. W. CRABTREE AND SONS, LTD., announce a loss on trading for the year 1921 of £15,964. After writing off £44,755 from stocks and meeting interest charges, etc., the loss is raised to £83,000. There was a further loss of £73,684 arising from the sale of the holding of the company in British Ensign motors, whilst the new factory in connection with that company was also sold at a loss of £98,421. Negotiations in regard to Excess Profits Duty have not been settled, but the report states that the company has sufficient profitable orders in hand to keep the works employed for several months.

ODHAMS PRESS.—A circular to the shareholders dated September 28th states: "In the usual course a half-year's dividend on the 10 per cent. cumulative 'A' preference shares of this company would be paid on the 30th inst. Although the accounts for the six months to the end of June last show substantial profits, in view of the general conditions prevailing the directors consider it prudent to postpone the payment of the dividend in question until the audited accounts for the full year to December 31st are available." For the year 1921 the company paid 8 per cent. on its ordinary shares.

JOHN DICKINSON AND CO., LTD., have paid an interim dividend of 4 per cent., less tax, on ordinary shares.

WALL-PAPER MANUFACTURERS.—The directors announce that a dividend at the rate of 5 per cent. per annum for the half-year ending August 31st, 1922, will be paid to the preference shareholders on October 31st, 1922.

BURNLEY PAPER WORKS, LTD.—A final dividend is announced of 2½ per cent. actual, making 5 per cent. for year, tax free, on ordinary shares.

NEW COMPANIES.

ALEXANDRA ADVERTISING AGENCY, LTD.—Capital £1,000 in £1 shares. Private company. First directors: J. D. Mugford and W. Greene. Registered office: 7, East India-avenue, E.C.

PALATINE DISPLAY SERVICE, LTD.—Capital £800 in £1 shares; advertising agents and publicity agents and contractors, display artists and decorators, manufacturers of display fixtures and fittings, wood and glass signs, etc. Private company. First directors: R. Goulden, F. Davidson and H. J. Davidson. Registered office: 45, Dutton-street, Manchester.

(Paper mill and leatherboard and asbestos manufacturers, leather tanners and curriers, strap manufacturers, boot and shoe makers, Stonehouse, Glos.)—Debenture dated September 8th, 1922, to secure all moneys not exceeding £2,500, which the mortgagees may be called upon to pay under their guarantee to the company's bankers, charged on the company's undertaking and property, present and future, also debenture of even date to secure £1,500, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: F. W. Daniels, Coleridge Chambers, Corporation-street, Birmingham, and A. J. Daniels, Meadow Mills, Stonehouse, Glos.

MEADOW MILLS, LTD. (Paper mill and leather board manufacturers, etc., Eastington, Glos.)—Satisfaction in full (a) on July 31st, 1919, of mortgage or charge dated September 14th, 1909, securing £500 (b) on July 31st, 1922, of mortgage or charge dated June 27th, 1908, securing £1,000, and (c) on September 8th, 1922, of mortgage or charge dated April 20th, 1907, securing £2,000.

F. BENNETT AND CO., LTD. (Booksellers, stationers, etc., Sherborne).—Mortgage on certain land and premises in Cheap street, Sherborne, Dorset, dated September 18th, 1922, to secure £1,616 19s. 10d. (subject to prior mortgage). Holders: Colonel Chas. C. French and R. S. Herries, both of 1, New-street-square.

C. GEO. KEMP, LTD. (Manufacturing stationers, etc., London).—Issue on September

6th, 1922, of £70 debentures, part of a series already registered.

MILLWARD AND HUGHES STAMPINGS, LTD. (Manufacturers of metal, wood, paper and cardboard stampings, etc., Smethwick).—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated September 14th, 1922, to secure all moneys due or to become due from the company to Barclay's Bank.

LUMINOR SIGNS (BRITISH), LTD. (London).—Particulars filed of £500 debentures authorised June 22nd, 1922, charged on the company's property, present and future, including uncalled capital; the whole amount being now issued.

The "Daily Mail" Trust.

The Daily Mail Trust, Ltd., was registered on September 27th as a public company, with a nominal capital of £1,600,000, in £1 shares, the first directors being Rt. Hon. Viscount Rothermere, Hemsted, Benenden, Kent (chairman and permanent director); Sir Robert L. Harmsworth, Bart., M.P., Moray Lodge, Camden Hill, W.; Sir Samuel H. Lever, Bart., K.C.B., 64, Eaton-square, S.W.; F. A. Szarvasy, 21, Park-crescent, Portland place, W. (chairman British, Foreign and Colonial Corporation, Ltd.); and Sir Mayson M. Beeton, K.B.E., Gower Lodge, Weybridge. The registered office is at 23-29, Bouverie-street, E.C.

Offer was made on Monday of £1,600,000 7 per cent. guaranteed 15-year first mortgage debenture stock of the Daily Mail Trust and has been very successful. The application lists were opened at 10 a.m. and closed ten minutes later, by which time the amount had been many times over-subscribed.

It was stated in the prospectus that the due payment of principal, premium and interest payable on the debenture stock would be unconditionally guaranteed, jointly and severally, by the Daily Mirror Newspapers, Ltd., and the Sunday Pictorial Newspapers (1920), Ltd.

"DAILY MIRROR" SHARES.—Public dealings have begun in the ordinary shares of the Daily Mirror Newspapers, Ltd. This development is the outcome of a private sale of a large block of shares, and it has no connection with the issue that has just been made by the Daily Mail Trust. The Daily Mirror Newspapers, whose ordinary share capitalisation consists of 700,000 shares of £1 fully-paid, owns half the ordinary share capital of Sunday Pictorial Newspapers (1920), Ltd., namely, 375,000 fully-paid ordinary shares.

RE A. W. LESLIE.—A meeting of the creditors of A. W. Leslie, of 8, Paternoster-row, E.C., was held on the 18th ult. Liabilities to the amount of £1,934 comprised trade creditors £520, and cash creditors £1,414. The deficiency amounts to £1,778. The debtor, on being demobilised, commenced business in February, 1919, with a capital of £250. With the exception of the year 1920, losses on trading were made. On the understanding that certain cash creditors withdrew their claims, it was agreed that the debtor should execute a deed of assignment, with Mr. A. Houghton as trustee and a committee of inspection.

To mark the occasion of its 50 years jubilee, the well-known publishing firm of H. Aschehoug and Co., Christiania, has allotted Kr. 150,000 to various institutions for the foundation of scholarships, and Kr. 100,000 to a pension fund for its employees.

AMONG the exhibitors at the Canadian National Exhibition, which has been held in Toronto, were Messrs. Cross and Co., Dunstable, who displayed lace paper goods.

U.S. Tariff.

Alterations in the Completed Bill.

Several alterations were made in the paper schedule of the U.S. Tariff Bill, which is now in force, from the rates as they appeared in the earlier draft.

The coated paper manufacturers won a victory over the agricultural bloc in that the rate on casein against which the manufacturers were waging war was reduced from 4 cents per pound to 2½ cents per pound.

The conferees of the Senate and House of Representatives made a change in the bleaching powder rate so that that paragraph reads: "Bleaching powder or chlorinated lime, three-tenths of one cent per pound."

Mechanically ground wood pulp and standard news-print were both left on the free list, but the reciprocal clause was stricken out in both instances. Chemical pulp is free.

There was no alteration from the paragraph given in our issue of June 22nd last in the rate suggested for printing papers not specially provided for, viz. ¼ of 1 cent. per lb. and 10 per cent. *ad valorem*.

Boards.

Alterations, however, were made in regard to the item "board, wallboard and pulp-board," the rates of duty being 10 per cent. *ad valorem*; pulpboard in rolls for use in the manufacture of wallboard, 5 per cent. *ad valorem*; sheathing paper, roofing paper, deadening felt, sheathing felt, roofing felt or felt roofing, whether or not saturated or coated, 10 per cent. *ad valorem*.

Paragraph 1303 reads as follows: Filter massé or filter stock, composed wholly or in part of wood pulp, wood flour, cotton or other vegetable fibre, 20 per cent. *ad valorem*; indurated fibre ware, masks composed of paper, pulp or papier-mâché, manufactures of pulp, and manufactures of papier-mâché, not specially provided for 25 per cent. *ad valorem*.

Other paragraphs were altered to read as follows:—

Tissue Paper.

Paragraph 1304.—Papers commonly known as tissue paper, stereotype paper, and copying paper, india and bible paper, condenser paper, carbon paper, coated or uncoated, bibulous paper, pottery paper, tissue paper for waxing, and all paper similar to any of the foregoing, not specially provided for, coloured or uncoloured, white or printed, weighing not over six pounds to the ream of 480 sheets on the basis of 20 x 30 ins., and whether in reams or any other form, 6 cents per pound, and 15 per cent. *ad valorem*; weighing over six pounds and less than ten pounds to the ream, 5 cents per pound and 15 per cent. *ad valorem*; india and bible paper weighing ten pounds or more and less than 18 pounds to the ream, 4 cents per pound and 15 per cent. *ad valorem*; crêpe paper, 6 cents per pound and 15 per cent. *ad valorem*: Provided that no article composed wholly or in chief value of one or more of the papers specified in this paragraph shall pay a less rate of duty than that imposed upon the component paper of chief value of which such article is made.

Coated Papers.

Paragraph 1305.—Papers with coated surface or surfaces, not specially provided for, 5 cents per pound and 15 per cent. *ad valorem*; papers with coated surface or surfaces, embossed or printed otherwise than lithographically, and papers wholly or partly covered with metal or its solutions (except as herein provided), or with gelatine linseed oil cement, or flock, 5 cents per pound and 15 per cent. *ad valorem*; papers, including wrapping paper, with the surface or surfaces wholly or partly decorated or covered with a design, fancy effect, pattern, or character except designs, fancy effects, patterns or characters produced on a paper machine without attachments, or produced by lithographic process, 4½ cent-per pound, and in addition thereto, if embossed, or printed otherwise than lithographically, or wholly or partly covered with metal or its solutions, or with gelatine or flock, 17 per cent. *ad valorem*: Provided that paper wholly or partly covered with metal or its solutions, and weighing less than 15 pounds per ream of 480 sheets, on the basis of 20 x 25 ins., shall pay a duty of 5 cents per pound and 17 per cent. *ad valorem*; gummed papers, not specially provided for, including simplex decalcomania paper not printed, 5 cents per pound; cloth-lined or reinforced paper, 5 cents. per pound and 17 per cent. *ad valorem*; papers with paraffin or wax-coated surface or surfaces, vegetable

parchment paper, grease-proof and imitation parchment papers which have been supercalendered and rendered transparent or partially so, by whatever name known, all other grease-proof and imitation parchment paper, not specially provided for, by whatever name known, 3 cents per pound and 15 per cent. *ad valorem*; bags, printed matter other than lithographic, and all other articles, composed wholly or in chief value of any of the foregoing papers, not specially provided for, and all boxes of paper or papier-mâché or woodcovered or lined with any of the foregoing papers or lithographed paper, or covered or lined with cotton or other vegetable fibre, 5 cents per pound and 20 per cent. *ad valorem*; plain basic paper for albumenising, sensitising, baryta coating, or for photographic processes by using solar or artificial light, 3 cents per pound and 15 per cent. *ad valorem*; albumenised or sensitised paper or paper otherwise surface coated for photographic purposes, 3 cents per pound and 20 per cent. *ad valorem*; wet transfer paper or paper prepared wholly with glycerine or glycerine combined with other materials, containing the imprints taken from lithographic plates or stones, 65 per cent. *ad valorem*.

The paragraph 1307, writing and note papers, remains as it appeared in the *British and Colonial Printer* of June 22nd.

The only alteration in regard to paper envelopes was to make the duty on "printed, lithographed, dyed, or coloured" 1½ per cent. per pound and 20 per cent. *ad valorem*.

Playing cards, which were to have borne a duty of 10 cents per packet and 20 per cent. *ad valorem*, were taken out apparently.

As to papers and paper boards (paragraph 1313) the rate is 30 per cent. *ad valorem*; test and container boards 20 per cent. *ad valorem*; and wall pockets as described 35 per cent. *ad valorem*.

Catalogues, etc., Received.

TECHNICAL BOOKS.—Messrs. W. and G. Foyle, Ltd., of 121-5, Charing Cross-road London, send us their Catalogue No. 7 of technical and scientific books, amongst which are included a number on printing and paper technology.

TYPE, ETC.—From Messrs. John Haddon and Co., Salisbury-square, Fleet-street, London, we have received a well produced pamphlet entitled "Dainty Type Faces." The type faces shown—selected as being light and attractive for newspaper advertising, booklet work, etc.—comprise the Hushing, Hushing Italic, Healey, Haddonian, Haddonian Italic, Hurlingham, Hurlingham Italic, Hotspur, Hotspur Italic, Halley, Haddon Old Style, and Haddon O.S. Italic. Well-designed specimen advertisements are reprinted showing these faces in actual use.

METRIC EQUIVALENTS.—Mr. A. E. Bawtree, F.R.P.S., of 7, Manor Park-road, Sutton, Surrey, sends us a very useful card containing a number of scales for use in finding instantly and without calculation metric equivalents and mensuration results. There are 16 scales in all, printed on the inside of a card, which, when folded, measures 5 inches by 4. Each scale is like two foot rules, placed accurately edge to edge, so that a reading on one can be instantly observed on the other. Into their metric equivalents Nos. 1, 2 and 3 convert miles, yards and inches; Nos. 4, 5, 6 and 7 convert square yards, square inches, cubic yards and cubic inches; No. 8 deals with pressure in lbs. per square foot; Nos. 9, 10, 11 and 12 deal with tons, pounds, grains and fluid ounces and also indicate gallons. Nos. 13, 14 and 15 compare Fahrenheit and Centigrade thermometer scales over a range from absolute zero to 2,000 deg. C.; No. 16 gives the circumference of a circle when the radius is known and from this information with regard to sphere, cylinders and cones is readily found. The price of the card is 1s. each, post free.

MESSRS. MARTIN AND CLARKE have sent us a copy of their new monthly stock list, and we should imagine that, notwithstanding present difficulties, this firm has some confidence in the trade, as they continue to add new lines to their warehouse stock. Their confidence in the possibilities of paper is also evident from the name which they have adopted for their premises, viz., "The Paper House." This is one of the firms that believe in the power of advertising, and we are of the opinion that such enterprise is bound to tell in the long run.

Government Contracts.

Contracts were placed with the following firms during August:—

Crown Agents.

PAPER.—Spalding and Co., London, E.C.
STATIONERY.—Waterlow and Sons, Ltd., London, E.C.

Stationery Office.

BAGS.—McCorquodale and Co., Ltd., Wolverton; Smith and Young, London, E.C.
BLOTTING PADS.—Waterlow and Sons, Ltd., London, E.C.

CARBONS.—Waterlow and Sons, Ltd., Dunstable.

ENVELOPES.—J. Dickinson and Co., Ltd., Hemel Hempstead; Millington and Sons, London, N.

INDIA TAGS.—F. Hewitt, Prestwich.
PACKING CASES (FIBRE BOARD).—Containers, Ltd., Thatcham; Thames Paper Co., Purfleet; H. Stevenson and Sons, London, S.W.

PAPER OF VARIOUS DESCRIPTIONS.—Spicers, Ltd., London, E.C.4; Thomas and Green, Wooburn Green; R. Craig and Sons, Ltd., Caldercruix; Wiggins, Teape and Alex. Pirie (Sales), Ltd., Wooburn Green; British Patent Perforated Paper Co., London, E.; A. M. Peebles and Son, Ltd., Accrington, Lancs; Caldwell's Paper Mill Co., Ltd., Inverkeithing; London Paper Mills Co., Ltd., Dartford; Darwen Paper Mill Co., Ltd., Darwen; J. Wild and Sons, Ltd., Radcliffe; C. Turner and Co., Ltd., Belmont, Lancs; Golden Valley Paper Mills, Bitton, near Bristol; Adcocks, Ltd., London, N.; J. Brown and Co., Ltd., Penicuik; Neptune Waterproof Paper Co., Ltd., Cowley, Middlesex; S. Jones and Co., Ltd., London, S.E.; Hollingworth and Co., Maidstone; Imperial Paper Mills, Ltd., Gravesend; J. Cropper and Co., Ltd., Kendal; J. Dickinson and Co., Ltd., Hemel Hempstead; Fourstones Paper Mills Co., Fourstones, Northumberland; Ford Paper Works, Ltd., Hylton; Inveresk Paper Co., Ltd., Musselburgh; Roughway Paper Mills, Ltd., Tonbridge; Tullis, Russell and Co., Ltd., Markinch; Northfleet Paper Mills, Ltd., Northfleet; R. Craig and Sons, Ltd., Airdrie; E. Collins and Sons, Ltd., Maryhill.

Air Ministry.

WALL-PAPER.—W. N. Froy and Sons, London.

New British Patents.

. . . LEEDS.

DEAR SIRS,

September 29th, 1922.

Kindly allow us to bring to your notice the following information.

You will no doubt recollect the War with Germany, and that everyone tried in their own sphere of usefulness to do their "bit."

The Printing Public were presented in the trade papers with a beautiful picture of several Aeroplanes flying over London causing destruction and our guns firing shells to bring those monsters down. These Shells were filled with Bullets made from Printers' Dross

Our "bit" consisted of the manufacture of 4,700 tons of Shrapnel Bullets from Lead and Antimony and Antimonial Lead supplied by the Government. Over 1,600 tons of Antimonial Lead was sent to us without any pretense of cleaning, made direct from the ore, thus containing all the impurities which were in the ore. This Antimonial Lead along with our Dross Metal was made into Bullets (of course it was good enough to kill Germans), and it is now being hawked up and down the Country at £17 per ton. Since the Armistice we have not had one ton or even one pound of Shrapnel Bullets or Bullet Metal in our Works, and we do not wish for any We, however, have reason to know that Antimonial Lead has been used in making Type Metal. This Antimonial Lead, as we say previously, costs £17 per ton, and contains 12 per cent Antimony, so that our adding Antimony and Tin to raise this Bullet Metal to our Standard formulas would enable us to sell at the following prices:

Lino Metal:	Flat Bed Stereo:	Autoplate Metal:	Mono Metal:	} Free on rail Leeds, Net.
£26 per ton.	£30 per ton.	£34 per ton.	£36 per ton.	

We are always on our Metal, however, and we do not use this Antimonial Lead.

Our to-day's prices for our Standard formulas with Jubb's guarantee are as follows:

Lino Metal:	Flat Bed Stereo:	Autoplate Metal:	Mono Metal:	} Usual Terms.
£41 per ton.	£46 per ton.	£49 10 0 per ton.	£48 per ton.	

We have on hand 600 tons of Printers' Dross, accumulated since the War, which we are prepared to sell to the first comer at £14 per ton, our works. This we could have made into Bullets but, fortunately, there is no War requiring them, and our trade in the Midlands is very slow or they are using this cheap Antimonial Lead,

JUBB'S KNOW SOMETHING—THEY MADE BULLETS.

Yours faithfully,

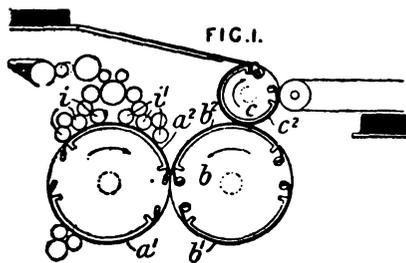

T. G. & J. JUBB.

P.S.—The above quotation of our prices is subject to Market fluctuations.

New Inventions.

Offset Printing Machines.

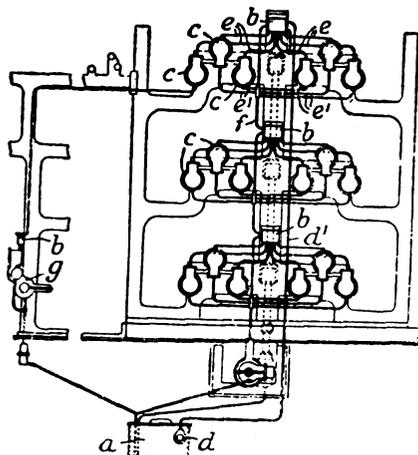

An offset machine of the kind in which the impression cylinder *c* is fitted with a rubber blanket *c'* for receiving an impression from a rubber blanket *b'* on an offset cylinder *b* fitted with a second blanket *b'* which prints on the outside of a sheet, the inside receiving an impression from the blanket *c'*, is constructed with an inking apparatus comprising six inking rollers *i, i'*, all of which are used to ink the plate *a'* which transfers its impression to the blanket *c'*, and two of which are tripped when the plate *a'* is passing the inking rollers.

The plate *a'* is thus inked more heavily than the plate *a*, and the impression on the underside of the sheet obtained from the blanket *c'* is thus caused to be of equal intensity to that on the outside of the sheet as printed directly from the blanket *b'*. The machine may be used for printing on one side only of a sheet by substituting an ink-distributing plate for the printing plate *a'*. The invention is in the name of the Leipziger Schnellpressenfabrik Akt.-Ges. vorm. Schmiere, Werner und Stein.

Lubricating Printing Presses.

According to the specification of an invention patented by Messrs. Crabtree and Sons, Ltd., and Mr. A. Terrey, in printing presses particularly of the kind described in Specification 146,638, the engaging elements of the worm or other driving gears in the machine are enclosed in casings through which lubricating oil is continuously circulated. In the multi-deck press shown, each deck is provided with an oil tank *b*, communicating by pipes *e* with the gear casings *c* which are connected by pipes *e' f* to the tank *b* of the deck next below, the casings of the lowest deck communicating with a reservoir *a*. Con-

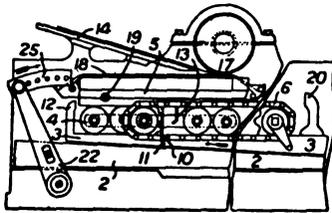

tinuous circulation of the oil is effected by gravity and by a pump *d* which supplies oil to the top tank *b* by a pipe *d*; a part of the oil may pass through the gear casings of the folding apparatus *g*. The gear casings are in two parts bolted together, and the shafts of the gears are mounted on roller thrust bearings which are arranged within the casings so as to be accessible to the oil.

Imitation Typewriting.

Mr. A. Hoffmann and Messrs. Hoffmann and Co. have patented a machine for printing letters in imitation of typewriting which

comprises a reciprocating bed *5* provided with an ink ribbon *18* over its forme, the bed *5* being reciprocated by a roller on an endless chain *6*, and being formed with a projection *19* which actuates a wedge *3* so as to depress the bed out of action after an impression has been taken. The bed *5* is mounted on rollers *4* supported by the wedge *3*, and in the position shown the bed is nearing the end of its idle stroke to the left which is effected by a

projection *10* on the chain *6* acting on a projection *11* of the bed. At the completion of this movement of the bed the projection *19* acts on an arm *12* on wedge *3* and raises the bed to printing position. A sheet is then fed from the table *14* to the bed, and as the bed is moved to the right by the action of the chain on a projection *13*, printing occurs owing to the sheet being gripped between the impression cylinder *17* and the bed. At the end of this movement, the wedge *3* is moved to the right by the action of the projection *19* on an arm *20* of the wedge, and the printed copy is detached. The actual printing pressure may be varied by adjusting the position of a lower wedge *2* on which the wedge *3* rests by means of an arm *22* which is adjustable over a segment *25* and has a pin-and-slot connection with the wedge *3*.

Folding Boxes.

An invention patented by Messrs. A. E. Shill, A. Richmond, and H. W. Rose provides that a collapsible cardboard, etc., container is constructed from a main body blank *a*, Fig. 1, to which inwardly folding end pieces *b*,

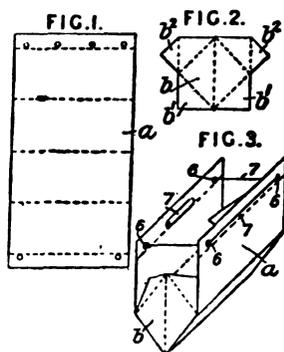

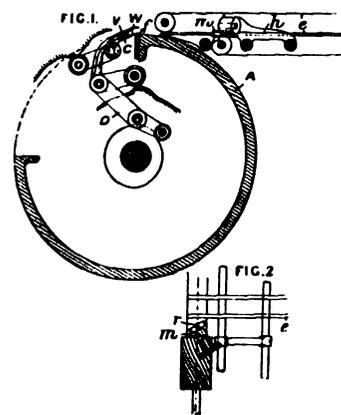

Fig. 2, are attached, the end pieces being formed with projecting pieces *b', b''* adapted to be secured to appropriate parts of the main blank by adhesive. The completed container has the appearance shown in Fig. 3; the strips forming the upper edges are provided with holes *6* for the accommodation of a cord *7* to which a carrying handle is secured. When filled and closed the ends flatten out and the container assumes a rectangular form. The container when empty can be folded flat by pushing in the ends.

Feeding Sheets.

In an invention patented by Messrs. A. B. Evans and R. P. Payne sheets are fed to the impression or sheet-carrying cylinders of printing presses at a speed substantially the same as the cylinder, and are registered in side and front or longitudinal register while in motion. The sheets are forwarded by belts *e*, and before reaching the impression cylinder *A* are registered against a side gauge *m* by an inclined plush-covered roller *r* which is driven by helical gearing and is dropped into contact with the sheet so as to cause the

sheet to engage the fixed side gauge *m* which is carried by a laterally adjustable bracket *h*, or a moving gauge may replace the gauge *m*. The impression cylinder *A* is fitted with a pair of grippers *V, W*, which are carried by an oscillating lever *O* and act to grip the sheet

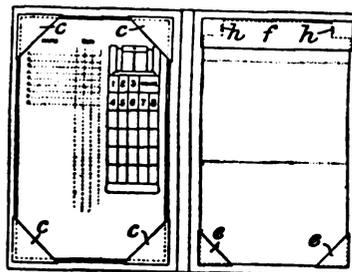

lightly and draw it against a gauge *f* mounted on the gripper ledge of the main gripper *C* which is actuated by a cam to grip the sheet after it has been thus registered in a longitudinal direction. The gauge *f* may be formed on the gripper *C*.

Light Printings on Dark Grounds.

An invention patented by Mr. G. F. Holder refers to a method by which light coloured letters are printed on a dark background by pressing a thin sheet of white or coloured paper coated with a composition which becomes adhesive when heated upon the surface of a black or other card board by means of electrically heated type, the paper adhering at the area of contact only and the remainder tearing away freely. The composition may consist of gelatine and barium sulphate. The invention is stated to be particularly applicable to printing the titles for films used in kinematograph projectors.

Loose-Leaf Binders.

Temporary binders, pocket-books, wallets, etc., of the kind having four fixed corner pieces on one side for detachably holding papers, etc., and a movable gripping device on the other side for detachably holding other papers, etc., as patented by Mr. F. G. Warne, are provided with two other fixed corner pieces at the bottom of the side provided with the movable gripping device. As shown, the wallet, etc., is provided

with corner pieces *c* on one side to hold plans of a charabanc, theatre, etc., and on the other side a flap *f* and elastic band *h* at the top, and corner pockets *e* at the bottom to hold loose sheets of paper, tickets, etc. The block of sheets, etc., may have a stiff back or tab to fit the pockets.

SPICERS, LTD.—Encased in a green cover, Spicers, Ltd., have issued a miscellaneous selection of samples for their stocktaking clearance sale. The firm command a very wide range of papers, envelopes, cards and tags at competitive prices. In fact, anything in the paper line is available through this house.

Davies and Royle, Ltd.

Recent Developments in an Old Established Business.

The registration, among the new companies, of Messrs. Davies and Royle, Ltd., is an interesting development in an old-established

MR. T. C. ROYLE, Founder.

paper business, whose headquarters are at 7, Old Swan-lane, London, E.C. The object of the formation of a limited company is to define the interests of the members of the firm, which have increased enormously in recent years by reason of the growing activities of the undertaking. The business was originally established in 1867 by the late Mr. T. C. Royle, who was a member of the Common

Council of the City of London and a very well-known figure in the paper trade. He was subsequently joined by Mr. Davies, but on his death in 1899 Mr. T. E. Royle, his son, who had previously been in the business, continued to carry it on.

Under the new scheme Mr. T. E. Royle is chairman of the company, and his co-directors are Mr. W. A. Dewsnap and Mr. J. Mutimer, both of whom have been associated with Old Swan-lane for many years. Mr. Dewsnap entered the business in 1900 and Mr. Mutimer commenced his career in the paper trade with McMurray's Royal Paper Mills, Ltd., Wands-worth, 21 years ago and joined Messrs. Davies and Royle some 12 years since as head traveller. He and Mr. Dewsnap now become joint managing directors of a concern in whose recent developments they have had a very large hand.

These two gentlemen are widely known in the paper trade, not only of this country, but of Scandinavia and Finland. Both possess an intimate knowledge of the paper trade in all its phases, and they are constantly passing up and down the country, while they pay visits to Scandinavia sometimes as frequently as three and four times a year.

Messrs. Davies and Royle handle every kind of paper, with the exception of "news," and they have a reputation for the speedy and reliable carrying out of contracts. While the major portion of their activities is associated with the home trade, they also have a large export connection. For many years they have had a branch office at Glasgow, and more recently they opened branches in Leeds and Manchester. It is one of the boasts of the firm that they pay exceptional attention to their customers' requirements during times of crisis, as indeed at all times.

Carrying on a purely agency business, the firm have for many years represented well known mills in Scandinavia, such as Ranneheim and Greker in Norway and Katrinefors Akt. in Sweden. In 1919 they took over the important agency of the Finnish Paper Mills Association, controlling the sale in the United Kingdom of all papers, with the exception of "news" and wall paper. Practically since the establishment of the business the offices have been in Old Swan-lane, a very convenient centre of the paper area in London.

As business has grown, more accommo-

dation has been required. At the outset the offices comprised but a small section of what is now the general office, but with expanding business floor after floor was taken in until now the whole of the four floors are occupied, while the staff has grown to a total of about 40. Naturally with such extensive operations to direct, the members of the firm have developed a very fine system of office routine. By this arrangement all the departments are

MR. T. E. ROYLE, Chairman.

apprised of the business which is passing through, and a careful record is kept of all orders. An efficient telephone system also connects the departments, so that no time is lost in handling any inquiry. On the ground floor the general correspondence is handled, embracing the three departments—London, Scotland and Ireland and the country. The first floor has been fitted up as a particularly

efficient sample room, all the samples being carefully arranged and readily accessible. The private offices of the directors, together with the export department, are located on the second floor, while on the third floor the shipping and bookkeeping department is self-contained, with Mr. Burgess, the oldest servant of the company, in charge of the shipping department.

MR. W. A. DEWSNAP, Director.

The extent of the business which Messrs. Davies and Royle control is very considerable and only a perfect system, together with a conscientious staff, can enable it to be carried through with the success which has attended it. Under the new arrangement the directors will in no way relax their efforts. For the moment Mr. Royle is in Australia, where he has had to go for the benefit of his health,

which has been indifferent for the past year or so. But in his co-directors, Mr. Dewsnap and Mr. Mutimer, he leaves behind him two gentlemen who are thoroughly capable of carrying on the undertaking. Both are comparatively young men, although with a long and thorough experience of the paper trade. They possess the keen business instinct and work together with perfect harmony and understanding. Under the style of the limited company, the business will be conducted precisely in the same manner as in the past, and there will be no less incentive to enterprise and development.

The Staff.

The directors are enthusiastically supported by a loyal staff, and to specify the various departments with their managers is to indicate to some extent the size of the business carried on from Old Swan-lane.

We have already referred to Mr. A. W. Burgess, who is in charge of the shipping department, and who has been with the firm all his business career, namely 26 years.

Another gentleman well known in the paper trade is Mr. A. D. D. Bird, whose service extends to more than 15 years.

Mr. A. N. Dewsnap has spent practically the whole of his business career with Messrs. Davies and Royle, after two years' sojourn with the Ranheim Papirfabrik in Norway.

Mr. Elsworth, who gained his knowledge of the paper trade with Messrs. H. Huber and Co. and afterwards with Messrs. Powell Lane and Co., at Gloucester, has had experience of the paper trade in England extending over a period of 25 years.

Mr. Scott is the export manager, a position for which he very well qualified by spending many years with the Borregaard Mill in Norway, and Molnbacka Trysil in Sweden.

Mr. Irvine is the chief bookkeeper and cashier, and he has spent 13 years with Messrs. Davies and Royle.

Mr. Mellis is in charge of the Glasgow office and has had 25 years experience of the paper trade.

Mr. Cuss, who controls the Leeds office, was formerly in the Stationery Office, where he obtained valuable experience in paper affairs.

At the Manchester office we find Mr. Attoe in charge. He has ripe experience of the

paper trade, having served for many years with Messrs. E. M. Fells and Co.

The sampling department is carried on by Mr. Targett and Mr. Hance, both of whom graduated in English mills.

The sum of experience represented by the gentlemen mentioned is a big item, and in addition there are on the clerical staff many

MR. J. MUTIMER, Director
members who have been with the firm for over 10 years.

A REPORT from the British Consulate-General at Munich states that in the paper and paper-working industries of Bavaria the shortage of raw material is making itself felt, but envelope makers still have plenty of orders in hand. In general, the opinion is that the industrial situation is far from encouraging, in spite of outward signs of prosperity.

Some Printing Developments: Mechanical and Technical.

Mr. John Geddes (H. W. Caslon & Co., Ltd.) Talks to Printers' Managers on Many Points of Practical Interest.

The main feature of last week's meeting of the Printers' Managers and Overseers (Parent) Association was a "Talk on Some Printing Developments, Mechanical and Technical," by Mr. John Geddes. The speaker's remarks covered a very wide field and contained a great number of interesting points. The following abstract of the address does not purport to be a full account, but summarises some of the principal matters discussed.

Letterpress Impression.

The first subject dealt with was letterpress impression, which the speaker considered at some length. He laid special emphasis upon the fact that not only does impression vary with the type of machine employed, but it varies also with the size of the job. The difference between the application of the impression used on the two-revolution machine with the rising and falling cylinder compared with the cylinder fixed in its journals was explained, and stress laid on the fact that no machine could be made with an absolutely unyielding impression. The speaker affirmed that the impression on different machines of the same type varied. He invited those present to investigate this question as it ought to be investigated, with, as he put it, two magnifying lenses, the lens of investigation superimposed upon the lens of experience. It was frankly admitted that the variations referred to were in one-thousandths of an inch, but emphasis was laid upon the fact that although printing can be done on machines with defects, the printer ought to know these defects, so that he can make adequate arrangements to compensate for them.

Very interesting reference was made to the thorough investigations conducted by Mr. Horace W. Hacker, of Chicago, in 1915, into the whole question of impression. Mr. Hacker made a series of specially designed compressible steel pieces, which, of course, had to be of extreme accuracy. These were put in a line between the cylinder and the bed with the impression on, and the deviation from true impression was then measured by a micrometer, the results being plotted out diagrammatically. A series of plotted diagrams were on view showing the actual effect of the springing of the cylinder under heavy impression, and the extent to which this was rectified by a permanent make-ready, which it was strongly recommended should be kept for each machine in accordance with the faults of that particular machine.

Another very interesting discovery of Hacker's was that, as shown by the testing

method described, impression varied according to the size of job done in the machine, and that it was therefore advisable to have a separate permanent make-ready for each size of job done on each machine. It was found, for instance, that, in a quad crown machine with full-size job, 95 per cent. of the impression was solid, the impression variation being in the centre to the extent of from one to three thousandths of an inch. With a job half the size, only 45 per cent. of the impression was solid. With a smaller job still, the impression varied still more, until with, say, a demy folio job in a very large cylinder machine, it was actually found that the bed rose. Thus it was claimed that to ensure machine efficiency a permanent make-ready for machine faults alone should be kept for every size job done on each machine. The lecturer suggested that an even better method of testing this variation of impression would be to have a solid type tint forme of new founders' types, this forme to be used as a test forme. The danger of overpacking of the cylinder was specially emphasised and the resultant mechanical troubles explained.

Criticism was made of the statement that the line of impression is all the same, no matter what size the cylinder may be, the speaker stating that this theory would undoubtedly be correct if there were no yield in the impression, but if there was yield, the line, instead of being strictly a line, varied in thickness according to the yield. Hence the importance of having proper size cylinders, not only for impression, but also, of course, for correct peripheral speed.

The Hacker Plate Gauge.

A very interesting device discussed was the Hacker Plate Gauge. This instrument, the speaker claimed, was the most striking scientific and practical device ever offered to the trade in connection with this matter of impression. The instrument is based upon a new discovery, namely, that a block or plate, even if type high, may still show a difference of '002 to '009 in. varying all over the face under printing impression. The Hacker Plate Gauge is a very simple apparatus consisting of a micrometer gauge mounted upon a cantilever. This cantilever has at its far end a weight equivalent to printing impression, so that when a block or plate is put into the gauge the exact printing height is shown in one-thousandths of an inch over or under. '001 in. is the thickness of tissue, and a supply of underlay papers is provided with the machine from '001 in. to '010 in. Blocks underlaid upon this system give an accurate print-

ing impression, abolishing all underlaying on the machine so that the machine-minder has only to overlay for effect, not for defects. In addition to the very important saving in machine time, it was claimed that this apparatus, giving as it did for the first time, an exact knowledge of the printing values of each plate, enabled the printer to get results much more quickly. Obviously correct underlay did away with any tendency to overpack the cylinder, which latter practice was a very serious matter, as any increase in the diameter of the cylinder, by adding sheets, altered the peripheral speed, causing tendencies to slur, rub or wear on the block, undue wear of top sheet, draws in the forme, etc. When underlaying by this process, if a block happens to be low in the centre, interlay is used, as underlay would have a tendency to cause rock. The reason for light blocks marking the paper, the proper amount of underlay and overlay, etc., were also discussed.

Printers' difficulties on account of the inequalities of blocks, especially of mounts, was dwelt upon, and in this connection, especially in regard to colour work, the importance of pulling proofs by different methods from those at present employed was stressed. It was contended that proofs of colour blocks for cylinder machines ought to be pulled on a properly constructed cylinder press, with, if possible, the same quality of paper and ink as would be used in the job. Thus the machine minder would have a proper guide, instead of, as at present, having to waste time and endeavour to match proofs produced under conditions which he can never command.

The Hacker Test Press.

Another interesting piece of apparatus referred to was a new contrivance for use in the production of electrotypes. The speaker said that up to the present there had been no method by which prints of electrotypes could be taken in accordance with a fixed standard, the usual method being to rub the electro with grit and to hammer the plates out from the back. Mr. Hacker discovered that in a machine where the cylinder was packed, the extreme pressure produced by the electro caused the packing to yield and come up again, so that the resultant proof did not show the real defects of the plate. The new Hacker test press is almost a scientific instrument of precision. The printing of the proofs is actually done from the naked cylinder so that any defects are immediately shown. Where very accurate colour proofs are required successive prints can be taken and the register shows absolutely dot and dot without any

The Miehle

About Make-Ready

Many orders for printing are lost through the heavy cost of make-ready overloading the estimates.

Comparison of cost of make-ready on a Miehle Two-Revolution Press with that on a Stop-Cylinder Press always shows a striking margin in favour of the Miehle.

There are two outstanding reasons why the Miehle is so much better in this respect: First, facilities are provided for free access to the cylinder; and secondly, much less make-ready is required.

The Miehle reduces pressroom charges in many other ways, of which we shall be pleased to give full details if you will write us accordingly.

thickening whatever, even when seen under a fine glass.

Printing Speeds.

With regard to speed of printing, in respect of high class half-tone work, the lecturer claimed that, speaking from a wide experience of conditions in various countries, he had never seen first-class half-tone work produced in large sizes at a greater speed than 1,500 impressions per hour. The reasons for this were detailed, the speaker maintaining that in the matter of speed the engineer was a long way ahead of the printer and that whilst the former could supply machines that would run at higher speed, the quality of the work could not then be maintained, which clearly showed that the underlying defects were technical rather than mechanical. A strong appeal was made to all interested to investigate the technical possibilities, even if this led to demanding more from the engineer, the blockmaker, and the supplier generally. Whilst the lecturer maintained that 1,500 was the highest practicable speed for first-class half-tone work, specimens were shown done in the McKie machine, printed in four colours at the rate of 3,000 sheets per hour. This seemed to vitiate the statement as to a limit of 1,500, but the explanation was that the McKie machine is a rotary, and, with its slower printing speed at the same running speed, it was actually, as regards peripheral speed, not running so fast as a flat bed, doing 1,500. Reference was made to the McKie system of make-ready by which it was possible to get all the different thicknesses required actually in the printing plate itself.

Mention was made also of so-called "Soft-tone" printing, a speciality of the De Vinne Press of New York, specimens of this being shown and arousing considerable interest. It was explained that the peculiar character of the work was due solely to the kind of ink employed.

Amongst other interesting subjects referred to was the question of type, it being pointed out that English type was very much deeper than American type, giving longer printing life. Mention was made by the lecturer of the fact that nickel is largely added to English type, giving it increased hardness and ductability. It was claimed that for accuracy, quality and durability, English type was the best in the world. Samples of offset printing shown included the first newspaper work done in the United States, in 1915. These were compared with examples printed in this country, and reasons were suggested for the disuse of the process for newspaper supplements in the States. The subject of photogravure, the Typolith process, special blankets for newspaper machines, a new type of moulding blanket for newspaper work, were also referred to, and a number of interesting specimens by different processes were set forth for inspection, these including some remarkable periodical work emanating from South America, Madrid and elsewhere.

(Some account of the discussion which followed Mr. Geddes' lecture will be found in a general report of the meeting which appears on another page).

Printers Wanted in Australia.

We have recently on different occasions mentioned the fact that there is a shortage of linotype operators in Queensland and also the fact that the New South Wales Master Printers' and Connected Trades' Association is advertising for boys to be apprenticed to the printing and allied trades. A communication which now reaches us through a London papermaking house having connections in Australasia emphasises the demands of Sydney, N.S.W. A Sydney correspondent of the firm in question writes as follows:—

"Prospects in Sydney are particularly good for competent linotype operators, more especially jobbing men. An attempt is being made (by the trade linotype houses particularly) to extend the scope of the work handled, but there is a distinct shortage of good tradesmen to deal with the work offering. Provided the men were available the amount of linotype work done could be greatly increased. Good jobbing operators desirous of making a change would be well advised to communicate with the secretary of the Trade Linotypers' Association, 340, Pitt-street, Sydney, N.S.W. Conditions of living in Sydney are most congenial, with many pleasure resorts available by easy means of transit. Minimum wages (which are generally much exceeded in the case of really proficient men), 2s. 5d. per hour (day),

2s. 8d. (night); piece rate, 4 16/17d. (day), 5 1/7d. per thousand (night). Cost of living is not unduly high."

Kent Municipal Trading.

Newspaper Men Visit the Stores.

At the invitation of Sir Mark Collet, Bart., chairman of the Kent Education Committee, about a score of representatives of Kent newspapers visited the committee's central offices at Maidstone on Tuesday of last week. The object of the visit was that, in view of the widespread criticism that has been made of the committee's municipal trading, the case for the committee might be placed before the newspaper men, and opportunity provided them to gain fuller information. It will be remembered that printing and stationery are included in the field of the committee's trading activities, and that printers have been much concerned at the committee's inclination to set up its own printery and bindery, a definite proposal to this end being rejected by the Kent County Council a couple of years ago.

Meeting at the Stores Department, Union-street, Maidstone, the newspaper representatives were received by Sir Mark Collet, Lord Sackville (vice-chairman of the County Council and Kent Education Committee) and Mr. C. H. B. Marsham (chairman of the Stores sub-committee), with Mr. E. Salter Davies (director of education) and Mr. E. Corbridge (superintendent of the Stores Department).

Sir Mark Collet first addressed the gathering, inviting the fullest inquiry from the Pressmen, and handing them what he described as a "concise statement of the method of working of the Stores Department." In this statement it was indicated that the chief function of the Stores Department is to obtain and distribute school supplies, the committee being responsible for the equipment and maintenance, either directly or indirectly, of about 1,000 schools and institutions, which are attended roughly by 100,000 pupils. It was remarked that, owing to the special character of school supplies, practically none of these has been obtained from tradesmen in Kent since the passing of the Education Act of 1902. On the other hand, the committee's policy is to purchase, not from the contractors, but from the manufacturers direct; and purchases are made, so far as possible, from Kent manufacturers. Arguments were put forward in favour of a centralised stores system, and it was stated that the Kent Committee were paying on an average 33 per cent. less than the other County educational authorities for articles of the same quality.

The visitors were next conducted through the various departments of the Stores. At the stationery department, Mr. Corbridge explained that a supply of 35 tons of paper lasted the committee about three months. Asked whether any of this paper was bought in the county, the superintendent replied: "We, of course, always buy in the cheapest market, and wherever possible, from Kentish paper mills. Some of our supplies come from Springfield and Turkey Mills, from Messrs. Busbridge's at East Malling, Messrs. Reed's, Tovil, Messrs. Lloyd's, Sittingbourne, and the Ivy Mill Board Co. Producing a packet of brown paper, comprising 100 sheets, used for chalk work Mr. Corbridge said: "That paper cost us 4d., but the contract houses are selling it at 11d."

The school-books are kept in a separate building, situated in Station-road, and it was elicited that the committee obtained from 25 to 40 per cent. discount in purchasing some of these books.

Balance Sheet Asked For.

The question was pressed whether there was any possibility of presenting a balance sheet of the Stores Department for the information of the ratepayers generally of the county.

Sir Mark insisted that this was practically impossible, owing to the committee not selling the articles which they sent out.

"What we want to know," said the questioner, "is whether we can have a comparative statement of the prices which the committee pay for their goods and the prices charged by the ordinary contractor. And we also want to know how the committee arrive at the basis of their overhead charges."

Mr. Salter Davies explained that the committee satisfied themselves that the overhead charges were adequate. If they found that those charges were not sufficient, they would increase them.

"Couldn't you ask for prices from the ordinary contractor for the purposes of comparison?" Sir Mark was asked, and he replied: "We are always prepared to buy in the cheapest market. If a person was prepared to take less we should go to him."

Mr. Corbridge remarked that the contractor is out for what he can get. He added that some of the great educational houses worked together in order to fix prices to the various authorities. In proof of this he stated that practically the whole of Scotland was mapped out, and portions of that country were given to certain contractors, and that system was developing in England.

After further discussion, Sir Mark Collet promised that the committee would do their best to obtain prices from some of the large contractors for the purposes of comparison with their own prices.

Allied Trade Union Membership.

Comparison of Figures.

Some interesting figures relating to the membership of trade unions appear in the September issue of the Ministry of Labour *Gazette*. According to an analysis by groups of trades representing the composition of the recent Trade Union Congress, the number of paper, printing, etc., organisations was 12, the delegates 36, and the number of members 168,477. In 1921 organisations and delegates were the same, but the number of members was 190,450.

In a table covering all industries is set out the number of trade unions and the membership from 1913, greater detail being given in respect of the years 1920 and 1921. The paper, printing, etc., group of trades shows the number of unions at the end of 1921 to have been 27. The total membership at the same date was 195,391, made up of 138,002 males and 57,389 females. At the end of 1920 the total membership was 220,746, of whom 148,793 were males, and 71,953 females. Thus the decrease in membership at the end of 1921, compared with the end of 1920, was 11.5 per cent., the decrease in the case of males being 7.3 per cent. and in females 20.2 per cent.

It is pointed out that in the paper, printing, etc., trades, in spite of the reductions during 1921, the union membership was 51,000, or 35 per cent. greater in that year than in 1918. The increase in female membership was 39 per cent.

In another table there is given a comparison of membership (male, female and total) for the five years 1913 to 1921. From this we find that the total membership increased from 85,000 in 1913 to 221,000 in 1920, and declined by 1921 to 195,000. The male membership increased as follows:—1913, 79,000; 1918, 103,000; 1919, 132,000; 1920, 149,000, decreasing in 1921 to 138,000. Female membership took the following course: 1913, 6,000; 1918, 41,000; 1919, 61,000; 1920, 72,000; 1921, 57,000.

American News-Print Production.

The monthly bulletin of the News-Print Service Bureau, N.Y., states that all the companies reporting produced 215,580 tons and shipped 216,830 tons during August. Shipments exceeded production by 1,250 tons. Production figures include 1,757 tons of hanging, of which 1,114 tons were made in Canada.

The average daily production of news-print paper by mills reporting for August amounted to 95.0 per cent. of the average daily output during the three months of greatest production in 1920 or 1921, with allowances for new machines.

Comparing production during the first eight months of 1922 with that of the same period for 1921, the United States companies reporting show an increase of 153,535 tons or 22 per cent.; the Canadian companies an increase of 189,802 tons or 37 per cent.; and the total of all the companies reporting shows an increase of 343,327 tons or 29 per cent. Strikes at the mills in 1921 largely account for the big difference in production during these periods.

Stocks during August decreased 1,882 tons at United States mill points and increased 300 tons at Canadian mills. Total stocks all reporting mills amounted to 27,185 tons or 1,582 tons less on August 31st than on July 31st and were equivalent to 3.3 days maximum production.

. . . LEEDS.

September 29th, 1922.

DEAR SIRS,

Kindly allow us to bring to your notice the following information.

You will no doubt recollect the War with Germany, and that everyone tried in their own sphere of usefulness to do their "bit."

The Printing Public were presented in the trade papers with a beautiful picture of several Aeroplanes flying over London causing destruction and our guns firing shells to bring those monsters down. These Shells were filled with Bullets made from Printers' Dross.

Our "bit" consisted of the manufacture of 4,700 tons of Shrapnel Bullets from Lead and Antimony and Antimonial Lead supplied by the Government. Over 1,600 tons of Antimonial Lead was sent to us without any pretense of cleaning, made direct from the ore, thus containing all the impurities which were in the ore. This Antimonial Lead along with our Dross Metal was made into Bullets (of course it was good enough to kill Germans), and it is now being hawked up and down the Country at £17 per ton. Since the Armistice we have not had one ton or even one pound of Shrapnel Bullets or Bullet Metal in our Works, and we do not wish for any We, however, have reason to know that Antimonial Lead has been used in making Type Metal. This Antimonial Lead, as we say previously, costs £17 per ton, and contains 12 per cent. Antimony, so that our adding Antimony and Tin to raise this Bullet Metal to our Standard formulas would enable us to sell at the following prices:

Lino Metal:	Flat Bed Stereo:	Autoplate Metal:	Mono Metal:	} Free on rail Leeds, Net.
£26 per ton.	£30 per ton.	£34 per ton.	£36 per ton.	

We are always on our Metal, however, and we do not use this Antimonial Lead.

Our to-day's prices for our Standard formulas with Jubb's guarantee are as follows:

Lino Metal:	Flat Bed Stereo:	Autoplate Metal:	Mono Metal:	} Usual Terms.
£41 per ton.	£46 per ton.	£49 10 0 per ton.	£48 per ton.	

We have on hand 600 tons of Printers' Dross, accumulated since the War, which we are prepared to sell to the first comer at £14 per ton, our works. This we could have made into Bullets but, fortunately, there is no War requiring them, and our trade in the Midlands is very slow or they are using this cheap Antimonial Lead.

JUBB'S KNOW SOMETHING—THEY MADE BULLETS.

Yours faithfully,

T. G. & J. JUBB.

P.S.—The above quotation of our prices is subject to Market fluctuations.

Trade Notes.

AN item of general interest to be noted in our "Special Prepaid Advertisement" columns this week is the fact that the London Master Printers' Association is inviting applications for the post of organiser.

PRINTERS' PENSION CONCERT.—Under the auspices of the North London Auxiliary to the Printers' Pension Corporation a particularly good programme has been arranged for the concert to be held at the Castle Tavern, Holloway-road, N., on the 21st inst. For this event, the Auxiliary has been fortunate in securing three gentlemen prominently associated with the trade to share the chairmanship, and Messrs. J. E. Dixon, Bert Harrison and Hugh MacKay, if given adequate support, will more than justify their selection. Subscriptions to this worthy object will be gratefully accepted, and may be sent to Mr. J. E. Dixon, 100, Hubert-grove, S.W.9, or to the same gentleman at the Amalgamated Press, Lavington-street, Southwark-street, S.E.1.

THE result of the election to the Alms-house Fund of the Printers' Pension Corporation is as follows:—Elected: B. Giles (5,435 votes); W. H. West (5,329); R. Cluse (3,773). Not elected: E. Ward (2,826); H. J. Pearson (2,753); W. Carter (760). The latter three candidates have received a gratuity of £1 each from the South London and North London Auxiliaries.

PICTURE POSTCARD CENSORS.—Blackpool Education Committee has asked the Chamber of Trade to revive its Postcard Censorship Committee, and is asking the Watch Committee to co-operate in the censoring of pictorial postcards.

BIBLES in hundreds of tongues and freak Bibles, like "Breeches," "Bug," and "Treacle" Bibles—so-called for the funny translations or misprints—are on view at a Church Congress exhibition, opened at Sheffield by the Bishop of Sheffield.

"**METHODIST TIMES.**"—A new departure was made last week by the *Methodist Times*, which was founded nearly 40 years ago as a "journal of religious and social movement." The journal now combines in its columns the interests of the three churches many of whose adherents are striving after Methodist union—the Wesleyan Methodist Church, the Primitive Methodist Church, and United Methodist Church. The Rev. Benjamin Gregory will continue as editor of the *Methodist Times*, with the Rev. Samuel Horton (Primitive Methodists) and the Rev. J. H. Squire (United Methodists) as associate editors.

HUDDESFIELD Socialist Newspaper Society has been compelled to sell its plant owing to the trade slump, says the *Daily Herald*.

ON October 21st the *Spectator* will return to its pre-war price of 6d. per copy. It will be considerably enlarged.

AN exhibition of original prints by the Colour Woodcut Society opened on Saturday at the Macrae Gallery, Fulham-road, London, admission being free.

MR. T. IBBOTSON, a papermaker at Sittingbourne Paper Mills, has secured the Down Cup by gaining the championship of the Mills' Bowling Club, for which over 100 players entered.

THE weekly trade report issued by the Leicester Chamber of Commerce states under the heading of paper boxes: The requirements of the shoe trade continue very quiet indeed. The demands of the hosiery trade are well maintained, and there appear to be indications of slightly increased business from the spinners.

C. DAVIDSON AND SONS, LTD.—Mr. W. D. Davidson, presiding at the annual meeting on Saturday at Aberdeen, mentioned that the directors had appointed Mr. H. Gordon, junr., as secretary in succession to the late Mr. W. E. Grassick. Moving the adoption of the report, the chairman suggested that the worst period of the slump in the paper trade had been reached, and that business would now improve. They thought that good results would follow from the starting of the department for the manufacture of patent paper barrels and drums. They had to complain not only of the slump of prices in the paper trade and the abnormal state of trade in the country generally, but also of the heavy burden of taxation, and of the large sums which had to be spent on insurance and in health and unemployment contributions. Mr. W. Allison seconded, and the report was approved.

IT was stated at the inquest on Monday that Mr. Thomas Handley, aged 60, a Liverpool master printer, died at a fancy-dress ball from heart failure.

THE sudden death is announced at Grand Mere, Quebec, of Mr. Bradley C. Bouter, for the past ten years master mechanic and foreman of the Laurentide Paper Co., Ltd.

THE late Mr. William Fieldhouse of Otley, Yorks, a director of Messrs. Fieldhouse, Crossfield, and Co., Ltd., printers' engineers, left £2,831.

MESSRS. BARLOW AND CO., wholesale paper merchants, Manchester, have removed to 157, Rochdale-road, Harpurhey, Manchester.

ON the subject of the injurious effect of high railway rates, Mr. A. W. Foster is quoted by the *Westminster Gazette* as saying: "The burden of high railway rates on the paper trade is especially emphasised by the fact that shipping rates from competing countries, such as Finland and Scandinavia, to British ports are frequently less than the railway carriage from British mills to the same ports."

ACCORDING to the *Paper Mill* (N.Y.), the Tidewater Paper mill, located at Bush Terminal, Brooklyn, has been sold by the *New York Times* Co. to a syndicate composed of Perkins-Goodwin Co. and Acer Paper Sales Co., Inc. The mill is turning out over 30,000 tons of standard news-print paper per annum.

THE French Veterans' Association call upon the Ministry for Foreign Affairs to endeavour to attach all cash receipts that accrue from the ex-Kaiser's book of memoirs, so that the portion to be attributed to the ex-Kaiser shall be diverted to France's reparation account.

THE Leipzig editor who published the memoirs of the ex-Kaiser says the author only received a fee for his work in accordance with the value of the book, the greater part of which has been divided among charities.

Reporting on the state of Prussian industry in August, the Commercial Secretary at H.M. Embassy, Berlin, says: The paper industry complained of the scarcity of working material, particularly of coal and cellulose, but inland sales were satisfactory. Foreign orders were received, but very little business was transacted, as the factories are hardly able to cover the inland demand, and sales with long terms of delivery involve too great a risk. The stock of orders is satisfactory.

SWEDISH industrial interests are greatly relieved by the fact that wage agreements in the printing, bookbinding and various other trades, affecting 40,000 workmen, have now been renewed, so that next year should be marked by freedom from unrest in Swedish home industry.

The M.P. Federation Council.

A meeting of the council of the Federation of Master Printers was held at Stationers' Hall on Tuesday, and was very well attended. The president, Mr. R. A. Austen-Leigh had an encouraging statement to present on the report of the organisation committee as to the active steps that were being taken to secure new members and to consolidate the organisation. The report of the Labour Committee dealt with the T.A. Settlement, negotiations with the Electrotypers and Stereotypers, and the position of the London wages negotiations. It was decided that the whole question of apprentices' wages and training of apprentices should be referred to the Apprenticeship Committee, to be called together at an early date. The Costing Committee's report was presented by Mr. Howard Hazell, and a suggestion that a costing conference for the sons of master printers should be arranged at an early date was warmly approved. Other suggestions for carrying on a vigorous costing campaign during the ensuing months were adopted. Considerable interest was taken in the question of State printing works and in the report of the Auditor-General on the losses that had been incurred; the council passed a resolution urging that the inquiry that had been promised into the working of this experiment in State control should be undertaken at the earliest possible moment. The Railway Rates Committee reported that any objections should be submitted by members without delay, and it was stated that a guide showing the proper classification of traffic for printers would be issued at the end of this month.

Trade Union Matters.

L.S.C. DIAMOND JUBILEE.—Consideration is being given by the London Society of Compositors to the question of signalling in suitable fashion the 1st of January next, when the L.S.C. as at present constituted reaches its 75th anniversary.

A "NORTHCLIFFE Memorial Garden" is to be constructed at the "Natsopa" Memorial Home by members of the National Society of Operative Printers and Assistants employed at the various offices formerly controlled by the late Viscount Northcliffe.

VOTING OF T.A. BRANCHES.—Some interesting details are divulged by the publication by the Executive Council of the Typographical Association of the branch figures of the ballot whereby the original award of the Industrial Court was rejected by 14,032 against 8,199. Newcastle, Oxford, Hull, Cambridge, Derby, Bath, Redhill, Portsmouth, Frome, Scarborough, Tunbridge Wells, Accrington, Yeovil, Hastings, and other branches accepted the award by a majority of votes. The voting of the larger branches, however, was heavily against the award, and secured the rejection of the terms by a majority of the full membership, the principal adverse votes being Manchester (1,395 to 634), Birmingham (1,023 to 214), Liverpool (940 to 358), Leeds (682 to 269), Bristol (533 to 108), Cardiff (374 to 53), Sheffield (405 to 98), and Bradford (329 to 126). It will be remembered that eventually, after the stoppage of work, the revised award was accepted by 14,983 votes against 5,483.

T.A. STRIKE LEVY.—The Typographical Association strike levy of 5s. in the £ should have been paid weekly. The Executive Council have, however, extended the payment time to the end of the next quarter—December 30th.

MESSRS. SAMUEL JONES AND CO., LTD., are issuing another novelty in paper. It is a coated writing which has been specially prepared so that large firms can advertise their wares on memoranda. Taking writing as well as line and half-tone illustrations in colour, the paper enables commercial correspondence to be combined with publicity.

Losses on State Printing.

Demand for an Inquiry.

Mr. A. E. Goodwin, secretary of the Federation of Master Printers, has made a statement to the Press concerning the criticisms contained in the report of the Controller and Auditor-General in connection with the printing works conducted under Stationery Office management. The following particulars regarding works have been taken from the Blue book published last week on "Trading Accounts and Balance Sheets, 1920-21":—

Dugdale-street.—Loss, £8,648 15s. 5d.; turnover, £65,350 13s. 7d.

Farringdon-road.—Profit, £1,411 os. 9d.; turnover, £27,737 11s. 4d.

Foreign Office Press.—Profit, £4,455 10s. 11d.; turnover, £40,217 3s. 2d.

Hare-street.—Profit, £5,365 13s. 1d.; turnover, £164,223 4s. 1d.

Harrow Printing Works.—Loss, £32,839 11s. 11d.; turnover, £101,773 18s. 2d.

Kingsway Press.—Profit, £1,524 13s. 3d.; turnover, £4,644 9s.

Shepherdess-walk.—Profit, £211 4s. 11d.; turnover, £4,929 11s. 10d.

Underwood-street India Rubber Stamp Factory.—Loss, £362 5s. 6d.; turnover, £949 1s. 8d.

"With regard to these figures," Mr. Goodwin states, "the accounting officer points out that 'selling prices have been based mainly on rates ruling in contracts for similar work between the Stationery Office and private contractors, and exceptional cases of special work have been charged upon a cost basis at hourly rates below or approximating to those published by the Master Printers' Federation.' Accepting this statement as correct, the only explanation that can be offered for such a loss as that occasioned at Harrow is that the methods of State control are no more suitable to the printing than to any other industry. The ridiculously low charge for supervision of £1,730 9s. 4d. is shown in respect of an expenditure of approximately £170,000. On the other hand, the profits shown as made at the Foreign Office Press and the Kingsway Press, where the supervision charges are £1,218 7s. 2d. and £26 4s. 10d. respectively require explanation if the system of accounting was the same at these works.

"It is interesting to compare the costs of wages and materials in relation to output as between the Hare-street and Harrow works. They are approximately as follows:—

"Hare-street.—Wages and purchases, £142,000; production, £167,000.

"Harrow.—Wages and purchases, £147,000; production, £136,000.

"Also, it is interesting to note that the profit of £1,411 os. 9d. shown as made at Farringdon-road Works is only arrived at by crediting profit amounting to £5,162 7s. on transfer and sale of plant, the latter item being a capital profit. Actually a net trading loss was made of £3,751 6s. 3d.

"No trader could possibly carry on business on the lines indicated in the accounts published by the Stationery Office, yet the trader is able and willing to do the work at prices at which the Stationery Office state they have charged their work out. The reason for this is that the printer is the master of his own business and knows how to get the maximum production at a minimum cost and how to arrange work, even if taken at severely competitive prices.

"For many years past the Government had the advantage of buying their printing and stationery from the trade at particularly low rates, thereby benefiting the taxpayer. In existing circumstances, the Government are making the taxpayer pay the losses occasioned by this change of method, whilst the trader is in many instances compelled to look on whilst he has men and machinery fully capable of doing the work to the best advantage and at the lowest cost to the public. The necessity for an inquiry has been repeatedly impressed upon the Government. Surely it should now be instituted at the earliest possible moment."

The Waterside Paper Mill Co., Ltd., Darwen, have appointed as their sole selling agents for the counties of Northumberland, Cumberland, Durham and Westmoreland William H. Vickers and Co. (Manchester), Ltd., 27, Mosley-street, Manchester.

Postage of Picture Post Cards.

Presentation to Sir Adolph Tuck.

Before a gathering representative of the picture post card trade and the printing industry generally, Sir Adolph Tuck's untiring and successful efforts in the cause of cheaper postage for picture post cards received recognition on Monday afternoon by his being presented, on behalf of his fellow-traders, with a handsome silver cigar box, on which his monogram and an inscription were engraved. The presentation took place at the London Chamber of Commerce.

The chair was occupied by Mr. C. H. Mason (of Messrs. E. T. W. Dennison and Sons), who, in the course of his remarks, said the picture post card industry had done its best to get the postage back to the original rate. The reduction made by the Post Office was a step on the road to the old rate, which they looked forward to as the basis of success in their industry.

Mr. Lambert paid a cordial tribute to the strong pioneer work carried out with characteristic energy by Sir Adolph Tuck, and, in making the presentation, expressed the thanks and good wishes of his colleagues in the trade.

Effect of Postage on Trade.

In acknowledging the gift, Sir Adolph Tuck said that whatever success had attended his efforts was, in the main, due to the united front presented by the trade and by the whole of the picture post card industry on this postage question, and particularly must it be ascribed to the loyalty of the post card committee elected to fight this question, with whom he (Sir Adolph) had the honour of working. They had a good cause. The arguments they were able to bring forward were simply unanswerable, seeing that as soon as the increase came into force their prediction was immediately verified that the prohibitive three-halfpenny postage on picture postcards would not only prove ruinous to the picture post card industry, but would actually entail a loss to the postal revenue itself. The decrease, it would be remembered, averaged upwards of 50 per cent. It was this vital information, sent by him periodically to the Postmaster-General and, what was of equal importance, to the 19 members of the Post Office Council of Business Men appointed by the Government to confer with Mr. Kellaway on his postage policy, which proved so convincing. They were naturally grateful to the Postmaster-General, continued Sir Adolph, for at last seeing eye to eye with the picture post card trade, but, unfortunately, he had thought fit to load the concession of the ½d. rate of postage, when but five words were used, with a proviso that these words must only consist of formulas of courtesy or of a conventional character. A large section of the public, however, was unable to differentiate between these formulas, and this could scarcely be wondered at, seeing that many postmasters themselves were apparently unable to discriminate between general messages and those of courtesy or convention, and, as loyal servants, gave the Post Office the benefit of the doubt in these cases by surcharging even the correct five word messages. The natural result was that the public still fought shy of making general use of this ½d. postage rate, and thus the hoped-for extension in the sale of picture post cards was kept down, for it was obvious that where to day one picture post card was sent at the 1d. rate of postage three or more such cards would be sent at the five-word ½d. rate if the danger did not exist of annoying friends by an irritating 1d. surcharge. Sir Adolph added that his own company had made a large bid to secure the abolition of the restriction upon the nature of the five words allowed by means of a Postcards Postage Competition, which involved not merely the expenditure of many thousands of pounds but of many months of sustained attention and labour. He ventured to assert that the success of their competition would spell success for the entire picture post card industry, and he sincerely hoped that they would be in a position to prove to the Postmaster-General by the large number of replies sent in by competitors to Question B—"What message would you send to the Postmaster-General to urge him to allow any five words to be sent on a picture post card for a halfpenny?"—the full strength of popular feeling in favour of rescinding the present useless and harassing limitation. (Cheers.)

Progress in White Metals.

Lecture at Institute of Metals.

At the meeting of the Institute of Metals on September 20th to 22nd at Swansea, there was a large attendance to hear a paper on "White Metals" by three members of the technical staff of Messrs. Fry's Metal Foundry, A. H. Munday, C. C. Bissett and J. Cartland. The paper was all the more appreciated through the authors' choosing to treat their subject pre-eminently in its practical, as well as in its purely academic aspects.

An example of the up-to-date methods made use of by the authors of the paper was afforded by the presentation of a film showing the actual production of various classes of white metals at the London works of Messrs. Fry's Metal Foundry. This was the first time a film had been shown before the meeting of the Institute of Metals.

First the whole family of white metals was reviewed; then the authors proceeded to deal in detail with bearing metals whose predominant constituent is either tin or lead. Analysis and the exact physical properties and characteristics in practice were given of nine anti-friction alloys, ranging from a tin-base alloy containing 93 per cent. tin to a lead-base alloy with 80 per cent. lead. Among the points emphasised was the fact that a homogeneous metal is unsuitable for bearings. Either a metal with soft matrix and hard crystals embedded, or a hard metal interspersed with veins of a softer constituent, will provide the surface essential to the maintenance of the oil film.

The second portion of the paper was a scholarly treatise on the manifold application of white metal alloys to the art of printing. Naturally, the authors had much of interest to say on that subject and they said it with a simple lucidity and graphic exposition that heightened the inherent value of the paper. As with anti-friction alloys, the authors rightly stressed the vital importance of casting temperatures and rate of cooling. Also, they pointed out that the evil consequences of over-heating are frequently intensified by the remedies applied after the event.

Subsequently, various solders, acid-resisting alloys for chemical work, fusible alloys, die-casting alloys, and production and refining generally were touched upon and the authors concluded by thanking Mr. John Fry for permission to present the paper and for facilities in its preparation.

In the general discussion which followed the presentation of the paper, it was remarked that the paper was a welcome change from the secretive methods so often adopted by manufacturers.

The co-operation exemplified by Messrs. Fry's Metal Foundry between the engineer, the metallurgist and the manufacturer is of considerable benefit to the actual consumer of metals whilst it must also result in an ultimate benefit to the metal trade in general.

Thin Opaque Printings.

SIR,—With further reference to your recent remarks regarding thin opaque printings suitable for directories, Bibles, catalogues, booklets, etc., we claim that we can produce a paper similar to "Hollandaise," to which you refer, and we enclose sheets for your inspection.

This paper is made on the original cylinder machine erected by the late John Dickinson, and possesses the qualifications so necessary for this class of work, i.e., opacity, evensidedness, and refined character.

It can be made down to double crown 17 lbs. substance, so that it is particularly suitable for the production of folders and advertising pamphlets which will reduce postage and incidentally considerably lower cost of production.

It can also be supplied with a supercalendered finish, so that printers should experience no difficulty in obtaining good illustrations on this paper.

Yours, etc.,
For JOHN DICKINSON AND CO., LTD.
H. K.

Croxley Mills, October 4th,

Printers' Managers and Overseers
ASSOCIATION.

Various Technical Matters Discussed.

The announcement of a "talk" on "Some Printing Developments, Mechanical and Technical" by Mr. John Geddes, of Messrs. H. W. Caslon and Co., Ltd., attracted an overcrowded attendance of members to the October meeting of the Printers' Managers and Overseers Association, held at the Old Bell, Holborn, on Tuesday of last week. Members' interest in the lecture was further evidenced by the keen discussion which followed, and by the fact that the proportion of members leaving early was unusually small.

The president, Mr. S. M. Bateman, being unavoidably absent, the chair was taken by the vice-president, Mr. R. H. Berry, who conveyed Mr. Bateman's apologies to the meeting.

The month's candidates for membership numbered four, and the following were duly elected: Mr. J. B. Fitzpatrick (St. Luke's Printing Works (Bank of England), Old-street, E.C., Overseer—letterpress machine department); Mr. D. Flanagan (the Britannia Folding Box Co., Ltd., Dace-road, Old Ford, Overseer—litho department); Mr. F. C. Gange (Messrs. Lowe and Brydone, Willesden, N.W., Overseer—litho department); Mr. A. W. Irvine (Messrs. Hazell, Watson and Viney, Ltd., Long Acre, W.C., Overseer—composing department).

Mr. E. W. Whittle, general secretary, suggested that members transferred from provincial centres to London should be introduced to the Parent Association as was the case with new members. He drew attention to the presence among them of Mr. L. C. Mennell, just transferred to London from the Yorkshire centre, of which he had been president. Mr. Whittle proceeded to mention that Mr. Mennell had been a very live member for about twelve years, and he recalled the cordial reception always given to London members visiting their Yorkshire confreres. He called upon the meeting to join him in giving Mr. Mennell a hearty welcome on his coming to settle in London, he having accepted a position as instructor at the London School of Printing.

The meeting having made a cordial response, Mr. Mennell briefly replied, emphasising the many friendships which his membership of the Association had brought him.

The general secretary also drew attention to the presence amongst them of Mr. J. Acton for the first time since his recent accident.

Mr. Acton, in reply, expressed his pleasure at being able to attend once more, especially in view of the subjects to be discussed that evening.

Mr. Geddes was then called upon to address the meeting, which he did in informal but able fashion. His remarks, which we summarise elsewhere in this issue, were followed with close interest and evoked a good deal of discussion.

The chairman, in throwing the meeting open for discussion, remarked that though the Association was accustomed to lectures of a high order, he thought the lecture that evening had surpassed any he had had the pleasure of listening to previously.

Mr. Platt had some interesting remarks to make on several of the points touched upon. He described a very simple form of block gauge which he had used, and also detailed his own methods of dealing with impression difficulties.

Another speaker emphasised the difficulty of reckoning in thousandths of an inch in view of the "give" in wood mounts and the inaccuracy of metal backs.

Mr. Acton, emphasising the importance of the subject of impression, touched further upon the difficulties attending it. He referred to the impossibility of getting two lots of paper from two different mills to print with the same impression from the same forme. He dwelt also on the fact of soft pine being used for mounts, the differing consistencies of inks, and suggested that the subject of impression should receive fuller treatment on a later occasion.

Mr. Mennell agreed that the subject of impression had not in the past been taken sufficiently seriously. He told of his own long and successful practice, when printing a heavy forme of blocks, of having the blocks a trifle above type-high.

Mr. Frank Colebrook suggested that the temperature of the machine room might have

TRAVELLER, with connection, wanted, for Process and General Engraving Business; good position for energetic man.—Full particulars and terms, to Box 13938.

Situations Wanted.

ADVERTISER seeks opening with a firm of Paper Merchants; good general knowledge of the trade, also English and Foreign shipping.—Box 14004.

BUYER, desires change; intimate knowledge Paper Market; five years buying experience all classes Paper, Wrappings, Printings, Boards, etc.; used to controlling staff; excellent references; Edinburgh and Glasgow district preferred.—Box 14002

YOUNG MAN (20), expert Shorthand, knowledge Economics, Literary, seeks Journalistic opening.—Box 13941.

Financial.

RULER wanted, with MACHINE, to JOIN BINDER in Progressive Business; no capital required for right man.—Write, Box 14006.

Machinery for Sale.

BREHMER and other WIRE STITCHERS, various models, including 4's, 4A's and Double-headed; guaranteed.—Box 13995.

a good deal to do with a difficulty of paper variation which Mr. Mennell had mentioned; and if so the trouble should not be beyond cure. The speaker congratulated the Association on starting the season with such a strong series of technical lectures. Mr. Geddes had laid them all under very great obligation, not for the first nor second time. He represented the famous house of Caslon; and there was more to say—there was something which marked Mr. Geddes out in his own class, as a salesman of printing equipment. It was this—that twice Mr. Geddes had at his own cost visited the United States and inspected great numbers of establishments in its printing world, all to the end of extending his efficiency in the service of the printer. They had had focussed for them in the com-

BREHMER BOOK SEWING MACHINE, for Letterpress work, distance between stitches, also length of stitches—adjustable according to size of Books; machine to take any size of Books up to 14-in. long and 9½-in. wide; machine for Power.—Box 13996.

DOUBLE-HEADED WIRE STAPLING MACHINE, for Wooden Boxes, from 2-in. to 12-in. in height; fitted with Two Heads; adjustable from 2½-in. up to 8½-in. apart; Adjustable Iron Table; for Power or Treadle; latest construction; absolutely new.—Box 13997.

NO. 4 BREHMER WIRE STITCHING MACHINE; Power only; will stitch ½-in.—Box 13998.

PERFECTION No. 6 WIRE STITCHING MACHINE, by Morrison, to stitch up to ½-in., good as new; Double-headed Brehmer Wire Stitching Machine, perfect condition; Round Cornering Machine.—Box 13999.

PERFECTION WIRE STITCHING MACHINE, by J. L. Morrison; will stitch up to 1½-in. in thickness; this machine is equal to new. No. 17½ Wire Stitching Machine, by Brehmer, will stitch up to 1½-in. in thickness; fitted for Power.—Box 14000.

SMYTH-HORNE No. 3 BOOK SEWER for sale; can be seen working any time.—Box 13994.

SMYTH-HORNE, LTD.,
 1-3, Baldwin's-place,
 Gray's Inn-road, London, E. C. 1.
 Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

IMPOSING SURFACE (Second-hand), about 72-in. by 32-in.—Particulars to "Observer" Office, Accrington. 14003

Miscellaneous.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

In the Matter of PARKIN S. BOOTH.
 RALPH DENNIS, Trustee.

FOR SALE

(BY PRIVATE TREATY)

Stock of Sundry Paper

CONSISTING OF

- 520 Reams Greaseproof Paper
- 300 „ Wipes (various)
- 200 „ Printing Papers (various)
- 50 „ Wrapping Paper
- 30 „ Note Paper.

- 4½ cwt. Soda and Sugar Bags,
- 450,000 M.G. Bags and
- 400 Reams Odd Lots.

Samples of the above can be inspected on the premises, 4/5, Pilgrim Street, any day after 12th October, between 10 and 4 p.m.

All offers to be made in writing to PARKIN S. BOOTH, Accountant to The Allied Paper Trade Protection Society, Ltd., 14, Holborn Viaduct, E. C.

pass of that hour's talk many things of much value, which it had cost their friend years of labour and many months of travel, and most enterprising outlay, to enable him so to present to them. (Applause.) The appreciation they manifestly felt, he (the speaker) individually and enthusiastically shared. He could say after about twenty years' knowledge of Mr. Geddes, that hardly anyone stood higher in his regard.

Mr. Geddes having briefly replied to points raised in the discussion,

Mr. Whittle proposed a very hearty vote of thanks to the lecturer, this being cordially seconded by Mr. Berryman.

Those present endorsed the vote with enthusiasm and the meeting then concluded with a brief response from Mr. Geddes.

State Printing Losses.

ATTENTION is drawn on another page to the
report of the Controller and Auditor-General
in connection with the printing works under
Stationery Office management. This report
is of great interest to the printing trade, and
it makes clear what printers have been say-
ing all along, namely that printing works run
under competitive commercial conditions are
more efficiently managed than can be the case
under red-tape Governmental control, and
that it is in the public interest that printing
contracts should be made open to competi-
tive tender and not merely be handed to a
State-supported printery. The outstanding
fact made plain by this report is that very
heavy losses have been saddled upon the tax-
payer through State-aided printing activities.
In one establishment, apparently, no less than
£32,839 net loss has been incurred in a period
of only 9½ months. The printing trade, to-
gether with the general public, is now faced
with the question of how long this is to go
on. This official report brings into the lime-
light the necessity for an inquiry into the
whole question of State printing, and no stone
should be left unturned to make the Govern-
ment realise that an inquiry must be insti-
tuted and without delay.

British Industries Fair.

PREPARATIONS are now proceeding for the
British Industries Fair, which will be held at
the White City from February 19th to March
2nd, next year. Manufacturers who have not
yet applied for space are advised to do so
immediately, in order that the necessary
arrangements may be made. Incidentally it
may be mentioned that the cost of the space
is now 6d. cheaper than it was last year,
namely, 3s. per foot, instead of 3s. 6d., while
the Department Stand Scheme, by which
firms can have their stands erected, is cheaper
by 20 per cent. It is hoped once more to have
a strong stationery and printing section,
which will embrace paper, printing, publish-
ing, stationery and stationers' sundries, and
office appliances. In view of the disturbances
which occurred recently at the Leipzig Fair
over the question of prices, it is anticipated
that there will be a larger attendance of

foreign buyers at Shepherd's Bush next year
since there will be no dispute as to exchange
values. In connection with the Fair, strong
propaganda is being conducted as usual. A
16-page leaflet is being printed in nine
different languages and distributed broad-
cast, while letters are being sent overseas for
the purpose of advertising the exhibition.
The fact that there are some 50,000 names on
the Fair index of addresses indicates the pub-
licity which will be given to the Fair. Last
year there were visitors from the United
States, South America, the Far East, the
Balkan States, and European countries, not
to mention British Dominions, and it is anti-
cipated that in 1923 a still larger number of
visitors will attend. Apart from the pub-
licity given at the exhibition itself, it is
claimed that the catalogue provides an oppor-
tunity for extensive advertising, since copies
find their way into the hands of some 40,000
persons, many thousands going abroad, and
being used as a directory. It is pointed out
that for the past three years over 1,000 British
firms have exhibited annually in the London
section alone, which is quoted as a good
demonstration of the value of the Fair. In
addition to the exhibition at Shepherd's Bush,
there will be a Birmingham Section at the
same time, and here again active propaganda
service supplements that of the Department
of Overseas Trade.

The Salesman and the Advertiser.

GRADUALLY firms in this country are coming
to realise the importance of advertising,
and even British print and paper people are
beginning to recognise the fact. Attention is
drawn to the matter by a lecture at Manches-
ter last week, in which Mr. Thomas Russell,
president of the Incorporated Society of
Advertising Consultants, devoted himself
to the subject "How Advertising Helps the
Salesman." Mr. Russell emphasised the fact
that people have now learned to buy, and he
attributed this to the developed art of sales-
manship, which itself was primarily influenced
by press advertising. Until advertising
through the powerful aid of the press had
taught them the art of shopping, people had
to buy whatever was put before them, said
Mr. Russell, but now they told the shop-
keeper what they wanted. Newspaper adver-
tising had not only taught people how to buy,
but had made it worth while for manufac-
turers to maintain a standard of quality, so
that their wares might be recognised as worth
buying. Advertising and salesmanship, as the
lecturer pointed out, are intimately bound up
one with the other. Advertising is not only a
means of introducing a new line of goods to
the public, but it is essential in maintaining
a reputation which may already have been
established. The extent to which people
nowadays are influenced by the press is extra-
ordinary, and it cannot pay any manufacturer
or merchant to neglect the service which press
advertising gives so readily. In the case of
trade and technical journals, for instance,
announcements go direct to the people who
are interested, and have a very special value.

Influence of Good Notepaper.

A CASE in the courts the other day again
emphasises the effect which good notepaper
has upon a likely customer. This fact is fully
appreciated by printers, but it is not so
well understood among the general consumers
of paper. Of course, it is not desirable that
good notepaper should be put to doubt-
ful use as in the case referred to, which con-
cerned an alleged bogus business. But it was
not the fault of the paper that the business
was open to question. What the case did
prove was that good quality paper and sta-
tionery do make a good impression. It does
not follow, of course, that commercial accu-
men should be misled by elaborate notepaper.
But good, honest business is all the more
likely to succeed and get its due reward by
the use of paper which bears the stamp of
quality and taste.

The London Wages Negotiations.

As announced in our columns last week, the ballot of the London Society of Compositors on the proposed reduction of wages resulted in a rejection of the proposals, and the Printing Machine Managers' Trade Society declined to take a ballot on the question of wage-reduction. Since then, we understand, other London unions have adopted a similar attitude. The Amalgamated Typefounders' Trade Society and the Amalgamated Association of Pressmen have rejected the proposals by ballot, and the Association of Correctors of the Press have taken the same course at a representative general meeting.

The National Society of Operative Printers and Assistants has also, by a ballot majority of 1,370 against 100, rejected proposals for wage-reduction.

The Council of the London Master Printers' Association is to meet to-day (Thursday) to review the situation.

A conference has taken place between the Federation of Master Printers and the National Society of Electrotypers and Stereotypers, but no statement has been made for publication. We understand, however, that the conference resulted in a decision to submit certain proposals to the membership of the Society.

The L.S.C. and Wage Reduction.

A Glimpse at the Recent Delegate Meeting.

Our readers will probably be interested in the following report of the recent special delegate meeting, at which, as we duly reported, representatives of the London Society of Compositors rejected their committee's recommendations in the matter of wage reduction. The report, which appears in the Society's *Typographical Journal*, is signed "F. C."—presumably one of the delegates present.

"A special delegate meeting of the London Society of Compositors was held on Thursday evening, September 21st, at the Memorial Hall, Farringdon-street, for the purpose of considering the committee's latest report on the wage reduction question. Mr. T. Timberlake (chairman of the society) presided.

"It having been moved and seconded that the committee's report, as printed and circulated among the members generally, be received, an animated discussion ensued, in which about a dozen delegates took part, nearly the whole of them strongly urging the meeting to have nothing whatever to do with the report, and to make it clear beyond the possibility of doubt that they (the delegates) were as strongly opposed as ever to any reduction of wages. One speaker thought the L.S.C. Executive, in the printed report, had put the employers' case better than the employers themselves had ever put it! Other speakers held up to derision the old bogey of work leaving London, and described the Board of Trade cost-of-living figures as 'deliberately cooked.' Still another speaker ventured to predict that the delegates were going to turn down the report by 'the biggest majority of modern times.'

"The Secretary dealt with the position as seen from the committee's viewpoint. It was admitted (even by some of the speakers that evening) that a great change had taken place in the situation, a change which was, in his opinion, sufficient to justify a modification of the Society's attitude. He outlined what would probably happen in the event of an actual lock-out, and indicated that, even if the fight should prove successful, it must of necessity be extremely costly—most likely so costly from the point of view of employment, as to make victory little better than defeat. Though the Society was in a very much better financial position relatively than some other big unions, the outcome of such a lock-out must be detrimental to its interests. In any case a ballot of the members would be taken.

"The discussion was continued by a few other delegates, one or two of them apparently being influenced by the secretary's estimate of the position. Others, however, insisted that the need for a bold attitude was greater than before, that the appetite of the employers for reductions would grow stronger

with each successful effort, and must be fought. One delegate, in an effective speech, said he thought the secretary had been before the employers so often and so much that he had become bemused, and urged him to come back to his old fighting form.

"When the show of hands was taken, it was seen that there was a very large majority against 'reception' of the report; and the Chairman intimated that the business of the evening was at an end."

Personal.

LORD RIDDELL, in lecturing at Stationers' Hall to-morrow (Friday) at 6.30 on "The Printing Business as a Career," will cover a wide field, incorporating some of his wise observations on such subjects as reading, thinking, and concentration—in connection with which he has recently been very prominently before the reading public.

THE chair is to be taken by the Master of the Worshipful Company of Stationers, Mr. Herbert Fitch.

MR. C. W. BOWERMAN, M.P., whose post as secretary to the Trade Union Congress has to be relinquished under an age-limit rule passed at the recent Southport Conference, will continue in his present office until September next year, when he will complete 50 years of trade union service.

THE next Congress will be asked to nominate a successor, and the delegates will also be invited to initiate a national testimonial to Mr. Bowerman on his retirement.

MR. R. A. AUSTEN-LEIGH, president of the Federation of Master Printers, entertained the Federation and Alliance secretaries to dinner on Monday evening at the Café Marguerite, where a very pleasant evening was spent. A *recherché* repast was followed by a highly interesting and helpful discussion on ways and means for improving the organisation of the Federation and increasing its usefulness to the trade.

MR. H. SEYMOUR BERRY, of Merthyr, has purchased Buckland, an historic estate of 3,000 acres in Breconshire.

MR. J. R. RIDDELL, principal of the London School of Printing and Kindred Trades, has been invited by Lord Morris to act on the Printing Committee of the British Empire Exhibition (1924).

COUNCILLOR G. A. ISAACS (general secretary of the National Society of Operative Printers and Assistants) is conducting a vigorous campaign as prospective Labour candidate for the Gravesend Division.

MR. G. J. THRASHER, who started work as a printer's apprentice, and retired from Hazell, Watson and Viney's a few years ago, is to be the new Mayor of Aylesbury.

MR. G. E. DUNSFORD, the veteran York journalist, who has attained the age of 74 years, recently celebrated his diamond jubilee as a journalist, and, to mark their appreciation of that event, his journalistic colleagues have presented him with a wallet of bank and Treasury notes.

MR. FRANK COLEBROOK, a critic of no mean order, pays a compliment to the *British and Colonial Printer and Stationer*. Referring to its contents, of variety and interest, he says, in a recent letter, the paper well reflects the waking up in the craft. Words of appreciation and encouragement stimulate further endeavours.

MR. F. H. OSBORN, the commercial editor of the *Sheffield Daily Telegraph*, has been presented by his colleagues on that journal with a case of cutlery on leaving to take up a post on the *Johannesburg Star*. Mr. Osborn is an executive member of the National Union of Journalists.

MR. J. KEMP, the advertising manager of the *Sheffield Independent*, and Mrs. Kemp, who have just celebrated the 25th anniversary of

their marriage, have been presented with a solid silver fruit basket by the members of the advertising department of that journal in honour of the occasion.

MR. W. V. MARCHANT, who is a well-known and esteemed member of the London paper trade, will be installed as Worshipful Master of the Papyrus Lodge of Freemasons on Wednesday, November 1st, succeeding Mr. George Buchanan, who has had a most successful year of office, full of pleasant reminiscences.

CAPTAIN J. A. NEWTON, at one time with the house of Lepard and Smiths, and well known for many years in the London paper trade, has been appointed manager of Messrs. Gordon and Gotch's Tasmanian Paper Department, under Mr. Pollard, the general manager in Launceston. He will at all times welcome trade information.

MR. T. OKAWA and Mr. K. Saton, Japanese paper manufacturers, have concluded an interesting visit to America, and are due in this country. They propose to visit paper mills in Europe.

THE golf championship of Western India, the competition for which was held in the first week of September, was won by Mr. David Walker, assistant editor of the *Times of India*, Bombay.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

H. W. MCKENZIE, C. J. CLAYTON, W. MARSHALL, C. E. MINSON and F. G. STELJES, printers' valuer and fire loss assessor, etc., 114-115, Holborn, London, E.C.1, under the style of H. W. McKenzie.

A. W. POPE, T. W. GILMAN and G. W. BRADLEY, printers and stationers, 11 and 11a, Leen-side, Nottingham, under the style of Pope and Gilman.

S. M. LANE and L. M. STEVENS, paper and paper bag mill agents, 110, Cheapside, London, and 16, Catford hill, under the style of S. Lane and Co.

Linotype Operator and His Notice.

In the Mayor's and City of London Court on October 6th, the Record Composition Co., Ltd., typesetters, 3, West Harding-street, sued Mr. Arthur F. Facey, linotype operator, for £42 for leaving their employment without notice.

Mr. Du Cann (for plaintiffs) said defendant was paid £6 10s. a week, but as he said he was doing more work than any other operator on plaintiff's premises his wages were raised to £7 10s. There was a great difficulty in getting skilled workers for linotype machines. There was a working agreement between the plaintiffs' trade association and the Society of Compositors that a fortnight's notice should be given on either side to terminate employment. On July 24th defendant asked Mr. Yates, plaintiffs' managing director, if he could release him from his post as he had a job offered him on the *Daily Express* and he was anxious to go there immediately. Mr. Yates treated the matter in a sympathetic spirit and said he would allow the defendant to go if he could find a satisfactory substitute and if the substitute was found satisfactory after working one night with the defendant. The next night the defendant did not work and no substitute appeared. That necessitated rearranging the whole work of the place and plaintiffs were put to great inconvenience as well as loss. The next night defendant sent a man to take his place, but he proved to be such an unsatisfactory worker that the plaintiffs could not keep him.

Defendant said that plaintiffs agreed to his leaving if he found a substitute, and one was supplied.

Judge Jackson said that the plaintiffs could not possibly recover for consequential damage involved by defendant's absence. But they were entitled to a fortnight's wages, less two days' holiday to which defendant was entitled. Judgment for the plaintiffs for 10s. and costs.

THE staunchest trees must needs have the staunchest roots.

DIVIDENDS AND REPORTS.

EDWARD LLOYD.—Interim dividend on ordinary shares of 3d. per share, free of tax, payable 9th inst.

NEVETT BOOKBINDING.—For year to June 30th last accounts show a profit of £5,300, and £922 was brought in, making £6,222. Further dividend of 5 per cent., making 7½ per cent. for year, tax free.

LAMSON PARAGON SUPPLY.—Owing to continued trade uncertainty the directors of the Lamson Paragon Supply Co have decided not to pay an interim dividend on the ordinary shares, but to await the result of the final accounts at the close of the company's financial year (January 31st). The half-yearly dividends on the 5½ per cent. and 10 per cent. cumulative preference shares have been paid on their due dates. The interim ordinary dividend last year was passed also, but 10 per cent. was declared in March last for the whole year ended January 31st, 1922.

BRITISH GLUES AND CHEMICALS, LTD.—At the annual meeting of British Glues and Chemicals, Ltd., Mr. T. Walton, the chairman, who presided, said the issued capital shows no change from the previous year; the reduction of creditors and credit balances from £226,292 at May, 1921, to £86,097 at May, 1922, is due mainly to payments in discharge of the taxation liability of the vendor companies; and the depreciation reserve account has been augmented during the year by £31,274, bringing up the total provision to £67,077. The £31,274 is, of course, charged in the accounts in arriving at the loss for the year, and the buildings and machinery have been maintained in an efficient condition out of revenue. There is practically no change in the company's investments in subsidiary undertakings, the value of stock-in-trade is less by £41,500 than 12 months previously by reason of falling markets, and debtors and debit balances show a small reduction.

HARTLEPOOLS PAPER MILL.—After providing £11,250 for debenture interest, £1,630 for repairs and maintenance, and £5,000 reserved for depreciation, accounts for year ending April 21st last show loss of £113,587, which increases debit balance to be carried forward to £150,574. Previous year loss of £36,987, after providing for interim dividend of 6½ per cent. actual.

BROWN, STEWART AND CO., LTD.—Dividends nil. Debit balance, £31,254.

NEW COMPANIES.

ROBERTS AND NEWTON, LTD.—Capital £6,000, in £1 shares (2,000 6 per cent. cum. pref.); to acquire the business of wholesale and export stationers carried on by W. Shaw at 7, Victoria-terrace, Tottenham-lane, Hornsey, N., as "Roberts and Newton." Private company. Directors: F. W. Baker and Mabel A. Shaw. Registered offices: 7, Victoria-terrace, Tottenham-lane, Hornsey, N.8.

GAZE AND GARSIDE, LTD.—Capital £2,000, in £1 shares; wholesale or retail chemists, booksellers, stationers, printers and publishers, etc., and to adopt an agreement with J. E. Gaze. Private company. First directors: Dr. J. E. Gaze, W. E. Gaze, and A. W. Garside. Registered office: 92, Turner's-hill, Cheshunt.

HILLS PUBLICITY, LTD.—Capital £500, in £1 shares; publicity, news and press agents, printers, publishers, and general advertising agents, etc. Private company. Subscribers: G. A. Hills and C. Hills. G. Hills is first director. Registered office: 150, Fleet-street, E.C.4.

PHILIP S. BRAUND, LTD.—Capital £5,000, in 2,500 preference and 2,250 ordinary shares of £1 each and 5,000 management shares of 1s. each; manufacturers, importers and exporters of, and dealers in stationery, office furniture, equipment and supplies, paper, cards, cardboard, inks. Private company. Subscribers: P. S. Braund and Emma Hammond. Registered office: 5, King-street, Covent garden, W.C.2.

SNACKS, LTD.—Capital £2,000, in 4,000 ordinary shares of 1s. each and 1,800 10 per cent. non-cumulative preference shares of £1 each; manufacturers of, and dealers in, food specialists, advertising and press agents, commission and insurance agents, etc. Private company. Subscribers: H. Glenisty and E. A. Smith. Directors: J. W. Nicholson, J. C. Fairbairn, S. J. de Biere and C. F. Miles. Registered office: 18, Old Compton street, Westminster, W.

HORTON KIRBY PAPER MILLS, LTD.—Capital £145,000, in £1 shares; to obtain an agreement with Albert E. Reed and Co., Ltd., and to carry on the business of papermakers, cutters and dealers, makers of, and dealers in pulp and materials used in the manufacture of paper, dealers in timber and wood or other fibre, stationers, printers, lithographers, bookbinders and account book manufacturers, etc. Private company. Subscribers: B. R. Bayliss and H. W. Easun. First directors: G. J. Maddick, Lieut.-Colonel W. T. Cox, D.S.O., A. R. Reed, E. P. Reed, and W. C. Nisbett.

"REX" PASTE, LTD.—Capital £100 in £1 shares; manufacturers of or dealers in adhesive pastes of all kinds, etc. Private company. Subscribers: P. J. Whitehouse and A. E. Gliddon. Subscribers appoint directors. Registered office: 36-8, Victoria-street, Westminster, S.W.

CALVERT AND CO. (WEST HARTLEPOOL), LTD.—Capital £1,000 in £1 shares; milliners, dealers in stationery and fancy goods, etc. Private company. First directors: J. W. Calvert and A. Sutton. Registered office: 8, Stockton-street, West Hartlepool.

AXIOMS, LTD.—Capital £150 in 1s. shares; financiers, manufacturers of, agents for or dealers in machinery, advertisement contractors or agents, etc. Private company. First directors: W. Wrentmore and A. T. H. Clarke. Registered office: 39, Victoria-street, S.W.

EXPERT PUBLICITY SERVICE, LTD.—Capital £500 in £1 shares; advertising contractors and agents, etc. Private company. First directors: A. Byre and S. Byre. Registered office: Ulster-chambers, Regent-street, W.

DORIC CO., LTD.—Capital £1,000 in £1 shares; export and import merchants, manu-

facturers of and dealers in woollen goods, paper, etc. Private company. Subscribers: W. G. Trent, W. C. Ralph, Muriel Douglas, C. M. Eames and J. Douglas.

CHAS. H. RALSTON AND CO., LTD.—Capital £2,000 in £1 shares; to take over the business of a manufacturer of waterproof packing materials carried on by C. H. Ralston at Corbett-street Works, Bradford, Manchester, as "Chas. H. Ralston and Co.," and to carry on the same and the business of manufacturers of roofing felts and waterproof, wax and other papers, etc. Private company. First directors: C. H. Ralston, T. Horrocks and J. M. Horrocks. Registered office: Corbett-street Works, Bradford, Manchester.

CAVE (WEMBLEY), LTD.—Capital £10,000 in £1 shares; to acquire, work, develop, manage and in any way deal with a concession granted to Moss Joseph by the British Empire Exhibition (1924), Incorporated, to work and deal with all further concessions or contracts which the company may obtain from the said exhibition, and to carry on the business of advertising contractors and agents, printers, general merchants, etc. Private company. Permanent directors: M. Joseph, L. Joseph and G. Joseph. Registered office: Audrey-house, Ely-place, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory.)

JAMES ENGLISH AND CO., LTD. (manufacturers of card and cardboard and photographic mounts, paper merchants).—Debenture dated September 28th, 1922, to secure £2,500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: U. Hopton, 81-7, Gresham-street, E.C.2.

KEY AND WHITING, LTD. (bookbinders, Canonbury, N.).—Issue on September 18th, 1922, of £1,000 debentures, part of a series already registered.

EMERY AND SON, LTD. (printers, etc., Hove and London).—Particulars filed of £500 debentures authorised September 14th, 1922; charged on the company's undertaking and property, present and future, including uncalled capital (subject to £500 first, £500 second and £2,500 third debentures); the whole amount being now issued.

THOMAS DE LA RUE AND CO., LTD.—Charge on all sums due or to become payable in respect of £400,000 mortgages debenture stock (released by bank) from the respective allottees thereof, as substituted security dated September 22nd, 1922, to secure all moneys due or to become due from company to London County, Westminster and Parr's Bank.

CHIVERS AND CHIVERS, LTD. (printers, Clapham Junction, S.W.).—(a) Satisfaction in full on September 8th, 1922, of mortgage dated February 10th, 1919, securing £480; (b) registered land registry charge on 36, Plough-road, Battersea, dated September 8th, 1922, to secure £700. Holder: Mrs. C. Gann, 18, Langscote-avenue, Putney, S.W. And (c) filed particulars of £700 debentures authorised August 11th, 1922, charged on the company's property, present and future, including uncalled capital; whole amount issued.

CROXLEY THIN OPAQUE PRINTING

for
**BUILDING
 BEAUTIFUL
 BOOKS**

QUALIFICATIONS:

- OPACITY
- EVEN SIDEDNESS
- FINE PRINTING SURFACE
- IMITATION HAND-MADE LOOK THROUGH
- ONE THOUSAND PAGES BULK ONE INCH
- DISTINCTIVE AND REFINED CHARACTER

A BOOK ONE INCH
 THICK CONTAINS
 1000 PAGES OF
 CROXLEY OPAQUE
 PRINTING
 DEMY 11 lbs.

ADVANTAGES:

- MAXIMUM READING—MINIMUM SPACE
- REDUCTION IN THE POSTAL CHARGES
- EASY TO CARRY AND HANDLE
- CONVENIENCE IN STORAGE OF BOOKS

The advantages of Croxley Thin Opaque are both numerous and obvious—send for samples, they will save you pounds in the production of directories, Bibles, booklets, folders, catalogues, and all printed matter where it is necessary to print a large amount of information in a small space.

P.M. & O.A. Manchester Gathering

Visit to Linotype Works at Broadheath.

To enable members of the Printers' Managers and Overseers Association to familiarise themselves more fully with the ramifications of Messrs. Linotype and Machinery Limited—whose name is a guarantee as to the efficiency of their productions—the Manchester Centre of the Association arranged a visit, open to all members of the Association, to the company's works at Broadheath, Manchester, on September 30th. Over one hundred members supported the Manchester president (Mr. Thos. Rignall), amongst the visitors being the general secretary (Mr. E. W. Whittle) from London.

Upon arrival at the works the general manager (Mr. B. Goulding) had ready an able staff of guides, and as soon as each visitor obtained some refreshment, he joined a guide and was escorted to the various departments. The Linotype in its latest improvements was thoroughly demonstrated by several specialists, and the number of questions put by many of the visitors made some persons believe that Socrates had sent forward a few of his disciples.

The "Miehle," which first came into popularity about a quarter of a century ago, still holds a premier position amongst letterpress printers. The continual call for this machine must necessarily make for higher perfection, both as regards finish and accuracy, than can be attained by any firm having only occasional orders. One great advantage to the printer is the resumption of the pre-war arrangement in case of accident, so that he can rely upon receiving any particular part almost immediately, and have his machine again running with the minimum loss of time, all parts manufactured by the company being interchangeable. High-grade presses live upon their racks and gears, and if not perfectly made and fitted, there is liability to undue wear and strain. Each individual part is tested, so that when the machine is finally placed in the printing office it may be confidently expected to give every satisfaction. As Mr. Goulding stated, if by any chance there should be the slightest hitch, send to the makers and it will be at once put right. When such a thorough expert as Mr. Stern gives his O.K. to any machine you may, to use an American phrase, "bet your bottom dollar on it."

The "Centurette," built on the models of two machines, the Century and the Miehle, embodies the main features of the parent presses, at the same time possessing features of its own. It is constructed primarily for speed and has a maximum capacity of three thousand per hour. It is built with the purpose of doing away with a good deal of the tedious process of making-ready, has good distribution and effective rolling power for high-class work. Its small number of working parts and adjustments, along with the solidity of frame and the mechanical advantages of bed movement enable it to be run with perfect safety at the high speed that is claimed for it.

The L. and M. rotary will probably have attention in a later issue as Mr. W. E. Dalby is giving a special demonstration to the Manchester members this month.

The Autoplate, whose advent was boomed in 1900, consists of casting mechanism and a series of finishing devices which automatically co-operate in one machine to make the casts and finish them. The matrix is placed in the casting mechanism at one end of the machine, and, by the turn of a lever, the operator starts the casting. This proceeds automatically, there being no further attention until the plate is finished.

After three hours' following the patient guides, the party had only secured a bird's-eye view of the various processes and departments, which left many desires for knowing more and more about the productions at Broadheath. Another adjournment, when tea afforded the satisfaction needed by the inner man, and a hearty vote of thanks—given by President Rignall and replied to by Mr. B. Goulding—ended an instructive afternoon for all those who believe in everything that matters about print. Such are the interpretations conveyed to

WEE MAC.

SOCIETE SPALDING AND PIRIE.—The capital of this company (formerly reduced) has been raised to 1,800,000 by 6,250 ordinary shares and 6,000 preference shares of 100 francs.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

Members' Annual Smoker.

In order to give a fillip to the season's activities this Association has for years past made the October meeting a members' smoking concert, and accordingly this year's event took place at the Talbot Restaurant, London-wall, E.C. The function, which was presided over by Mr. A. W. Hunt (president) and Mr. H. Milton (vice), was supported by a large gathering, and proved in every way a great success.

Music started at 7 o'clock sharp and went merrily along without a dull moment right up to 10.30. Miss Alice Sims opened with a pianoforte solo which was brilliantly played, and throughout the evening this lady efficiently accompanied the vocal items provided by Messrs. Archer, Bothwick, Daniels, Digby, Fox, T. Hunt, Harold Hunt, Pegan and Tod, whose turns, both grave and gay, met with much appreciative applause. Mr. Jones also gave a couple of songs that added to his prestige, already gained, in his role of steward and as a provider of many good things. Two other vocalists added their share to the programme, Miss D. Glover deserves special mention, her sympathetic, well modulated voice being used with telling effect in songs that met with much commendation, and Miss Fox proved a very interesting entertainer with songs at the piano. Other items were an instrumental trio (piano, violin, 'cello), played by Mrs. Mordaunt, Mr. Cox and Mr. Miles. This last-named gentleman also gave a 'cello solo, which was enthusiastically encored, and Mr. J. Lee provided the elocutionary turn of the evening. Mr. J. Esler, as a variation from music and song, was entertaining as a manipulator of folded paper, from which he produced many wonderful things; he also met with much success as a trickster with a pack of cards, astonishing his audience exceedingly.

The stewards were Messrs. A. J. Jones and A. C. Ware, who carried out their duties with much approval.

The singing of Auld Lang Syne and the National Anthem brought a noteworthy gathering to a close.

CORK

Newspapers and Malicious Damage.

Damages Awarded Totalling £50,000.

The proprietors of the *Cork Examiner* and allied papers, Messrs. Thomas Crosbie and Co., Ltd., claimed, before the Recorder of Cork last month, £39,203 5s. 6d. for the destruction of their plant on August 8th last, and loss of business resulting from the raid on the offices by armed forces. On the same days, September 28th to 30th, the claims of the proprietors of the *Cork Constitution*, Messrs. News and Sons, for £16,587 4s., for destruction of machinery and plant, and £14,000 for consequential losses, were heard. Mr. Edwin W. Evans, newspaper valuer, of 150, Fleet-street, London, E.C.4, assessed the damages in both cases. The claim made on behalf of the *Cork Examiner* included the loss of three printing machines, 14 linotypes, and the stereo plant. This was a claim for the value of the machinery destroyed, not for the cost of replacement. The *Cork Constitution* had temporarily suspended publication before the date of the destruction, but contemplated re-issuing when the affairs of the country had settled down, and the estimated cost of re-establishing the paper was £6,000. The Recorder awarded £35,000 in the case of Messrs. Crosbie and Co. In awarding the *Cork Constitution* £15,000 for damage to machinery, the Recorder said he was not sure that if the attack on the offices and plant had not been made, the paper would now be in course of publication, so he would not allow that part of the claim.

SECTION eight of the *Manchester Guardian* (Commercial's) "Reconstruction of Europe" is another fine production, and deals with the problem of reparations and the devastated area in an exhaustive manner.

The Publicity Club of London.

Visit to Fry's Metal Foundry.

The Publicity Club is to be congratulated upon the excellent educational schemes which its committee provides for its members. In addition to many excellent lectures and discussions, it arranges visits to works of a representative character, each at the head of its particular branch of trade, and what is, if possible, more important still, every establishment visited has a direct bearing upon the work of the publicity specialist.

In the case of a recent visit the venue chosen was Messrs. Fry's Metal Foundry, where the members were received by Mr. A. H. Munday (London manager), Mr. P. M. Parish (secretary) and Mr. W. L. Sarjeant (works manager). After a short preliminary account of the principles of metal refining and mixing, especially for printers' alloys, the party was conducted around the works, and saw the practical application of the most modern metallurgical science.

The up-to-date furnaces in operation for refining, melting and mixing were inspected, and the processes carefully explained. The ingenious methods of labour-saving, and also of safeguarding the operatives were noted with great interest. The modern die casting plant, die-shop, the casting of printers' spacing material and rolling of printers' leads, and also the recently perfected method of manufacturing lead yarn were all seen and explained. A demonstration in the chemical laboratory of the estimation of a number of constituents of the alloys was much appreciated.

The members were then entertained to tea by Mr. John Fry, who formally welcomed them, and stated in very cordial terms the interest and pleasure the visit gave to him.

Mr. W. M. Young voiced the thanks of the members of the Publicity Club to Mr. John Fry and his staff for their kindness and hospitality, and assured them that the highly interesting and instructive visit had been fully appreciated.

Marking of Books for America.

Under instructions from the Treasury Department, the Customs House put into final effect on September 15th the ruling of May 6th that hereafter all imported books must be permanently and conspicuously marked with the country of origin. This rule of Customs procedure has been in past years construed to allow use of the regular printer's marks, which very often are found on the last page of text instead of on the title page and sometimes give city of origin rather than country of origin.

When this new order was first promulgated, the Customs House insisted that the marking should be on the title page, but in the last communication to the National Association of Book Publishers, the Chief of the Division of Customs states that this will be interpreted to mean also on the back of the title page. Rubber stamping books is not considered a substitute for printing, as the regulations call for permanent marking rather than what might prove temporary. Old and rare books will be accepted under the regulation which provides that imported merchandise need not be marked when such marking would have any effect on the artistic value.—*N.Y. Publishers' Weekly*.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NETHERLANDS.

An agent in Amsterdam is desirous of obtaining the representation of United Kingdom firms for the sale of the following goods, particularly for export to the Netherland East Indies: aium, formaldehyde, caustic soda, soda crystals, manuscript paper, school exercise books, etc. (Reference No. 341.)

The . . .
American Miehle Company's VERTICAL Job Press.

Three quarter view, showing method of inserting forme: showing also pile-table and fountain swung back and forme roller unit removed from Press.

SPECIFICATION.

Inside Chase Measurement, 13 $\frac{3}{4}$ in. x 19 $\frac{3}{4}$ in.
 Type matter locked in chase, 12 $\frac{1}{2}$ in. x 19 in.
 Largest sheet which can be delivered,
 12 $\frac{1}{2}$ in. x 19 in.

Distribution—2 forme rollers with geared steel vibrator, 2 composition distributors with geared steel vibrator, 10 in. full length ink plate, ductor roller, full length ink fountain.

Over-all Measurements :
 Width, 4 ft. Length, 5 ft. Height, 4 ft. 6 in.
 Net weight, with motor, approximately 2,600 lbs.
 Speed Range 2,000 to 3,600 per hour.

* *

THE American Miehle Company's Vertical Press will produce job printing more cheaply than any other press on the market because it will produce printed impressions for a greater portion of its effective time by reason of the enormous reduction in the time required to change from one job to another.

We invite you to call and see the Vertical Press at work.

Sheet Delivery Mechanism.

A patent granted to Messrs. Linotype and Machinery, Ltd., Mr. C. L. Stern and Mr. A. V. Bugler, relates to sheet-delivery mechanism for printing machines of the kind comprising a reciprocating carriage on to which a sheet is delivered by tapes during the outward travel of the carriage, and from which the sheet is swept on to the delivery board during the inward travel of the carriage by fingers projected between the bars of the carriage, these fingers being carried by a rock shaft supported in brackets adjustably fixed to bars located at the side of the machine by means of pins insertable into holes in the brackets

inking rollers over the type bed and the transfer roller over both beds, and also for lifting the transfer roller clear of the beds during its return movement. The type bed 13 is inked by rollers 5, and the impression is transferred therefrom by a transfer roller 6 to the bed 14 co-operating with the platen 11. The rollers 5 receive ink from a roller 67 at the angle between the two beds and also from other rollers 34 receiving ink from a drum 35, which also supplies the roller 67 by means of an intermediate roller 81 and an endless apron 82. The inking roller carriage 70 is reciprocated over the bed 13 by means of a bell crank lever 62, link 60, and crank pin 69 on a gear 68 en-

passed about them by endless bands or chains carried by sprocket wheels. The type bed 13 is vertical and opposite the transfer bed 14, which co-operates with the platen 11 rocked by a crank on the main shaft 9. An endless band 4 passing round sprockets 2, 3, driven from the shaft 9 by gears 8, 7, carries the transfer roller 6 and inking rollers 5 by means of carriages 18, the latter being controlled by

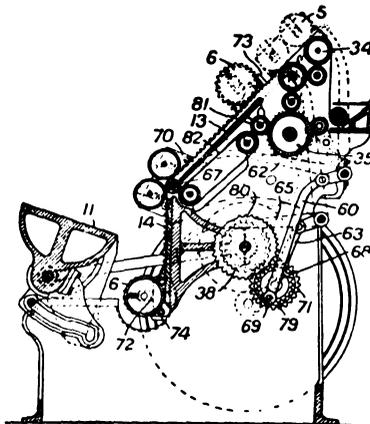

cams and guide rails, so that the inkers contact with the type bed 13 only and the transfer roller with both beds. The rollers 5 are inked by a drum 15, to which ink is distributed by a set of rollers 24, 25, 26, 27, receiving ink by means of a transfer roller 28 from a duct roller 29. In a modification, the beds are arranged horizontally.

and holes along the side bars, and consists in obtaining a finer adjustment of the finger rock shaft by providing a plurality of holes in the brackets spaced apart by a distance differing from the intervals between the holes in the side bars. As shown, the fingers 7 are carried by a rock shaft 8 supported above the path of the reciprocating carriage 3 by brackets 9, 10, adjustable along side bars 11, series of holes 29 being provided along the brackets closer together than the holes 30 in the side bars, so that for almost every possible position of the brackets one of the holes 29 registers with one of the holes 30 in a manner resembling the graduations of a vernier scale. Pins 31 secure the brackets in position. The shaft 8 is rocked by means of an arm 12, provided, as already proposed, with a non-radial slot 13 engaged by a stud 14 on one arm 15 of a bell-crank lever, the other arm 16 of which is connected by a rod 18 to a cam lever 20 actuated by a roller 22 on the carriage to lower the fingers 7 into position between the bars 1 of the carriage ready to sweep off the sheet on to the delivery table 32. As the carriage approaches the limit of its inward travel the roller 22 strikes against a curved lever 24, having a projection 25 bearing against the arm 15 of the bell-crank, thus raising the fingers 7 out of the way of the next sheet delivered from the tapes 4 on to the carriage.

Offset on Platen Presses.

An invention patented by Mr. E. Grosse relates to platen printing presses of the kind adapted for offset as well as direct printing, and comprising a number of beds, one of which co-operates with the platen for producing impressions transferred to this bed from another bed by means of a transfer roller, and consists in arranging the type bed and the transfer bed at an angle to one another at opposite sides of an ink distributing roller, means being provided for reciprocating the

gaging a mutilated gear 80, so that the carriage dwells at each end of its stroke. The transfer roller 6 is reciprocated over both beds by a bell crank 65, link 63, and crank pin 79 on a gear 71 driven by a gear wheel 38. Stops 73, 74 co-act with wedges 72 supporting the bearings of the transfer roller to lift it away from the beds during its return stroke and to move it into contact therewith for the down stroke. When used for direct printing, the forme is arranged on the bed 14, and the bed 13 may be used as an ink table, the transfer roller being replaced by an inking roller. Another invention by Mr. Grosse refers to an

offset platen printing press of the kind wherein a transfer roller transfers the impression from the type bed to a second bed fitted with an offset blanket, this second bed co-operating with the platen, the two beds are arranged parallel and opposite each other, and the transfer roller and inking rollers are

Paper Man's World Tour.

Interview with Mr. J. R. Brough.

Mr. J. R. Brough (A. J. Brown, Brough and Co.) has returned from a world tour with many interesting impressions. A man of wide public experience, he was able to look upon the municipalities in the colonies with a trained eye.

In Australia he was very much impressed by the general character of the principal towns. Their buildings, their tramways and railways, and other amenities struck him as being very much up-to-date.

"It is marvellous," he says, "what has been done in 100 years in the development of Australia and New Zealand, thriving cities taking the place of what was formerly bushland." Hobart, Tasmania, struck him as likely to develop into a very important centre, because of the fact that it possesses the cheapest electrical power in the colony.

Industrial Conditions in Australia.

Australia and New Zealand have suffered a similar trade depression to that which has been experienced in this country, but they are beginning to see an improving state of affairs.

"One of the main points that developed from the war," said Mr. Brough, "was this: the colonies, but Australia and New Zealand more than Canada, being unable to get as much as they had been in the habit of doing from the old country and elsewhere, were driven in upon themselves, and started to make many goods which they would not otherwise have made. These new industries have to be safeguarded, and accordingly the policy of protection has been widely introduced. They, however, carry it to an absurd point, because it means that consumers have to pay pretty dearly for the articles which they make, their own market being but a small one representing as it does only six or seven millions of people in Australia and in New Zealand about 1,250,000. Accordingly they cannot hope to manufacture on a sufficiently big scale to compete with the prices of goods produced elsewhere. Therefore they have to resort to heavy tariffs.

"It is true they give the Mother Country in many cases a lower duty than is placed upon goods from other lands, but by the time you have paid freight from here and the duty, even at the reduced rate, it is a particularly heavy handicap for British manufacturers. To that extent I think we must be prepared to do less business with Australia for the time being, speaking generally, of course. Another factor which is helping to keep up the price of goods in Australia is the basic wage, which has followed the advent of Labour governments."

In the course of interviews and addresses at fairly big assemblies in Adelaide and elsewhere, Mr. Brough pointed out that the protective policy of Australia would cut both ways, and it would have the effect before long of decreasing the colonies' ability to export to this country.

Protection and Paper.

Asked if he had any information with regard to the manufacture of paper in Australia, Mr. Brough mentioned that there were one or two mills and he had seen their products.

In the matter of paper, Mr. Brough again came up against the policy of protection, and one gentleman put it to him this way: "I am a manufacturer myself and you offer me a paper which is cheaper than I can get locally; but if I buy from you instead of from a domestic house, the fact becomes known and manufacturers here will naturally look upon me as something in the nature of a blackleg. Therefore, we manufacturers are bound to hold by one another, and anything that we can make in Australia we must buy, even if the price is high."

"That was the attitude I found in several cases," remarked Mr. Brough. "One New Zealand man said to me that 'rightly or wrongly, we have to depend not only upon agriculture, but upon manufacture as well.'"

Mr. Brough found that a good many Scandinavian mills had been dumping paper at very cheap prices into Australia, owing to the absence of a sufficient demand in Europe. This, of course, upset the market very considerably. The Scandinavian mills, however, perhaps under pressure from their banks or otherwise, were determined to get rid of their products, and having sold what they could to Great Britain, they shipped the rest off cheaply to Australia.

In New Zealand Mr. Brough found the people there were ready to treat Great Britain

and Canada rather better than they did the Australians. The fact was that Australia had handicapped some of New Zealand's products and New Zealand had retaliated by not allowing Australian goods to enter the country so easily and by giving favourable treatment to the Mother Country and Canada.

"Did you find much Japanese or American paper in Australia?"

"No," said Mr. Brough, "I did not come across it. I did come across one big parcel of American 'news' paper, but that was merely surplus goods and they used Australia as the dumping ground."

As illustrating the attitude of the Australians at that time to German goods, Mr. Brough mentioned that in going through the Customs House at Adelaide, the officials confiscated a parcel of German samples which he was carrying. Although Mr. Brough pointed out that these were merely samples being taken into the country for purposes of comparison in the event of German goods being admitted after August 1st, he could not alter the decision of the officials who retained the samples. Since then, of course, it has been decided to admit German goods, but on certain terms.

The Commonwealth, Mr. Brough mentioned have an anti-dumping measure which operates according to the fluctuations of the exchange. With the German mark at a discount, as it is, Mr. Brough does not anticipate German goods being sold in Australia on any large scale.

Visit to Canada.

Passing on to Canada, Mr. Brough paid a visit to several paper mills in British Columbia, being induced to do so by the fact that he had seen some of their products in New Zealand.

He found that the mills in the Dominion, and especially in British Columbia, were practically sold out. This Mr. Brough attributed to a selling organisation established among the paper mills. Accordingly he found the plants full of orders for a long time to come. In catering for the Australian market, Western Canadian mills have the added advantage of cheaper freights and more direct transport.

Mr. Brough was impressed with Canada as a papermaking country, where new mills are starting up.

"Canada," he said, "will be one of the biggest papermaking countries, so far as I can see, and it is only a question of time when they will beat Scandinavia. They possess the raw materials in the shape of wood pulp and they have inexhaustible water-power. Some of the new mills are being laid out on a magnificent scale, and they have every facility for transporting materials and converting them into pulp and paper."

"My general impression is that Canada weathered the storm of depression quite as well as, if not better than, Australia and New Zealand. It, too, is a wonderful country, and the industrial possibilities are immense."

Poor Bank Note Paper.

It would be interesting to know the source of the paper used by the State Reserve Bank of South Africa, since serious complaints are made as to the quality of the paper.

"The present issue of notes by the State Reserve Bank has only been in circulation a month," says the *South African Printer and Stationer*, "and they are already showing very definite signs of wear and tear. The paper is quite unsuitable, and it is positively dangerous to fold up a ten-shilling note, for, if kept compressed in a note-case for a few days, the crease develops into a tear. As the result of a test, the paper is proved free from wood, but does not contain the correct percentage of rag. The proportion of rag and cotton usually used in bank note paper is not present. From a casual examination, it seems that there is about 60 per cent. esparto to 20 per cent. rag and cotton, whereas the latter should form nearer 90 per cent. Furthermore, the paper is machine-made instead of hand-made as should be the case. The ease with which the ten-shilling note of the present issue can be torn is most disconcerting. It seems as soft as cheap 'bank' paper."

Following a reference to spurious notes which are said to be in circulation, the same paper remarks: "It is a very unsatisfactory state of affairs when the whole country is looking askance at the first note issue of our Reserve Bank."

Paper Industry in Austria.

In a report on the economic and commercial situation of Austria to July, 1922, by Mr. O. S. Phillpotts, Commercial Secretary to H.M. Legation, Vienna, some interesting figures and references are made to the paper industry of Austria. Naturally since the changes which followed upon the war, the paper production of Austria occupies a very much smaller position than it did before.

Reporting generally on the paper factories of the country, Mr. Phillpotts states that these are fully employed, chiefly for export. He adds that there are export restrictions and a kind of export duty is levied in order to secure paper under cost price for the Austrian newspapers.

In a series of appendices statistics of Austrian paper trade are given. Dealing first with the industrial production, a comparison is made with the month of May of the last three years. In May, 1920, the percentage of full production was 15 in the case of paper, and in the case of cardboard 50 per cent, and wood pulp 80 per cent. These three classes are bracketed together in the month of May, 1921, when the percentage of full production was 60 to 70. In May last the percentage of paper production was 67, cardboard 59 and wood pulp 78.

Paper Exports and Imports.

The figures relating to the export of paper and paper goods are furnished for the years 1920 and 1921. Under this heading the figure for 1920 is 95,706 tons and for 1921 114,430 tons. These figures include paper 37,302 tons in 1920, 47,891 tons in 1921; cardboard 24,515 tons in 1920 and 24,486 tons in 1921; paper goods 8,421 tons in 1920 and 9,689 tons in 1921; paper pulp, 3,993 tons in 1920 and 13,249 tons in 1921.

Exports of paper are made chiefly to Hungary, but 33.8 tons came to this country in 1920 and 795.6 tons in 1921. Cardboard goes chiefly to Poland, while the share of the United Kingdom in 1920 was 10 tons and in 1921 107.7 tons. For paper goods, Jugo-Slavia is the chief destination, while 24.3 tons came to the United Kingdom in 1920 and 133.3 tons in 1921. Paper pulp apparently finds its chief customers in Italy, but in 1921 71.4 tons were dispatched to the United Kingdom.

Austria is now a considerable importer of paper and paper manufactures, these being obtained chiefly from Czecho-Slovakia. Total imports under this heading in 1920 represented 20,481 tons and in 1921 25,012 tons. The United Kingdom supplied 17.4 tons in 1920 and 28.4 tons in 1921. Of the total imports packing, photographic and other kinds of paper represented 6,985 tons in 1920 and 6,642 tons in 1921.

Present Position of the Industry.

A report from Mr. Foster, the American Consul at Vienna, gives the following information concerning the paper industry in Austria:—

Paper is one of the most important exporting industries in Austria, as wood is abundant in this Republic. Of the former Austro-Hungarian paper industry, 60 per cent. has remained to the Republic, 20 per cent. was taken over by Czecho-Slovakia, and 10 per cent. went to Jugo-Slavia. The industry, however, is still controlled from Vienna, and a lively exchange of semi-manufactures is carried on between Austrian and Czecho-Slovak factories. In 1921 about 50,000 quintals of wood pulp were forwarded to Czecho-Slovakia in return for 100,000 quintals of cellulose, which were required by the Austrian mills. When working at full capacity it is estimated that the annual output of the three countries will reach 1,600,000 metric quintals of paper, 1,680,000 quintals of wood pulp and cardboard, and 1,200,000 quintals of cellulose.

During 1921 the Austrian paper industry worked at only about 65 per cent. of capacity, one of the chief obstacles in the way of full production having been scarcity of coal. While most of the factories are run by water power, coal is required for certain processes, such as drying, and the serious shortage experienced during 1920 and 1921 greatly handicapped the paper industry.

Austrian exports of paper products during 1921 amounted to about one-third of the total output. The principal countries of destination, in order of quantities, were: Hungary, Italy, Poland, Jugo-Slavia, Czecho-Slovakia, and Germany, but Austrian paper was sold also to the Balkans, Egypt, Persia and the United States, declared exports to the latter country having been valued at \$207,377.

A HARRIS
ENVELOPE AND CARD PRESS
 WOULD
SAVE YOU MANY POUNDS!

The Harris Blanker is a high-speed Rotary Press with a simple and positive suction feeder for printing envelope blanks in the flat after being die-cut and before being folded. It will handle the complete range of standard envelope blanks; has an automatic suction feeder, packer delivery, and attains a speed of 12,000 per hour.

September 29th, 1922.

DEAR SIRS,

Kindly allow us to bring to your notice the following information.

You will no doubt recollect the War with Germany, and that everyone tried in their own sphere of usefulness to do their "bit."

The Printing Public were presented in the trade papers with a beautiful picture of several Aeroplanes flying over London causing destruction and our guns firing shells to bring those monsters down. These Shells were filled with Bullets made from Printers' Dross.

Our "bit" consisted of the manufacture of 4,700 tons of Shrapnel Bullets from Lead and Antimony and Antimonial Lead supplied by the Government. Over 1,600 tons of Antimonial Lead was sent to us without any pretense of cleaning, made direct from the ore, thus containing all the impurities which were in the ore. This Antimonial Lead along with our Dross Metal was made into Bullets (of course it was good enough to kill Germans), and it is now being hawked up and down the Country at £17 per ton. Since the Armistice we have not had one ton or even one pound of Shrapnel Bullets or Bullet Metal in our Works, and we do not wish for any We, however, have reason to know that Antimonial Lead has been used in making Type Metal. This Antimonial Lead, as we say previously, costs £17 per ton, and contains 12 per cent Antimony, so that our adding Antimony and Tin to raise this Bullet Metal to our Standard formulas would enable us to sell at the following prices:

Lino Metal:	Flat Bed Stereo:	Autoplate Metal:	Mono Metal:	} Free on rail Leeds, Net.
£26 per ton.	£30 per ton.	£34 per ton.	£36 per ton.	

We are always on our Metal, however, and we do not use this Antimonial Lead.

Our to-day's prices for our Standard formulas with Jubb's guarantee are as follows:

Lino Metal:	Flat Bed Stereo:	Autoplate Metal:	Mono Metal:	} Usual Terms.
£41 per ton.	£46 per ton.	£49 10 0 per ton.	£48 per ton.	

We have on hand 600 tons of Printers' Dross, accumulated since the War, which we are prepared to sell to the first comer at £14 per ton, our works. This we could have made into Bullets but, fortunately, there is no War requiring them, and our trade in the Midlands is very slow or they are using this cheap Antimonial Lead.

JUBB'S KNOW SOMETHING—THEY MADE BULLETS.

Yours faithfully,

T. G. & J. JUBB.

P.S.—The above quotation of our prices is subject to Market fluctuations.

The Printing Business as a Career.

Lord Riddell has some Interesting Things to Say concerning Various Phases of the Industry.

The first of a series of craft lectures (arranged by the Stationers' Company and Printing Industry Technical Board) was given at Stationers' Hall, Ludgate-hill, on Friday, by the Rt. Hon. Lord Riddell, the subject chosen by His Lordship being "The Printing Business as a Career." The chair was occupied by Mr. Herbert Fitch (Master of the Stationers' Company), and there was a very large attendance of members of the trade, among whom was present a considerable representation of the student section of the industry. Besides Lord Riddell and Mr. Herbert Fitch there were also present:—Mr. Edward Unwin (Past Master of the Stationers' Company), Mr. Henry Hill, Mr. A. E. Goodwin, Mr. R. A. Austen-Leigh, Mr. Ernest B. Judd, Mr. Geo. Eaton Hart, Major Husk, Mr. Frank Colebrook, Mr. G. A. Eden, Mr. H. Wilson Howes, and Mr. J. R. Riddell (principal, London School of Printing).

In a few preliminary remarks the chairman said he was agreeably surprised at the large audience that had assembled, not to listen to what he had to say, but to hear their right hon. friend give one of his learned and illuminating and interesting addresses. He was very glad, as Master of the Company, to extend to His Lordship and to all those present a very hearty welcome at that first lecture of a series which is being given for the promotion of the best aspects of the great art and mystery in which they were all interested. They were also fortunate that Lord Riddell, in spite of the innumerable claims upon his time and energies, had been good enough to attend there that evening to deliver the inaugural address, and they were gratified to think that this new enterprise had been launched under such auspicious circumstances. The Stationers' Company was more than ever alive to the necessity of promoting the best interests of the great trade of printing and its cognate industries.

The Right Hon. Lord Riddell, who was very warmly received, said it was not his intention to deliver a lecture, but to offer a few remarks on the subject announced. If one made inquiries of most master printers, continued His Lordship, he would be told that the printing trade was one of the most anxious and harassing trades in the country. Those engaged in the trade would acquiesce in that. If any of those present thought of entering the printing trade they should ignore observations of that sort. His experience was that everyone took an exaggerated view of his own worries and anxieties as compared with other people's. Therefore, those entering the industry would be well advised to consider the printing trade on its merits,

irrespective of the gloomy remarks made by dissatisfied printers who had not received from their customers as good conditions as they considered, themselves entitled to receive.

Trades which gave the workers engaged in them an opportunity of expressing themselves were especially interesting, and the printing trade was essentially one of these. As compared with other trades, printers were certainly—he would not say more—*intelligent*. (Laughter.) He did not suggest the printing trade was one in which to make great fortunes, but it was one in which they could live a very interesting and useful life.

A Tribute to Trade Union Leaders.

Their trade was a very highly organised one, both in respect of masters and men. He had had the honour of attending many discussions regarding trade questions between masters and men, and these were characterised by eloquence, geniality, and statesman-like qualities which did credit to their country. They all knew Mr. Bowerman. (Applause.) They knew what he did for the trade. When other trade unions were in their infancy the London Society of Compositors was a highly organised institution. It was not for him to say what results had been achieved. He believed that the London Society of Compositors was successful and that other trade unions were also successful because those who had led those unions had early appreciated that, interesting as political theories may be to them, their job was to get good wages and good conditions of labour. The result of the policy of the sagacious leaders who established these great unions had at any rate been that the workers received higher rates of wages than workers in any other industry in the country. It was thought that with the introduction of the modern composing machine, the linotype, that the position of the worker would be seriously interfered with, but experience had shown nothing of the kind. The compositor earned more money than ever. The same could be said of the men who worked the rotary presses. They earned more money than their predecessors who worked similar machines. The more highly complicated the machine the higher the remuneration to the men who operated it. When we saw the vast masses of papers turned out from the rotary presses, it was very difficult to appreciate the manifold operations and the skill and energy and patience displayed by those who produced them.

They sometimes heard reflections upon the British press. A gentleman not engaged in

the industry—an ecclesiastic—recently made some derogatory remarks about British brains of to-day as compared with one hundred years ago. That, thought Lord Riddell—was a libel, for if they were prepared to pay a proper price for printing they could get it in this country just as good as that produced anywhere else. If they compared present-day printing with that of the past they had nothing to be ashamed of, for as far as the printing trade was concerned, it stood as high to-day as it ever did.

The Trade's Educational Facilities.

During the next week or two they would see the completion of a great enterprise. The London County Council and the printing trade, with great foresight and liberality, had established a new printing school in Blackfriars, which, when fully equipped, would be the largest and most up-to-date printing school in this country. He congratulated the London County Council and the printing trade on what had been done, for it was not a slight matter to make arrangements whereby a great authority like the London County Council together with the masters and men in the industry, should join in what was not only a pious movement to establish a printing school, but what meant also contributions of so many thousands of pounds a year from the employers and employed, and meant the London County Council agreeing to contribute the balance required.

The printing trade in this country, the speaker continued, was one of the largest industries, employing 214,000 people, there being also 60,000 engaged in papermaking and 68,000 in the manufacturing stationery section. It was gratifying to those engaged in the industry that owing to the action of the Stationers' Company a body had been set up for examining students, consisting, he thought, partly of representatives of masters, men, and local authorities. It was a most efficient body, and although it had only been in operation for some three years, it had given evidence of its value. There was no doubt that, in conjunction with the Printing School, the printing trade would shortly become very highly organised in the matter of education. The trade had many phases, and many classes of people were engaged in it.

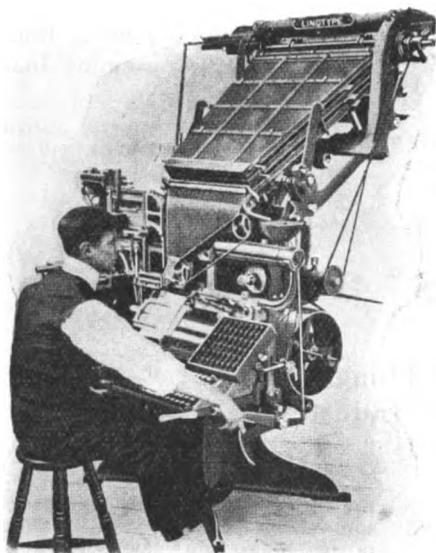

A great printing business required financial, commercial, technical and artistic ability, and it required men in each of these departments who were experts in them. The head of a great printing business required to be a man of vision and a good organiser, so as to be able to judge of the capacity of those serving under him. He had in his possession

Sir, Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from192.....to.....192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—

CONDITIONS:

The Subscription is annual, payable in advance, and may commence at any time.
 All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.
 Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.
 The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.
 In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms:

Subscription £2 2s. 0d. per annum, entitling the Subscriber to:—
 Ten Status Enquiry Forms and ten Debt Forms free of charge.
 Further Enquiry Forms during currency of Subscription at 2/- each.
 Debt
 The Collection of an unlimited number of Accounts at the following rates of Commission:—
 5% on amounts recovered up to - £20 1% on amounts over - £100
 2% on amounts over £20 and up to - £100 5% on amounts recovered in Ireland, Scotland and the Channel Isles.
 Special terms in respect to Foreign Debt collections and enquiries.
 Representation at Meetings of Creditors free of charge.
 Searches of the Registers (unlimited) free of charge.
 Legal Advice by the Solicitors to the Office upon ordinary business matters free.

a statement which proved what he had previously said regarding wages paid in the printing trade. A compositor, for example, in the general printing business could earn somewhere about £5 a week; a compositor on a daily newspaper somewhere about £8 a week, and a compositor on night work considerably more. When they came to the commercial side—and a good commercial traveller was a great asset—he had reason to know that some commercial travellers earned large sums of money, ranging from £1,000 to £3,000 a year. Of course these were exceptional men. He did not wish to suggest to any of his hearers who might be meditating upon a choice of business that they would earn such a salary as that. He was often asked if the printing trade offered a good opportunity as a career for a boy, and he always answered unhesitatingly that it did. The opportunities in that trade were, he considered, quite equal to those in almost any other.

During the last twenty years a great revolution had taken place in the printing trade, and he did not know any other, except perhaps the electrical, where so many changes had taken place. The introduction of the rotary press, coupled with the introduction of cheap paper, had entirely altered the newspaper section of the business. Before these innovations circulations were comparatively small. To-day, as they knew, coupled with insurance—(laughter)—newspaper circulations ran into millions, and although many comments had been made as to the advisability or otherwise of insurance schemes, it was necessary, at least, so he understood, to print the papers. (Laughter.)

The Printing Trade's Attractions.

He could remember the first half-tone blocks perfectly well, and the introduction of these had opened up a great field for labour and a great field for artistic work. He wanted to emphasise the fact that the printing trade was not only a great craft—it was an artistic trade, and it was because the trade had that peculiarity that it was attractive. They all knew from experience that printers were perhaps the most intelligent people in the country. (Hear, hear.) They took great interest in public affairs, and were always prepared to argue any question in which they might be interested. He could point to six men in London, heads of great businesses, who started life in the composing room. Many of the most prominent personages in the newspaper world to-day graduated as compositors. The printing trade had a way of pushing capable people forward, and it had a charm of its own.

In all newspaper offices there existed a spirit of camaraderie which, except in times of strife, led everyone in the office to be anxious that the job should be done well, and that fact made him look forward with the greatest hope to the future of the trade. His friend, Mr. J. R. Riddell, had done a great deal for the trade. If students wished to become really good printers they must learn not only from the practical work of everyday life, but they must be prepared to go to technical schools where printing was taught. Printing had a literature of its own, and it had great traditions. Many great men had been printers. The president of the United States is the proprietor of a newspaper in a small country town, and the American ambassador was another newspaper man. Though these men were newspaper men, the whole of the printing industry was bound up together.

Before concluding, Lord Riddell said there was one observation he wished to emphasise: the printing trade was distinguished by one very desirable thing. There might be disputes as to wages and conditions of labour, but when it came to the charitable side of the trade they found masters and men all stood shoulder to shoulder in trying to help the "lame dog." (Cheers.)

Mr. R. A. Austen-Leigh, in moving a vote of thanks to Lord Riddell, congratulated both the Worshipful Company of Stationers and the Printing Industry Technical Board on the success achieved at the opening of the season in securing Lord Riddell to give the first lecture. Referring to outstanding examples of success achieved by those trained in the printing craft, Mr. Austen-Leigh mentioned that the late President of the Irish Free State began life as a compositor, whilst Benjamin Franklin was also a printer.

Mr. Henry Hill, seconding the vote of thanks, spoke of the wonder of a book. It was more wonderful, he thought, than even a house, a ship or an aeroplane, in that it contained in a few pages the thoughts of men of two or three hundred years ago.

The vote of thanks was put to the meeting in Parliamentary fashion and carried with hearty applause.

Lord Riddell briefly replied to the vote of thanks, and with this the meeting closed.

The Boxboard Market.

The 1921 Year Book of the Swedish Chamber of Commerce for the United Kingdom contains a host of information concerning the activities of the Chamber and various phases of industry in which the members are likely to be interested. The reviews of market conditions are very well done, being short and to the point.

The following comments are made concerning the Swedish boxboard market during 1921:

The close connection between the boxboard market and the export trade was again demonstrated during 1921, the sales curve following faithfully the Board of Trade returns. It need scarcely be emphasised, therefore, that there was a considerable falling off in boxboard orders, compared with previous years.

The home trade was responsible for most of the orders which were placed, but even here the position was stagnant for the first few months of the year. Some of the more important box-using industries again, such as the margarine trade, suffered a serious setback, which was naturally reflected in the lessened demand for whitewood boxes. Altogether, the boxboard business shared to a great extent, if happily not to the full, the depression which ruled throughout the timber trade, and indeed most other trades.

So far as prices were concerned, the tendency was downwards until September, when there was a slight reaction. The drop in values at the end of the year amounted to about 50 per cent. in cost, freight and insurance, compared with the previous year, and there was every indication that at all events a temporary norm had been reached. This fact will, it is hoped, restore to buyers the confidence which they lacked during 1921, when purchases were on a hand-to-mouth basis.

The disappearance of the exchange and freight basis clauses from boxboard contracts during this year afforded satisfaction both to buyers and agents.

A feature of the year which naturally had a repercussion on Swedish boxboard mills was the appearance on the British market of boxboards of Central European origin, their main recommendation being that of cheapness. It is possible to predict with confidence, however, that this competition will not survive the abnormal conditions which led to their introduction. Granted the better trade conditions which appear to have set in with the turn of the year, the average buyer will invariably prefer the better finish and the superior appearance of the Scandinavian box, even at a slightly higher price.

Two UNEMPLOYED engineers were brought up at Barrow last week on charges under the Forgery Act, 1913, the charge on the warrants being that defendants were in possession of certain paper intended to resemble and pass as special paper, such as is provided and used in making bank notes. In a secret chamber had been found various implements and portions of 20s. and 10s. forged Treasury notes; also part of a letter from a London firm of stationers as to supplying special paper. Mention was made of a letter to a firm of stationers stating that one of the defendants was starting a process and printing plant.

If you try you may; if you don't you won't.

BINDERS TO THE PRINTING TRADE.

PRINTERS who have the facilities for folding, sewing and casing up, can be supplied with cases made in Leather, Rexine, Pluviusin, Imitation Leather, Cloth, or any other material, blocked or embossed in Gold, Imitation Gold, White or Coloured Foil Leaf, ink in any colours.

Our staff consists of more than 300 capable workers, provided with the most up-to-date machinery

We shall be pleased to submit samples for Trade Catalogues, etc.

Wire Stitching Machines for every purpose.

Thread Stitching and Knotting Machines for School Exercise Books and Calendar Work.

Thread Book Sewing Machines for Sewing Light Letterpress and Heavy Account Books.

Glueing Machines, End Sheet Pasting Machines and Folding Machines (Hand or Automatic Feed).

No. 33 Thread Book Sewing Machine.

THIS Machine is intended for sewing the heaviest Account Books, Letter Copying Books, Guard Books etc., and is made in two sizes, one to take books up to 22 in., and the other up to 28 in. in length. According to size, one to six books may be sewn at one time and cut asunder afterwards, each separate book having kettle stitches at its ends and also between the tapes. Speed of Machine, according to size of work, is up to 35 Sections per minute.

Trade Notes.

BINDERS' DOCKETS.—A meeting is arranged to take place in Manchester to-day between the Federation of Master Printers and the bookbinding section of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers to consider the question of the application of the time docket in Manchester bookbinding establishments.

FOLLOWING up the good start made by the London Master Printers' Association in tackling the question of the competition between certain wholesale stationers and printers for the supplying of printers' customers with paper, the Federation of Master Printers is now taking the question up as a national matter. A Federation committee is being formed to go into the problem with a view to conferences being arranged with the National Association of Wholesale Stationers and Paper Merchants.

At last week's meeting of the West and North-West London Master Printers' Association, which was devoted to discussion of Association business, an interesting suggestion was made by Mr. Alfred Langley, vice-president of the L.M.P.A. to the effect that a ladies' committee should be formed with a view to assisting the funds of the Printers' Pension Corporation.

NEWSPAPER AND BETTING ACT.—“The words ‘one shilling’ on the front page of the *Sporting Echo* do not represent the price of the paper. They are a device to evade the Ready Money Betting Act.” This was the decision of the magistrate at Merthyr on Tuesday in fining John Long, editor, and Edward Emmanuel, printer, of the *Sporting Echo*, published in London, £25 each for publishing an advertisement for “ready money” football betting. H. Pearce, the circulation manager, was fined £10, and all three received the option of one month's imprisonment. The newspaper contained coupons for forecasting the results of football matches. One shilling had to be sent with each coupon and one shilling for the next issue of the paper. “The

shilling is not a stake or a wager, but merely the price of the paper,” said Mr. Reed, who represented Long, Emmanuel and Pearce. The magistrate agreed to state a case for High Court opinion. It is the first prosecution under the Ready Money Betting Act of 1920.

MORE NOTE FORGERY.—Two former members of a theatrical touring company—James Page, 28, and Harry Fuller, 26—were sent to prison at the Old Bailey on Friday for having in their possession apparatus used for making £1 Treasury notes. Mr. Justice Roche said that as it was their first offence he would deal lightly with the men. He sentenced Fuller to eight months' and Page to six months' imprisonment, both in the second division.

AN outbreak of fire occurred last week at 15, Catherine-lane, Glasgow, occupied by the publishing firm of Messrs. Wood and Gibb. The damage is estimated at about £800.

ROCHDALE and District Printing and Kindred Trades Guild held their annual whist drive and concert on Saturday at the Provident Hall, Lord-street, Rochdale. During the evening the cricket shield and bowling cup were presented by Mr. Hancock, president of the local Master Printers' Association. Substantial prizes were offered for the whist drive.

THE South London Caxton Musical Society opened their thirtieth winter season of concerts in aid of the Caxton Home, at the London and Brighton Hotel, Peckham, on Saturday last, when the chair was occupied by representatives of the *Daily Telegraph*, Messrs. S. Bryant and F. R. Rayment. Generous contributions to the “plate,” which realised over forty guineas, were received from Viscount Burnham and the companionship of the *Daily Telegraph*. The popularity of the concerts has induced the committee to hold them weekly during the season.

CAXTON HOME CONCERT.—The Caxton Home Committee is holding its fifth annual concert at the Central Hall, Westminster, S.W., on Saturday afternoon next, for which an excellent programme has been arranged. The proceeds of this effort will be placed to the reduction of the debt on the War Me-

morial Extension, and donations towards this object will be gratefully received by the hon. secretaries, Messrs. G. Chapman and W. F. France, at the Caxton Home Office, 3, Cursitor-street, E C 4.

Trade Union Matters.

THE annual report of the printing and Kindred Trades Federation discloses that the year's income was £10,455. The year's working showed a gain of £5,068, the total funds of the Federation now being £14,653 12s. 5d.

“NATSOPA” SPORTS.—It is proposed by the Executive Council of the National Society of Operative Printers and Assistants to provide a shield and medals for competition in a football tournament. The plan adopted will be for each town to play inter-office matches until the winners are found who are to represent the town or for each town to select a team and towns meet on the knock-out principle. Entries for the charity shield competed for by the London branches are now asked for.

THE North Wales Coast branch of the National Union of Journalists loses a valuable member by the sudden death, at Colwyn Bay Railway Station, on Monday, of Mr. D. Clwyd Griffiths, who for many years has represented the *North Wales Coast Pioneer* and associated journals. Mr. Griffiths was only last week re-elected hon. secretary of the North Wales Coast branch, a post he had occupied since the branch was formed.

ALL-SIZE ROTARY PRESS.

THE machine cuts off different lengths before it prints. Any width roll can be used. The change from one size to another is made in a few minutes. The sheets are delivered flat or folded at the speed of six thousand an hour. Adapted for all kinds of work of the best quality printed on one or both sides.

Printers' Managers and Overseers ASSOCIATION.

Offset Discussed at Manchester.

The October monthly general meeting was held in the "Mitre" Hotel, Cathedral Gates, Manchester, on Saturday evening last, when Mr. Thos. Rignall (president) occupied the chair, being supported by Mr. Fred Robinson (vice president) and a large gathering of members, particularly from such distant places as Blackburn, Bolton, Rochdale, Stockport and Oldham.

The minutes were read by the secretary, and after a slight recommendation from Mr. Robert Marshall, were then approved.

Correspondence.—Mr. E. W. Whittle, general secretary, had that evening wired for a collection to be taken on behalf of P. M. and O. A. Pension No. 3, and the members immediately subscribed £2 10s.

The Yorkshire Centre reported their be-fogged experiences whilst travelling between Manchester and Yorkshire on September 30th.

Mr. Jos. Orrell, who was desirous of being transferred to London, was optimistic about the new city of his adoption.

Mr. Leonard Taylor wrote from Peking, North China, informing the president of his three years' experiences where East is so different to West.

The Industrial Welfare Society sent an open invitation for the members to attend a series of lectures running from October to March.

Messrs. H. W. Caslon and Co., Ltd., having arranged demonstrations of printing machinery and appliances at 9, Mosley-street, Manchester, the members agreed to pay a visit on Tuesday evening, the 17th inst.

The Lanston Monotype Corporation, Ltd., invited the members to a demonstration of a new member of the Miller family which would take place in the Municipal College of Technology, Sackville-street, Manchester, on Saturday afternoon, November 11th next, and this was agreed to.

The annual report and balance sheet came under discussion, but it was resolved to postpone comments to a later meeting.

Auditors.—There being required another person to fill the vacancy caused by Mr. Orrell going to the metropolis, Mr. Geo. H. Rider was elected co-auditor with Mr. Charles N. Knowles.

Echoes of the recent trade disputes.—Several members mentioned irritating experiences since the settlement, therefore it was agreed that a special general meeting be called for Saturday evening, October 28th, at seven o'clock sharp, to consider grievances in connection with the recent dispute, the training of apprentices in technical schools, endowment of a ward at Ancoats Hospital, the annual balance sheet, and anything else requiring special attention.

The president having put the closure to a very critical meeting, he said he was pleased to announce that a Manchester member would give the first lecture of the session, and he called upon Mr. W. E. Dalby to explain his title, "How and Why of an Offset Machine."

How and Why of Offset.

Mr. Dalby then said he would throw on the screen a number of illustrations of the single-colour offset and the two-colour offset machines. The former machine was built on the two-revolution principle, thus allowing more time for feeding in the sheet than could be obtained with a single-revolution machine, and further, it allowed a forward delivery to a position where the sheets could be easily examined. The essentials of an offset machine capable of producing any class of work, from the highest to the lowest, at high speeds were: Rigidity, dead register, rolling power, perfect damping, accessibility, efficient blanket stretching device, control, smooth running and clean delivery, all the above points having been achieved by Linotype and Machinery Ltd. Rigidity was not fully appreciated by the earlier makers of offset machines, and many were the troubles directly attributed to this defect, it causing bad register, gear marks, uneven impression, rolling of the machine, etc. Good register was essential on work with any pretension to quality. Bad register on an L. and M. machine in capable hands was an unknown quantity. Half-tone work in ten colours, prints on satin and linen, high class show-cards, and work of a similar nature that required the most exacting register was being daily produced on the L. and M. machines. Register was built into

the machine, yet the engineers had provided certain adjustments which came within the province of the printer. The feed board could be raised or lowered to the impression cylinder, the front guides were of assistance to the operator in setting his job, each gripper finger had its own adjusting screw, as the setting of the grippers had a direct bearing on the register. The tympan on which the grippers rest were designed to reduce the margin required for gripper room on the sheet even as little as 3-16ths of an inch, and further, the aluminium adjustable stops compensated for wear. The inking arrangements were over the plate cylinder, and on a quad demy machine which took a sheet 52 x 37½ ins. there were 6 inking rollers, 3 steel vibrators, 2 transfer rollers, 3 distributors with 3 steel riders and 1 ink ductor roller. The movement on the vibrators could be stopped altogether, or set to give a little or the full amount of vibration. The ink fountain was fitted with a flexible steel blade, the ink feed being regulated by a cam and ratchet wheel working from zero up to 25 teeth. The damping apparatus was positioned underneath the feed board and below the plate cylinder, and easy of access. There were two plate damping rollers, one feed roller, one brass vibrator roller, one large brass fountain roller, which could be worked either automatically or independently, the water feed being regulated by a pawl and ratchet wheel fitted with a patent index-plate showing the teeth feed per impression. To secure even tension on rubber blankets, and to avoid creep, gear marks or loss of tone values, a device is provided for pulling up the blanket hard and tight. To effect parallelism absolutely positive between the front and back edges of the blanket a special blanket square was provided in which holes were drilled corresponding exactly with the studs in the reel rods, the pressure being applied from both gripper and back edges of the cylinder. The impression cylinder trip when being thrown in was so timed that it never came into operation until the plate was fully linked up and the immediate print completed, so that no half-print or half-inked up impression was possible. The machine was smooth running without any rocking motion, it being due to the fact that all cylinder and driving gears were cut on the Sunderland system. Mr. Dalby also fully described the two-colour offset.

Graining of Plates.

The graining of plates did not always receive the attention its importance demanded, and it was no uncommon thing to find a plate put into the graining machine, marbles put over it, then sprinkled with water and sand, the machine started up, and left without any further attention until the plate was required. The plate, under those conditions, was bound to receive an indifferent grain, and later on surprise might be expressed at the work not remaining sharp and clean during subsequent operations. For good results the plate should be grained evenly all over, and examined through a strong glass before being sent to the transferer. Where care was taken, the graining machine was preferable to the sand blast or chemical grain methods. When the plate was properly sensitised, washed and dried quickly to prevent oxidation, it was then ready for the transfer.

When transferring from an old original or new drawing the first thing to do was to thoroughly clean the original, bearing in mind that every defect, large or small, would be multiplied according to the number set up on the sheet. Use good ink, and pull the transfers slightly fuller than for stone, being careful to avoid finger marks when patching up. Then ascertain the correct distance to lay the patched sheet from the gripper and side lay edges of the plate, and then lay every job down in the same relative position, especially for register work. Wherever possible, dirt should be chemically removed rather than by abrasion; and key work, which had been put into a printing black for the guidance of artists, should be eliminated before pulling the transfers. Beautiful colour work could be produced from half-tone transfers, specially made for offset work, combined with transfers from collotype plates. The camera and its adjuncts were steadily advancing photographic transferring, as it was possible to obtain absolute replicas sharp and clean. Lithotex, which had been dealt with in a previous lecture by Mr. Garrett, produced quad demy work, 200 up, with a crispness, uniformity and register that could not be achieved by the old method of transferring. Mr. Dalby also emphasised that

a good ink was by far the most economical in the long run, and the difference in the price of ordinary and good offset ink was soon eaten up if the operator was continually stopping his machine to fake up his job. An offset ink being more concentrated and ground up finer than the ordinary litho ink, it naturally cost more, but the worry being eliminated and the results being perfect, compensated for all the care taken.

The Subject Discussed.

Mr. Rignall pointed out that the specimens around the room showed what could be done by lithography. The photographic method was "it," and the short space of time that was occupied by the American Directoplate process mentioned by the lecturer showed the wonderful strides photography was making into the lithographic business. There was a deal to be learned before the photographic method became a business proposition and its use could only be valuable where big orders were concerned.

Mr. Edward McVay did not agree that the photographic cost was exorbitant, as minimum plates cost only 7s. 2d. for four square inches, whilst the cost of a man transferring would be much for the same work, say 10s to 12s, therefore the photographic method was within the reach of all.

Mr. Winstanley admired the fine specimens of offset work, but objected to the idea that the flat-bed printer should forget his knowledge in order to become a good offset printer. The man of common sense who was a good flat-bed printer would be the most likely person to make a good offset printer.

Mr. E. Garrett said the offset process was the finest and most flexible method the lithographer had. A printer who turned from flat-bed to offset had a lot to learn and should have an aptitude for his trade. A great many persons ran away with the idea that they only had to buy a machine and all would be well, but they eventually learned that it was a dear proposition. No one should introduce a rotary offset for work where runs were continually under 5,000 as it would prove a white elephant. Such machines swallowed up the work and therefore there should be a continual flow of large orders. Flat-bed machines on small runs gave as fine work as rotary without carrying such heavy overhead expenses.

Mr. W. E. Dalby replied that many flat-bed machinemen were unfitted for rotary offset, as the fast running of the latter machine appeared to bewilder them. Being used to printing direct from stone to paper, they did not realise or understand the transferring from the plate to the rubber and then to the paper. Rubber blankets might run perfectly one day and the next became tired, thereby necessitating a change. The pressmen should be mechanically minded for an offset machine owing to its fine adjustments. On flat-beds the play was not of much account, but when he had to deal with cylinders ground true to the 1,000th part of an inch, and he had to conform to the maker's specification for certain plates and blankets, a 5,000th part of an inch would upset all calculations. Flat-bed machinemen did not appreciate such facts, owing to so much latitude on the older method of printing.

Mr. Chas. N. Knowles and several other members also spoke, and the meeting closed with a vote of thanks to Mr. Dalby for his able and valuable lecture. WRE MAC.

Industry and Alcohol.

Industry, ignorant of physiological laws, failed in the past to provide means for taking food during working hours, writes Prof. E. L. Collis, the well-known expert on industrial medicine, in the current issue of *Industrial Welfare*. The result by common agreement was not satisfactory. One of the most notable actions taken by the Liquor Control Board during the war was the effort made to remedy this state of affairs by instituting industrial canteens. This action was taken boldly on the strength of the faith the Board possessed that taking adequate food during the working day lessened fatigue and consequently the craving for alcohol. No one will gainsay that this action was wise and far-seeing. More and more employers are coming to appreciate its wisdom. In many factories to-day the tea trolley goes round the shops mid-morning and mid-afternoon, while excellent accommodation is provided where good food can be obtained cheaply and eaten in comfort during the meal intervals.

Patents, etc.

THE Proprietors of British Patent No. 7,098 of 1914, relating to CYLINDER PRINTING MACHINES, desire to enter into arrangements by way of license or otherwise on reasonable terms for the purpose of developing and practically working the same in this country.—Inquiries should be addressed to Sefton-Jones, O'dell and Stephens, 285, High Holborn, London, W. C. 1. 14007

THE WORLD'S

Paper Trade Review

IS PUBLISHED EVERY FRIDAY AT
58, Shoe Lane, London.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!* The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E. P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

Hopes of Reduced Postage.

THE Postmaster-General continues to hold out hopes that lead the public in general and the long-suffering printing trade in particular to maintain an attitude of *nil desperandum* in respect of the burden of postal rates which it is so desirable should be mitigated without further delay. Mr. Kellaway was right when he said at Bedford last Thursday that the business world would not be content, nor would the general public, until they had succeeded in restoring to the country the benefits of the penny post. This, together with the restoration of the universal half-penny rate on post cards and a removal of the annoying restrictions that hamper the rates on printed matter, would confer immense benefit not only upon the printing industry but upon commerce generally. Mr. A. E. Goodwin, secretary of the Federation of Master Printers, has done the trade a good service by making plain in the public Press that much of the unemployment in the printing trade is due to high postal rates and that, whilst the natural order of things is that trade improvement follows improved postal facilities, Mr. Kellaway's speech indicates that we have to wait for a revival before a revision of rates can be effected. This is a disappointing proposition, and it is to be hoped Mr. Kellaway may find himself able to give early effect to the improvements he has in mind, and thus assist in bringing those better times which he and all of us desire.

The Merchandise Marks Bill.

OF the several pieces of legislation which the House of Commons will have to consider when it reassembles, one of the most important is the Merchandise Marks Bill. Though little news has yet been made public as to last week's meeting of the Joint Industrial Council of the printing industry, it is gratifying to learn that the Council passed a resolution urging that the Merchandise Marks Amendment Bill should be pressed forward in order that all printed matter, when sold, should clearly convey to the public the country of origin. The need for such legislation is evident when it is realised, as the secretary

of the Federation of Master Printers has stated to the Press, that printed posters are imported with the country of origin printed on the edges, and the edges bearing the imprint are then cut off, enabling the posters to be sold as British goods. Christmas cards and the like are delivered from abroad in parcels on which the country of origin is stated, but the cards themselves bear no indication that they are of other than British manufacture. Foreign makers of cartons print the country of origin on the carton, but in such a position that when the flaps of the packages are turned in there is scarcely a possibility of the printing being seen.

Loose-Leaf Binding.

WE find the loose leaf ledger people deeply concerned over the problem of hinging their sheets. It has been customary with the majority of them to crease or crimp the loose leaves near the binding margin with the object of inducing flexibility and consequently flatness in the lay of the leaves when the book is open. There are strong objections to this method, not the least of which is the increased bulk created. A progressive firm has solved some of its difficulties by a system of calendering the bending area. Still there is room for the ideal method, which we are given to understand has yet to be discovered. There is, of course, a process of chemical treatment in vogue, but that is under patent, and, so far as we know, is not in use in this country. Is there any simpler way of producing flexibility at a given part of a sheet of paper without adding bulk or detracting from the strength or durability of the product? Personally, we regard it as a paper-making proposition.

Account Book Paper.

MESSRS. THOMAS AND GREEN, LTD., have improved the shade of their ledger laid paper by deepening it a little. The change is all to the good, if our experience of the account book paper section is well founded. There is always a preference for the definite azure tint, provided it does not overstep bounds. The great trouble with some of the cheaper azure laid E.S. writings is that their tint is ephemeral. A day in sunlight is sufficient to restore them to an unnatural whiteness. It is almost amazing to what an extent these cheap papers are supplanting high class tub-sized makes in the account book trade. Times innumerable we have heard of and seen specifications for contracts substituting papers at 4½d. to 6d. for those costing 1s. 3d. to 1s. 6d. per lb., and hitherto in use. In pursuit of economy the change is sometimes a very mistaken policy on the part of the user, but the process of paring inevitably creates opportunities for experience to teach its lesson.

London Unions and Wages.

Following a recommendation made by the Joint Industrial Council last week calling upon master printers and those unions which had not yet reached agreement on the subject of wage reduction to renew negotiations with a view to obviating any stoppage, a conference took place on Tuesday between the London Master Printers' Association and the London Society of Compositors. The outcome, we understand, was that the L.S.C. has undertaken to call another special delegate meeting and make the latest position clear to their members. The L.M.P.A. is also holding further conferences with the other unions which have not yet agreed to reductions of wages.

Personal.

AMONG those attending the opening of the new Port of London Authority House by the Prime Minister on Tuesday were Lord Riddell, Sir Albert Spicer, Bart., Sir Philip Waterlow, Mr. W. Lindley-Jones, Mr. C. J. Morgan (Foy, Morgan and Co.), and Mr. T. E. Naylor, M.P.

SIR EDWARD ILIFFE, head of the firm of Iliffe and Sons, Ltd., has been passing through Canada on his way to Japan and will return to this country via India.

MR. H. SEYMOUR BERRY, opening an industrial exhibition at Merthyr on Monday, said he regretted the necessity for his impending departure to his new Breconshire home. In any case, however, his interest in his native town would continue.

MR. W. THORNTON SHARP, who was secretary to the Newspaper Press Fund for a period exceeding thirty years, and later a vice-president and honorary adviser to the Council, has been elected treasurer of the institution, in succession to the late Viscount Northcliffe.

MR. OSCAR C. GRIFFITH, principal of the firm of W. P. Griffith and Sons, Ltd., has intimated his retirement from the Council of the London Master Printers' Association on the ground of ill health.

AT last Thursday's meeting of the Council, Mr. Griffith's resignation was accepted amid warm expressions of appreciation of the many years of very useful service which Mr. Griffith has rendered to the L.M.P.A., the hope being also expressed that his health might show early improvement.

MR. CEDRIC CHIVERS, the well-known Bath bookbinder, who is an alderman of the city, has been chosen as Bath's next mayor.

MR. R. LUNDY, district secretary for the National Society of Operative Printers and Assistants, is a Labour candidate for the November elections in Manchester.

MR. R. M. LANCASTER, the ex-secretary of the Leeds Typographical Society, was at the annual meeting of the Yorkshire Centre of the Industrial League re-elected to the presidency.

MR. JOHN WILKINSON, who recently retired on a pension after having served fifty years (twenty-seven of which he was foundry overseer) in *The Times* office, was on Saturday invited to meet his late colleagues at dinner and presented by them with a gold watch, suitably inscribed.

MR. EDWARD PRICE BELL, London correspondent of the *Chicago Daily News* since 1900, and one of the best-known American journalists in Europe, has left this country to take up permanent residence in the United States.

MR. JOHN CLAYTON, special correspondent of the *Chicago Tribune* Foreign News Service, has been threatened, says that journal, with arrest and expulsion "as an undesirable alien" by the British military authorities at Constantinople. The charge against him is that he violated the orders of the Allied generals at Constantinople in going to the Mudania Conference. By doing so he provided the world with important news which would not otherwise have been available.

MR. S. HEALEY, who has been with the United Newspapers, Ltd., for a period of close on twenty years, was on Tuesday presented with a travelling trunk on the occasion of his leaving the firm. The presentation was made by Mr. A. Elan, father of the chapel, on behalf of the overseers and staff of the United Newspapers.

MR. HEALEY is going to California, where he intends to take up fruit farming, and is followed on his new enterprise with the best wishes of many friends for his future success.

MR. A. HULL, who for seven years has been on the literary staff of the *Chester Courant*, has been the recipient of a presentation from the staff of that paper on leaving to become chief reporter of the *Darlington Guardian*.

MR. CHARLES J. SEYMAN, who for nearly twelve years has been on the staff of the *Draper*, has been appointed editor in succession to Mr. J. E. Hall, who has held the position for 18 years.

MR. J. PENDEREL-BRODHURST has resigned the editorship of the *Guardian*, which he has held since April, 1905. He will be succeeded by the Rev. F. A. Iremonger, and the change will take effect on December 31st.

MRS. H. F. WOOD has been appointed a director of Messrs. Samson Clarke and Co., Ltd., the advertising specialists, who are shortly to occupy their new headquarters in Mortimer-street, W. She is a daughter of the late Mr. Quintin Hogg, famous as the founder of the Regent-street Polytechnic.

We understand that Mr. Squire Riley is resigning from his position as manager with Messrs. Jno. Wild and Sons, Ltd., Radcliffe, at the end of the present month.

Pensions: An Appeal to Master Printers.

SIR,—His Royal Highness The Duke of York has graciously consented to preside at the ninety-fifth anniversary festival of the Printers' Pension Corporation on November 15th, thus maintaining the interest in its work which the Royal Family have shown on so many occasions.

Knowing so intimately the enormous responsibility this institution has undertaken, and the great financial strain involved, I have had no hesitation in consenting to act as steward on this occasion, and as president of the L. M. P. A. I have recently issued the customary annual appeal, trusting implicitly to the never-failing response which it has in the past received.

May I, through your influential journal, appeal to those master printers who have not yet responded to my appeal or to similar appeals of my fellow stewards, to support me by sending a contribution, or a promise to contribute, to me at the address given below.

I also make this appeal to master printers who are not members of the L. M. P. A. to do their share in providing the funds to enable this Institution to carry on its work. Every master printer should realise that the work of the Printers' Pension Corporation is his responsibility, but I am afraid that in the past this has not been recognised in the way it should have been. Our craft is the only craft in England, probably in the world that has an institution of this kind. Let us therefore endorse in a practical way the labour and self sacrifice of our predecessors in establishing this proud record.

Yours etc.,

J. R. TRUSCOTT,

President.

The London Master Printers' Association, 24, Holborn, E.C.1.

"BOLDEFIGGER" CALENDARS

(REGISTERED).

To Printers and Stationers.

I am advertising "Boldefigger" Calendars very extensively this season, and you will probably have many enquiries for them from your customers.

Be prepared to show them samples and give quotations. Full particulars and specimens will be sent you on receipt of a post card. Ask for "List A."

GEO. W. LOCKWOOD,

Publisher of the famous "Boldefigger" Calendars,

8, City Road, Manchester.

THE PAPER TRADE PROTECTION ASSOCIATION

Branch of THE BRITISH MERCANTILE AGENCY, LIMITED.

ESTABLISHED 1855.

For the Protection of the Paper, Printing, Stationery & Allied Trades

OFFICES:—

13 & 14, OLD JEWRY CHAMBERS,

LONDON, E.C.2.

The Bookbinder.

Special Papers for the Binder's Use.

Vast Field of Choice for Covers and Ends.

The bookbinding branch of the allied trades is perhaps hardly fully awake as yet to the great developments which, of recent years, have been made in the art of paper-making. The art has now attained to such a pitch of efficiency that many of its products are not readily recognised as being paper at all—so closely do they approximate in appearance, in feel and in wearing quality to leathers, satins, cloths and other materials of a much more costly character than paper. Moreover, in stuff that is manifestly only paper, the choice tints and artistic designs that are now available make it unpardonable to continue the stereotyped use of dull conventional styles which ought properly to be outgrown or at least in part superseded.

Modernist Paper Boards.

The most striking instances in which we have seen modern papers applied for book-making purposes have emanated from the Continent, chiefly from Germany. Post-war paper board covers as produced by German bookbinders include quite startling examples. Some are not only startling but very pleasing as well, and, whilst many are not satisfactory either in taste or wearing quality, their wholesale production suggests a direction in which British bookbinders might show more enterprise than has hitherto been manifested. It is true that poor quality paper boards may have but little durability, yet they constitute a distinct advance upon the mere paper wrapper, the use of which leads to immediate damage being done to the book itself if the volume is handled to any considerable extent before it is sent to the binder. Moreover, the additional attractiveness both to the eye and the hand which artistically papered boards can bestow should be in

itself a strong selling factor; and the wearing quality of the cover can, of course, be increased either a little or a great deal by the choice of better quality papers, or by the use of more durable material for backs and corners.

Some Wonderful Papers.

British bookbinders would do well to make sure that they are adequately acquainted with the immense range of choice in colours, designs and substances of the various kinds of papers which the papermaker can nowadays offer to those members of the trade who care to test the public feeling in regard to paper board editions of new and tasteful style, or who wish to introduce novelty and increased variety into their range of end-papers.

There are, of course, various makers who provide large selections of fancy papers for the bookbinder's use, but our attention was drawn very strongly to the vast field available in this direction when we had the pleasure the other day of examining the wonderful variety of samples of papers for bookbinders which are produced by the famous Société des Papiers, of the Keller-Dorian Mills, Lyons, France. Although amongst boxmakers the name of Keller-Dorian is familiarly regarded as a hall mark of quality and original design in fancy papers for covering, etc., it is not generally recognised that these mills also specialise in the manufacture of papers essentially suitable for the bookbinding and allied trades. We were agreeably surprised to discover the impressive series of samples which the English branch of the firm, Messrs. Keller-Dorian (G. Baker and Co.), Ltd., can show to the bookbinder at 158, Bishopsgate, London, to which address their head office has recently been removed from Manchester. The papers

shown us there had many features of attractive freshness, and bore evidence to the assiduity of the firm's large staff of artists continually at work evolving new creations.

Of papers particularly suited for end-papers this firm stocks upwards of 300 different designs and shades in the cheaper grades, whilst they have also a series of "Reliures Riches" containing 100 qualities of the richest hand-made end-papers, which are now being used for the binding of the more expensive editions. When it is stated that, in addition to the above-mentioned, they stock upwards of 3,000 different designs of fancy papers (offered at per ream price, by the way), it will be clear that the bookbinder in search of something new in cover papers, has a satisfactorily wide field of choice open to him. Imitation leathers, leatherettes (including some embossed in most elaborate and artistic designs), imitation cloth papers, a big range of velures, metallic papers, a variety of marbled papers—these are some of the outstanding features of interest noted amongst the samples inspected.

Why Not Brighter Books?

The cry of "Brighter London" which has been so much to the fore of late, is but a symptom of the general spirit of revolt from the conventional drabness that has been too much associated with the past century or so of our national life. The same spirit is showing itself in the pictures of present-day artists, and is reflected in feminine attire and in furnishing fabrics. There is no reason why the realm of books should be debarred the touch of the gayer fashion, and a little more enterprise on the part of the bookbinder might well reap its financial reward besides contributing to the creation of a brighter Britain.

Bookbinding Notes and News.

The State of Trade.

Trade is keeping very quiet in the book-binding industry. Orders of any magnitude are few and far between. Official requirements are restricted, and the larger banks and companies are working the policy of economy to perfection. Unemployment figures have no real value because they do not set forth the percentage of short time in the trade. Just a few of the large houses are entering upon their Christmas annual rush, but mainly publishers are finding the demand for books very apathetic.

The Cut-Price Illusion.

Price-cutting is rife on the commercial bookbinding side of the industry. With the great bulk of work, small or large, put out to a wide circle of competition, keenness is inevitable. Some houses appear to have adopted the policy of getting work at any price for the sake of finding employment, a laudable notion which breaks down in face of the fact that if the work is placed employment is found somewhere. The truth is rather that selfish anxiety impels a lot of master binders to fill their own place even at the cost of dragging the trade down to a losing level. Every binder who takes work at a loss sets the lead to his neighbour to take it at a greater loss. It is not much use attempting to solve the problem of price-cutting until the organisation and loyalty of the

trade makes it possible to work to a standard system.

Bookbinders' Dockets.

The question of bookbinders' dockets is entering upon its final phase. Outside Manchester there are few places in the country where the bookbinding industry is prohibited from ascertaining its real costs through the agency of the docket record. Even in Manchester there is a majority of intelligent opinion, in favour of the adoption of the docket. In fact, the only bar to the docket is a standing clause in the local rules to the effect that men filling dockets will be fined. All that is necessary is the deletion of that clause. We do not for a moment believe that the privilege of using dockets would be exercised by many firms for some time for the simple reason that they are not progressive or well organised enough. That, however, does not affect the issue. By the time these notes appear there will have been held a meeting of both sides of the trade at which we hope the question of the time docket will be settled once and for all.

Prices of Materials.

There is no new trend in the market for bookbinders' materials. Leathers are steady and are more likely to harden than otherwise. American buyers have made inroads into the best quality hides and skins, and their action

has lifted auction values of the raw pelts and hides. For the bookbinding trade the figures given last month will stand.

Lined Book-cloth.

A London house is experimenting in the production of lined book-cloth suitable for club book-covers, etc. There is nothing new in the idea, of course, for the leading manufacturers of book-cloth have long had a market for it. More recently there has been some cheap foreign lined cloth about, but it lacks the strong substantial backing which is necessary. No doubt the new product is aiming at something in the way of an advance in price for the consumer.

Paper Backed Novels.

Paper backed novels are having a trial once again, and once again we are told that this is the way the French publishers produce many of their volumes. That may be so, but the facts remain that the only purpose of the cheap paper wrapper is to facilitate re-binding. We already have paper backed novels embellished with a picture and printed on common paper, and these are made that way because they are to be read and destroyed. Then in the pocket novels we have cloth casings to make them last long enough for their purpose and go on a bookshelf if necessary. Nobody wants to pay for binding the light stuff which constitutes the great

proportion of modern fiction. For the library there is the higher class literature already produced in good binding at a cheap price. One in a thousand of readers can afford to have books bound in his own way, and then there is a requirement for downright good paper and print, and a paper wrapper possibly. But is there sufficient inducement here for any publisher to embark on the paper cover enterprise?

Ink on Parchment Paper.

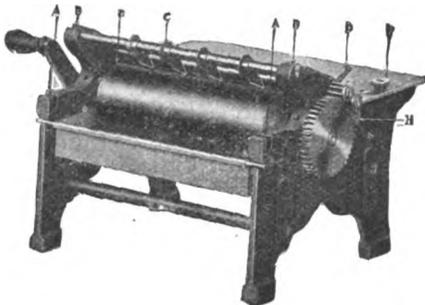

A parchment manufacturer gave it as his opinion that a great mistake was being made in using paper parchment as a substitute for the animal product where documents of permanent importance were at stake. His reasoning was that the engrosser actually incised his character on real parchments and the ink became embodied and part of the skin. On paper he claimed that the writing lay on the surface and became subject to atmospheric influence. Our own view is that everything depends upon the ink. There are in existence books printed on paper in the 14th century in which ink inscriptions are to be found which, although slightly mellowed by age, still retain all their legibility.

Some Bindery Accessories.

Bookbinders and boxmakers will be interested in several useful pieces of auxiliary apparatus of which we have received particulars from Messrs. Fell and Hill, Ltd., 26, Hatton-wall, London, E.C. A speciality of this firm is machinery for glueing, gumming, and varnishing.

Their latest machine, put on the market this year, is the "Reversible," a machine supplied with glueing rollers ranging in width from 16 in. to 40 in., suitable for bench or power, and adaptable for use with stand, if desired. The makers claim that it is equally suitable for paper, cloth or board. It is made on the single roller system, the glue being regulated by a scraper, and it should prove a valuable accessory in the small factory, where many kinds of paper, cloth or board may need to be dealt with, and glued or varnished in any week.

A smaller machine, for hand operation, is illustrated herewith. Known as the

"Universal," it is strong and compact, and meets the demand for a low-priced but reliable machine, being far the cheapest practical little machine on the market. It also is made on the single roller system, with instantaneous gum regulator and scraper. The machine can be cleaned in a few minutes without the use of a spanner or screwdriver. The glue container is removable for cleaning and recharging. The feed rollers are both geared, and paper or thin cardboard labels pass on to the gumming cylinder equally well. Special pickers release the gummed article from the cylinder.

Messrs. Fell and Hill, Ltd., make also other models of glueing, gumming and varnishing machines, including the "Speedie," the "Expert," and the "Express," whilst the simple hand-gumming rollers known as the "Rolla" and the "Improved Rolla" are specially useful for strip or edge gumming.

Bindery Items in U.S. Tariff.

The American mail brings further news of the final passing of the United States Tariff Act of 1922.

The dutiable list contains the items relating to printing paper, paper boards, filter stock, tissue papers, and coated papers, as printed in our issue of October 5th, together with the paragraphs concerning writing, drawing, hand-made paper, etc.

Other items which were not fully dealt with in our previous issue are detailed below.

Of special interest are several items of importance to the bookbinding trade.

Leather Bindings.

The increased duty on leather bindings will undoubtedly cause considerable complication in some fields of importing. Under the new law, the book and the binding will be taxed separately, and bindings of less than twenty years old, whether full leather or part leather, all fall under the 30 per cent. levy. When the binding is five to twenty years old and has been used, it will be difficult for anyone to gauge the age.

Gold Leaf.

With regard to gold leaf, which bears a duty of 55 cents per 100 leaves, it is explained that this rate applies to leaf not exceeding in size the equivalent of 3 1/2 in. by 3 1/2 in., additional duties in the same proportion being assessed on leaf exceeding in size said equivalent.

Embossed Papers and Boards.

Par. 1313.—Papers and paper board and pulpboard, including cardboard and leather-board or compress leather, embossed, cut, die-cut, or stamped into designs or shapes, such as initials, monograms, lace, borders, bands, strips, or other forms, or cut or shaped for boxes or other articles, plain or printed, but not lithographed, and not specially provided for; paper board and pulpboard, including cardboard and leatherboard or compress leather, laminated, glazed, coated, lined, printed, decorated, or ornamented in any manner; press boards and press paper, all the foregoing, 30 per cent. *ad valorem*; test or container boards of a bursting strength above sixty pounds per square inch by the Mullen or the Webb test, 20 per cent. *ad valorem*; stereotype-matrix mat or board, 35 per cent. *ad valorem*; wall pockets, composed wholly or in chief value of paper, papier-maché or paper board, whether or not die-cut, embossed, or printed lithographically or otherwise; boxes composed wholly or in chief value of paper, papier-maché or paper board, and not specially provided for; manufactures of paper, or of which paper is the component material of chief value, not specially provided for, all the foregoing 35 per cent. *ad valorem*.

Jacquard Cards.

Par. 1309.—Jacquard designs on ruled paper, or cut on Jacquard cards, and parts of such designs, 35 per cent. *ad valorem*; hanging paper, not printed, lithographed, dyed, or coloured, 10 per cent. *ad valorem*; printed lithographed, dyed, or coloured, 1 1/2 cents per lb. and 20 per cent. *ad valorem*; wrapping paper not specially provided for, 30 per cent. *ad valorem*; blotting paper, 30 per cent. *ad valorem*; filtering paper 5 cents per lb. and 15 per cent. *ad valorem*; paper not specially provided for, 30 per cent. *ad valorem*.

Par. 1310.—Unbound books of all kinds, bound books of all kinds except those bound wholly or in part in leather, sheets or printed pages of books bound wholly or in part in leather, pamphlets, music in books or sheets, and printed matter, all the foregoing not specially provided for, if of *bona fide* foreign authorship, 15 per cent. *ad valorem*; all other, not specially provided for, 25 per cent. *ad valorem*; blank books, slate books, drawings, engravings, photographs, etchings, maps and charts, 25 per cent. *ad valorem*.

bookbindings or covers wholly or in part of leather, not specially provided for, 30 per cent. *ad valorem*; books of paper or other material for children's use, printed lithographically or otherwise, not exceeding in weight twenty-four ounces each, with more reading matter than letters, numerals, or descriptive words, 25 per cent. *ad valorem*; booklets, printed lithographically or otherwise, not specially provided for, 7 cents per pound; booklets, wholly or in chief value of paper, decorated in whole or in part by hand or by spraying, whether or not printed, not specially provided for, 15 cents per pound; all post cards (not including American views), plain, decorated, embossed, or printed except by lithographic process, 30 per cent. *ad valorem*; views of any landscape, scene, building, place or locality in the United States, on cardboard or paper, not thinner than eight one thousandths of one inch, by whatever process printed or produced, including those wholly or in part produced by either lithographic or photogelatin process (except show cards), occupying thirty-five square inches or less of surface per view, bound or unbound, or in any other form, 15 cents per pound and 25 per cent. *ad valorem*; thinner than eight one-thousandths of one inch, \$2 per thousand; greeting cards and all other social and gift cards, including those in the form of folders and booklets, wholly or partly manufactured with text or greeting, 45 per cent. *ad valorem*; without text or greeting, 30 per cent. *ad valorem*.

Par. 1311.—Photograph, autograph, scrap post card and postage stamp albums, and albums for phonograph records, wholly or partly manufactured, 30 per cent. *ad valorem*.

Par. 1312.—Playing cards, 10 cents per pack and 20 per cent. *ad valorem*.

Bookbinding in Persia.

"In the beginning was the Word." This—translated into the Iranian tongue—seems to have been the fundamental concept underlying Persian art, the genesis of Persia's artistic expression—says a writer in the house organ of an American firm (Gane Bros. and Lane). For her finest art sprang from her love and reverence for the written word, which led her kings to enshrine in rare and costly volumes these precious heritages of poet and sage, and made the collecting of books the most princely of artistic manias.

The rich Persian bibliophile often commanded four artists to embellish a book, the *calligrapher* (for the text was, of course, written by hand in Arabic characters, and this writing was considered an art), the *binder*, the *illustrator*, and the man who adorned the title page with arabesque.

In the early sixteenth century these volumes were generally cased in morocco, decked with tooled or impressed patterns, and sometimes gilded. But a little later it became customary to coat the morocco binding thinly with lacquer, so that it might be decorated with a brush; and these painted covers are the unique glory of Persian binding. They are richly wrought with flowers, birds and animals, or intricate and beautiful arabesques; and sometimes even the insides or doublures of the binding are treated likewise.

The Mohammedan faith forbids the representation of human or animal forms, but Persian clergy fostered a less orthodox belief, so that, although copies of the Koran were treated devoutly in arabesque and pure design, secular writings are bound between enchanted gardens, where slender stags and rhythmic birds disport themselves among fields of asphodel.

Persia yielded slowly to the advance of printing, which seemed to her an offensively mechanical thing; and only since the mid-nineteenth century have books been printed in Persia. With this adoption of occidental methods, her ancient beautiful art of binding has come to an end.

DIVIDENDS AND REPORTS.

EYRE AND SPOTTISWOODE.—Accounts of Eyre and Spottiswoode for year to March 31st, 1922, after providing £4,727 for debenture interest, £1,200 for sinking fund, £662 for leaseholds sinking fund, £9,828 for depreciation of plant, type, fittings, etc., and writing off £1,000 from cost of issue of mortgage debenture stock, show loss of £15,666; to this must be added £12,500 which directors have decided to provide as additional depreciation, making loss of £28,166; deducting £14,723 brought in after payment of 1½ per cent. on preference shares in November, 1921, leaves debit balance of £13,443 to be carried forward.

EDWARD LLOYD, LTD.—At the meeting of Edward Lloyd, Ltd., on Monday, Mr. Frank Lloyd, who presided, stated the fall in value of the stocks of raw material on hand on January 1st, coupled with the reduced production of paper owing to the coal strike in the first half of the year, had resulted in a serious loss to the company, and it was evident that, even after recovery of the estimated amount of the claim for return of Excess Profits Duty, the accounts would show a heavy loss for the year. The company would consequently be unable to declare any dividend on the ordinary shares for 1921. They were, however, now making a fair profit on a largely increased production, sufficient to justify them in paying the interim dividend of 1½ per cent. which had recently been declared on the company's ordinary shares for the current year.

NEW COMPANIES.

PATRICK BROS., LTD.—Capital £6,000; to take over the business carried on by H. and T. Patrick at Station-street, Belfast, as "Patrick Bros.," printers' engineers and furnishers, etc. Private company. First directors: H. Patrick, T. Patrick and P. Patrick. Registered office: 5, Station-street, Belfast.

WILLIAM THOMPSON AND SONS (STOCKPORT), LTD.—Capital £5,000; to take over the business of a printer, stationer, bookseller and dealer in fancy goods, carried on by W. Thompson at St. Petersgate, Stockport. Private company. First directors: W. Thompson, J. T. Thompson, Jane E. Thompson and Margaret M. Meadowcroft. Registered office: 34, St. Petersgate, Stockport.

AINTREE PRINTING Co., LTD.—Capital £1,000; general printers and stationers, publishers and bookbinders, manufacturers of, and dealers in labels, seed bags and pockets, sample bags and other commodities used in the horticultural trade, etc. Private company. First directors: E. E. Edwards, M. R. Scanlan, and A. J. Corfe. Registered office: 455, Rice-lane, Walton, Liverpool.

SHOW CARD MOUNTERS, LTD.—Capital £500; show card mounters, printers, lithographers, advertising contractors, agents and designers, manufacturers of, agents for, and dealers in, advertisement novelties, engravers, etc. Private company. Subscribers: L. Stone and Barbara Smith.

J. W. NUNN Co., LTD.—Capital £1,500; to adopt an agreement between C. R. Jefferies, and J. W. Nunn and T. W. Blomfield for the acquisition of the business of printers and publishers, carried on by the said C. R. Jefferies and J. W. Nunn at Colchester, Essex. Private company. Permanent directors: J. W. Nunn, C. R. Jefferies and T. W. Blomfield. Registered office: St. Peter's Chambers, High-street, Colchester.

"LEADER" PUBLISHING Co., LTD.—Capital £100; to acquire the business carried on by F. Reader, and to carry on the business of publishers of sporting periodicals, promoters of sporting competitions and general sporting and racing printers and publishers, etc. Private company. Subscribers: F. Reader and R. E. A. Shaw. Registered office: Newport House, Great Newport-street, W.C.2.

S. LANE AND Co., LTD.—Capital £2,000; manufacturers and brokers of, agents for and dealers in paper, cardboard, timber and all kinds of commodities containing paper, cardboard, metal or wood, paper bag and account book makers, boxmakers, etc. Private company. Subscribers: S. M. Lane and E. P. Heard. Registered office: 110, Cheapside, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

EAGLE PRINTING WORKS (LINTON), LTD.—Deposit on September 30th, 1922, of deeds of certain freehold land and premises in Linton, Cambs, to secure all moneys due or to become due from the company to Barclay's Bank.

FORD PAPER WORKS, LTD.—Particulars filed of £20,000 debentures authorised October 3rd, 1922, charged on the company's undertaking and property, present and future, including uncalled capital; subject to existing debentures; the whole amount being now issued.

PORTALS, LTD. (paper manufacturers, Whitchurch, Hants).—Satisfaction in full on September 2nd, 1922, of second mortgage debentures dated September 9th, 1921, securing £32,000.

New Inventions.

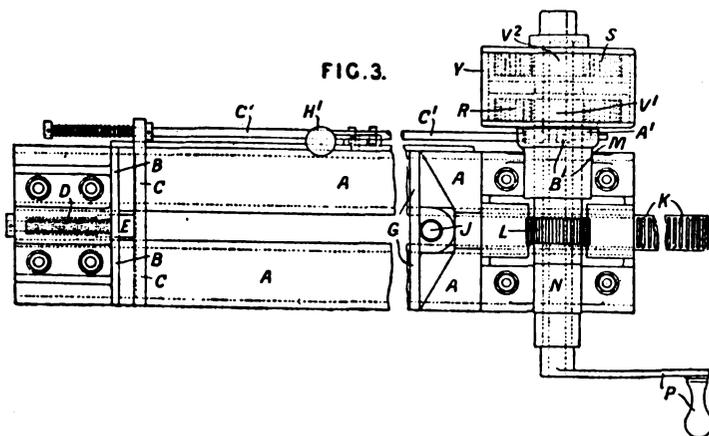

Bookbinding Presses.

In a bookbinders press of the kind having a fixed head and movable platen and alternative means for advancing the platen rapidly and slowly, means controlled by the pressure exerted between the platen and the head are provided for automatically operating the control of the platen motions. The platen G carried in guides in the table A is provided with a verticle handle J for the rapid advancing and retiring motion, and carries a rack bar K operated by gearing from a shaft N and

Covers for Loose-Leaf Binders.

A patent that relates to loose-leaf binders of the kind in which flexible thongs, tapes and the like are threaded through the sheets and a top clamping bar, and are then bent or drawn down over the clamping bar and secured by wedges, etc., is in the name of Mr. F. James. According to the invention, a series of teeth is provided on the edge of the slot over which each thong is bent. As shown, a clamping bar of C-cross section is provided with slots 2 in its lower flange and notches 3 in the upper

given, and development effected with a mixture of equal parts of alcohol and glycerine. In another example, an alcoholic solution of shellac is similarly employed. The sensitiveness of the resin layer may be increased by adding to it (1) 15 per cent. of carbon disulphide, or (2) 10 per cent. of a solution of albumen obtained by boiling one part of maize or wheat with 10 parts of alcohol under a reflux condenser for several hours. After development, the backing material may be etched, or the developed layer may be used for direct printing. The process is suitable for all photographic reproduction on non-absorbent backings in monochrome and polychrome printing, and for lithography.

handle P for the slow and pressure-applying motion. Planetary pinions R, S are supported from the central web of a casing Y attached to the shaft N. The pinions S engage a pinion V² fixed to a sleeve M having on it the pinion L meshing with the rack K, and the pinions R engage a pinion V¹ attached to the ratched-wheel A'. A fixed head B at the end of the table has a face-plate C resiliently maintained at a short distance in front of it by a spring D arranged in a cavity in the head and engaging a plunger E. The material to be pressed is placed on the table against the face-plate, and the platen is run rapidly forward so that its impact causes the face-plate to retire, thus giving an horizontal motion to a tappet rod C¹ having a slotted link at its end which imparts a vertical movement to a pawl B¹, causing it to engage the ratched-wheel A'. On turning the handle P, the casing Y and pinions V², L revolve and the rack K is fed forward. The pawl is disengaged when necessary by a handle H¹ on the tappet rod, and the platen can then be withdrawn rapidly. The invention is patented by Mr. J. Murray.

Metal-Coated Paper.

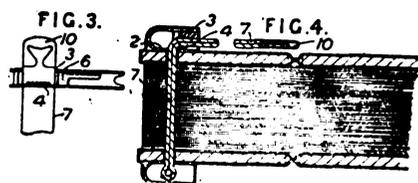

An invention by Mr. K. Wickel has reference to the preparation of metal-coated or metalised paper impermeable to water, oil, and air, and suitable for packing food or as a substitute for gold leaf; bituminous substances are employed as a binder. The bituminous substance, such as "Vulka-bitumen" may be employed in the melted condition; or it may be dissolved in hydrocarbons, carbon tetrachloride, trichloride of ethylene, or similar solvents, and the powdered metal (bronze), may be mixed with the solution and applied by rollers, brushes or scrapers, or by atomisers; or the dry process may be used. The product may be made pliable or stiff according to the hardness of the bitumen used. By applying high temperatures as by heated dies, the metal coating may be transferred to other articles.

Gelatine Printing Surfaces.

Mr. H. Renck has invented a method whereby in the production of gelatine relief printing surfaces, an exposed, soaked, and hardened gelatine plate is submitted to a heat treatment in order to obtain a permanent relief in a dry state with a printable depth and which can be used without the necessity of moistening. The heat treatment may be done by pouring a heated mass upon the exposed, soaked, and hardened plate.

flange, a series of teeth 4 being provided on the front edge of the slots. A pivoted wedging member 6, which may have a rounded or inclined under surface, wedges the thong 7, and is secured against the edge of the notch; sliding pins, plates, or wedges may be em-

ployed. The clamping bar may be made of sheet metal and partly filled with wood, or it may be of wood with metal reinforcements adjacent to the notches and slots, and it may be positioned below the cover so that the thongs are not exposed. The thongs may be provided with metal tags 10.

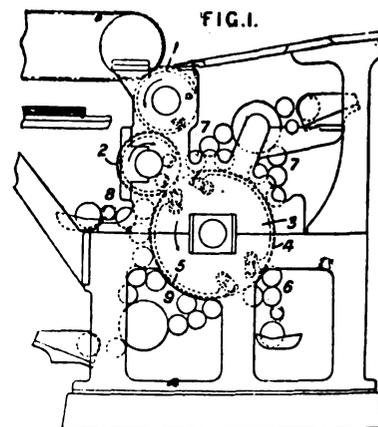

Producing Process Blocks.

An interesting method of producing process blocks is the invention of Mr. E. Doelker, and consists in a process in which a layer of natural or artificial resin, or a mixture thereof sensitised, for example, with a chromate, is exposed under a negative until the portions exposed are rendered insoluble in a developer comprising (1) an alkali or a substance having an alkaline reaction, or (2) alcohol or other organic solvent, with or without the addition of alkaline substances. The light-sensitiveness of the layer may be increased by adding thereto (1) carbon disulphide, either pure or containing sulphur, or (2) albumen decomposition products. Numerous examples of resins, sensitisers and developers are given. In one example of the process, 50 to 200 grm. of a non-sticky artificial resin, for example, a condensation product of phenol and formaldehyde, are dissolved in 1,000 cc. of alcohol coloured with Schweinfurt green. 100 to 250 cc. of this solution are agitated for 1 to 5 minutes with 2 to 10 grm. of ammonium bichromate and filtered through cotton wool. A polished zinc plate is roughened with a solution containing nitric acid and alum, rinsed, dried and warmed. The resin solution is then applied to the plate, exposure under a line or screen negative is made in sunlight for 3 to 5 minutes, and development effected with a 1 to 15 per cent. solution of caustic potash. The plate is rinsed, dried and warmed, and the resulting reproduction etched in fairly strong acid. Alternatively, an exposure three or four times as long is

Printing Machines.

According to an invention patented by Messrs. Linotype and Machinery, Ltd., and Mr. T. R. G. Parker, rotary offset machines of the two-revolution type are provided with one or two plate cylinders, each fitted with

two printing surfaces provided with separate dampening and inking apparatus arranged to damp and ink the plates successively in different colours during a single revolution of the printing cylinder. As shown applied to a machine for printing one side of a sheet in two colours, the impression cylinder 1 and offset cylinder 2 are each of half the diameter of the plate cylinder 3, which is fitted with two plates 4, 5, provided with separate dampening apparatus 6, 8, and inking apparatus 7, 9, which are tripped by known means so as to act on one plate only during each revolution of the cylinder 3. The cylinders 1, 2, 3 are so arranged that the vertical plane passing through the horizontal axis of the cylinder 1 lies between the corresponding planes for the axes of the cylinders 2, 3. In action, the cylinder 2 receives an impression from each plate 3, 4 during every two revolutions of the cylinder 2, and it transfers these on to a sheet fed to cylinder 1 at every alternate revolution, the cylinder 1 being tripped away from it for alternate revolutions. In a modification, one impression cylinder is arranged to co-operate with two offset cylinders similar to 2 and plate cylinders similar to 3. Such a machine may print four super-imposed impressions for each alternate revolution of the impression cylinder 1, or if desired this cylinder may be arranged for perfecting work by constructing it as described in Specification 26195/12 to rock alternately into and out of contact with the offset cylinders. Such a machine may be arranged to print one or two colours on either side of a sheet.

Coating Printing Rollers.

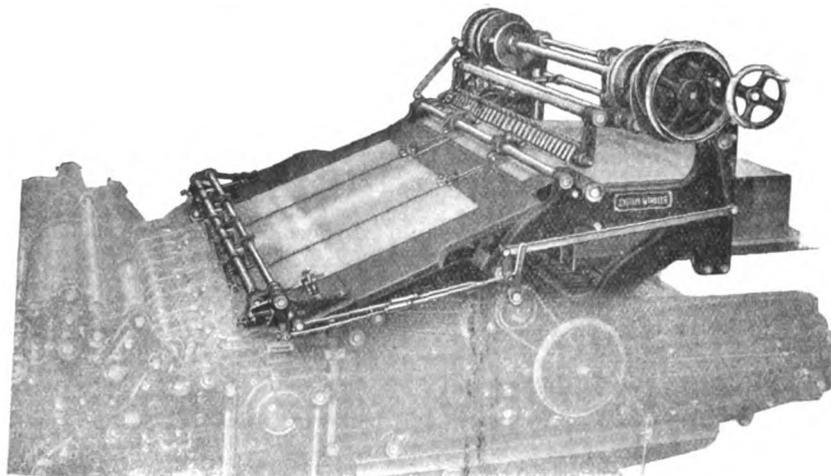

In an invention by Mr. R. Lamp¹ cylindrical surfaces such as those of printing rollers are coated with solutions by rotating them in front of a reciprocating spray; or the spray may be fixed and the surfaces be reciprocated as well as rotated. The specification states that the process will produce granulated as well as continuous coatings.

TIME IS MONEY!

— THE —

Winkler Automatic Sheet Feeder

WILL SAVE YOU BOTH.

Built in all sizes and can be fitted to any letterpress or litho machine.

Intricate mechanism is superseded by simple movements.

Fitted in its entirety on the machine, so that access to the latter is not impaired.

Works in unison with the machine and at variable speeds **up to 3,000.**

Feeds all kinds of paper from thinnest tissue to cardboard.

Register is assured even at high speed.

Adaptable for very short runs.

Quick changing from small to large sizes and vice versa.

Changing to hand feed in a few minutes.

Purely mechanical automatic throw-off when the paper feed is disturbed.

No tapes or friction wheels to smear the sheets, and freshly-printed matter can be at once backed-up without the risk of marking or smearing.

CAN BE SEEN RUNNING IN LONDON.

"THE MANUFACTURE OF PAPER CONTAINERS: A TEXTBOOK ON PAPER BOX AND BAG MAKING." By P. E. Verstone. London: Verstone and Co., 29, Ludgate-hill, E.C.4. 10s. 6d. net.

A practical treatise dealing with an important industry such as paper box and bag making has hitherto been lacking in the United Kingdom, and the author of the work under review is to be congratulated on meeting a distinct want on the part of many engaged in the various operations connected with a large and expanding industry.

It is evident that a keen and close study has been made of the developments in connection with the manufacture of paper containers, and the information presented will no doubt strongly appeal to practical workers and also to technical students. The industry is essentially a modern one, but its growth, traceable to technical processes and ingenious mechanism, has certainly been most marvellous.

The opening chapter deals with the raw material—strawboard, leatherboard, paperboard, wood pulp board, corrugated boards, and box and bag papers. Then follow details of the various operations that attend the production of machine-made boxes, the upright covered box, the folding box or carton, the upright wire stitched box, the collapsible wire-stitched or taped box, the round box and the hand-made box.

Three interesting chapters deal with paper bags, hand-made and machine-made. From the earliest types—the "flat" variety—the progress is recorded of the developments in this branch of industry due to the introduction of mechanical appliances which make and print the paper bag complete from the reel of paper.

Waterproofing materials and adhesives are fully covered by the author, and a valuable chapter is that dealing with organising the factory. Another valuable feature is the set of tables giving the approximate number of

sheets to the cwt. in various kinds and sizes of cardboard used in the manufacture of paper boxes. At the end of the book is an ample glossary with cross references.

"The Manufacture of Paper Containers" is not only to be recommended for the fulness of detail that characterises the entire work, but for its wealth of illustrations, which cover over 100 technical diagrams and designs and over 60 representative types of machines in use at the present time.

A CENTENARY TYPE SPECIMEN BOOK.—Type specimen books are always of interest to the printer, and form welcome additions to the office library, which is often all too short of works of a technical character. The new specimen book issued by Messrs. Pavvys and Bullens, Ltd., 119, Cromer-street, W.C.1, will be appreciated not only on account of the excellent assortment of faces which it shows, but on account of the long standing of the house from which it is issued, the firm boasting a connection of over 100 years with the printing trade, and the two houses that now form one foundry having built up a reputation for their products in the printing fraternity that has established their place in the trade. The book contains an excellent selection of news and jobbing faces in a wonderful variety of styles, and really comprises within its pages examples of all the types that a printer need have. Among the display founts there are the Woodstock family, comprising old style, bold, bold condensed, and gothic; the Wren family gives a series of light, bold, light expanded, and bold expanded, and is a face that in its various sizes can be used in an extensive variety of work. Other faces are the Cheltenham, Spartan, Chelwin, Westminster, and Ivanhoe, and there is a full selection of antiques, clarendons, ionics, egyptians and latins. The lining Gothics and Tudor blacks are noticeable for their clearness of cut, and the display scripts are of a useful character. A section of the book is devoted to ornaments, corners, emblems, etc., and there is a good selection of borders in the modern style. The volume is well got-up and easy of reference, and should be a welcome addition to the printers' collection of type specimen publications.

Paper Trade Golfing Society.

Keen Play for the Hall Caine Cup.

The autumn meeting of the Paper Trade Golfing Society was held at the Temple Golf Club, Maidenhead, on the 7th inst., and the following members took part:—

Messrs. E. W. Allen, C. Baker, A. S. Batchelor, R. A. Beer, Major F. H. Bowater, G. Buchanan, E. B. Fiske, R. G. Harvey Greenham, B. J. Hall, G. R. Hall Caine, F. C. Harding, S. A. Harding, G. H. Hedley, C. E. Higgins, H. F. Higgins, W. A. Houstoun, R. Hubble, J. W. S. Johnston, P. Jones, D. H. Kentish, E. C. Lait, N. H. Leander, L. C. Lewsey, K. S. Mason, W. C. Powers, E. H. Raynham, G. C. Robertson, S. G. Saunders, Harrison Savory, G. W. Shilcock, F. A. Skerratt, W. Sommerville, A. Dykes Spicer, J. C. Tennant, H. E. Unander-Scharin, H. S. Wescott, J. L. White, and E. Lewis Winn.

In the morning a foursomes competition took place for the "Foursome Challenge Cup," presented by Mr. G. R. Hall Caine, C.B.E., with the following results: Mr. C. Baker and Mr. H. F. Higgins and Mr. A. Dykes Spicer and Mr. E. H. Raynham tied for first place; Major Frank H. Bowater and Mr. R. G. Harvey Greenham and Mr. Digby H. Kentish and Mr. N. H. Leander tied for second place; and Mr. S. A. Harding and Mr. B. J. Hall returned the third best score.

The couples tying for first place afterwards played off a deciding match, which resulted in Mr. A. Dykes Spicer and Mr. E. H. Raynham beating Mr. C. Baker and Mr. H. F. Higgins after a strenuous contest at the 19th hole. Mr. A. Dykes Spicer and Mr. E. H. Raynham therefore become the holders of the cup for the first year.

During the afternoon a medal round competition took place, in which Major Frank H. Bowater and Mr. H. S. Wescott were successful in tying for first place with net scores of 74. Amongst the scores returned were the following: Mr. H. E. Unander-Scharin, 75 net; Mr. F. C. Harding, 79 net; Mr. A. S. Batchelor, 79 net; Mr. W. C. Powers, 79 net; and Mr. G. Buchanan, 80 net.

Transport of Paper.

Development of an Intricate Business in London.

The handling and transporting of paper is an intricate and delicate operation, and the extent of its development in recent years is comparable only with the extended uses of paper. Few people, even among those who consume paper products in their manifold forms, realise the amount of work involved in conveying paper and boards from mill to ultimate destination. One wonders, perhaps, when a trolley of news-print passes by, how the huge reels were lifted on to the vehicle and by what device they are prevented from rolling off. But of the vast organisation required to ship paper overseas and from port to customer, there is scarcely time in these hurrying days to contemplate.

Nevertheless, transport of paper is itself almost an industry, especially in London, where the handling of paper represents every phase of a very complicated and responsible undertaking. In more recent times road transport has taken an increasing share of this work. For a large proportion of it, of course, it is the only suitable method.

An instance of the extent to which this industry has grown is indicated by the progress of the firm of Messrs. John Harris and Son, Ltd., wharfingers, contractors and forwarding agents, of 136-138, Ben Jonson-road, Stepney, London, E.1. The business was established some 40 years ago by Mr. John Harris, who, at the age of 70, still takes a very active interest in the concern, being chairman of the company. He is fortunate in having the assistance of four sons, who, with Mr. W. J. Cearns and Mr. John R. Anderson, constitute the board of directors. Thus we find a Harris in each department, ensuring a person of authority in charge. In fact, Messrs. John Harris and Son, Ltd., have established their enviable reputation on the reliability and thoroughness of their service. Mr. W. F. Harris, the general manager, has been right through the business—carman, wharf hand, and so on—so that he understands every

phase of it. In the handling of goods honesty and integrity are of the first importance, and Messrs. Harris insist upon this virtue, not only in themselves, but from every member of their extensive staff.

From the very outset Messrs. Harris and Son, Ltd., have dealt with paper, and their long experience has rendered them exceptionally proficient in the task. Handling of paper demands particular care and ingenuity, for in a moment pounds worth of damage may be done, as, for instance, if a hook or other instrument enters a reel of news-print, or, on the other hand, if damp is allowed to reach the paper in bundles or reams. Messrs. Harris have studied every one of the numerous operations, and there is no contract too small and none too large for them to undertake. Every facility is provided for dealing with the carriage of paper. They possess a wonderful fleet of motors, supplemented by horse traction. Indeed, they claim to have the finest motor depot in London at Saxon-road, Bow. Thus they are able to dispatch quickly and safely any consignments which may be committed to them. It is some indication of the extent of their operations to know that they run a regular service of motors to Southampton three times a week, and on this route and several others they are able to carry goods more cheaply than the railway company. Not only so, but by this method of transport, the amount of handling is reduced and at the same time the risk of damage is minimised.

In taking charge of paper landed in the Port of London, Messrs. Harris have provided exceptional facilities, and, moreover, have the expert knowledge which ensures accuracy. There are many ways in which paper merchants may be let in for claims which can be avoided by knowledge of routine and the exercise of care, especially in taking consignments from vessels arriving from overseas. As indicative of the intricate character of the work it may be mentioned that on a recent occasion one shipment which Messrs. Harris had to direct consisted of no fewer than 3,236½ cwt. bundles, or somewhere about 80 tons. This consignment consisted of paper representing 124 different substances and sizes, and these had to be sorted out and delivered to customers. Of course, unless experienced men were engaged upon the task, the correct

distribution of the bundles would be impossible.

Apart from their experience in receiving shipments of paper in the river, Messrs. Harris have provided exceptionally fine wharves at Stepney and Old Ford for the reception and warehousing of goods. The Birdsfield Wharf at Old Ford has been erected at a cost of £10,000. The structure is fitted up in every way to protect the paper. There is a floor area of 22,000 square feet super, and the height is 30 ft. With a solid concrete foundation extending to a depth of 4 ft. the accommodation is emanently suited to the purposes for which it is intended. Altogether Messrs. Harris have a total carrying capacity of 12,000 tons, and they are able to handle per day something in the neighbourhood of 200 tons.

At Old Ford the firm have their own staff of engineers, electricians and carpenters, who are able to direct the paper traffic efficiently. The stacking of paper goods, which may reach the whole height of the building, necessarily requires experience, and this is possessed by the whole of the staff. Heavy news reels, which may weigh anything up to a ton, require particular care. Messrs. Harris' work-people, however, are able to deal with paper either in huge reels or bales or in reams with equal skill, and the quantity of paper goods passing through the hands of the company represents the growth of paper handling in recent years.

MESSRS. HILL, PALMER AND CO., LTD., of 80-84, Golden-lane, London, E.C.1, have placed on the market the "H.P.P." holder and cutter for roll paper. It is stoutly made in three qualities with interchangeable castings to fix either side of the holder. The apparatus may be supplied either with a stand so that it may be fixed on counter or floor, as a shelf pendant for the end of the counter or to be fixed to a wall, or in pendant form for attachment to the underside of the counter, packing bench or fixture. The holders can be made in any combination of sizes, while additions may be fitted to any stand which happens to be in use. All stands are provided with rubber studs which prevent the scratching of glass, polished counter, or fixtures.

PLEASE NOTE.

WE CAN quote you very low prices for all styles of binding in Cloth, Leather, or any other material, also for Portfolios, Cases, Loose Leaf work, Reading Cases, and the like to any design you may require and on the shortest notice.

Should we be favoured with an enquiry it shall receive our best attention, and if you require any samples we shall be pleased to forward same, and if deemed necessary to offer any suggestions.

We feel sure our prices will prove advantageous to you, and that you will have no fault to find with the workmanship, which we are confident will please.

Paper for Intaglio-Printing.

By WILLY GRÜNEWALD (Technical Editor of the "Papier-Zeitung").

The largely confirmed habit of making and putting papers on the market without regard to their use or to the particular requirements of the printing process to be applied to them has found little favour with the intaglio printer. Ignorance, during the process of making, of the fact that the paper is to be used for intaglio printing, renders its adaptability for that purpose in most cases very doubtful, especially in view of the very exacting requirements of this process. These are so manifold and peculiar that only by a very close examination can the printer test such papers thoroughly, and in order to be able to give the paper manufacturer appropriate hints the user should have knowledge of the making of such papers. Thus might the printer learn the limits which price, raw materials and papermaking machines are apt to put upon the satisfaction of his desires.

The copper intaglio plate and its ink filled engravings, no matter by which process it was made and inked, is at first sight an inconsistency to the paper manufacturer, who is expected to provide a paper with a perfectly smooth surface, in some instances with a high-grade, super-calendered surface, in order to preserve the good appearance of the paper and give the proper effect of the press product—a paper, moreover, which will lie flat on the dead plane printing plate. Notwithstanding all this, it is expected that the paper shall lift the ink out of the engraved lines without a fault, or, at least, in equal proportions.

Paper Must Lift the Ink.

To overcome this seeming impossibility the paper manufacturer and the printer must join forces. The printer should before all else reduce the adhesive power of the ink as much as possible, for the ink sticks to the metal of an intaglio plate especially closely, the reason being that in this process the quantity of ink needed for a certain impression is attached to a surface much larger and rougher in proportion than, for instance, in relief printing. The same quantity of ink adheres to a plate of 10 sq. cm. in size much more than to a plate only 1 sq. cm. in size. In the processes of relief and intaglio printing the proportion of the inked metal surface is as the diameter of a circle to one half of the circumference, i.e., as 1 : 1.57. Supposing, for simplicity's sake, that the lines are semicircularly sunk in, and supposing a circular dot has been sunk in semi-globular form, the proportion would be even, as 1 : 2. In any case, the enlargement of the inked surface of the engraved plate as compared with that of the relief block remains a fact, while the amount of ink needed for giving a sharp impression of the picture-element does not differ greatly in either of these processes.

Appreciation of this fact will teach the printer to weaken his ink considerably, whereby the effect of adhesive power, increased by the larger metal surface, is reduced. Furthermore, the paper is applied under high pressure on the copperplate, and on account of its elasticity is pushed into the engraved lines of the picture. The suppleness of the paper may be increased by damping before using, whereby also its absorbency is somewhat enhanced. To push the paper into the hollow lines of the engraved plate a soft elastic pad (i.e., rubber) is overlaid, so that by its elastic properties the paper may be still further pressed into the intagliated picture, whereby the ink is subjected to a certain pressure. The accompanying diagram shows the effects of these conditions and energies.

Weakened ink, soft overlay and dampening of the paper (in certain limits) comprise the printers' means to bring about a quick lifting of the ink and the adherence of it to the paper while going through the press. Taking off the sheets slowly, drying over hot cylinders or interleaving with set-off sheets may be the cause of ready drying of the readily lifted inks, but they cannot bring to bear any influence on the finished product of the press.

As is seen, the printer is limited in the selection of his means. Even the most favourable conditions cannot enable him to push the paper to the very bottom of the engraved lines, on account of the proportionally small elasticity of paper. But this is not required, provided the paper manufacturer has done his duty. Though his means are likewise limited, he is able to give to the paper the very property which obviates the necessity of much forcing of the paper into the intagliated plate; that is, by giving absorbing property to the paper.

On account of the characteristics inherent in all vegetable fibres (of which paper is made), not only of retaining water and oily liquids in their texture, but also of sucking them up into the inner tissues, all kinds of paper (Pergamyn not excepted) are absorbent; capillary action in and between the fibres greatly increases the faculty of absorbing; and these capillary effects the papermaker is enabled to largely increase during the making of the paper.

Increasing Paper Absorbency.

The absorbing power of fibres used in

papermaking is not always the same. Cotton fibre possesses it most; soft worn-out linen fibres are not far behind; but new linen cuttings are less apt in this respect. Of cellulose, that obtained from deciduous trees (especially soda poplar pulp and esparto cellulose) is the best adapted for absorbency and is mostly used. The mechanically treated harsh wood pulp is the poorest medium to satisfy the demands for greater absorbency, though with a particular process of manufacture and the choice of a well adapted kind of wood, (e.g., of the poplar tree) an absorbing power above the average may be realised.

In regard to the manufacture of blotting and filter paper, the fitness of the raw materials for such can be stated in the same order as above. If the absorbing properties alone were to be considered, blotting papers would, indeed, be more or less the best adapted for intaglio printing, subject to the value of the raw materials used therein. The immense absorbing properties would be augmented by its elasticity, enabling it to take up even the last particle of ink. But the absorbing power is not the only thing to be considered, for too much of it would render the paper unfit. If an ink line is drawn on blotting paper, it is no easy task to keep its edge clear cut and to prevent its blurring. The absorbing property of the paper is too great. There is danger in rotary press work, for instance, that the lettering in large fat types and the deep dark shadows should appear with blurred, irregular edges, giving the result a very disturbing aspect. With lightweight papers there is the danger of blotting or showing through in increasing measure. With regard to the absorbing power, it is easy to overdo this.

Besides, there are other reasons why blotting paper could not be recommended. To increase its absorbing properties considerably its firmness to a certain extent must be neglected. The flabby feeling, the rather rough surface and the frequent throwing-off of fibres and fluff render such paper unsuited for intaglio printing, quite apart from the excessive absorbing power of paper made of best materials. To prevent or to reduce these said properties presents no difficulty to the papermaker. To paper pulp of good absorbing capacity he adds other materials which give to the finished product a certain firmness and stiffness, but no rattle, and he treats the whole fibrous mixture in such a way that the right degree of absorbing property may be attained.

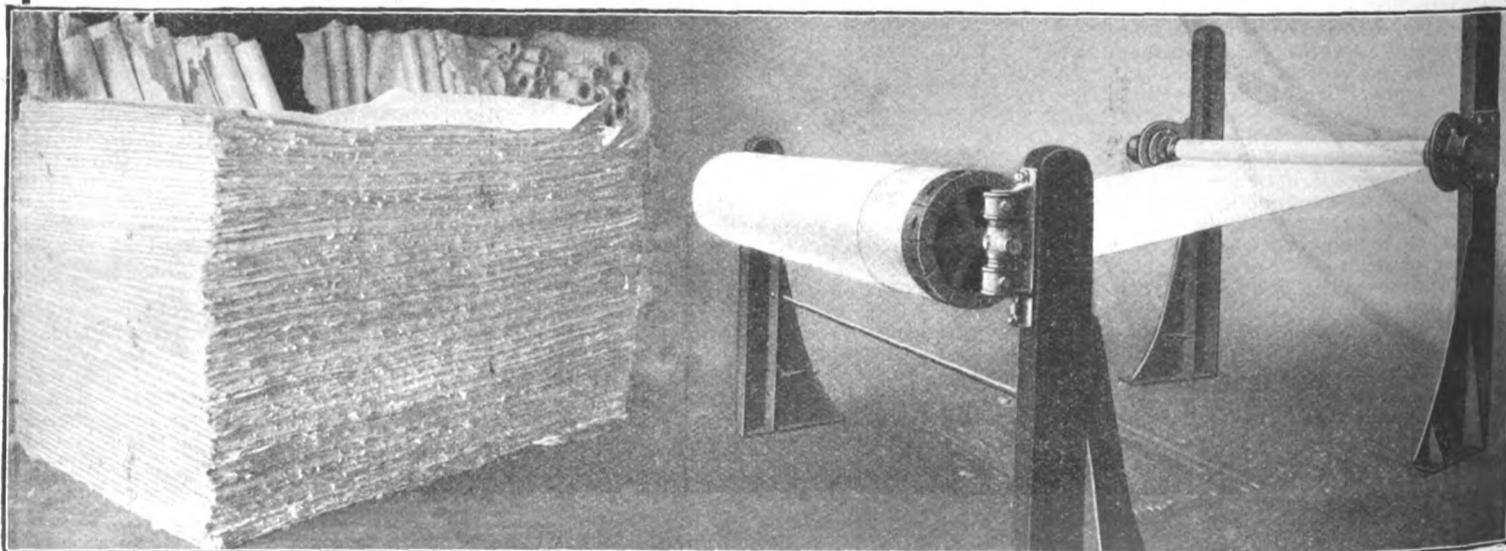

The usual sizing with rosin, which covers the fibres with a water-rejecting film and pastes them together, must of course be dispensed with. Papers made for use in intaglio printing are not sized. With poorer raw material, for instance, pulp containing little

LINOTYPE & MACHINERY LIMITED
 9 KINGSWAY, LONDON.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES :

- | | |
|---|--|
| <p>1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.</p> <p>2.—It occupies a space of only six feet on the run, and is quite noiseless.</p> <p>3.—The power required is such a small amount that it can be driven from any existing shafting.</p> | <p>4.—Centres of any kind or width can be worked on the machine.</p> <p>5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.</p> <p>6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.</p> |

MACHINES SUPPLIED FROM STOCK.

MITCHELL BROS., *Engineers,* Myrtle Road Works, Brentwood, ESSEX

cellulose, and such as is used at present largely for the making of cheaper grades of "news" for intaglio printing and rotary presses, not only must sizing be sacrificed, but a sufficient degree of the absorbing property of the paper, which the mixture of the raw materials does not contain in itself, nor may be given by a suitable treatment in the beater, must be sought for by the addition of larger quantities of fillers, such as China clay. By this means a greater absorbing quality and softness of paper is attained; also the spaces between the fibres and the surface of the paper are closed up. Without fillers such papers could not be made suitable for rotary intaglio printing. According to the weight of the paper, this filling material is in the proportion of 12 to 15 per cent. up to 20 to 25 per cent. and even more. The best intaglio papers made of rags for artistic purposes contain no fillers beyond what is sufficient for a perfect surface.

Manufacturing Paper for Intaglio.

The making of such paper of best quality, of which heavier weights are mostly desired, can be effected as follows:—The half-stuff (of soft linen rags and cotton, each one half) is thinned out and, with a proportionally large amount of water, carried into the beater. Here the fibres are, if possible, separated by the knives of the bedplate and the roll, so that they may be clean cut rather than squeezed. It is intended to give that property to the stuff which the papermaker calls making it "fast or free," and the sign of such a condition is the fast giving off of water on the wire of the paper machine. Such finished paper is of good bulk and possesses porous softness and absorbing capacity. Heavier weight papers demand also a cutting of the paper stock to a certain shortness, otherwise an even settling of the fibres on the wire is rendered difficult or made altogether impossible. After a few hours of beating, the stuff has obtained those properties which render it ready for the machine, after having been tinted blue, red or yellow as the case may be. Other colourings for intaglio printing are in little demand.

Half-stuffs for papers of poorer quality (e.g., 30 per cent. cellulose, 70 per cent. wood

pulp) must not be beaten at all; here the stroking-out of the fibres must suffice. As already mentioned, such papers are used today in large quantities for supplements by the great daily papers on their rotary presses and are largely loaded with fillings to increase their small intrinsic absorbing property and to soften the hard structure. Absorbing power and firmness are properties which may only be obtained by compromise.

The work on the paper machine offers nothing specially remarkable. Even so, however, the making of super-calendered and readily absorbing rotary intaglio paper of sufficient tensile strength in the quality and weight of news-print is not always an easy matter. All unavoidable failings of the paper machine, of the calender and winding apparatus are to be brought into such coordination that they are not multiplied, but eliminated in the finished product.

For real artistic purposes and *editions de luxe* some mills manufacture genuine hand-made papers. Cardboard, which on one side is faultless in its absorbing property, whilst the off side is finished as writing, is being made—though as far as I know it is made for intaglio printing by one mill only. For this kind two different papers are pasted together.

Difficulties from Unsuitable Paper.

From the above it can be seen that hard-sized or coated papers are unsuitable for intaglio printing. If paper must be used which has little absorbing capacity, the following difficulties may confront the printer: The ink cannot be thinned enough to facilitate its being taken out of the cuts and hollows of the engraving; thicker ink cannot be used, for the hard-finish paper could not be pushed into the engraved lines, and, therefore, would not take on the ink. The printer seeks his salvation by giving more pressure, but injures his machine thereby and gains a result that is unsatisfactory, especially in the deep shadows. Moreover, the waste occasioned thereby, considering the high price of paper, is not a very satisfactory addendum.

For this reason the attention of the printer is called to the necessity of advising his paper dealer or manufacturer of the purpose to which he intends to put the paper and of the

particular properties expected from it, so that it may not become useless to him. Whether or not these demands are compatible with the price allowance will certainly be made known to him.

As to the testing of intaglio paper, this is a simple matter. If appearance, firmness and surface conditions are satisfactory, its main requirement—sufficient absorbing power—may be ascertained with surety by applying pen and ink. In doubtful cases compare with samples of other papers known to be good, and there will be no need for testing it on the hand press.

An Old Berkshire Paper Mill.

In William Cobbett's "Rural Rides" there is the following interesting note on the paper mill at Whitchurch, near Thatcham, Berks: "Whitchurch is a small town, but famous for being the place where the paper has been made for the Borough Bank. I passed by the mill on my way to get out upon the downs to go to Alresford, where I intended to sleep. I hope the time will come when a monument will be erected where that mill stands, and when on that monument will be inscribed "the curse of England." This spot ought to be held accursed in all time henceforth and for evermore. It has been the spot from which have sprung more and greater mischief than ever plagued mankind before."

In this connection, Mr. Mat. Henry writes: "Evidently after the Peninsula Wars, etc., they had to use paper money." As a youngster some 45 or 50 years ago, I well remember my father driving over to Whitchurch some ten miles from Thatcham to see the then proprietor, Mr. Giles, who had a 36 in. machine, and made the paper for the Government for Post Office orders. I suppose this mill was cleared out many years ago."

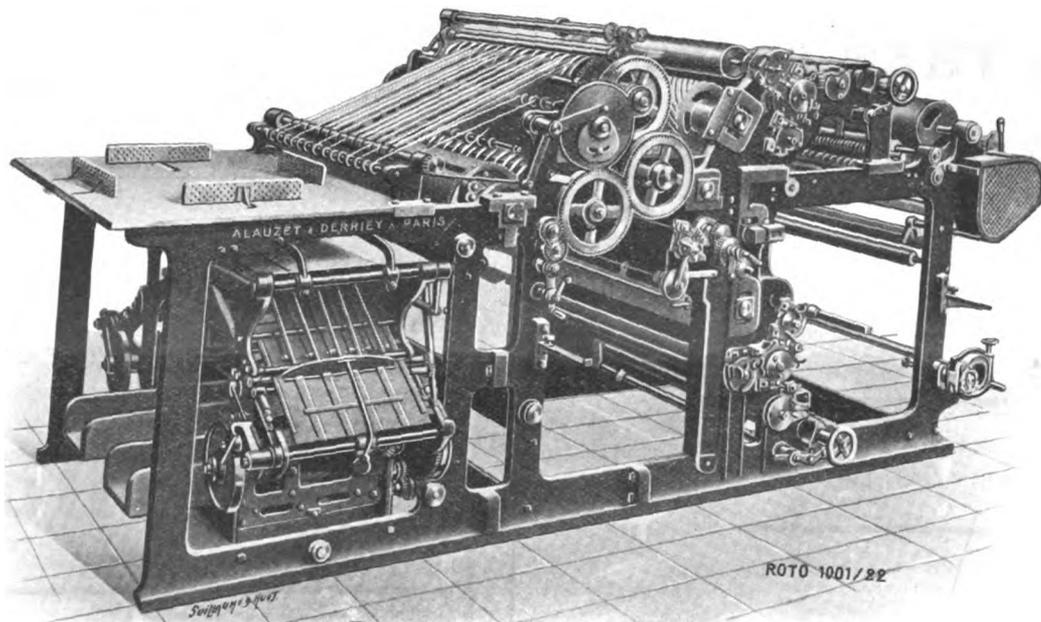

The late Mr. William Cyril Beaumont, of Palgrave, Suffolk, journalist, for 27 years managing director of the *Statesman* newspaper in India (died August 6th), left £26,753.

Trade Notes.

F.M.P. ANNUAL MEETINGS.—It has now been decided that next year's annual meetings of the Federation of Master Printers will be held in London from May 26th to 29th. The London Master Printers' Association is taking the arrangements in hand, and an attractive programme is being drafted.

SUCCESS attended the "Dance of the Merry Master Printers of East and North-East London," held at Stratford Town Hall on Thursday last, the large number of participants spending a very jolly time. The principal organiser, Mr. T. D. Hawkins, is to be congratulated upon the happy outcome of an enterprising project, as the result of which a considerable contribution accrues to the funds of the Printers' Pension Corporation.

RECEIVING ORDER.—Amongst the week's announcements of receiving orders under the Bankruptcy Act, 1914, is one relating to W. J. White, 27, Replingham-road, Southfields, London, stationer.

LECTURE BY MR. GAMBLE.—The Association of Master Printers of the Central London Districts have arranged a meeting of special interest for Wednesday, November 1st, at the Stationers' Hall, at 6 for 6.30 p.m. An address is to be delivered by Mr. William Gamble, F.R.P.S., F.O.S., on "The Influence of Photo-Offset and Rotary Photogravure on the Future of Letterpress Printing."

The Liberals in the Chertsey Division have adopted Mr. Samson Clark, of Molesey, of the firm of Samson Clark and Co., advertising agents, London, as their candidate.

An interesting event will be commemorated at Caxton Lodge, Grove-lane, Stamford-hill, N., on Thursday next, November 2nd, the occasion being the celebration of the 60th birthday of Mr. W. H. Burchell, the well-known hon. secretary of the Association of Master Printers, Central London Districts.

A **CHEQUE** for £387 was presented at Dover Town Hall on Monday to Mrs. Jenner, widow of Mr. George William Jenner, of Dover, the ship's printer on the ill-fated liner *Egypt*, who was drowned after giving his lifebelt to a woman passenger.

HOME OFFICE PRINTING CUT.—At Peterborough Quarter Sessions last Thursday the clerk reported that the Governor of Leicester Prison had returned stamped addressed wrappers which were usually used for sending calendars to justices, stating he had received notification from the Home Office that in the interests of economy the custom of issuing calendars beforehand to justices should cease.

NEW OWNERS OF "THE TIMES."—It is announced that the shares in *The Times Publishing Co.* owned by the late Lord Northcliffe, as well as those owned by Sir John Ellerman, have been acquired by Mr. John Walter, and that Major the Hon. John Jacob Astor is associated with Mr. Walter in their acquisition. According to the balance-sheet issued on June 30th, 1921, the capital of *The Times* consisted of 320,000 £1 fully-paid preference shares and 645,000 £1 fully-paid ordinary shares, and in accordance with the directions contained in the late Lord Northcliffe's first will Mr. John Walter, the great-great grandson of the founder of the journal and chairman of the company, was to be given the option of acquiring his lordship's holding, which was stated at the time to be 506,970 shares.

NEWSPAPER AMALGAMATION.—Negotiations have been completed for the amalgamation of the *Aberdeen Free Press* and the *Aberdeen Daily Journal* and of the *Evening Gazette* and the *Evening Express* and the weekly issues of the *Free Press and Journal*. Subject to the approval of the shareholders of the *Aberdeen and North of Scotland Newspaper and Printing Co., Ltd.*, the amalgamated papers will be formed into a company to be styled *Aberdeen Newspapers, Ltd.*, and the accounts will be merged from November 1st next, the fusion of the newspapers taking place at a later date.

The concert held on Saturday at the Central Hall, Westminster, S.W., in aid of the funds required in connection with the building and furnishing of the Caxton Convalescent Home War Memorial Wing was attended by a large representation of members of the printing and kindred trades. Amongst well-known artistes who contributed to a capital programme were the following:—Mr. W. Rayment Kirby, Mus. Bac., Miss Maisie Cuthbert, Miss Cissie

Simmons, Miss Francis Davidson, Mr. Charles Walbourn, Mr. Rex Harold and Mr. Sid. Gartell.

PRINTERS' BOXING.—Under the presidency of Major Arnold Wilson, the Printing and Allied Trades will hold their annual amateur boxing competition on Friday, November 17th, at the Northampton Institute, Clerkenwell, E.C., at seven p.m. Competitions at three weights: 8st., 10st. 4lb. (open to all amateurs), and 9st. 9lb., novices. There will also be exhibition boxing by the leading professionals. Entry forms, tickets, etc., can be obtained from the Hon. Secretary, 3, Ongar-road, London, S.W.6.

PRINTING TRADES FOOTBALL.—The handbook issued by the Football Section of the Printing and Allied Trades Charity Sports Association is an excellent and useful publication in that it gives all the information necessary for the printer to be kept *au fait* with the various football fixtures to be held in connection with the industry during the coming season. The handbook is a great improvement on last year's issue, and gives ample evidence of the zeal displayed in its production by Mr. George H. Marks (Fry's Metal Foundry). In addition to a league of two divisions, two cup competitions are to be played for. "Pull together" is the key-note of the secretary's appeal, and if this is done, a successful year's programme is sure to ensue.

The Deptford Works Committee recommend the Borough Council to accept the offer of an advertising agency to erect approved advertising signs on lamp standards in the borough, and to pay to the Council £20 per sign for the first year and £15 for the second and third years, with a minimum of fifty signs.

FOUNDED on October 20th, 1822, the *Sunday Times* has just celebrated its centenary, and publishes a number of messages of congratulation received on the occasion, including one from his Majesty the King.

The *Spectator* returned on Saturday to its pre-war price of 6d. per copy. In response to the requests of many readers, the type of the *Spectator* has been enlarged throughout.

"THE BUCKS STANDARD," of Newport Pagnell, has just installed in its printing office the Lanston Monotype, with jobbing attachment, and announces that the whole of its eight pages are now Monotype set, whilst the office's resources for general printing are much increased.

The *Guild Socialist* for October is specially devoted to the printing industry, and contains articles from various authorities on the industry.

TWO ENGINEERS, John Carnaby Marshall and John Paxton, were committed for trial at Barrow last week, on a charge of being in unlawful possession of certain paper intended to resemble and pass as paper used for making a banknote. A woman witness alleged that Marshall had told her he was trying to make notes, but could not get the numbers right. In a signed statement, however, she said she had not discussed the matter with the two men.

DEATH OF MR. GEORGE CADBURY.—We regret to announce the passing of Mr. George Cadbury, which occurred at his residence in Birmingham on Tuesday evening. Mr. Cadbury, who had entered his 84th year, had been in failing health for some time. It was Mr. Cadbury's zeal for social reform that led him into field of newspaper proprietorship. He had bought four papers in the Birmingham district in 1891, and ten years later Mr. Lloyd George and others persuaded him that he would give substantial support to the cause he held dear by taking over the part-proprietorship of the *Daily News*. After some hesitation, he put a considerable sum of money into the paper, which came under the management of a board of directors including the late Dean Kitchin, the late Mr. J. P. Thomasson, and others. Later circumstances compelled him to assume the sole responsibility for the paper; but some years afterwards he transferred his interests to a trust administered by his sons.

The death took place suddenly on Sunday of Mr. William Clark (66), of Heaton, Newcastle-on-Tyne. The deceased had been 53 years in the service of Messrs. R. Robinson and Co., Ltd., wholesale stationers and printers, and was at business as recently as Saturday, apparently in his usual health.

The death has occurred of Mr. Arthur Garside, for 42 years on the staff of the *Manchester Evening News*.

The death is announced in New York of the Rev. Lyman Abbott, editor-in-chief of the *Outlook* and the author of many books.

The death has occurred in Dublin of Mr. Alexander Phillips, one of the best known journalists in Ireland. A member of the staff of the *Irish Times*, and previously chief reporter of the *Dublin Daily Express*, he was for many years Dublin correspondent of the Press Association.

FIRE broke out last week at the building occupied by the Paris evening newspaper *Intransigeant*, and the damage caused was considerable.

The suit brought by the ex-Kaiser against Herr Emil Ludvig, the author of the drama "Dismissal," in which the ex-Kaiser and Bismarck appear among the characters, has been decided by the Prussian Court in favour of the defendant. The publication of the play in book form, as well as its dramatisation, is now consequently permitted.

MAXIMILIAN HARDEN'S well-known political weekly *Die Zukunft*, says a Berlin telegram, has ceased publication owing to pecuniary difficulties.

Trade Union Matters.

MEMBERS of the National Union of Journalists on Plymouth and Exeter daily papers and North and South Devon and Cornwall weeklies, meeting at Plymouth, unanimously instructed the National Executive to reject the Newspaper Society's proposed wage cut, and pledged themselves to support the Executive in any step necessary to maintain the present position.

AFTER being remanded on the charge of stealing £534, the money of the Typographical Association, James Waters (60), the Newcastle treasurer of the Association, has been sentenced to six months' imprisonment.

Printers' Readers at Dinner.

Lady Hulton Presides at the 28th Annual Festival of the Readers' Pensions Committee.

There was a large gathering in the Venetian Chamber, Holborn Restaurant, on Saturday, on the occasion of the annual dinner of the Readers' Pensions Committee. Unstinted praise was meted out to the importance of the work of the printer's reader, and encouraging references to the energies displayed by the Pensions Committee were made by many of the speakers, who included a number of distinguished authors and journalists. Lady Hulton, who presided, made an excellent chairman, and among those present were the following: Sir Neville and Lady Pearson, Sir G. Rowland Blades, M.P., Mr. and Mrs. J. Gomer Berry, Mrs. C. S. Peel, Dr. W. L. Courtney, Mr. J. Heddle, Miss Hulton, Mr. and Mrs. Gilbert Frankau, Prof. H. J. Spooner, Mr. J. Theodore Goddard, Mr. and Mrs. W. A. Perkins, Mr. J. Randall, Mr. H. M. Gurr and Mrs. Gurr, Mr. Fred Hart, Mr. T. E. Naylor, M.P., Major and Mrs. Carruthers, Mr. E. W. Whittle, Mr. F. Hedger, Mr. Jos. Mortimer, O.B.E., Mr. H. F. Parker (general secretary Lloyd's Home) and Mrs. Parker.

After the loyal toasts had been honoured, Sir Neville Pearson, Bart., proposed that of "Literature and the Press," and in a brief speech mentioned several instances in which he thought the work of the newspaper Press and that of literature went hand in hand.

Dr. W. L. Courtney, in replying on behalf of Literature, said he associated himself with those who felt a great and growing regard for the readers of the Press. One not only had to admire their ceaseless energy, but authors were always in considerable awe as to what they might do to their manuscripts. (Laughter.) The printer's reader had solved the secret which all literary people kept closely concealed—the secret that no one is so negligent as the writer of books. From what he could gather, writers in the full fervour of their animating rhetoric would go on putting in their "and whichs" and split infinitives. (Laughter.)

Mr. James Heddle, who responded on behalf of the Press, dealt among other things with the speedy production of the modern newspaper, and mentioned the fact that Mr. Lloyd George's speech in Leeds was received in Manchester and London simultaneously, the last word being in the hands of the reader ten minutes after the ex-Prime Minister had taken his seat.

The Pensions Committee.

The toast of the "Readers' Pensions Committee" was proposed by Lady Hulton, who expressed her great pleasure and pride at being asked to take the chair. Though the wife of a newspaper proprietor, Lady Hulton confessed to knowing little about present-day newspaper production. She could not help knowing how dreadful a thing it was for a proprietor to find errors in his own newspaper. Sometimes she heard the echoes of a thunder. (Laughter.) A greater strain than ever was now put upon the readers of the Press, whose work was not done in the peaceful library, or in the retiring sanctum, but amid rush and turmoil. It was a question of reading against time, with both eyes looking for mistakes which, if allowed to slip through, might have unpleasant consequences in the form of a libel action. (Hear, hear.) Concluding, Lady Hulton said their task that night was one of charity, and she hoped that the efforts of the Pensions' Committee would receive generous recognition. (Cheers.)

The James Feldwick Pension.

Mr. W. A. Perkins (chairman of the committee) thanked Lady Hulton for the sympathetic manner in which she had proposed the toast, and also for the great interest she had taken in promoting the success of the gathering. He also expressed the gratitude of the committee to those who had subscribed so generously to the fund. Although they had established fourteen pensions, the need for further effort was great. This year they had an exceptional number of claimants for pensions. At least half a dozen candidates had subscribed to all or nearly all the committee's pensions, in addition to being annual

subscribers for long periods, up to nearly 50 years, to the Printers' Pension Corporation. That was the type of man who received help from their fund. The committee had decided to name their fifteenth pension (which would be completed as a result of that night's gathering) the "James Feldwick Pension," in recognition of the work of Mr. Feldwick as, first, a member of the executive, then as one of the secretaries, and finally for many years as chairman. He (Mr. Perkins) had been associated with Mr. Feldwick in the committee's work for many years, and could testify to his zeal for the cause. In fact, James Feldwick specialised on the work of the Readers' Pensions Committee, and, even now that he had retired from office, and for a considerable time had been incapacitated by illness, he sent to the committee from his home at Peckham words of counsel and advice which were much appreciated. Mr. Perkins announced further donations to the list, which totalled about £550.

The Guests.

The toast of "The Guests" was proposed by Mr. P. J. Greene and acknowledged by Mrs. C. S. Peel, O.B.E., Mr. J. Theodore Goddard and Mr. N. B. Graham.

Mrs. Peel declared her love for printers, and said that it was very nice to have come to an age that people kindly call the age of discretion, when one can say to a gathering such as the present that she loved printers, a statement that did not make them feel shy in the least. (Laughter.)

Mr. Goddard spoke of happy hours spent in the courts defending newspapers in libel actions, and Mr. Graham brought friendly messages of greeting from the provinces to the Pensions' Committee.

The Chairman.

Mr. J. Gomer Berry, in proposing the health of Lady Hulton, congratulated the Pensions' Committee in securing Lady Hulton to occupy the chair. Her presence in that capacity was a recognition of the new status of women. He would not prophesy how many of the twenty-eight women candidates for Parliament would be returned at the General Election, but he thought he might say that, if at any future time history were to repeat itself, and there was a meeting of members of Parliament where a Government was turned out, practically in one hour, that meeting would consist entirely of women. (Laughter.) Sir Gomer Berry, after paying a tribute to the distinguished newspaper proprietor, Sir Edward Hulton, asked the company to rise and drink heartily to the health of their chairman.

The toast was enthusiastically accorded, musical honours were given.

Lady Hulton, replying, expressed sincere thanks for the manner in which the toast had been received, and congratulated the *Sunday Times* on reaching its centenary.

The proceedings during the evening were enlivened by a very agreeable musical programme, contributed by the following artistes:—Mr. Arthur Frith, Miss Gladys Peer, Mr. Gordon Marsh and Mr. Walter Phillips.

A most enjoyable gathering was brought to a close by the singing of "Auld Lang Syne."

CHURCH AND INDUSTRY.—The Church Socialist League, in an appeal to the bishops, clergy and laity on the subject of industrial morality, asks the archbishops and bishops "to inform the Federation of British Industries that the onus lies on it to find some radically new methods of carrying on industry and commerce, such as shall be compatible with Christian morality." The Federation of British Industries, "continues the appeal, "claims that everything should be settled simply and solely by alleged 'economic necessities.' The Church of England, in various pronouncements during the last 15 years, has demanded that moral first charges be insisted on, and that these matters be not settled mechanically by supply and demand."

It requires a vision that reaches beyond closing time to build any permanent success.

Electrotypers' Wage Settlement.

Position of the London Unions.

It became known on Thursday last that the ballot taken by the National Society of Electrotypers and Stereotypers had gone in favour of the acceptance of the wage proposals submitted. An agreement has accordingly been ratified on behalf of the Federation of Master Printers, the Newspaper Society, and the trade unions, whereby the Electrotypers and Stereotypers' Society accept a reduction of 6s. per week in the rate of wages payable to members employed by members of the Federation of Master Printers of the United Kingdom and the Newspaper Society in two instalments, viz., 4s. on the pay day in the week ending October 28th, 1922, and 2s. on the pay day in the week ending January 6th, 1923. The agreement includes provision that wages shall be stabilised until December 31st, 1923, and no application for reductions or increases shall be made during that period in the rate of wages payable under the terms of the two national agreements.

Negotiations with Other London Unions.

The special delegate meeting, which, as we reported last week, the London Society of Compositors has agreed to hold in order to put before members the new wage proposals, was to be held last evening (Wednesday), after which a ballot of the whole membership is to be taken. Negotiations have been resumed also with all the other trade unions operating exclusively in London. The following is the proposal put forward by the employers: "That a reduction of 6s. per week be agreed to, of which 4s. shall be deducted on and from the pay day in the week ending November 4th next, with a further reduction of 2s. on and from the pay day in the week ending January 6th, 1923; wages to be stabilised until December 31st, 1923, subject to a conference being agreed to if the necessities of the trade during next year warrant revision, by agreement, of the above proposal." The representatives of all the unions concerned have undertaken to report back to their executives, and also to take the opinion of their members upon this proposition.

Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

There was a moderate attendance of members at the October meeting of the Association on Tuesday, last week, which took place at the headquarters, St. Bride Institute, Bride-lane, E.C.4. In the unavoidable absence of Mr. A. Chadwell (president) Mr. G. W. Sharvell was voted to the chair.

The minutes of the previous meeting were read by the secretary (Mr. W. Bullett) and confirmed.

Some private business concerning the affairs of the Association was dealt with first.

Mr. A. Wood then, on behalf of the stewards, reported on the arrangements in hand for the annual dinner, and said that the stewards, after making full inquiries at many of the well-known hotels had settled on the Trocadero, Piccadilly, for Saturday, November 18th, at which to hold their annual function. The arrangements thus made by the stewards and reported to the members were then confirmed by a vote of the meeting.

Mr. J. Parker drew attention to the fact that Mr. W. C. Warren was this year acting as their steward at the Festival dinner of the Printers' Pension Corporation, and said he thought it would be a good thing if every member of the Association attached his name to Mr. Warren's list with a substantial donation.

Mr. W. C. Warren (general secretary, National Society of Electrotypers and Stereotypers), who was asked to address the meeting, said already he had to thank several members of the Association who had sent a cheque or had promised to do so in order to assist him in his stewardship at the Festival Dinner on November 15th. Continuing, Mr. Warren said he had been speaking on the subject of printers' pensions for several days past. On the previous evening he had addressed a small audience of fellow craftsmen in Liverpool, and though they did not seem to know

much about the aims and objects of the Printers' Pension Corporation, they were not long in voting a donation of £5 to be placed on his list. The same thing happened in Manchester, with a similar result. Mr. Warren then emphasised the excellent work being undertaken by the Corporation to provide for the war orphans of the printing trade. He was sorry to hear that the funds in existence for this purpose were £8,000 to the bad, but he hoped as a result of the Festival Dinner a great deal of the money required would be raised. So far as printerdom was concerned Mr. Warren thought it was necessary for the facts to be generally known in order to ensure to the Corporation adequate support.

The chairman then made an appeal to the members to give all the help they possibly could to Mr. Warren.

Resolutions were moved by various members, some of which proposed to place a collective sum from the Association, but it was eventually agreed to leave the question of contributing to the members individually.

A vote of thanks to Mr. Sharvell for his duties in the chair brought the meeting to a close.

The Printing Crafts Guild.

The fifteenth annual general meeting was held in the Municipal College of Technology, Manchester, on Saturday evening last, the chair being occupied by Mr. Charles W. Gamble, O.B.E., M.Sc.Tech.

The minutes having been read and confirmed, Mr. F. J. Hughes, honorary secretary, read the fifteenth annual report for session 1921-1922, showing the position of the Guild at September 30th last. The report stated that during the past session the lectures, visits and socials had been more numerous than in any previous session, this being mainly due to the enthusiasm displayed by the chairman, Mr. Charles W. Gamble. The membership stands at 470, thus creating a new record. In the previous session the total was 444. Owing to the high postal rates the communications to members had made a serious call upon the funds, but there was a brighter hope for the future now that the halfpenny post had been resuscitated. The balance sheet showed an income of £97 3s. 3½d., and an expenditure of £87 7s. 2d., thus leaving a favourable balance of £9 16s. 1½d. The committee expressed thanks to the following for their valuable assistance during the session:—The House Committee of the College, Messrs. J. J. Phelps, M.A., E. Fisher, James Shaw, F.R.P.S., L. Conrad Hartley, F. Greenwood, City Art Gallery Committee, Hans Renold, Ltd., Associated Newspapers, Ltd., Fry's Metal Foundry, E. Hulton and Co., Ltd., Sun Engraving Co. (Watford), Linotype and Machinery Limited.

The report being passed, Mr. C. Doughty, treasurer, presented the balance-sheet, and Mr. J. Begg, auditor, stated he had found all finance in order, but regretted that one of the social events had been a tax on the funds instead of paying its way. He hoped that the new officers would not lose sight of his remarks.

The election of officers brought the popular president to his feet, and he explained that after holding the position for several years he thought others should be allowed to come forward to such an honourable position; therefore, he recommended Mr. A. Trickey, who had been an enthusiastic teacher in the College for than twenty years, as his successor.

Several members expressed admiration of Mr. Trickey's capabilities, but that gentleman said he preferred the presidency being in the same hands, and withdrew the nomination.

There was a vociferous call upon Mr. John Taylor to continue as president, and he gracefully accepted the mandate.

As chairman of committee, Mr. Charles W. Gamble, O.B.E., M.Sc.Tech., was re-elected, as well as Mr. C. Doughty as hon. treasurer, and Mr. J. Begg, hon. auditor.

The chairman here interposed that they had to accept with regret the resignation of their honorary secretary, and he called upon that officer to make some remarks.

Mr. F. J. Hughes said his reason for retiring was on account of the time required to conduct the affairs of the Guild in an efficient manner, and also, he thought other persons should have an opportunity of gaining experience of human nature in its various aspects. The Guild had been fifteen years in

Situations Wanted.

ADVERTISER seeks opening with a firm of Paper Merchants; good general knowledge of the trade, also English and Foreign shipping.—Box 14004.

BUYER, desires change; intimate knowledge Paper Market; five years Buying experience all classes Paper, Wrappings, Printings, Boards, etc.; used to controlling staff; excellent references; Edinburgh and Glasgow district preferred.—Box 14002

MINDER (Soc.) seeks situation; Wharfedales and Platens; best Jobbing, etc.; 7 years' experience.—127, Leesland-road, Gosport. 14011

YOUNG MAN, with fair knowledge Book-keeping and General Office Routine, desires engagement; small salary accepted to commence.—Box 14010.

Machinery for Sale.

BREHMER and other WIRE STITCHERS, various models, including 4's, 4A's and Double-headed; guaranteed.—Box 13995.

existence and it was the only one of its kind that was able to continue during the period of the Great War. Its first secretary was Mr. W. R. Cannell who held the office for three years, and Mr. R. F. Singleton had also served for a similar period. When he (the speaker) took up the reins of office the membership was 87, and during the nine years he had been honorary secretary it had increased to 470, the labour now entailed calling too much upon the limited leisure time of one individual. Fortunately, he had been helped by excellent officers, and when the country was short of elderly craftsmen to look after the younger generation, their ex-president, Mr. R. B. Fishenden, heartily threw his services into the Guild and collaborated with the present president, Mr. John Taylor, so that there had been no break of service for the benefit of the apprentices who will eventually become the craftsmen of the future.

The members desired Mr. H. Holme, Moss Bank, Richmond-street, Ashton-under-Lyne, who has faithfully and consistently helped Mr. Hughes during the two past years, to accept the office of honorary secretary, and that gentleman kindly acquiesced.

The post of assistant hon. secretary was willingly filled by Mr. A. Edwards.

The committee includes: Miss E. Dust Messrs. J. E. Cass, J. Crook, E. Fisher, F. J.

BREHMER BOOK SEWING MACHINE, for Letterpress work, distance between stitches, also length of stitches—adjustable according to size of Books; machine to take any size of Books up to 14-in. long and 9½-in. wide; machine for Power.—Box 13996.

PERFECTION WIRE STITCHING MACHINE, by J. L. Morrison; will stitch up to 1½-in. in thickness; this machine is equal to new. No. 17½ Wire Stitching Machine, by Brehmer, will stitch up to 1½-in. in thickness; fitted for Power.—Box 14000.

SMYTH-HORNE No. 3 BOOK SEWER for sale; can be seen working any time.—Box 13994.

SMYTH-HORNE, LTD., 1-3, Baldwin's-place, Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

IMPOSING SURFACE (Second-hand), about 72-in. by 32-in.—Particulars to "Observer" Office, Accrington. 14003

Miscellaneous.

NAMES wanted of 3 or 4 Non-Society Lithographic Printing Firms having two or more Litho Machines.—Box 13977.

REMINGTON Latest No. 10 TYPEWRITER, coded, self-starter model, absolutely unused, as new; sacrifice, £14; cost nearly double.—White, Arcade, Northampton. 14008

Patents, etc.

THE Proprietors of British Patent No. 7,098 yb 1914, relating to CYLINDER PRINTING MACHINES, desire to enter into arrangements of way of license or otherwise on reasonable terms for the purpose of developing and practically working the same in this country.—Inquiries should be addressed to Sefton-Jones, O'dell and Stephens, 285, High Holborn, London, W.C.1. 14007

Hughes, G. H. Lodge, Edward McVay, W. M. Menzies, J. T. Shelmerdine, A. Trickey, H. J. Phillips, Jas. Worthington.

District representatives are as follows:—Altrincham, E. Ashton (Broadheath Printing Co., Viaduct-road); Ashton-under-Lyne, H. Holme (hon. secretary); Bolton, Ernest Boardman (Mornington-road); Bury, F. Roscow (15, Malvern-avenue, Walmerley-road); Hyde, H. W. Wallace (10, Newton-hurst, Victoria-road, Newton); Oldham, Geo. H. Rider (36, Trinity-street); Rochdale, Wm. Ingham (31, Mackinnon-street); Stockport, R. F. Singleton (113, Turncroft-lane).

The official technical journal of the Guild is as hitherto, the *British and Colonial Printer and Stationer*.

A recommendation from the last annual meeting "that the membership be limited" had been discussed by the committee at the beginning and again at the end of the session. After hearing the pros and cons given by the honorary secretary, the committee thought such a recommendation would interfere with the useful and wide policy of the Guild. Upon being submitted to the annual meeting the recommendation was rejected. WEE MAC.

It is unfortunate that men will allow "good enough" to keep them from the best.

THURSDAY, OCTOBER 26, 1922.
General Election and Printing.

THE advent of a general election, whilst it is regarded as promising to give greater stability to trade as a whole, is very immediately beneficial to the printing industry, as so many printing orders owe their origin directly and indirectly to the exigencies of election activities. The consequent fillip will be especially welcome at the present time, as, although there is some sign of the normal seasonal improvement in the printing industry, the state of trade is not as good as it ought to be. The cost of printing, unfortunately, curtails the amount of election orders that will be given in the next week or two, but printers all over the country will be busy on work of a political character, and the orders given will be the bigger for the fact that the sudden break-up of Mr. Lloyd George's Government has rendered useless much of the ammunition with which, in the form of poster and leaflet, the Coalition had already stocked its magazines.

Parliamentary Election Forms.

A FEW weeks ago His Majesty's Treasury (as indicated in our issue of September 14th) approached the returning officers throughout the country and asked for information as to the quantity of the official Parliamentary forms used in their respective divisions and the cost of these forms, intimating also that consideration was being given to the question of arranging that all these forms and the official stationery used at Parliamentary elections should be supplied through the Stationery Office. We understand that representations have been made to the Stationery Office by the Federation of Master Printers to the effect that it was very improbable that any economy at all would be effected by a change in the present arrangements whereby these forms are supplied direct to the respective returning officers by local printers or by contractors who specialise in this particular direction. It was pointed out that the distribution of the forms demanded a special organisation, that the formes were already standing in the printing offices accustomed to doing the work, also that with the exception of small quantities supplied during by-elections the contractors' only chance of

recovering the heavy cost of keeping these formes standing occurred when a general election took place. The total expenditure concerned is said to be not more than £2,000, and as it is open to the returning officers to order either locally or from any of the larger contractors there is sufficient competition to prevent any exorbitant charges being made. Inquiries made last week by the Federation of Master Printers elicited from the Treasury the information that no decision had yet been reached on the question, but that if a general election took place within two months it was very unlikely that the Stationery Office could arrange its organisation to deal with the matter. No more definite information than this could be obtained, but in view of the definite proximity of the election it may be assumed that existing arrangements will not be disturbed. It is, however, somewhat absurd that the suggestion of the change should have been made in a matter that showed so little prospect of securing any benefit to the taxpayer.

The Latest Wages Position.

AN important step towards the final settlement of the problem of wage reduction is made by the acceptance by the National Society of Electrotypers and Stereotypers of the agreement which we print on another page. This agreement completes the settlement of wages in the provinces besides applying to electrotypers and stereotypers employed in London. In submitting their revised proposals to the representatives of the unions concerned, the employers, we understand made it perfectly clear that this is the final offer, and that under no circumstances will they go into conference on a lower figure. They also made it perfectly clear to these executives that in the event of the proposal being turned down the L. M. P. A. Council would not feel able to prevent those firms desirous of enforcing the suspended notices from having perfect freedom of action at their own convenience at a time to be settled by them collectively.

Reduction of Postal Rates.

THE resolution adopted by the Joint Industrial Council of the Printing and Allied Trades urging the Postmaster-General to reduce immediately the postal rates for printed matter in the larger packages, to remove the restrictions as to the time for posting printed matter, and to give a definite ruling that any five words can be used on a picture post card, was duly sent to the Postmaster-General. Mr. A. E. Goodwin, joint-secretary of the J.I.C., has since received a reply which he states is not at all encouraging. It is to the effect that it is not possible to carry out any of these suggestions at the moment. We are glad to hear, however, that steps are being taken to lay the matter before the authorities, and evidence is being collected to show how seriously trade is being handicapped by the present high rates. Members of the printing industry can do useful work in this connection by questioning all Parliamentary candidates in their divisions as to whether they are in favour of further reductions in the postal rates.

Paper Export.

THE feature of the paper market continues to be the development in export; and in regard to paper business generally, mills are beginning to work at full capacity. Indeed, owing to the amount of orders in hand, one of the better grade mills on the Thames has been obliged to transfer some of its business to another mill in the same organisation, this being due chiefly to the improvement which has taken place in export business. An important feature in overseas trade is the bigger business which is being done in news-print; and in this connection it is interesting to note that the Canadians have withdrawn their price from Australia, according to the latest advices from that quarter.

Mr. Andrew Dargavel Feted.

Process Engravers at the Hotel Cecil.

The high esteem in which the process engraving industry holds Mr. Andrew Dargavel (John Swain and Sons, Ltd.) was made manifest on Monday evening, when members of the Federation of Master Process Engravers to the number of about 100 met at dinner in Mr. Dargavel's honour. The function took place in the Victoria Hall of the Hotel Cecil, and the gathering included many whose names are household words in the process realm.

Mr. V. Siviter Smith, vice-president of the Federation of Master Process Engravers presided, and beside him at the top table were: Messrs. P. J. Bailey, David Greenhill, F. Colebrook, T. C. Eamer, John Swain, E. Atkinson, H. Clarke, W. Holt, F. E. S. Perry, A. Craske, F. H. Vaus and W. H. Smith.

tion and regard of them all. (Applause.) This was true not only of the members present, but of others all over the country. There was not one of them—even amongst those who had not been able to agree with Mr. Dargavel on all points of policy—but joined in personal regard for the man and the numerous services he had rendered to the Federation. (Applause.) The speaker went on to indicate the great sacrifice of time that had been entailed in Mr. Dargavel's attending 42 council meetings during the past year, besides dealing with a great deal of other Federation work in addition. By his infinite patience, his kindly encouragement of others, his unfailing allowances for differences of temperament, and his strength in council, he had put the engravers under a debt which they could never repay. (Hear, hear.)

Mr. Siviter Smith then presented Mr. Dargavel, on behalf of the Federation of Master Process Engravers, with a diamond tie-pin, a cheque for £150, together with a handsome

Mr. Dargavel Replies.

Mr. Dargavel, in acknowledging the appreciative remarks made about himself, said that he had at home a number of letters written in the same strain. These he kept in a little inlaid box, itself a gift from a Federation member. That little box and its contents served to remind him of very many pleasant associations and friendships, and it had well fulfilled the purpose for which it was intended. He valued it as a token that his efforts on behalf of the Federation and the trade had met with some appreciation. Anything more than that, he had neither hoped nor expected. He felt it quite impossible to find words to express adequately his thanks for the kind things that had been said, the very magnificent presentation made, and the very high honour done him that evening. As for the work he had done, it would not have been possible but for the assistance and support which he had received from all the members of the Council, and very many other members as well. Mr. Dargavel proceeded—with many humorous references to the idiosyncrasies of the gentlemen mentioned—to refer to the good work done by several of his colleagues, naming particularly, Mr. David Greenhill, Mr. Bailey, Mr. Vaus, Mr. Huggins, Mr. Eamer, Mr. Hunter, Mr. Smythe, Mr. Perry, Mr. Atkinson, Mr. Craske, Mr. Thomas and Mr. Siviter Smith. Recalling the early work of Mr. Carl Hentschel in the formation of the Federation, he said he thought Mr. Hentschel would be justified in claiming that he had laid the foundations and paved the way for the greater things that were to follow. Mr. Dargavel concluded with renewed expressions of thanks for the honour done him, which, he said, he would remember as long as he lived.

Mr. Andrew Dargavel.

Other well-known process people, including Mr. Carl Hentschel, Mr. A. Knighton and Mr. William Gamble, were to be seen at other tables.

Excellent arrangements had been made by the dinner sub-committee (Messrs. T. C. Eamer, Carl Hentschel and A. Knighton) who, with the energetic secretary of the Federation (Mr. A. E. Dent), contrived to make the whole function a happy and successful one.

A Handsome Presentation.

The chief item on the short toast list was the health of the guest of the evening, Mr. Andrew Dargavel. This was given by the chairman, in a speech which expressed very cordial appreciation of Mr. Dargavel's character and work, and which was heartily endorsed by those present, the toast being given musical honours. Mr. Siviter Smith recalled that Mr. Dargavel was now in his eighth year of office as president of the Federation of Master Process Engravers, and they were gathered that evening to demonstrate that Mr. Dargavel, by his assiduous and disinterested work, had gained the affec-

tion and regard of them all. He also read a letter which accompanied the gifts, and which conveyed acknowledgement of Mr. Dargavel's great services to the Federation since 1914, there being appended congratulatory messages received from various parts of the country.

The chairman's remarks and the making of the presentation were greeted with tumultuous applause.

The principal presentation was hereupon followed by a subsidiary one, Mr. Entwistle (of Manchester) rising to say that members of the Northern Counties Association wished, apart from their individual participation in the presentation already made, to show their appreciation as an Association. Mention had been made of differences between the provinces and London, but provincial members were absolutely at one with London in their regard and affection for Mr. Dargavel. (Applause.) Manchester members knew Mr. Dargavel as a violinist and musician, and accordingly asked him to accept two bound volumes containing the complete works of Beethoven arranged for violin and piano. (Applause.)

Personal.

AMONG those connected with the allied trade who attended the reception and dejeuner to the Prince of Wales at the Guildhall on Friday were: Lord Riddell, Ald. Sir Rowland Blades, Ald. Sir T. Vansittart Bowater, Sir E. Hodder Williams, Mr. Deputy Brough, Major Bowater, Sir Wm. Waterlow and Mr. Deputy Sandle.

THE Reception Committee included Sir G. W. Truscott, Sir W. A. Waterlow, Mr. W. Lindley-Jones, Mr. F. H. Bowater and Mr. Sheriff S. H. M. Killik.

SIR ARTHUR M. SUTHERLAND, the principal proprietor of the *Newcastle Chronicle* and associated papers, will be one of the candidates for the Jesmond Ward at Newcastle-on-Tyne at the municipal election on November 1st. His opponent will be Mr. William Caen, the nominee of the Typographical Association and the Newcastle Labour Party.

SIR WILLIAM PRICE, of Messrs. Price Bros. and Co., Ltd., pulp and paper manufacturers, Ltd., Quebec, is reported to be substantially interested in a syndicate which has purchased the *Quebec Chronicle*, formerly owned by the late Sir David Watson.

Mr. HARRY MURCH, the staff superintendent of the *Daily News* and the *Star*, was entertained to dinner on Saturday night at the Boulogne Restaurant, Gerrard-street, W., on the completion of 25 years' service with the firm.

Mr. E. S. AGNEW, the son of the proprietor of *Punch* has been invited to contest the Holland with Boston Division of Lincolnshire in the Liberal interest at the next Parliamentary election.

Mr. FRED. ALLEN, of the literary staff of the *Bury Times*, has been presented by the editor and staff of that paper with several handsome volumes on leaving to join the staff of the *Wolverhampton Express* and *Star*.

Mr. WILLIAM C. EDGAR, the editor of the *North-Western Miller*, who has been associated with that important trade journal for 40 years, has been given a complimentary luncheon by the National Association of Flour Importers. The *North-Western Miller* will celebrate its "jubilee" next year.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

STANDARD PRINTING Co., LTD. (Printers, manufacturing stationers, South Croydon)—Debenture dated October 5th, 1922, to secure £1,250, charged on company's undertaking and property, present and future. Holder: E. J. Bell, 17, Queen Victoria-street, E.C.

A. H. BUTLER, LTD. (Printers, etc.)—Mortgage and second charge on 33, 34 and 35, Western-road, St. Leonard's-on-Sea, both dated September 29th, 1922, to secure £800 and £50 respectively. Holders: E. G. Hutchinson, 111, Priory-road, Hastings; S. C. Munner and P. Idle, 5, Warrior-square, St. Leonard's-on-Sea.

GERRARDS, LTD. (Printers, etc., London)—Satisfaction in full on November 24th, 1921, of three debentures, all dated November 9th, 1914, securing £600, £1,800 and £100 (notice filed October 12th, 1922).

HENRY CHRISTMAS AND Co., LTD. (Printers, stationers, etc., London).—Five mortgage debentures dated October 2nd, 1922, to secure £100 each, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: H. Christmas, 41, Balmes-road, N.1.

E. C. OSBORNE, LTD. (Stationers, printers, etc., Birmingham).—Particulars filed of £2,000 first and £1,000 second debentures authorised by resolution of October 4th and 10th, 1922, respectively, charged on the company's undertaking and property, present and future including uncalled capital, the whole amount being now issued.

DUFF STEWART AND Co., LTD. (Music publishers, etc., London).—Particulars of £2,500 debentures authorised September 27th, 1922, charged on company's undertaking and property, present and future, whole amount issued.

ESSEX TELEGRAPH, LTD.—Satisfaction in full on June 24th, 1922, of mortgage dated September 29th, 1911, securing £2,000.

LES GALERIES UNIVERSELLES, LTD.—Satisfaction in full on September 22nd, 1922, of charge dated January 31st, 1913, securing £85,000.

FORD AND BRANCH, LTD. (Manufacturers of paper bags, etc., Gloucester).—Satisfaction to the extent of £150 on September 4th, 1922, of debentures dated March 9th, 1912, securing £1,600.

DRAWING OFFICE SUPPLIES, LTD. (Manufacturing stationers, etc., London).—Satisfaction to the extent of £4,000 on October 9th, 1922, of debentures dated August 25th, 1921, securing £44,000.

WILLIAM ASHTON AND SONS, LTD (paper merchants, stationers, etc., Southport).—Satisfaction in full on August 17th, 1922, of debentures dated August 20th, 1904, securing £3,000.

SHEFFIELD CARDBOARD BOX Co., LTD.—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated September 27th, 1922, to secure all moneys due or to become due from the company to Barclay's Bank.

W. LOOKER, LTD. (stationers, printers, dealers in fancy goods, etc., Bath).—Debenture dated September 29th, 1922, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Branch Nominees.

W. C. HAYES, LTD. (printers, stationers, newsagents, etc., Chipping Norton).—Satisfaction in full on September, 9th, 1922, of mortgage dated January 13th, 1913, securing £350.

NATIONAL CHAMPION PRESS SYNDICATE, LTD. (London).—Particulars filed of £10,000 debentures authorised September 22nd, 1922, charged on the company's property, present and future, including uncalled capital; the amount of the present issue being £5,000.

CROPPER AND Co., LTD. (manufacturers of and dealers in folding boxes, corded and paper bags and paper specialties, etc.).—Debenture dated September 29th, 1922, to secure £100,000, charged on freehold and leasehold premises in Southwark, S.E., and Thatcham, Berks, and company's undertaking and other property, including uncalled capital. Holder: The Treasury Solicitor.

CHALLENGE, LTD.—Debenture dated September 26th, 1922, to secure £5,000; charged on the company's undertaking and property, present and future. Holders: Rev. H. R. L. Sheppard, 6, St. Martin's-place, Trafalgar square, S.W., and others.

BANKRUPTCIES, etc.

ACTE AND Co., LTD., 70, Newman-street, W., pictorial post card dealers, etc.—A compulsory winding up order was made against this company last February upon the petition of a creditor, and accounts have been lodged showing total liabilities £26,869, assets valued at £5,217 (absorbed in the claims of the debenture holders), and a deficiency of £24,508 with regard to contributories. The chief asset is stock costing £8,636 and expected to yield £5,090. Mr. E. T. A. Phillips, official receiver, reports that the company was incorporated as a private company on August 31st, 1910, with a nominal capital of £4,000 in £1 shares, and was formed to purchase the stock-in-trade and carry on the business of Acte and Co., Ltd., dealers in pictorial post cards and fancy goods. The

issued capital was £2,861, the whole of which was allotted for cash. The company carried on business until the end of 1916 as before, but then directed its activities into different channels, chiefly patent medicines, and its failure is attributed to heavy expenses incurred in advertising its goods, also to bad management and serious lack of working capital. The liquidation remains in the hands of the official receiver.

SIGURD ARNE SKRENDER, paper merchant.—The first meeting of creditors was held on October 12th at the London Bankruptcy Court under the failure of Sigurd Arne Skrender, 20, Queenhithe, E.C., paper merchant. The receiving order was made on the petition of the liquidator of the British American Continental Bank, Ltd., who tendered a proof of debt under a judgment for £10,657 in respect of calls on shares and interest.

Mr. Walter Boyle, official receiver, reported that according to the debtor's statements he was a Norwegian and had not been naturalised in this country. Prior to 1914, he was employed by the Norwegian Paper Mills, of Norway, as secretary and chief clerk, and in connection with that firm he came to London in September, 1914, to take up the position of manager of their London agents, the Northern Paper Co., 20, Queenhithe, E.C. He occupied that post until the end of 1916; and in January, 1917, acquired by purchase for £4,500 the business which he continued as the Northern Paper Co. until January, 1921. His present position was due mainly to the failure of the British American Continental Bank, Ltd., in which he held 8,000 £5 shares, with 25s. paid up; a further call of £2 was made, which he was unable to meet for the reason that all his resources were with the Bank when it went into liquidation, as they held his stocks of paper against advances up to 50 per cent. thereon. After the failure of the Bank, he found it impossible to continue business alone; and on April 7th, 1921, he transferred it to "the Northern Paper Co., Ltd.," receiving as vendor £317 for the office furniture, and being appointed manager at a salary of £5 a week with bonus. He held no shares, and the agreement for the premises, for which only one year to run, had been transferred to the company. There were no other assets to transfer, as they were all charged to the Bank against advances; the Bank had since realised their security, and showed a loss of between £35,000 and £40,000. That liability was not taken over by "the Northern Paper Co., Ltd.," and the debtor had no property of any description. He had further stated that he was a director of the "Northern and Southern Products Co., Ltd.," of which company he held the majority of the shares; they had no present value and were deposited with the British American Continental Bank. Nothing was due to the debtor from that company (Northern and Southern Products Co., Ltd.). An action had been brought against him by the Aktiebolaget Axel Christiernsson, Stockholm, for breach of contract in respect of paper supplied, but not delivered. The debtor rejected the paper on sample, but did not defend the action, and judgment was given against him by default for £1,885. He had consented to an order of adjudication and attributed his insolvency to liabilities on shares and depreciation in the value of stocks held by the British American Continental Bank (in liquidation). A draft statement of affairs had been submitted showing total liabilities £84,237 (unsecured £59,474), and no assets whatever. The case was left with the official receiver to be wound up in bankruptcy.

POSTAGE STAMPS SUPERSEDED?—Following upon the introduction of a mechanical stamp cancelling machine, comes the announcement that another machine is being devised for printing (as well as franking) newspaper wrappers, and later on a small machine, costing only a few pounds, will be available for household use. A British company, the Universal Postal Frankers, Ltd., of which Mr. Godfrey Isaacs is chairman, having bought the world patent rights of the New Zealand franking invention, have installed a manufacturing plant near London, and are now putting the machines on the market. The machines, which will frank denominations of ½d., 1d., 1½d., 3d., 6d. and 1s., have been authorised for use by the G.P.O. and the Postal Congress of All Nations recently held at Madrid. The owner of a machine pre-pays at the Post Office the sum he wishes to expend in postages, and a detachable meter, which fits into the machine, is set and sealed by postal officials.

Canada's New Regulations.

Marking of Printed Matter Imported.

In connection with the Order in Council of September 21st, 1922, providing for the marking with an indication of the country of origin of the following classes of goods when imported into Canada, with effect on and after November 1st, 1922, viz: 1. Printed or lithographed matter of all kinds, including books and pictures; 2. Wooden or fibre lead pencils; 3. The following regulations as to the marking of goods have now been issued by the Canadian Minister of Customs and Excise, under the authority of Section 12a of the Customs Tariff which provides for such marking:—

Regulations.

1. The country of origin of a manufactured article is held to be the country in which the article has been finished by a substantial amount of labour amounting to not less than one-fourth the cost of production of such article in condition as imported into Canada.
2. Goods entered for immediate exportation or in transit through Canada are not required to be marked.
3. When imported goods are found to be not legally marked, the appraiser or other proper officer will note the fact on the invoice and the additional duty shall be levied accordingly.
4. The appraiser or other officer will report all goods not properly marked to the collector, who will notify the importer to re-deliver the unexamined packages or to arrange to mark the goods under Customs supervision.
5. Importers may be permitted to mark examined goods in Customs warehouse, or arrange for the marking of same under Customs supervision on their own premises.
6. Whether the markings found on goods in condition imported is as nearly indelible and permanent as the nature of the goods will permit is a question of fact to be determined in each instance by the collector subject to the decision of the Commissioner of Customs and Excise.
7. If the importer fails to mark goods when called upon to do so by the collector, the collector may require the same to be exported, and in default thereof, the goods shall be treated as unclaimed, dated from time of importation, and if sold, must be sold on condition that they be marked by the purchaser under Customs supervision.
8. The words "Made in," "Produced in," "Printed in," or other words of similar import, or the name of the manufacturer, producer or publisher, accompanied by the name of the country, or a place in a province, state or other division of a country where the goods have been manufactured or produced, will be accepted as sufficient indication of the country of origin.
9. Imported containers, labels or wrappers, printed or lithographed, intended to be filled with or used upon domestic products may be marked in accordance with the provisions of the preceding section so as to indicate the origin of the goods in their condition as imported, for example: "Label printed by John Jones, New York."

GERMAN NOTE PRINTING.—A Berlin correspondent of the *Liverpool Daily Post* states that, owing to the frequent inability of the Government printing presses to keep pace with the demand for notes of the smaller denominations, several of the largest German industrial firms are making their own paper money. On pay day these are issued to the employees, who are able to exchange them for goods, the firms, of course, undertaking to redeem the notes later. The great firm of Krupp took the lead, and, incidentally, have put to shame the designers and printers of Government paper money. Employing their own artists, engravers and printing works, they are circulating notes artistically superior to anything that has come from the Government presses, as well as being more difficult to falsify.

SOUTH-EAST
London Master Printers' Association

A meeting of the Master Printers of Croydon and District was held at the Greyhound Hotel, Croydon, on Tuesday, the 24th inst., when Mr. W. H. Burchell, hon. secretary of the Central Districts Master Printers' Association, gave an address on "Profitable Printing Office Management." Mr. Brigenshaw, president of the South-East Association, was in the chair.

The business meeting was preceded by tea and general conversation, after which the chairman opened the formal proceedings by welcoming those present, and explained that while the association would continue their usual practice of monthly meetings at London-bridge, which formed such a convenient centre, they had decided to hold meetings at intermediate dates in certain outlying districts, hence their present one, which would be followed by others at Woolwich and Lewisham. He then introduced Mr. Burchell, and promised the audience an interesting and instructive address, which would amply repay them for attending.

Mr. Burchell, who was well received, then read his paper, full of practical hints gained in the course of his long experience in the trade. He claimed that a well-run and healthy workshop brought its own gain in better work and good output. Cleanliness, sanitation and ventilation should be the rule in all departments. Vast improvements in this direction had made the printer's life a happier and a healthier one. He then dealt with the need for a proper system of work docketing in order to ascertain costs, and passed round the job envelope he had devised, by which, with the dockets, he was able to trace and check the various steps and costs of each job. In another direction he urged members to look into the question of their insurances, and revalue their machinery and stock from time to time, and in many other matters Mr. Burchell gave hints and suggestions of considerable value to the craftsman.

A general discussion followed.

Mr. Northam and Mr. Grubb bore testimony to the benefits obtained by installing the Federation Costing System.

Mr. Whyte (secretary, L.M.P.A.), explained that the Costing Committee would send down one of their staff to advise any member who wished to adopt the system, and Mr. Johnson pointed out the great benefit the small printer had derived from it.

Mr. Mason (secretary, S.-E. Association), supported the previous speaker as to the value of the costing system, and stated that his committee, realising the importance to members generally of ascertaining their cost, and so estimating on a fair basis, had decided to purchase a number of copies of the Federation's standard book on "Cost Finding and Accountancy," to be lent to their members.

The Chairman, in summing up the proceedings, said he felt they had been of real profit to all present. Did all printers know their cost, the general public would not get their print under market rates.

Mr. Northam proposed a vote of thanks to Mr. Burchell and the chairman, which was carried by acclamation.

POSTAGE TO CANADA.—At a recent meeting of the council of the Canadian Chamber of Commerce in London, the following resolution was carried unanimously: "The Canadian Chamber of Commerce in London, having many evidences of the hampering effect upon Anglo-Canadian relations of the present postal charges, would represent most strongly to the British Government the desirability of the earliest possible return to the penny letter rate to Canada and a revision downward of the postal charges upon newspapers, periodicals and parcels. The Chamber would most respectfully suggest that in this way the postal revenue may be increased, and the intimacy between the two countries be most effectively increased."

MILLER "CRAFTSMAN" UNIT.—In sending us literature describing the new "Craftsman" and other Miller automatic platen machines, the Lanston Monotype Corporation tell us that they have sold over 300 of these high-speed automatic presses, and that many houses now have large batteries of them running. Particular stress is laid upon the enormous inking power of the "Craftsman" unit. The inking arrangements on the "Craftsman" are claimed to be far better than on many other higher priced machines which are being offered for sale.

Printers' Pension Corporation.
95th Anniversary Festival.

A record gathering will support the Duke of York when he presides at the 95th anniversary festival of the Printers' Pension Corporation on November 15th. Amongst those accepting invitations are the following: The Lord Chancellor, the Duke of Marlborough, Viscount Burnham, Viscount Astor, Lord Riddell, Lord Waring, Lord Illingworth, Lord Askwith, Sir William A. Waterlow, Sir William E. Berry, Sir G. Rowland Blades, Sir Frederick W. Bowater, Sir George Lewis, Sir Edward Stern, Sir Herbert E. Morgan, Sir Frank Newnes, Sir T. Vansittart Bowater, Sir Andrew Caird, Sir Bertram MacKenna, Sir Milsom Rees, Mr. R. A. Austen-Leigh, Mr. A. F. Blades, Right Hon. C. W. Bowerman, M.P., J.P., Mr. J. Gomer Berry, Mr. G. Rooke-Collingridge, Mr. W. R. Codling, C.V.O., C.B.E., Mr. A. E. Goodwin, Mr. Geo. Eaton Hart, Mr. W. Howard Hazell, Mr. T. E. Naylor, M.P., Mr. G. A. Isaacs, Mr. H. W. Howes, Lieut.-Colonel H. R. Stephenson, M.P., D.S.O., Lieut.-Colonel J. R. Truscott, Mr. W. Whyte, Mr. A. H. Walker.

The following letter has been received by the secretary of the Printers' Pension Corporation:—

Buckingham Palace,
October 4th, 1922.

Dear Sir,—

I am desired by his Royal Highness the Duke of York to thank you for sending him a copy of the appeal which you are issuing for funds to meet the heavy expenditure in benefits distributed amongst the two thousand beneficiaries of the Printers' Pension Corporation.

His Royal Highness is especially pleased to know that the institution numbers amongst its recipients no fewer than twelve hundred children of printers killed in the war. He is gratified to be associated with this good work, and is looking forward with keen interest to the forthcoming anniversary festival over which he will preside on November 15th, when he hopes to hear that your appeal has met with the success it most assuredly deserves.

Yours faithfully,

(Signed) **LOUIS GREIG.**

Comptroller to H.R.H. the Duke of York.

Greeting Cards for 1922-23.
Impressive Examples by the House of Tuck.

In the May 18th issue of the *British and Colonial Printer and Stationer* we dealt at considerable length with the charms of the newest things in greeting cards that were being produced for the coming season by the world-famous house of Raphael Tuck and Sons, Ltd., of Moorfields, London, E.C.2. Now that dealers are getting busy in prospect of the approaching Christmas trade, we have received an impressive selection of samples to remind us of the wonderful variety of Tuck cards that are available.

The very extensive ranges of Christmas and New Year cards, Christmas auto stationery, calendars, gift books and toy books, picture post cards, etc., which Messrs. Raphael Tuck and Sons are putting on the market this year under the title of "The World's Art Service," show that the firm is not resting upon its laurels. The new series of Christmas and New Year cards, comprising more than 3,000 different designs, caters for the ever-increasing demand, whilst special interest attaches to the latest Royal Christmas cards reproduced from the original designs which the firm has had the honour of annually preparing for Their Majesties these many years past. Messrs. Tuck's collection of art calendars embodies over 500 different designs wonderfully reproduced, and their range of over 100 distinct daily block calendars, with quotations from favourite poets and authors, are another safe selling line. Further lustre should be added to the name of Tuck by this year's output of tasteful productions.

THE degree of Bachelor in Colour Chemistry has been created at Manchester College of Technology.

Charles Letts's 1923 Diaries.
An Admirable Selection.

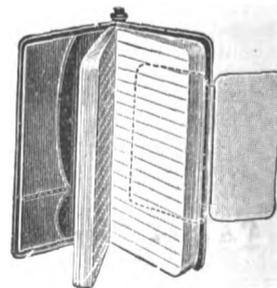

A forcible reminder that the year 1922 is running to its close reaches us in the form of the customary selection of new season's diaries sent us by Messrs. Charles Letts and Co., of Southwark-bridge-buildings, London, S.E.1. The 1923 examples again demonstrate the very varied tastes and requirements which can be satisfied by this well known firm of diary makers and note-book specialists.

An interesting novelty, for which patent rights have been applied for, is the "Efficiency" calendar, which combines most of the advantages of a daily tear-off calendar with greatly reduced bulk and cost. One example of this calendar is illustrated herewith.

There are 31 date-cards, numbered from 1 to 31 consecutively, each card bearing also the names of the twelve months, and under the name of each month the name of the day of the week which, in that particular month, falls on the date shown on the card. Thus only 31 cards do duty for the 365 sheets of the tear-off pad. In the example illustrated, which includes a metal mount for hanging on the wall, the 31 cards (together with an extra card bearing the whole year's calendar) are ringed upon a metal rod, the user being instructed to "turn over" one card per day. We imagine some people not especially gifted with an instinct for mechanics may exhaust a good deal of time and temper in trying to carry out this "turn over" instruction whilst vainly endeavouring to persuade the turned-over cards to stand up vertically with faces to the wall. Sufficient intuition or exploration, however, may eventually reveal the fact that the metal mount contains an ingenious hidden and unsuspected hinge (not hinted at in the instructions) whereby the rod on which the cards are ringed comes out clear of the metal mount, so that the day's card can be easily swung round the rod and the set of cards replaced (with a snap) to show none but the new day's card. The contraption is a neat and satisfactory one, but requires, we think, a word of explanation.

The new diaries include, of course, the well-known and popular lines. There is a

wide variety of pocket diaries, ranging from leather padded and gilt, down to cheap cloth-substitute. One of these, fitted with the special self-opening tablet, is illustrated herewith. Amongst them are diaries for special interests, including the "School-Boy's Diary," the "School-Girl's Diary," the "Boy Scout's Diary" and the "Girl Guide's Diary." The "Business Man's Notebook" is of special interest, containing as it does a mass of useful reference matter compiled by Mr. Herbert N. Casson, the owner of the *Efficiency Magazine*. The "Automatic Date Indicator" is a useful metal framed date pad for office use, whilst the office worker will also be specially attracted to the handy and informative octavo office diaries and the well-known larger desk diaries obtainable either with blotting paper or without, and with or without self-opening tablet.

. . . **LEEDS.**

September 29th, 1922.

DEAR SIRS,

Kindly allow us to bring to your notice the following information.

You will no doubt recollect the War with Germany, and that everyone tried in their own sphere of usefulness to do their "bit."

The Printing Public were presented in the trade papers with a beautiful picture of several Aeroplanes flying over London causing destruction and our guns firing shells to bring those monsters down. These Shells were filled with Bullets made from Printers' Dross.

Our "bit" consisted of the manufacture of 4,700 tons of Shrapnel Bullets from Lead and Antimony and Antimonial Lead supplied by the Government. Over 1,600 tons of Antimonial Lead were sent to us without any pretence of cleaning, made direct from the ore, thus containing all the impurities which were in the ore. This Antimonial Lead along with our Dross Metal was made into Bullets (of course it was good enough to kill Germans), and it is now being hawked up and down the Country at £17 per ton. Since the Armistice we have not had one ton or even one pound of Shrapnel Bullets or Bullet Metal in our Works, and we do not wish for any We, however, have reason to know that Antimonial Lead has been used in making Type Metal. This Antimonial Lead, as we say previously, costs £17 per ton, and contains 12 per cent. Antimony, so that our adding Antimony and Tin to raise this Bullet Metal to our Standard formulas would enable us to sell at the following prices:

Lino Metal:	Flat Bed Stereo:	Autoplate Metal:	Mono Metal:	} Free on rail Leeds, Net.
£26 per ton.	£30 per ton.	£34 per ton.	£36 per ton.	

We are always on our Metal, however, and we do not use this Antimonial Lead.

Our to-day's prices for our Standard formulas with Jubb's guarantee are as follows:

Lino Metal:	Flat Bed Stereo:	Autoplate Metal:	Mono Metal:	} Usual Terms.
£41 per ton.	£46 per ton.	£49 10 0 per ton.	£48 per ton.	

We have on hand 600 tons of Printers' Dross, accumulated since the War, which we are prepared to sell to the first comer at £14 per ton, our works. This we could have made into Bullets but, fortunately, there is no War requiring them, and our trade in the Midlands is very slow or they are using this cheap Antimonial Lead.

JUBB'S KNOW SOMETHING—THEY MADE BULLETS.

Yours faithfully,

T. G. & J. JUBB.

P.S.—The above quotation of our prices is subject to Market fluctuations.

North London Master Printers.

Cost-Finding Methods Discussed.

The opening meeting for the season was convened at a new place of venue, the Public Library, Highbury, and a good attendance of members listened to an excellent paper read by Mr. John D. Wise of the South-West London district.

Mr. Wise, in opening his remarks, said it was not his intention to read the same paper that he had at Glasgow, but he wanted to confirm all that he had said there. He wanted to deal with the difficulties of small printers. He had been a master printer for forty years, and the object of the monthly meetings was to learn from each other how best to tackle the difficulties that were continually with each member.

Plight of the Small Printer.

With many, times were hard, work scarce, troubles and difficulties abounding in every quarter. The small printer must amend his ways or his days were numbered. The chief cause of all the ills was that many printers continued to work in the dark, but a remedy had been found, the Federation Costing System, which, like the rising sun, was able to dispel the darkness of the night. Mr. Wise said he wondered how many printers present were able to tell, from any docket they used in their office, the total number of hours worked in any one week, what proportion of time was chargeable to the customer, and what proportion of time non-chargeable. There were many etceteras, and, these, it must not be forgotten, covered a lot. Then, too, had they a docket that showed the cost of machining? If not, they were working in the dark. He advocated the costing system of the Federation because the costing department of No. 24, Holborn, did all the work of finding out the cost. Its representative, Mr. Williamson, was with them that evening, and when once he had installed it, it was as easy as A.B.C. He (the speaker) had often been asked what it cost to work the system. He had always replied, he did not know. The cost goes into overhead charges just as bookkeeping did. Could anyone tell him the cost of making out an invoice? If it was important to make out invoices, it was just as necessary to know the cost to put on that invoice. To the small printer one necessary item to be cut out was that of waste. It was elusive, but not too elusive for the costing system to find.

Some Points to Remember.

Dealing with the evils of "picking," Mr. Wise said many small printers spent a lot of money in fancy rules and ornaments that ought to be spent on quads and spaces; this would help eliminate a lot of "picking" that went on in many offices. The costing system would bring the fault home to the right man, and if cost were high it would cause a scarcity of work. The costing expert would advise for what work the plant of each individual member was best equipped. It was quite impossible for a small printer to think he had any chance with a job that had to be hand-set if it could be done on a mono or lino, and it must always be borne in mind that the small printer could get type machine-set cheaper than if they had a machine installed themselves. Then, too, the small printer should thoroughly learn that with order and regularity, even with an old plant, more could be obtained than with a new plant and disorder. Mr. Wise concluded a very able address by giving some sound advice relative to a machine that had been put on the market and was able to compete with the small printer, samples of the work turned out being exhibited to the members.

A discussion followed, many members taking part. Mr. W. J. Mizen said that emphasis could not be made strong enough that printing was not a dear product, but the life-blood of every business. Mr. Whyte (secretary of the L.M.P.A.), who was present, spoke of the serious inroads made by the competing machine that Mr. Wise had mentioned, and Mr. D. A. Whitehead, of Muswell Hill, said all they had heard that evening showed the necessity of perfecting the costing system.

Mr. A. Williamson, the costing expert, in a few closing words, said he had come to hear Mr. Wise and to see what pearls he could pick up. There was only one costing system, and that was the Federation's. If it was not

The United States Tariff.

Effect on Kindred Industries.

Apart from the new duties which are placed upon paper by the new Customs Tariff which has been put into force by the United States Government, various other items concerning kindred industries are also affected.

Par. 381 of the schedule 3 covers copper engravers' plates, not ground (7 cents per lb.), copper engravers' plates ground (11 cents per lb.).

Type metal is included in paragraph 393, and bears a duty of 2½ cents per lb. on the lead contained therein.

Par. 396 reads as follows: "Print rollers and print blocks used in printing, stamping, or cutting designs for wall or crepe paper, linoleum, oilcloth, or other material, not specially provided for, composed wholly or in chief value of iron, steel, copper, brass or any other metal, 60 per cent. *ad val.*"

The Free List.

A number of items of importance to the allied trades are included in the Free List in addition to wood pulp and standard newsprint paper, as previously mentioned. Other items on this list include the following:—

Par. 1520.—Bibles, comprising the books of the Old or New Testament, or both, bound or unbound.

Par. 1527.—Books, engravings, photographs, etchings, bound or unbound, maps and charts imported by authority, or for the use of the United States, or for the use of the Library of Congress.

Par. 1528.—Hydrographic charts and publications issued for their subscribers or exchanges by scientific or literary associations or academies, and publications of individuals for gratuitous private circulation, not advertising matter, and public documents issued by foreign governments; books, maps, music, engravings, photographs, etchings, lithographic prints, bound or unbound, and charts which have been printed more than twenty years at the time of importation: *Provided*, that where any such books have been rebound wholly or in part in leather within such period, the binding so placed upon such books shall be dutiable as provided in par. 1310.

Par. 1529.—Books and pamphlets printed wholly or chiefly in languages other than English; books, pamphlets, and music in raised print, used exclusively by or for the blind; Braille tablets, cubarithms, special apparatus and objects serving to teach the blind, including printing apparatus, machines, presses, and types for the use and benefit of the blind exclusively.

Par. 1531.—Books, libraries, usual and reasonable furniture, and similar household effects of persons or families from foreign countries if actually used abroad by them not less than one year, and not intended for any other person or persons, nor for sale.

Par. 1542.—Linotype and all typesetting machines, etc.

Par. 1560.—Cotton and cotton waste.

Par. 1612.—Lithographic stones not engraved.

Par. 1625.—Newspapers and periodicals; but the term "periodicals" as herein used shall be understood to embrace only unbound

Exports of British Paper, etc.

or paper covered publications issued within six months of the time of entry, devoted to current literature of the day, or containing current literature as a predominant feature, and issued regularly at stated periods, as weekly, monthly, or quarterly, and bearing the date of issue.

Par. 1635.—Duplex decalcomania paper not printed.

Par. 1651.—Rag pulp; paper stock, crude, of every description, including all grasses, fibres, rags, waste, including jute, hemp and flax waste, shavings, clippings, old paper, rope ends, waste rope, and waste bagging, and all other waste not specially provided for, including old gunny cloth, and old gunny bags, used chiefly for papermaking, and no longer suitable for bags.

Par. 1677.—Sulphur, in any form, and

sulphur ore, such as pyrites or sulphuret of iron in its natural state, and spent oxide of iron, containing more than 25 per cent. of sulphur.

In Par. 1700 is included pulp woods, and Par. 1705 embraces works of art, drawings, engravings and photographic pictures imported for the promotion of art, but not for sale.

Special provisions provide for the marking, stamping, branding or labelling of articles imported in legible English words so as to indicate clearly the country of origin, provided this can be done without injury, while every package containing any imported article or articles has to be identified in the same way.

From Printer's Devil to Master Man.

The Irrepressible Secretary of the Central London
Master Printers Celebrates his Diamond Jubilee.

Many happy returns to that ever-active London master printer, Mr. W. H. Burchell, who to-day completes his sixtieth year! Mr. Burchell is a good example of the possibility of energy and determination climbing steadily to success in spite of being started at the bottom rung of the industrial ladder, and a brief review of his career will doubtless be read with interest, especially in view of his close association with various important movements in the printing trade.

Born on November 2nd, 1862, at Kennington, William Henry Burchell was the eldest but one of a family of 16 children. Soon after his birth the Burchell family removed to the east of London, and it was there that young William Henry was initiated into the mystery of printing.

Gower's Walk Printing School.

Hearing that Gower's Walk School, E., had a printing office attached to it he gave his parents no rest until they had applied to have him elected as a scholar. The school was a National Day School with a board of trustees and consisted of three departments, a boys' school, a girls' school and a printing office. Suitable boys were selected for instruction in the printing office, and young Burchell was one of the chosen.

Mr. Burchell has some amusing recollections of his time as pupil at this establishment. The young pupils were certainly kept busy. They had to put the printed work, in glazed boards with set-off sheets, into the hydraulic press for the night, whence they were taken out the next morning ready for folding up. Other jobs of frequent occurrence were the "setting up" or "distributing" of the type for the jobs and the sorting of "pie." Mr. Burchell remarks that there was a good deal of that composing room delicacy, "printers' pie," about in the early careless days. An outstanding recollection is of the advent of a brand-new cylinder machine. Amid great excitement, anxious enquiries were made as to what boys would be selected to work the machine. It was fitted with two fly-wheels with handles to turn them. Burchell, Brown, Jones and Robinson were selected as the operators. The periods of work were ten minutes on and ten minutes off. The intervals corresponded with the rest intervals in a boxing competition. Carpenter or Beckett would not be more exhausted after a gruelling round than were these youngsters after wrestling with that brand new cylinder machine for ten minutes. The machine soon found out which were the "A.1" boys and which were of the "C.3" grade. Besides providing plenty of work, it also yielded some amusement to the practiced hands. A period of initiation was instituted, and a new-comer

had to "go through it"; each had to submit to the test of being "swung." The neophyte would be turning the handle of one of the fly-wheels, when his companion on the other handle would give it a jerk and the novice had his first experience of flying round with the wheel, providing his comrades with the pleasure of picking him up after his aerial flight.

There were rays of sunshine at the Gower's-walk School. The girls were taught to knit

Mr. W. H. Burchell.

socks, which were presented as prizes to the boys.

As an indication of the size of the little printers in the case room—there were dozens of stools scattered about for the boys to stand upon, to enable them to work at ease. Plat-forms were also erected round the presses and machines for the diminutive workers.

Gower's Walk School is now on the "Fair List" of the London Society of Compositors, under the title of the School Press, Rupert-street, E. Of course, it is now conducted under very different conditions.

Printer's Manager of Tender Years.

At eleven years of age the duties of printer's manager fell on the promising young shoulders of Mr. Burchell. At the school press, during the midsummer three weeks' holiday, the idle time hung heavily on his

hands, so he decided to find a job for himself. He found it at the firm of Messrs. Byron Ballard, printers, of Osborn-street, E. At this printery he used to canvass the orders from the customers, compose and print off the jobs, pack them up, make out the invoices, deliver the work, and secure the cash—a pretty all-round job for a little man of eleven years of age!

An interesting memory of this firm is that it printed the "Monthly List of Preachings" for the famous William Booth, the creator of the Salvation Army. At that time, before the genesis of the Salvation Army, services were conducted at what was known as "the People's Mission Hall," formerly a vegetable market, in the Whitechapel-road. At this place notices of forthcoming meetings were placarded, such as that "Sergeant Brown, of the Coldstream Guards, from the Tower of London, will preach here at 3 p.m. on Sunday next." Mr. Burchell frequently took proofs of these notices to the "General" to correct. He remembers the origin of the *War Cry*, the representative journal of the Salvation Army. The printing office was in a disused stable in Fieldgate street, near the Mission Hall. No doubt it was the practice of getting men from the regular army to preach at the Mission Hall which gave the General the idea of founding the vast organisation of the Salvation Army.

Later in Mr. Burchell's career he had occasion to apply for a job at Peall's, and he was agreeably surprised to find that Mr. John Peall, his two sons, and nearly the whole of his staff had been educated at Gower's-walk School.

In those days the society rate of wages for journeymen was 3s. for 54 hours, but they more often worked 60 hours for the same remuneration. Apprentices, if they joined the society, were forced to leave the firm when they had served their time.

On the death of John Peall Mr. Burchell decided to get around and gain experience of the printing trade in various capacities. He first worked as a "turnover" at Messrs. Dunn, Collin and Co., working there between 70 and 80 hours per week. He also worked in the same capacity at Messrs. Zapp and Bennett's. In 1881 he entered the firm of Messrs. Eden Fisher and Co. as an artistic compositor, with which firm at various times he fulfilled the duties of storekeeper, reader, deputy overseer and overseer. He remained for 18 years in the service of the firm, rating for the last ten years of his engagement as works manager.

Birth of "The Caxton Press."

From small beginnings great events arise. Being very anxious that his son should get

Sir, Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from192.....to.....192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions :-

CONDITIONS :

The Subscription is annual, payable in advance, and may commence at any time.
 All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.

Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.

The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.
 In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms:

Subscription £2 2s. Od. per annum, entitling the Subscriber to:-

Ten Status Enquiry Forms and ten Debt Forms free of charge.
 Further Enquiry Forms during currency of Subscription at 2/- each.

Debt
 The "Collection of an unlimited number of Accounts" at the following rates of Commission:-
 5% on amounts recovered up to £20
 2 1/2% on amounts over £20 and up to £100
 1% on amounts over £100
 5% on amounts recovered in Ireland, Scotland and the Channel Isles.

Special terms in respect to Foreign Debt collections and enquiries.
 Representation at Meetings of Creditors free of charge.

Searches of the Registers (unlimited) free of charge.
 Legal Advice by the Solicitors to the Office upon ordinary business matters free.

(Signed)..... (Address).....

Date.....192..... Business.....

an extra thorough knowledge of the art of printing during his apprenticeship, Mr. Burchell bought a "small plant" and installed it in his home for the purpose of imparting the necessary practical instruction. Amongst the productions printed at this home press, Mr. Burchell remembers issuing daily two different programmes for Sousa's band. The band, under the famous conductor, travelled the provinces in 1901. The programmes followed Sousa about to each provincial town the band visited—rather an ambitious effort for a home production. The printing consisted of a 4-page folder, having the front page stamped by steel plate process in green colour, with the three pages of letter-press in black ink. Long hours were not considered improper at this home press. Mr. Burchell remembers an exciting incident in connection with the printing of Sousa's programmes. Once when work was proceeding through the night, a loud ringing at the bell was heard. On going to the door, it was found that a "man in blue" wanted a little information about the bright illumination of the windows and the rumbling noises heard. Mr. Burchell had to satisfy the public custodian that he was not printing bank notes nor pirated music, but merely Sousa's programmes.

The constant additions to the home plant caused it to outgrow its accommodation, necessitating the finding of more commodious premises. These were found at 27, Cursitor-street, Chancery-lane, W.C., and here the ever-growing business again necessitated a removal, this time to 15, Furnival-street, E.C., the business being moved finally to 13-15, Leather-lane, E.C., the present home of "The Caxton Press." Under this title the business was registered as a private limited liability company in 1905, in order that Mr. Burchell might allocate to his son and to his brother an interest in the concern.

It is not usual for so many members of one family to be actively associated with the same firm. There are five Burchells connected with the Caxton Press. Mr. W. H. Burchell is governing director; Mr. W. H. Burchell, junr., a director and secretary; Mr. Harry Burchell, a director and works manager; Miss Ella Burchell controls the bookkeeping and correspondence department, whilst Miss

Lorna Burchell superintends the shorthand and typewriting departments.

Mr. Burchell married happily at the age of 21, and his wife, *née* Kate Louise Fidge, is still his staunch helpmate.

Organisational Activities.

Of a markedly sociable disposition, and gifted with considerable organising ability, Mr. Burchell has written his name large upon several printing trade movements with which he has associated himself. The need for common action amongst printers' managers was one of the causes he espoused, and in 1893 he became the founder and first hon. secretary of the Printers' Managers and Overseers' Association, of which he still holds card No. 1. Mr. Burchell was the founder also, in 1898, of the Institute of Printers and Kindred Trades, whilst in 1918 he organised the Association of Master Printers of the Central London Districts. He has frequently addressed London master printers and others on subjects of interest to the trade, sometimes on controversial matters in regard to which not everyone can share his views, though all must appreciate the breezy commonsense and lively outspokenness with which he endows his remarks. He was a strong opponent of the London Day Continuation Schools, and his fighting energies have of late been much occupied in connection with the postal rates. It is admitted that he did much to keep the need for reduced rates well before the public in the recent campaign for reduction, and now that some concessions have been granted he has set himself the task of continuing his agitation until the letter rate is reduced to 1d. the ounce, a uniform rate of 3d. reinstated for postcards, and 4d. for printed matter up to 2 ozs.

Amongst Mr. Burchell's other interests must be mentioned the claims of charity. He was instrumental in raising a large sum of money to help clear the debt on the Caxton Convalescent Home at Limpsfield. He is a life member of this institution, as also of the St. Bride Foundation Institute. He was the founder and first hon. secretary of the East London Printers' Benevolent Society, formed in 1888 for assisting printers in distress, and he was the first initiate of the St. Bride Lodge of Freemasons (No. 2,817).

For the use of the recent portrait which accompanies this article we are indebted to the proprietors of "Notable Londoners."

We think our readers will join with us in wishing that this sturdy and active London printer, just entering upon his seventh decade, may yet have before him very many years of useful and happy association with the printing craft.

U.S. Paper Tariff.

The United States Tariff Commission has issued a report entitled "Surface-coated, Photographic, Cigarette and Miscellaneous Papers." This report is one of a series to be published by the Commission, dealing with different kinds of paper. In structure it follows the general outline of all the tariff information surveys prepared by the Commission, the aim of which is to present to Congress in detail sifted data that may serve as a guide in framing scientific tariff legislation. These data relate to description of the different varieties of paper, raw materials used, processes of manufacture, volume and value of production, imports, exports, prices, tariff history, nature of competition with foreign countries, customs decisions, etc. The papers considered are surface-quoted, waxed, gummed, decalcomania and decorated paper; cloth-lined or reinforced paper; photographic and blue-print paper; cigarette paper; papier mâché; paper not specially provided for in the tariff law; miscellaneous manufactures of paper, such as bags and boxes; and paper stock. Copies of this report may be secured from the Superintendent of Documents, Government Printing Office, Washington, D.C., for 10 cents each.

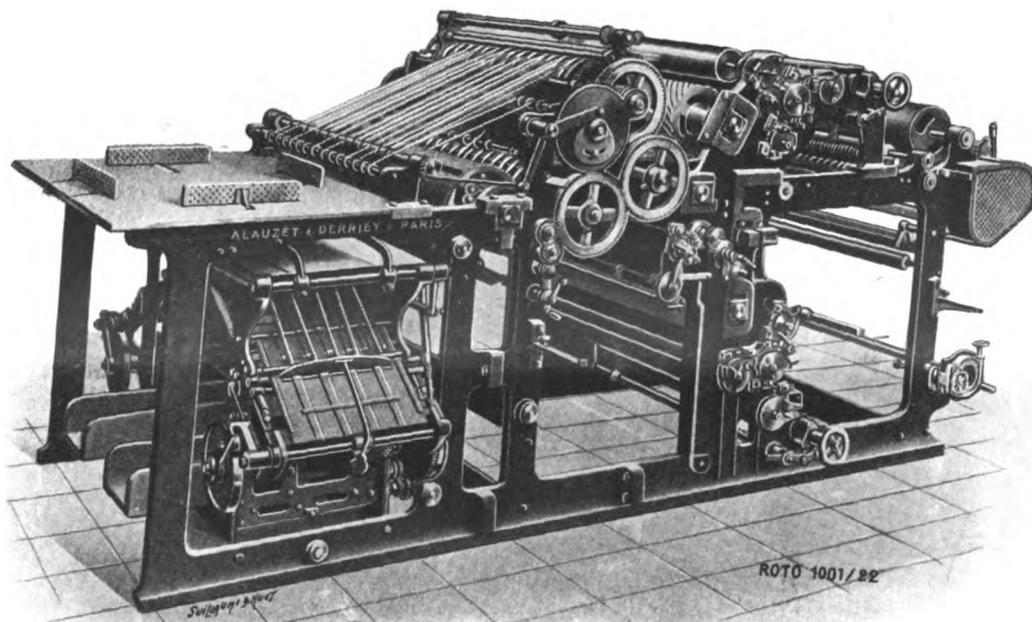

Users of stationery are advised that there is no excuse now for using rubbishy material, since the difference between this class and the higher grade of goods is so small as to be unworthy of consideration. Commercial stationery is now so much cheaper that many firms are using a higher class of goods.

Trade Notes.

L.M.P.A. ORGANISER.—We understand that there have been numerous applications in respect of the vacancy for an additional organiser for the London Master Printers' Association (which was announced in our Special Prepaid Advertisement columns), and that selected candidates are being interviewed on Monday next by the selection committee at 24, Holborn.

AMONGST the week's dissolutions of partnership is that between A. Birdsall, F. R. Birdsall and H. W. Birdsall, bookbinders and stationers, etc., Wood-street, Northampton, and at 7, Beak-street, London, W.1, under the style of Birdsall and Son, so far as concerns F. R. Birdsall.

THE South-West London Master Printers' Association has accepted an invitation to inspect the Croxley Mills of Messrs. John Dickinson and Co., Ltd., and a party is being arranged to pay a visit on Monday next.

"COSTING" MEETING.—The next meeting of the S.-W. London Master Printers' Association will be held next Tuesday, November 7th, at the Central Hall (Room C), Westminster, at 7 p.m. This gathering is being held as part of a great Federation costing campaign in which meetings are taking place all over the country, and addresses on the subject of "Costing" will be delivered by Mr. W. Howard Hazell and Mr. A. Williamson, chairman and secretary respectively of the Federation Costing Committee.

THE Apprenticeship Committee of the Federation of Master Printers met on Tuesday and appointed Mr. J. C. Coppock as chairman. There was considerable discussion as to the wages paid to apprentices, and it was decided to make certain recommendations to the Federation Council, a special committee being appointed to consider details of a scheme for the training of apprentices and to report to a full meeting of the committee.

MR. F. L. ARMSTRONG, the secretary of the Employers Federation of Envelope Makers and Manufacturing Stationers, has usefully drawn the attention of his members to the regulations of the Postmaster-General under Section 33 of the Representation of the People Act, 1918. This section gives the candidate the privilege of exercising the right of free postage, and manufacturing stationers should note that communications must not exceed 2 ozs. in weight nor 9 ins. in length by 4½ ins. in width.
